Under a rule adopted by the Seattle Postoffice, letters addressed in care of the Sailors' Union Agency at Seattle can not be held longer than 30 days from date of delivery. If members are unable to call or have their mail forwarded during that period, they should notify the Agent to hold mail until arrived.

INFORMATION WANTED.

Frank J. Phillips, a member of the Marine Firemen's, Oilers' and Watertenders' Union of the Atlantic and Gulf, last heard of in San Francisco, Cal., April, 1916. Anyone knowing his whereabouts will please notify Mrs. Frank J. Phillips, P. O. Box 521, San Pedro, Cal. 2-19-19

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

The Public
A Journal of Democracy

Poverty is A Crime!

It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

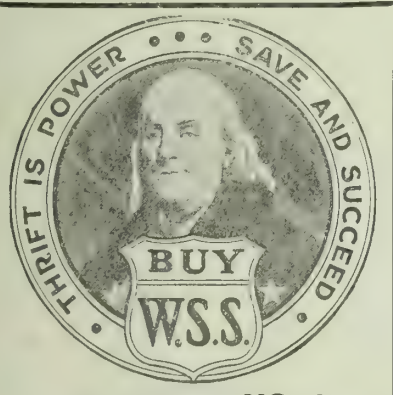
"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

THE PUBLIC
122 E. 37th St., New York City



DO YOU KNOW

That War-Savings Stamps pay 4 per cent. compound interest?

That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?

That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?

That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?

That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?

That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?

That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

INFORMATION WANTED.

Relatives of Axel Hansen, the seaman for whose murder Capt. Pedersen, or "Hell-Fire Pedersen" of the bark "Puako," is to be tried May 15, at New York City, please communicate with the undersigned. Any seaman knowing aught of Hansen or his relatives, please write. The names and addresses of one or two witnesses who have known for some time past Capt. Pedersen's reputation, the way he is reputed to have handled his men on board ship, are also desired to communicate with the undersigned. Silas B. Axtell, 1 Broadway, New York City.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

One B. Kajakcorchi, oiler, of Russian nativity and member of Seamen's Union, was injured on the steamer "Paraiso," of Swayne & Hoyt, San Francisco. The vessel was one day out of New York and on the second watch the strap on the go ahead starboard eccentric broke, with the result that Kajakcorchi had his left hand smashed all to pieces. He has been in the hospital ever since and will be disabled for many months. He has a permanent disability. Patrick Ennis and Andrew McCann, who know about the previous condition of this strap, will oblige me by communicating with me or the nearest Union delegate. This strap, we have reason to believe, was worn out and defective, as it had been heating up continuously for nearly three weeks prior to the accident. Silas B. Axtell, Esq., 1 Broadway, New York City. 8-21-18

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City.

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

Members of the S. S. "J. O. Neil" will please call or write to the undersigned attorney relative to salvage services performed on the 18th day of January, 1919, to the S. S. "Oregon." Silas B. Axtell, 1 Broadway, New York, N. Y. 4-21-19

Members of the crew of the S. S. "Oskawa" will please call at my office in relation to a claim for salvage against the S. S. "Westgrove." Silas B. Axtell, 1 Broadway, New York, N. Y. 4-21-19

Anyone knowing the whereabouts of Daniel Shean, last heard from at Cleveland, will kindly communicate with his brother, Richard Shean, 7014 Cedar Ave., Cleveland, Ohio. 11-6-18

When making purchases from our advertisers, always mention The Seamen's Journal.

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

Members of the crew of the SS. "Kellogg" who were on board when she picked up the SS. "Catania" can obtain money due them for salvage services by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardmore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

Members of the crew of the S. S. "Fred W. Whellen" who were on board November 11, 1918, when she picked up the bark "Galica" should file their claims with this office and be joined in libel which is being filed by the undersigned on behalf of the members of the crew. Silas B. Axtell, 1 Broadway, New York City. 12-25-18

Anyone knowing the whereabouts of Woodley Ransome and Charles Bland, who were members of the tug "Virginian" when she was damaged by the "Navy Tug No. 4," will kindly communicate with Arthur Jones, Agent, Marine Firemen's, Oilers' and Watertenders' Union, 513 Main St., Norfolk, Va. 11-6-18

Charles L. Carlsen, No. 1834, who disappeared from the barge "Isaac Reed" at Eureka, California, on December 31, 1918, is inquired for by his wife, Mrs. C. L. Carlsen, 107 Courtland Ave., San Francisco, Cal. 2-5-19

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City.

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S "Davy," is inquired for by his mother Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

Carl Hansen, a native of Soon Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis. 8-17-18

Home News

The report of the Midvale Steel and Ordnance Company for the year ended December 31, 1918, shows net earnings after taxes of $71,129,012, compared with $57,942,941 in 1917.

By a plurality of 1,061 votes, the Democrats of Peekskill, N. Y., elected a woman village treasurer over a man Republican opponent. The women's votes at the village election total more than one-half of the 5,000 votes cast.

The night court for women in New York, established as a separate tribunal in 1910, was officially abolished on the 20th. It was supplanted by the Women's Day Court. The night sessions had attracted undesirable elements and curiosity seekers.

The first woman to be appointed a member of the faculty of Harvard University is Dr. Alice Hamilton of Chicago, who has just been named as assistant professor of industrial medicine in the Medical School at Harvard. Dr. Hamilton is a graduate of the University of Michigan.

The influenza epidemic last year cost the Prudential Insurance Company $14,000,000 in payments on the deaths of 63,000 policyholders between September 26 and December 31, the company announced at its home offices in Newark. During 1918 payments were made on more than 250,000 deaths, and total more than $71,000,000, which is $20,000,000 greater than any previous year.

Sixteen thousand eight hundred and eleven cities, towns, and villages in the United States have taken part in the weighing and measuring tests of Children's Year, according to figures made public on the 4th by the Children's Bureau of the U. S. Department of Labor, which, with the local child welfare committees of the Council of National Defense, instituted the Children's Year program.

There have been 3216 lynchings, exclusive of the East St. Louis and other mob riots, in the United States in the last thirty years, 702 of which have been lynchings of white people and 2514 lynchings of Negroes. Sixty-three Negroes and four white persons were lynched in 1918. Some of the recent lynchings have been particularly atrocious, involving burning at the stake and torture of the victims.

The Great Adventure group of Singletax workers in California have invited William L. Ross of Philadelphia to assume direction of their activities. A number of Philadelphia members of the organization have issued a statement saying that Mr. Ross is prepared to give up his business and the income from it, move to Los Angeles, and devote his entire time to the work, asking only that his living expenses be paid.

Viscount William Waldorf Astor, born an American and naturalized in England, is said to pay more money for income tax than the total of his income. His property is in the United States and is taxed by both the American and British Governments. His American holdings are valued at more than $80,000,000, with an estimated income of $4,000,000. The New York taxes are $1,600,000; the Federal income tax, with surtaxes, $1,200,000, and the British income tax $1,600,000—a total about $400,000 more than the income.

Domestic and Naval

The schooner "Lydia H. Roper", reported at St. Thomas in distress, has been condemned.

The "Saccarappa", which has arrived at Havre from Santos, damaged by collision is one of the Hog Island built fabricated ships of the Shipping Board, 5735 tons, built in 1918.

The "Balosaro", bound from Guadeloupe, which put in at St. Thomas for repairs to motive power, is a Shipping Board steamer of the composite type, 2469 tons, built at Mobile in 1919.

The "Freedom", which was in collision May 5 180 miles E. of Ambrose Channel with the Swedish steamship "Gloria" and put back to New York, is one of the requisitioned German liners. Her former name was the "Wittekind", 5640 tons.

The newest British battleship, the "Hood," is 894 feet long, or 104 feet longer than the "Mauretania." The armament of this immense fighter consists of eight 15-inch guns, and she is said to be proof against torpedo attack through the hull being fitted with an outer cushion, which makes torpedo and mine attacks harmless.

The Railroad Administration has ordered four self-propelling barges for use on the Black Warrior River between Birmingham and New Orleans. These new barges will cost $244,000 each, and have a capacity of 2200 tons. Twenty wooden barges of 550 tons capacity have also been ordered from the Murman Shipbuilding Company, of Mobile.

The "Iperia", damaged in collision off the Azores with the Norwegian ship "Svalen", is bound from the Persian Gulf to New York with dates. She is owned by J. W. Elwell & Co. of New York and registered at Montreal, 3362 tons, built in 1899. The "Svalen" is bound from Baltimore for Rio with coal, 1812 tons, owned by S. O. Stray & Co., Christiania.

Inability to collect amounts due by the Government, is given as the explanation for the troubles of the Groton Iron Works, Noank, Conn., which has gone into permanent receivership. The Company was building wooden ships for the Emergency Fleet under orders originally received for 12 hulls aggregating 42,000 tons. The company is a subsidiary of the United States S. S. Co., controlled by C. W. Morse.

In making restitution ton-for-ton for American merchant ships destroyed during the war, either by submarines, or raiders, or mines of German make, credit will be given Germany by the Reparation Commission for the German ships which the United States took over. No details have been given out as yet, but it may be that in the final apportionment the U. S. Government will keep to itself the German ships and account to the other Powers for any excess between what Germany owes this country and what the United States took from her. This operation would be extremely simple, since every one of the Powers arrayed against Germany at the peace table is in debt to the United States for sums exceeding by far the total value of all the German ships taken over. The question is, however, whether the other powers will assent to this mode of procedure, particularly in view of their large liner losses.

San Francisco Letter List

Letters at the San Francisco Sailors' Union Office are advertised for three months only and will be returned to the Post Office at the expiration of four months from the date of delivery.

Members whose mail is advertised in these columns should at once notify S. A. Silver, Headquarters Sailors' Union, San Francisco, to forward same to the port of their destination.

News from Abroad

Six candidates are in the field for the presidency of Mexico at the election in July, 1920.

American capitalists have applied for permission to erect an oil refinery in the Tampico district, which will be the largest in the world.

The Great War Veterans of Saskatchewan have taken the initiative in a movement to prevent the entry of Mennonities into Saskatchewan and Alberta.

The Chinese Government has granted a charter to the China Development Bank, a Chinese-American concern. Many Shanghai merchants are supporting the undertaking, which represents a union of several previous efforts.

Juarez, the Mexican metropolis of border towns, has become the oasis in the great American prohibition desert. Barrels of American-made whiskey and wine are offered to persons permitted to cross the border under prevailing passport regulations.

It was reported in the Copenhagen Berlingske Tidende that the Danish engineer Ohrt and the Swedish engineer Quistgaard had applied to the railway minister with a proposal for a direct railway connection between Sweden and Denmark by a tunnel under the Sound.

Proportional representation has been adopted by the French Chamber by a majority of 235 votes, having previously killed scrutin d'arrondissement, which only permits of electors voting for one representative, and reinstituted the scrutin de liste, by which votes can be cast for each senator or deputy in a department.

The New Europe, of London, which confesses to having mistakenly started the calumny against the Bolsheviki charging them with the nationalization of women, has admitted itself in error and unreservedly expressed regret at the mistake, due to confusing an insignificant local Soviet organ with an important Russian newspaper.

The figures of the postal savings in Japan in January in 1918, compared with those of 1914, show a remarkable increase from 190,000,000 yen to 550,000,000 yen. State revenue, too, swelled markedly, and in 1918 the government raised 310,000,000 yen from the three important sources, namely, taxes, stamp duty, and the profits of government monopolies.

The retail dealers of Denmark for several years have been working for the organization of a co-operative association for making purchases, to enable them to compete with the so-called Consumers' Co-operative Association. The result is the recent formation of Danske Kobmaends Handels-Aktieselskab (Danish Merchants' Commercial Co., Ltd.), which will undertake to eliminate some of the middlemen wholesalers.

In order to ease the currency crisis, the Union of the Tar Artels of the Vaga district (Archangel province) decided in October last to proceed with the issue of its own "credit notes" in the form of bonds in series of 25, 50, and 100 rubles, to a total value of 200,000 rubles. This new "co-operative money" is accepted by all the offices and branches of the Union, and they are guaranteed by all its property and goods.

With the Wits

Picking Them Out.—"Here's an applicant for a Cabinet office."

"Good! What qualifications does he lack?"—Life.

Not All Lost.—Flo—You can't believe everything you hear.

Gertie—No, but you can repeat it.—The Sydney Bulletin.

A Plane Truth.—The paradoxical thing about the airplane is that it is not much good unless it is used up.—Boston Transcript.

Astute Patient.—Doctor—My dear sir, it's a good thing you came to me when you did.

Why, Doc? Are you broke?—Life.

Cholly's Type.—"I can read Cholly like a book."

"You're foolish to strain your eyes over a small type."—Cleveland Press.

Soft-hearted Singer.—Doe Boy—Why does she close her eyes when she sings?

Pay Shent.—Because she can't bear to see us suffer.—Over Here.

Easy.—"My uncle left me only $5,000. Wonder if I could break his will?

"Sure thing! He must have been crazy to leave you anything."—Boston Transcript.

His Little Bit.—She—But you only volunteered just as peace was proclaimed.

He—Er—yes. You see, exactly, I—er—wanted to see it was carried out properly.—The Sydney Bulletin.

A Self-Entertainer.—The Hostess—I am going to ask you to take Mrs Salston down to dinner.

Featherstone—What shall I talk to her about?

The Hostess—It won't be necessary.—Judge.

Gentle Hint.—Ethel—I'm afraid that bell means another caller.

Fred (imploringly)—You know there is such a thing as your not being at home.

Ethel (suggestively)—Yes, and there is such a thing as my being engaged.—Tit-Bits.

At Last.—During the flu epidemic in San Francisco, when all public meeting-places were closed, and the entire population was compelled to wear masks to prevent the spread of the disease, a drunken man was overheard muttering:

"Well, I'm an old man, but I have lived my time and am ready to quit. I have lived to see four great things come to pass—the end of the war, the churches closed, saloons left open, and the women muzzled."—Judge.

Secure and Profitable

The wise man keeps part of his money in a reliable savings bank. If you are making money now, why not put aside something for a rainy day?

Savings and Commercial Depts.

HUMBOLDT SAVINGS BANK

733 MARKET STREET, Near Fourth
SAN FRANCISCO

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 38. SAN FRANCISCO, WEDNESDAY, MAY 28, 1919. Whole No. 2540.

SEAMEN'S CONDITION IN EUROPE

Andrew Furuseth Reviews Developments Abroad

Upon his return to America President Andrew Furuseth of the International Seamen's Union of America penned a final report for the membership on the doings of the recent International Seafarers' Conference.

This official report is published herewith in full. It is the third and last of a series of articles upon this subject published in the Journal.

Furuseth's final report is of exceptional interest because it deals with the Seamen's condition in Europe and maritime affairs generally. Those who want to keep abreast of the times should not fail to peruse Furuseth's interesting summary.

Mr. Thomas A. Hanson, Secretary-Treasurer, International Seamen's Union of America, 332 West Randolph St., Chicago, Ill.:

Dear Comrade:

My last report carried us beyond the meeting of the Executive Board of the British Seamen's Union. As you know, they refused point-blank to endorse the proposal, that—

> "A seaman shall not be punished by imprisonment for leaving his vessel in a safe harbor, nor shall he be arrested, detained and surrendered to his vessel."

The last report showed that the Constitution-making Conference on International Labor Legislation refused to accept the idea that the seaman should be free, but that they adopted the following:

> "In no case shall any of the High Contracting Powers be asked or required, as a result of the adoption by the Conference of any recommendation or Draft Convention, to diminish the protection afforded by its existing legislation to the workers concerned."

The best that can be said about this is that it endeavors to crystallize existing conditions of labor generally and therefore of seamen also. Assuming that the League of Nations will become a fact and that the weight or instrument through which it is to act in labor matters becomes also a fact, European nations would not be in a position to change the status of their seamen after they go into the League of Nations. It therefore became of importance, from our point of view, that these facts should be brought to the Scandinavian seamen and so far as possible to the Scandinavian people, in order that they might—if they should feel so inclined—take the action of liberating the seamen before they became members of the League.

On my arrival in Norway, I went at once to the offices of the different organizations of seamen; that is, the Sailors and Firemen who constitute one organization, the Marine Cooks and Stewards the second, the Mates the third, the Marine Engineers the fourth, and the Masters the fifth. I laid the matter frankly and fully before them and they decided to call a meeting in Christiania of all ratings of seamen and that at this meeting they would adopt a memorial to the Norwegian Government praying for the adoption by the Norwegian Government of the following, which of course in Norway was translated into the Norwegian:

> "that a seaman shall not be punished by imprisonment for leaving his vessel in a safe harbor, nor shall he be arrested, detained and surrendered to his vessel."

The memorial was drafted and was signed by all except the Masters, who had a meeting in which the majority, while not distinctly against the adoption by the Government of this principle, evidently felt that it should be left to be considered by the Joint Scandinavian Commission on Maritime Law; at least, this was the position taken by their representative at the meeting itself, after having told me that he was entirely in favor with it and he hoped to get it through his organization.

In my first visit to Norway, I consulted with members of the Norwegian Parliament, with executive officers of the Norwegian Government, and the Premier himself, and found that at that time they felt inclined to our ideas. After my second coming to Norway, and while we were preparing for the meeting, I again went to see all of those to whom I had spoken before, and found so far as I could understand that there was no change in their sentiment. The memorial itself was submitted to the Premier by me, and he said that while there is a Scandinavian Commission to deal with the maritime law, we are not necessarily bound to wait, especially on a question of this kind; I can see no good reason why this should not be adopted and I hope that we may get it through this year. The Norwegian Commissioner of Navigation was present at the meeting, so was the Food Administrator, who used to be the Commissioner of Navigation; there were probably thirty Masters at the meeting, a larger number of Engineers, a large number of Mates, etc., and the whole meeting consisted of between 500 and 600 men. The memorial was adopted; there was not one dissenting vote.

The memorial was then signed officially by all except the Masters, sent to the Government and given the widest possible publicity, besides being sent to the headquarters of all of the different labor organizations in Norway, by the Secretary of the General Federation of Labor in Norway, with the suggestion that it be acted upon and their action sent in to the Government at the earliest possible moment.

I had made arrangements to have a similar meeting in Gothenborg, Sweden, Copenhagen, Denmark, and a tentative arrangement for a meeting in Stockholm, Sweden. In this, however, I failed. Only two days after I made application for permission to go to Denmark (and this after application had been dealt with by the Danish Foreign Office), the Danish Seamen published a statement which they submitted to the Danish ship owners and the Danish Government to the effect that unless they could come to an understanding within a certain time there would be a general strike. It may be that this prevented me from getting the permission to go to Denmark—it may have been other reasons; there is no telling.

The American Minister in Christiania did his best to get me the permission to go to Denmark; I could have gone to Sweden if I could have gone to Denmark, because it is simply a question of passing through and staying over 48 hours. I waited in Christiania seven days for permission to go to Denmark and not receiving permission in the seven days, and the fact that I could not have received it in the next seven days, because of the great number of Easter holidays they observed, I had to make other arrangements in order that I could return to the United States on the Danish steamer which left Christiania on Good Friday.

The Norwegian Seamen said that they would take care of having the memorial, suitable to the two other countries, adopted at the earliest possible time. I received the same definite promise from a representative of the Mates from Sweden, and from the Firemen from Sweden, both of whom happened to be at our meeting in Christiania.

In passing, I may say that the Swedish Government at this time is distinctly a Labor Government, and it was with great regret that I was unable to go to Sweden, especially to Stockholm.

The Scandinavian Commission.

The Scandinavian Commission which is mentioned above is made up of representatives of the different maritime interests, including the personnel on board of the vessels of the three Scandinavian countries, Denmark, Sweden and Norway. The purpose of the commission is to rewrite the whole Maritime Law of the three countries, and to make it exactly the same for all three countries. There is a probability that Finland may join in with them when she is in a position to do so. How long a time it will take before this Commission can report it is impossible to say at this time, but the shortest time mentioned in Norway was four years, so that any action on the question of the freedom of seamen that we get at this time will be of tremendous importance, not only with reference to the action taken by the Commission on International Labor Legislation, but also with reference to the ultimate report that this Commission will render to the three different countries.

The Seamen's Act.

The Seamen's Act has few friends among the shipowners and Government officials in either France or England. The feeling in these two countries, as far as I can judge, is distinctly hostile. They fear it. They feel that in its operation it will take from them their best men. The Seamen of England in their official capacity are, as you have seen in the previous report,

hostile to any extension of the act. It is, however, my conviction that that is purely official and owes its origin in the Government attitude and to some extent to the fear of future competition. The French Seamen do not understand the Act, and what position they will take when they do understand it is at the best a guess. One moment they say it is drastic as against the Seamen, and the next moment say it is too drastic as against the owner. They have had no means of gaining any experience about it, or carefully studying it in any operation that it might have upon French Seamen, because the French Seamen are all inscribed with the French navy; they are all man-of-war men and to leave their vessels while war is in progress would incur the death penalty. What influence it might have upon the French Seamen we must wait to ascertain until peace time. The shipowners in Norway are hostile to the Act; they hoped that the Paris meeting might destroy it—they were disappointed when this did not happen. They understand the law and realize that unless it is changed, repealed or in some way emasculated, they will be compelled not only to pay the American wage rate but to adopt the same principles for themselves.

I have had no personal experience with either Swedish or Danish ship owners, but I have a very definite understanding about what at least some of the Danish Masters feel about it; they want the serfdom of the Seamen wiped out, and it is reported that this is a feeling that is fairly general.

Wages.

The information which I have received, but which I have not been able absolutely to verify, is that the wages in Italy run somewhere between $60 and $70; not in wages specifically, but in addition to one name or the other. The wages in France have not been influenced by the Seamen's Act. The information I received from the officers of the French Union is that the wages of Firemen are £10, the wages of Sailors £8 18 sh.; that is to say, in American money, $50 for the Firemen and about $45 for the Sailors. The wages in England are £11 10 sh., for Sailors and £12 for Firemen with a £3 bonus, which is to remain and which is to be included in the wages as such. So as a matter of fact the wages in England are £15 or equivalent to ours, which are $75. The Norwegian Seamen and shipowners met and came to an understanding in regard to wages for a year, and it was frankly acknowledged both by the shipowners and Seamen that it was necessary in order to hold the men to pay substantially at least the American wage rate in all overseas trade. As a result they agreed that the wages of Sailors in the overseas trade in freight vessels should be 263 crowns, which is equivalent to $70 in our money; in passenger vessels, 273 crowns, which is the equivalent of about $72.50, that is for Sailors. There is a difference between the Sailors' and Firemen's wages, but it is only 5 crowns, which is about $1.50. This was agreed to before I left Norway, and I have a copy of the agreement with me here. There is no doubt but that the Swedish and Danish wages will be about the same; they will not be less, they may be a little more; in other words, they will run about the same as the American wages in the three Scandiavian countries for the next coming year.

Manning Scale.

In Norway they have adopted a Manning scale, under which steam vessels of from 5000 to 6000 tons will have to carry one Boatswain, one Carpenter, six Able Seamen and five Ordinary Seamen. With reference to Firemen, each Fireman is to handle not more than three and one-half tons of coal outside of the tropics, and in the tropics three tons of coal; not more than four fires, but the ordinary provision is three fires per fireman.

Efficiency.

The Norwegian Parliament is dealing with the question of efficiency and working hours, on recommendation of the Government, and the working hours submitted by the Government are: Three watches for the Firemen, two watches for the Sailors; a nine-hour workday in ports outside of the tropics, and an eight-hour workday in ports in the tropics, such workday to run between six in the morning and six at night, evidently with the purpose of giving opportunity to lay off from work during the hottest part of the day. There is a general demand from shipowners and especially from officers of vessels that the Government shall establish a standard of efficiency, and the Government has promised them it shall be taken up together with other matters at this time, and the understanding is that it requires three years' service on deck to become an Able Seaman, and six months' service as a coal passer to become a Fireman.

Observations.

The shipowners of England and Norway are well acquainted with the Seamen's Act and they have kept in close touch with the rulings made by our Department of Commerce and the decisions of our courts. I was told by shipowners in Norway, before I knew anything about it myself, what the Supreme Court of the United States had decided on the question of advances and what would constitute one-half, under Section 4. When I returned to England I received the information from here myself, but it was surprising to me how well they kept informed. The situation is the same in England; they are taking advantage of those decisions and of the rulings to the fullest extent, and the latest information I received in England was that they were going to place in their shipping articles a provision that any seaman demanding one-half of his pay in the United States, agreed beforehand that he in that case should be paid at the rate of one shilling per month. Their aim, so far as England is concerned, is to place the men in a position in which they will have no money to live on after they leave a vessel and until they can get another vessel, and thus hold them to the vessel through physical necessities.

The Seamen and shipowners of Norway discussed the question of advances in their conference and the Seamen insisted that all advances would be abolished. The shipowners said that while they might agree to that as a general proposition they would not bind themselves to it. I was, of course, not present at that conference, and my information comes from those members of the Seamen's organization who were present, and they advised me that in the discussion about advances the shipowners said, Well, those advances are respected in the United States under the decisions and of course we are not going to bind ourselves not to pay any advances.

With reference to the language clause, they are in unanimous agreement in Norway and in England, it is dead, and they can carry all the coolies and Chinese they want to the United States without incurring risk. This feeling on the part of the British and Norwegian shipowners will have a distinct tendency to increase the number of Orientals carried in their vessels, both because of the fact that they can get them cheaper and the further fact that they are less likely to desert in the United States. Of course, that means a gradual wearing down of the equalization process if it is permitted to go on.

I left Norway on Good Friday, arrived in New York Tuesday, April 29, in the evening. Left New York for Boston on Thursday night; returned to New York on Friday night, and arrived in Washington on Sunday morning. Since my arrival in Washington, I have seen the members of the Shipping Board and some others, and have promised a copy of this report to the Shipping Board.

Respectfully yours,

(Signed,) ANDREW FURUSETH.

Washington, D. C., May 7, 1919.

SHIPPING IN THE TREATY

The shipping features of the treaty draft handed to the German delegates at Versailles by the representatives of the Allied and Associated Powers (referred to hereafter as The Powers), are summarized below from the press despatches so far published:

Shipping.

Germany to replace ton for ton and class for class all merchant ships and fishing boats lost as a result of the war. Germany to cede all merchant ships of 1,600 tons and upyard, half of those between 1,600 and 1,000 tons gross and one-quarter of steam trawlers and tugs. The above to be delivered within two months to the Reparation Commission.

As additional form of reparation Germany is to build on Allies' account new ships not to exceed 200,000 tons annually.

All inland vessels seized by Germany to be returned, failing which German river boats to be handed over up to 20 per cent. of total fleet.

Ships of The Powers to enjoy same rights as German vessels for five years, in respect to ports, coastwise trade, fishing and towage, even in territorial waters.

Waterways.

Belgium to be permitted to build a deep draft Rhine-Meuse canal within 25 years, in which case Germany must construct the part within her territory on plans drawn by Belgium. Similarly the interested allied governments may construct a Rhine-Meuse canal, both, if constructed, to come under the competent international commission. Germany may not object if the Central Rhine Commission desires to extend its jurisdiction over the lower Moselle, upper Rhine, or lateral canals.

Germany to cede to The Powers certain tugs, vessels and facilities for navigation on all these rivers, the specific details to be established by an arbitrator named by the United States. The value will be included in the regular reparation account. In the case of the Rhine, shares in the German navigation companies and property such as wharves and warehouses held by Germany in Rotterdam at the outbreak of war must be handed over.

The Kiel Canal to remain free and open to war and merchant ships of all nations at peace with Germany, on terms of absolute equality, and no taxes to be imposed beyond those necessary for the upkeep and improvement for which Germany is to be responsible.

The European Danube Commission reassumes its pre-war powers, but for the time being with representatives of only Great Britain, France, Italy and Rumania. The Upper Danube to be administered by a new international commission until a definitive statute be drawn up at a conference of The Powers. Enemy Governments to make full reparations for all war damages caused to the European commission; cede their river facilities in surrendered territory, and give Czecho-Slovakia, Serbia and Rumania any rights necessary on their shores for carrying out improvements in navigation.

Rhine and Moselle. The Rhine is placed under the central commission to meet at Strassbourg within six months after peace and to be composed of four representatives of France, four of Germany, and two each of Great Britain, Italy, Belgium, Switzerland and the Netherlands. Germany to give France on the course of the Rhine included between the two extreme points of her frontiers all rights to take water to feed canals, while herself agreeing not to make canals on the right bank opposite France.

International Rivers.

The Elbe from the junction of the Vltava (Moldau), the Vltava from Prague, the Oder from Oppa, the Niemen from Grodno, and the Danube from Ulm are declared international, together with their connections. The riparian states must ensure good conditions of navigation within their territories unless a special organization exists therefor. Otherwise appeal may be had to a special tribunal of the League of Nations, which also may arrange for a general international waterways convention.

The Elbe and the Oder to be placed under international commissions to meet within three months, that for the Elbe composed of four representatives of Germany, two from Czecho-Slovakia, and one each from Great Britain, France, Italy and Belgium; and that for the Oder composed of one each from Poland, Russia, Czecho-Slovakia, Great Britain, France, Denmark and Sweden.

Free Zone in Ports.

Free zones existing in German ports on Aug. 1, 1914, must be maintained with due facilities as to warehouses, and packing, without discrimination, and without charges except for expenses of administration and use. Goods leaving the free zones for consumption in Germany and goods brought into the free zones from Germany to be subject to ordinary import and export taxes.

THE RIGHT TO WORK

(By Edwin Markham.)

Out on the roads they have gathered, a hundred thousand men,
To ask for a hold on life as sure as the wolf in his den.
Their need lies close to the quick life as the earth lies close to the stone;
It is as meat to the slender rib, as marrow to the bone.
They ask but leave to labor for a taste of life's delight,
For a little salt to savor their bread, for houses watertight.
They ask but the right to labor and to live by the strength of their hands,
They who have bodies like knotted oaks and patience like the sea sands.
And the right of a man to labor and his right to labor in joy,
Not all your laws can strangle that right nor the gates of hell destroy,
For it came with the making of man and was kneaded into his bones,
And it will stand at the last of things on the dust of crumbled Thrones.

Birds' nests used by the Chinese are built by a sea swallow with a gelatinous substance taken from the sea moss. The nests are attached to high cliffs, where it is dangerous climbing to get them. They are soaked after washing in warm water, in cold water over night, then boiled in milk until they may be pierced with a broom splint. They are then added to a clear soup.

Demand the union label upon all purchases!

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Record Building Boom Anticipated.

The building deficiency in the North Central States is estimated by the United States Department of Labor to be in the sum of $1,511,200,000. A recent survey of building conditions in north Atlantic States placed the deficiency in that district at $1,200,000,000.

The department's statement that the current year is likely to prove one of unprecedented building activity seems to be fully justified. Building permits and contracts let indicate that building construction work the country over is rapidly getting to pre-war figures. It is claimed that the new normal will be far ahead of the pre-war figures. The rapidity with which building and construction work is reviving indicates that building interests are convnced there will be no reduction in construction cost for several years, if at all.

April was a record month. Construction totaled $224,000,000 in the territory east of the Missouri and north of the Ohio River. This is 40 per cent. more than the value of March contracts and more than twice the April average of $96,000,000 for the last nine years. Jobs for millions of workmen at present high wages also are seen in the record contract total.

Although the department's data includes only partial reports for the month, officials said there can be no doubt the estimate is correct enough to establish the record totals computed.

Building engineering contracts for the week ending April 4, amounted to nearly $61,000,000. For the week ending April 11, the total was approximately $40,000,000 and for that of April 18, it reached more than $56,000,000.

Produced 20 Million Pounds Meat in 1918.

American dressed meat production, including lard, amounted in 1918 to 20,129,800,000 pounds—a quantity never before approached in magnitude by the live stock industry of this or any other country. The corresponding figure for 1917 was 16,317,300,000 pounds.

Three-fourths of this enormous increase was in pork and one-fourth was in beef.

The meat surplus in 1918 was so great that extra export demands made little impression on it, although 1918 export shipments of meat and lard nearly doubled the 1917 figures—rising from slightly less than 1,750,000,000 pounds to slightly more than 3,000,000,000 pounds—and these figures do not include shipments to American military forces abroad.

The aggregate 1917 consumption of dressed meat and lard in the United States was approximately 14,500,000,000 pounds, but in 1918 it rose to 17,250,000,000 pounds. This means, after allowing for increase in population, an addition of 23 pounds for every man, woman and child in the country—despite the food conservation campaign which in 1917 caused consumption to decline considerably.

"While the people as a whole through their abstinence, averted the immediate crisis, it was the farmer who was the really big factor in the ultimate situation," says the bureau of animal industry, United States Department of Agriculture. "This producer, of course, was expected to do his part, but he did it with such powerful effect that in a single year the meat shortage was turned into a pronounced surplus."

Government To Aid.

The housing shortage of Montreal is to be overcome by Governmental aid. According to reports received by the United States Department of Labor, a fund of between $4,000,000 and $5,000,000 will be available, and the administrative commission of the city of Montreal has been working on a plan by which it may be used most effectively. A manager will be appointed under whom plans and specifications will be prepared.

When a workman makes a request for money with which to build a home he will have a choice of plans. After the required amount of money has been lent, the building will be inspected from time to time, so that assurance may be obtained that the specifications on which the loan was made are being carried out. The worker has the privilege of building the house himself. The commission intends to give preference to labor in making the loans. Loans will be made for a period of 20 years at 5½ per cent.

Wall Street's Reason.

Read what the New York Times gives in its financial column as one of the outstanding reasons for the depression in business:

"There is a growing feeling in the financial district that the sooner Government control of wires, railroads, express companies and ships ceases, and the properties are returned to their owners, the sooner the business in general will get back on its feet. Earnings of the express companies and the railroads are considered as the most positive argument against federal ownership and control, and the mixup of telephone, cable and telegraph service under federal management is also considered as sufficient proof that Government operation should go."

World-Wide Bill of Rights For Labor.

The New York Evening Mail says:

"A response to the spirit of the time and an enabling clause to the new international law are found in the supplement to the peace treaty framed by the International Commission on Labor Legislation, of which Samuel Gompers is chairman, and adopted by the Peace Conference.

"It is a bill of rights for the man who labors that the conference has adopted. In its scope and significance it is not far different from the Declaration of Independence signed by the spokesmen of the thirteen colonies. It is, in effect, an annex to that document.

"The commission's plea for the adoption of this labor bill of rights was passed in the last analysis upon labor's instinct of

World's Workers

Legislation to enfranchise New Brunswick women on the same terms as men has been introduced by the Attorney General of the provincial government, and it is said that the bill's introduction as a government measure insures its passage.

More than 100,000 British farm workers are unionized. Their organization is known as the National Agricultural Laborers' union. They have more than 2000 locals. They're urging now a minimum wage of $12 a week for a six-day working week of 44 hours the year around. They would work unavoidable overtime at time and a half for week days and double time for Sunday.

During the war London and other cities in Great Britain successfully operated Government kitchens in the poorer quarters. Glasgow is about to launch into the enterprise of a kitchen that will provide 2000 portions each meal, to be served at noon and in the evening. Food will be supplied at the lowest possible price, but on a paying basis. The cooks will be trained and the aim is to raise the level as well as lower the cost of living. The Glasgow experiment is but the first of the kitchens to be established by the Corporation Committee for National Kitchens.

Higher coal prices will increase the cost of steel. English employers are opposing the higher price of coal because the consequent increased price of steel would hinder competition in the world's markets. A nominee of the British Coal Commission, J. T. Forgie, acting for the employers, states that the increase in the coal price would be due to the miners' demands for higher wages and better living conditions. Frank Hodges, the nominee of the miners on the commission, points out on the other hand that the steel industry has survived the increased cost of coal since the war. Robert Smillie, head of the miners' organization, asks (1) why an idle class should get 50 cents a ton profit from coal and thus hinder the steel industry, and (2) why the miner should not get decent living conditions by abolishing royalties to the owners and holders of mining property.

White collar workers are bestirring themselves in England. An interesting development of the trade union movement has taken substantial form in the Professional Workers' Federation. It comprises the National Union of Teachers, the Incorporated Association of Assistant Masters, the Association of Assistant Mistresses, the Custom and Excise Federation, the Second Division Clerks' Association, the Tax Clerks' Association, the Federation of Women Civil Servants, the London County Council Staff Association, and kindred organizations, which represent in all some 174,000 workers never before jointly organized to protect their special interests. The secretary of the Federation is F. H. Norman, 49 Bedford street, Strand. Some of the things the federation has undertaken are: Reform in income tax regulations, which it is claimed press too heavily on professional workers; more adequate supply of middle class houses and lower rents; reductions of railroad fares.

Pacific Coast Marine.

The schooner "Blakely," purchased by Captain Crott of Alabama for the Atlantic trade, has sailed from Bellingham on her farewell trip from Puget sound, where she was built in 1902.

It is reliably reported that the representative of a Chicago shipping concern, name withheld, in Seattle, will select a site for a $3,000,000 bonded warehouse. He plans to locate a similar building in San Francisco.

The Columbia river lightship, "No. 88," has been ordered to Bremerton, where a wireless outfit will be installed on board, which is expected to prove of great value in giving information as to weather conditions and shipping off the Columbia.

Federal Judge Cushman of Seattle has directed experts to determine if the wreck of the "Princess Sophia" is salvable. The "Sophia," owned by the Canadian Pacific Railroad, sank in a storm in Lynn canal, Alaska, last October, none of the bodies of her 150 passengers being recovered. The wreck is exposed at low tide and it is claimed that beachcombers have taken some of the cargo off, while some of the freight is being washed away. Accordingly, the inspection was directed.

The steel steamer "Heffron," which is being fitted up as a hospital ship at the Union plant of the Bethlehem Shipbuilding Corporation, made a successful trial trip on the bay during the past week, and will be ready for service shortly. The vessel will be sent to Vladivostok to bring back 1000 sick and wounded Czecho-Slovak soldiers who have been on duty in Siberia. The ship was built at the Moore shipbuilding plant in Oakland and is rated at 9400 tons deadweight. The vessel will be operated by the United States Shipping Board.

Captain E. L. Whitney of Mobile, Ala., has purchased the four-masted schooner "William E. Burnham" from Walter S. Scammell. The consideration was $90,000, and this is considered as a fair price when it is considered that the outstanding charters will bring goodly profit. The "Burnham" was purchased by Scammell more than two years ago and since that time has made a tidy bit of money. The former owner secured his vessels with a number of high-priced charters for the case oil business when it was good, and later when the signing of the armistice caused a slump he smiled and suggested that it was always well to prepare for a rainy day. Whitney is expected to make the vessel nearly pay for itself during the next two years.

Caught in a ripping southeast gale and a blizzard, the three-masted steam schooner "Premier" of San Francisco was wrecked three miles east of Cape Lutke, near Bristol bay, Alaska, after going ashore early on the morning of May 13, according to advices received by the marine department of the Chamber of Commerce. The captain and crew are reported safe. The advices stated the schooner has broken up and the cargo is a loss. The "Premier" left San Francisco in ballast for Grays Harbor on April 2. The schooner took on a cargo of lumber and shooks and departed from Grays Harbor April 23. The "Premier" was owned by the Alaska Packers' Association and was valued at $50,000. The vessel was built at Port Ludlow, Wash., in 1876.

Following the return of F. M. Stark of the Stark-Mason Steamship Company from a trip along the lower coast, the firm has announced its intention of branching out and securing more tonnage to handle the business along the west coast of Mexico. At present the company is operating the steamship "Centralia," and this does not provide for enough sailings to handle the increasing volume of business. Mason said that the company is now on the lookout for one or more new vessels and will make purchases if the right sort of tonnage is offered at the right price. Recently there has been a decided improvement in the lower coast business, owing to the fact that more normal conditions in Mexico now permit many of those formerly working mining and other concerns to operate. Stark reported upon his return that the company could secure enough business to keep three "Centralias" in operation.

The Luckenbach Steamship Company is making extensive arrangements to install a larger fleet in the service between the Atlantic and San Francisco than was used before the war, according to information received during the week. A. P. Hammond, San Francisco manager, is now in New York discussing the new plan, and he is expected to return within another week. That the Luckenbach company is confident that there will be a vast increase in the steamship business was noted a few weeks ago, when Hammond shifted the offices in the Merchants' Exchange building from the old quarters to a new suite of offices, which are twice as big as those formerly occupied. Hammond was one of the first of the local steamship men to secure ships from the Shipping Board, and the company has managed and operated more than a score of the wooden and steel steamers during the last few months.

Captain John Wallace, secretary of the San Francisco Bar Pilots' Association, during the week exhibited the plans for a new pilot-boat which will be submitted to the builders for bids as soon as the expected increase in shipping at the port materializes. The vessel will be christened the "William Denman" in honor of the well-known San Francisco admiralty attorney, and will outclass any of the former pilot craft of San Francisco. It will be provided with equipment as luxurious as many well-known and far-famed private yachts. The vessel will be 110 feet along the water line and will have a beam of 28 feet. It will be of wooden construction, will be ketch-rigged with a single deck. The model will be of the Gloucester bow elliptical transom stern type with a deep hollow keel. The craft will have two masts and will be bald-headed. The engine will be amidships and the engine-room will jut into the wing of the starboard side, leaving the port side free for passage. The forecastle will be big and ample enough to give a lot of room to a crew of eight and another stateroom will be provided for the engineer and boatkeeper. The main saloon, dining-room and sleeping quarters for eight pilots will be luxurious and commodious. The plans and specifications have been prepared by D. W. and R. Z. Dickie, and according to the experts who have seen them provide for a vessel that will eclipse anything ever dreamed of by local mariners.

Rebuilding of the steamer "Callao," one of the first of the ex-German interned steamers to arrive at the Canal Zone from Peru, has been completed. Prior to her departure from the Balboa plant for New York, via the Canal, this vessel underwent a successful trial trip, during which her machinery was operated to maximum capacity. The "Callao," formerly known as the "Sierra Cordoba," of the North German Lloyd Steamship Company, was one of four of the best-equipped passenger vessels of this company, plying between Bremen and Buenos Aires. The vessel is fitted with two triple-expansion, three-cylinder, reciprocating engines, driving twin screws, power being furnished by four marine type Scotch boilers at a working pressure of 200 pounds. The boilers are operated with coal as fuel and are fitted with the Howden forced draft system. The auxiliary machinery consists of the usual pumps, such as feed, bilge and ballast, fire, ash ejector, and sanitary; one Atlas-Werke evaporating and distilling plant, two 60-K. W. D. C. generator sets, one auxiliary condenser, one Vulcan-Werke ash hoist engine, one Clayton system disinfecting machine, and one Atlas-Werke main and one auxiliary steering engine, fitted with a telemotor control gear. When this vessel was towed into Balboa by the dredge "Culebra," which had been dispatched to Peru for this purpose, she was in a very dilapidated and crippled condition, due to her long internment and to destruction wrought by the German crew. Practically no work of repairs had been carried on after Germany's declaration of war, leaving the hull in very poor condition and badly corroded.

In order to eliminate the congestion of travelers in Hawaii, the steamship companies are doing everything possible to persuade tourists from journeying to Honolulu, was announced yesterday. The Matson Navigation Company recently sent hundreds of letters to persons who have booked passages on the steamers of the line, explaining that unless return transportation has been secured it were better to remain away, for every sailing on the company's ships has been booked at Honolulu and Hilo for the remainder of the year, with the exception of any sailings that may be made on the "Wilhelmina," "Maui" and "Matsonia." Relief will be afforded when the big three are returned from transport service on the Atlantic. At present nearly all of the passenger service is being handled to and from the islands by the Matson ships, and the monthly accommodation for each one-way trip is only 200 persons. Formerly the Pacific Mail, T. K. K. and Oceania steamers took care of a lot of travel from Honolulu, but the through passengers on these ships nearly fill all of the accommodations, and it is only occasionally that there is room for an extra to be picked up at Honolulu. The British Government has stopped all passenger travel to and from Europe via the Suez canal, and all must come either to San Francisco or to Victoria. The Empress steamers have been requisitioned to bring British troops to Victoria, and thus there is congestion everywhere. The commandeering of the China Mail liner "Nanking" also adds to the crowding, and the passengers booked to come here on this ship are trying to procure transportation elsewhere.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, MAY 28, 1919.

THE WASHINGTON CONFERENCE.

Under the signature of Vice-Chairman Stevens, the United States Shipping Board has telegraphed the following self-explanatory invitation to the various District organizations of the International Seamen's Union of America:

In accordance with following resolution of Shipping Board, your organization and membership is invited to send representatives to an Ocean Marine Industrial Conference to be held at Washington, D. C., beginning June 4th, ten o'clock.

"Whereas, The successful development of an American Merchant Marine is largely dependent upon the full co-operation of the vessel owners, operators and managers, the seamen and the Government; therefore, be it

"Resolved, That the Shipping Board call a conference at Washington, D. C., to begin on or about June 4th, 1919, between Owners, Operators and Managers of ocean-going and coastwise steamships in the United States, the various Organizations of Seamen and Licensed Officers and interested departments of Shipping Board and other Government departments and agencies, for the purpose of establishing by agreement among the various interested parties suitable agencies for the consideration and adjustment of labor issues and for the promotion of efficiency and industrial harmony in the American Merchant Marine."

The JOURNAL has already dealt editorially with the very question now brought forward by the Shipping Board.

There can be no doubt but that a National joint advisory council of merchant shipping, properly constituted, can be made a splendid agency for the promotion of industrial peace and good will.

As a basis for success, however, it must be clearly and distinctly understood (1) that such a council must necessarily be composed of representatives elected by the existing organizations of shipowners and seamen; (2) that both parties have an equal voice and vote in the deliberations; and (3) that the council must not interfere with, or assume to restrict the freedom of action of either party.

If based upon these premises a National joint advisory council of merchant shipping, or a council under any other name, will in the very nature of things foster co-operation, promote confidence and help to create that joint-responsibility which is so essential to the successful operation of our country's great, new Merchant Marine.

Here's success to the deliberations of the Washington Conference!

A CENTURY'S PROGRESS.

It is surely a remarkable coincidence that man's first genuine attempts to cross the Atlantic, by air route, are being made just one hundred years later than the first steamship voyage over the same turbulent ocean.

Of course, one hundred years pass swiftly when measured by the inventions and improvements that develop transportation. Yet even the seasoned travelers by trans-Atlantic liners of the present day will probably have to be reminded that the A-1 passenger ships were still using sails for auxiliary power as recently as 1880. Indeed, few travelers of any sort, sharing the luxurious accommodations of the most recent type of first-class ocean steamship, can readily appreciate the vast mechanical development illustrated by the modern "liner" as compared with the courageous little steamship "Savannah" which started on her trip from Savannah, Georgia, during May, 1819.

To be sure, the attempt to cross the Atlantic under steam propulsion was not by any means the first ocean trip by a steam vessel, any more than will be the anticipated Atlantic aerial crossing by aircraft. In such experiments pilots and engineers build up their confidence by any number of shorter voyages, until at last the more hazardous attempt becomes the logical next step. Steam had been occupying the attention of inventors and experimenters as a means of propelling vessels from the time of the Potomac River experiments of James Rumsey in 1784, and with Fulton's success on the Hudson River, in 1804, the world witnessed a rapidly expanded river and harbor boat service centering at New York. Steam vessels quickly began the shaping of an extensive commerce on the Hudson; they spread to other rivers farther south, reaching Philadelphia and Trenton. They plowed regular pathways across the bays and sounds along the Atlantic Coast.

Then, by degrees, steam vessels forced their way into deeper waters, until it could hardly have failed to be the inspiration whereby some bolder spirit would wish to start forthright to cross the ocean. Captain Stevens Rogers in the "Savannah" finally essayed the role. His craft was a three masted, square rigger, with a single funnel, and paddle wheels amidships. Her paddles were so designed that they could be unshipped whenever the weather should prove unfavorable. On this trip out the "Savannah" was able to use her paddles during eighteen days out of the total of twenty-six occupied in the voyage to Liverpool. At any rate, this is the printed record. But it may as well be admitted that there is, as usual in the case of early steam vessels, a considerable variation in the accounts of the "Savannah's" achievement. Some say she made her trip in twenty-five days, others give it as twenty-nine. One account relates that she had to fall back on her sails for the latter part of her voyage because, after about twelve days out, the engine had consumed all the coal that could be carried, even though the entire cargo space had been requisitioned for this fuel.

This much for the "Savannah" as the trans-Atlantic pioneer of steam. She drops out of the ordinary record, practically with this voyage. Thereafter, only desultory steam crossings were made until 1838, when regular trans-Atlantic service commenced with the steamers "Sirius" and "Great Western." These ships were able to make the trip in from fifteen to eighteen days, without carrying much sail; but the public did not seem to appreciate such "rapid" service, so the "Sirius" was withdrawn after a few trips, and, while the "Great Western" continued in operation, she was an item of expense rather than profit to the company that owned her. It was not until 1839, when an enterprising gentleman from Halifax, Nova Scotia, Samuel Cunard by name, made regular trans-Atlantic service by steamships a recognized success, financially and otherwise. And now the question to be is this: Who will make the trans-Atlantic air-line a commercial success?

FURUSETH'S REPORT.

Pursuant to the announcement made in last week's JOURNAL a mass meeting of all the maritime unions in San Francisco was held on the evening of the 21st inst. in the meeting hall of the Sailors' Union of the Pacific at 59 Clay Street. Comrade P. Flynn, Secretary of the Marine Firemen, Oilers and Watertenders of the Pacific, did the honors of the occasion as presiding officer.

After a few brief prefatory remarks with reference to the object of the meeting the chairman introduced the speaker of the evening, Andrew Furuseth, President of the International Seamen's Union of America.

Furuseth related at some length his observations and experiences met with on his recent visit to Europe in the interests of the organized seamen of America. As most of what he told his hearers is contained in his reports, as published in this and previous issues of the JOURNAL, it will only be necessary here to take note of a few incidental phases of his journey which are of rather more than passing concern to seamen.

Speaking of how the Seamen's Act was viewed by Europeans he said that the seamen over there apparently did not understand it very well, but were nevertheless well disposed toward it. Government officials and shipowners, especially the latter, were, however, frankly hostile to the Act. Their economic bias made it impossible for them to view it in any other light. Wages for seamen in all departments had soared to unheard of levels, and were likely to remain at the new levels thanks to the operation of the American Seamen's Act. In fact, European seamen's wages, with a few unimportant exceptions, were on an average as high as those received by American seamen. Thus is sustained the contention of those who have claimed all along that the working of the Act would tend to equalize the cost of operation as between American and foreign ships. And this is the fly in their ointment which has so upset the usual tranquillity of the worthy European shipowners. They believe in competition, of course; but only when all advantages are on their side.

One thing rather surprised Furuseth. Wherever he went in Europe he invariably found that the government officials and the shipowners had information of American court decisions in cases involving the Seamen's Act long before he himself received such information. This, he pointed out,

showed how seriously the Act was regarded over there.

The speaker also told of the difficulties of traveling in Europe. Without a passport it is practically impossible to move about freely, or journey from one country to another. And passports are exceedingly hard to obtain. Hence, outside of England and France, Norway was the only country he had been able to visit. He had great hopes, however, of the cooperation of Scandinavian seamen, as they are well organized, and seemingly determined to have the more beneficial features of our Seamen's Act incorporated into their own laws. He also found the government officials there less hostile to our cause than in most other places.

In commenting on the outlook for the future of the European workers he was inclined to be pessimistic. He likened conditions there to a prairie fire fanned by a strong wind, the wind of general discontent among the masses. The great need of the workers, he said, was leaders with vision and the courage to demand and exact justice. There may be such leaders in the making. But if so, their influence as yet is nil.

Referring to the proposed organization at Washington, D. C., under Government auspices, of a "maritime board" to deal with all questions affecting the relations between shipowners and seamen, Furuseth felt that such a board may be a good thing for seamen, and again it may not. He didn't know which, and therefore thought it was up to us to find out.

The meeting was well attended. That the audience was interested in the subjects discussed was shown by the many requests addressed to the speaker for information, and elucidation of points brought out by him. Proceedings came to a close with a stirring appeal from Chairman Flynn for harmony and closer cooperation among the various organizations represented in the meeting, both officers and men.

The many friends and well-wishers of Comrade Furuseth will no doubt be glad to learn that he has returned from abroad in much better health than when he set out on his journey. From present appearances he will yet be spared to work for many years to come for the cause to which he has rendered such signal service in the past.

When, during the war, the United States requisitioned certain Dutch merchant vessels a few publicists waxed rather hot over this alleged injustice to a neutral nation. Now it seems that worse things might have happened. The annual report of the Holland-America Line for 1918 shows a net profit, including the balance from the preceding year of Fl.20.924,821 ($8,369,600), The money received from the U. S. Government for charter hire of vessels forms the largest item. This bountiful harvest enabled the directors to write off Fl.5,310,594, to pay to the employees' pension fund Fl.100,000, to transfer to reserve fund Fl.3,200,000, to reserve for building purposes Fl.2,500,000, and to transfer to extra reserve fund Fl.1,500,000, and last, but not least, to declare a dividend of 40 per cent. Who would not be perfectly happy under like circumstances?

The man who questions the continued growth and success of the labor movement pays a very small compliment to the potentialities of human nature.

COURTS ASSAIL UNION TREASURY.

Coronado Coal Company Is Awarded $600,000 in Damages From United Mine Workers of America.

The United Mine Workers of America will appeal to the United States Supreme Court in the suit brought against the miners by the Coronado Coal Company, in which a decision has just been rendered by the United States Circuit Court affirming the decision of the United States District Court at Fort Smith, Ark.

The original verdict against the miners in this suit was for damages of $200,000, which, when trebled under the law, amounted to $600,000.

Determination of the miners to appeal was announced by William Green, Secretary of the United Mine Workers, who is in New York to attend a meeting of the Executive Council of the American Federation of Labor.

Secretary Green's statement follows:

"The United States Circuit Court has decided against the United Mine Workers by affirming the decision rendered against the organization in the Coronado Coal Company case by the District Federal Court at Fort Smith, Ark.

"Officers of the United Mine Workers have instructed their attorneys to appeal this case to the United States Supreme Court. They advise us they have forty days in which to perfect an appeal.

"We propose to fight this case to the end and through the court of last resort.

"This decision affects the existence of every labor organization in America. The issue involved is so vital that a decision must be sought from the highest court to which we can appeal. Everything will be done that can be done to win this case."

The history of the Coronado Coal Company's suit against the United Mine Workers of America is told in detail in the report of the Executive Council to the American Federation of Labor convention in St. Paul. Dealing with that suit, the Executive Council of the Federation said:

Suit Charging Conspiracy.

"A. S. Dowd, receiver for nine coal corporations, brought action against the United Mine Workers of America, July 25, 1914, charging that the organization since 1898 had been in a gigantic conspiracy with union operators to interfere with the production and commerce of the corporations that followed a non-union policy by means of strikes and attendant violence.

"The case grew out of a local strike of the Arkansas miners. The Bache-Denman Coal Company alleged that they were damaged by reason of the strike and that the officers and members of the United Mine Workers of America conspired to prevent the operation of their mines and the shipment of their coal in interstate commerce. A demurrer was sustained to this complaint by the Federal Judge of the District Court. An appeal was made to the Circuit Court of Appeals, but that court held that the complaint was good and remanded it for trial. In its opinion, the Circuit Court took the position that a labor union, although unincorporated, could be sued in its union name. This opinion of the judge is without precedent. We reported this decision to the 1916 Convention.

"The trial took place before Judge Elliott. After the jury had been out about forty-eight hours they were called before the court and instructed by the judge:

Charge By Judge.

"'Now, gentlemen of the jury, this is a pretty serious situation, and I want to say to you that the court has no thought at all of discharging you. You were sworn upon your oaths to do your duty as jurors. In the opinion of the court there is no reason on earth why reasonable men, with due regard for right, and each having due respect and consideration for the other's opinion, should not arrive at a conclusion in this case. What would be a fortune to either of you or I has already been spent, and a failure to render justice in this and others is what brings the courts into contempt.

"'I say this to you that you may understand the seriousness of your situation. The facts in this case have got to be found by a jury. Another jury will have no better opportunity of knowing what these facts are or be in any better position to determine these facts than you, and it is your duty as jurors under your oaths to get together and return a verdict.

"'Now the Federal Courts recognize the right of this court under these circumstances to say what this court believes in relation to the facts in this case, and you are advised that this court is of the opinion that the facts in this case justify you in the conclusion, overwhelmingly, that it was the policy and therefore the agreement for years of this national organization to prevent mining of non-union coal for the unlawful purposes named in this complaint that it might not come into competition with union-mined coal; that there is no question in this

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., May 26, 1919.
Regular weekly meeting came to order at 7 p. m., P. B. Gill presiding. Secretary reported shipping good; men scarce. Full Shipwreck Benefit awarded to five members of the crew of the schooner "William Olsen."
John H. Tennison and P. B. Gill were elected to represent the Union at the Washington conference called by the Shipping Board.
JOHN H. TENNISON, Secretary.
Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., May 26, 1919.
No meeting; shipping slow; members scarce
J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., May 26, 1919.
Shipping fair; prospects good.
W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, May 26, 1919.
Shipping fair; few members ashore.
H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, May 26, 1919.
Shipping dull.
P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, May 26, 1919.
Shipping fair.
ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, May 26, 1919.
Shipping rushing; men scarce.
JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, May 26, 1919.
Shipping very good.
HARRY OHLSEN, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, May 19, 1919.
Shipping dull; prospects poor.
JACK EDWARDSON, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., May 22, 1919.
The regular weekly meeting was called to order at 7 p. m., Ed. Andersen in the chair. Secretary reported shipping improving. It was decided to send one delegate to the coming Ocean Marine Industrial conference to be held in Washington, D. C., on June 4th.
EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, May 15, 1919.
Shipping medium.
LEONARD NORKGAUER, Agent.
Grand Trunk Dock, Rooms 203, P. O. Box 214. Phone 2233.

San Pedro Agency, May 15, 1919.
No meeting Shipping good; no members ashore.
JOE MACK, Agent.
No 613 Beacon Street. Phone Sunset 336. P. O. Box 54.

DIED.

John Miller, No 2578, a native of Denmark, age 33. Died at Los Angeles, Cal., June 6th, 1918.

The steamer "City of Eureka" has completed her trial trip on the Columbia river, fulfilling expectations of the builders of getting into action just thirty-seven and one-half days after her keel was laid.

The new steamer "Meriden," a 3800-ton vessel, was launched during the week from the shipyard of the Albina Engine and Machine Works at Portland. She is the seventeenth hull launched from the yard.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Organized labor in the railroad industry has vetoed the return of the properties to private management. It proposes, before the new Congress shall begin to make itself ridiculous in this direction, to convince even Congress that it is too late to turn them back on any terms that will be satisfactory to the stockholders or the officials of the railroad companies.

Glenn E. Plumb, chief attorney for the independent railway brotherhoods and for the Railway Employes' Department of the A. F. of L., is authority for the announcement that neither the Underwood bill nor the Watson bill can be passed and enforced, because either bill, if passed, will lead to a strike.

These bills provide that the railroad properties shall go back to the private owners with a guaranteed net income upon the "property investment accounts" of the companies. In the Underwood bill this is 6 per cent., and in the Watson bill it is 6½ per cent. These "property investment accounts" are the private companies' own claim as to the value of the property. They represent all the wind and all the water and all the robbery that is embalmed in the stock and bond issues of all the railroads. The total is about nineteen billions of dollars.

If Congress adopts the Watson bill, which is the one drawn by the Warfield association of stock and bond holders, this huge bulk of wind and water and robbery is guaranteed by the Government, and the consumers of food and fuel and clothing in this country will have to pay $535,000,000 more next year, in higher freight and passenger rates, than they are paying this year. The Underwood bill means an additional tax upon our family incomes of $440,000,000 a year. Of course that is an indirect method of reducing wages, because it adds to the cost of living. If either of these bills is enacted, the 2,000,000 railroad workers will promptly call for another wage increase. Plumb says that that will be absolutely necessary, because they are now just keeping up with the higher prices of the necessaries of plain living.

But Congress may think that instead of raising our freight and passenger rates the necessary 15 per cent. to pay the private stockholders their dividends on the wind and water and robbery, they will get the money by cutting wages.

"If wages are cut," says Plumb, "there will be a strike that will paralyze the industrial life of the country. To make up the $535,000,000 additional revenue that the Watson bill provides, wages would have to be reduced about 40 per cent. Resistance to such a cut would be inevitable. Indeed, resistance must be expected to any reduction in railroad wages, whether it be direct or indirect reduction."

Henry Sterling, legislative agent of the American Federation of Labor, calls to my notice the fact that, according to records carefully compiled by the Labor Division of the Massachusetts State Bureau of Statistics, the average income of all workers in the mills and factories of that State in 1917 was only $759. That measures the standard of living which was possible to the wage workers of Massachusetts at the height of the prosperous period up to the year 1918. While railroad employes are not included, it is notorious that railroad employes in Massachusetts did not average a higher rate of pay, in 1917, than the workers in the other industries. The number receiving very low wages was many times as great as the number who were reasonably well paid.

"This average income of $759 for Massachusetts is a shade higher than the average throughout the United States for 1917," said Sterling, to-day. "It is higher than the average for New Jersey, or for Pennsylvania, or for other industrial regions, with the exception of New York City and a few of the newer developed and organized places. Massachusetts labor is well organized, as is indicated by the fact that the 1,112 unions, out of a total of 1,450 or more, reporting on unemployment to the State Bureau last December, gave their membership as 221,000. The State has a population of 3,000,000 odd.

"This average income, then, represents very fairly the income of American labor for 1917. We all know how the cost of living was then mounting up."

Sterling hopes to see the Atlantic City convention recognize the land question and the money question as the two fundamental issues to be settled in order that industrial democracy may be attained. He thinks Secretary Lane's land scheme for returned soldiers is a step in the right direction, but that the action of the North Dakota Legislature in un-taxing the improvements upon land is still more important. New Zealand, he finds, has gone farther toward solving the land question than has any other Anglo-Saxon country.

"From 1896 to 1911 the cost of living in New Zealand increased only 8 per cent., while here it has increased 54 per cent.," he said. "Yet at the same time, wages of men in New Zealand increased 40 per cent., and wages of women and children 70 per cent. They were able to do it and still control the cost of living, because they solved the control of land."

Tom Flaherty of the Postal Employes, who is trying to get a living wage for the victims of Burlesonism, has received from Otto H. Kahn, the New York banker, a heart-rending appeal for lower taxation of the income of millionaires!

How would the average Massachusetts mill worker with his $800 or so for an annual income, or the postal clerk with his pinched salary, like to be in the terrible fix described by Banker Kahn as follows:

"Let us take the case of a man whose income is $500,000. The average Federal Income Tax on this for 1919 is $323,000, leaving $177,000. From this remainder must be deducted state and municipal imports of various kinds. There must also be taken into account contributions to charities and to other undertakings for the public good, which contributions to all intents and purposes amount to a tax, in the case of every right-minded man, even though a voluntary tax. It may then be taken, that out of $500,000 income there is left only $100,000 to $150,000 for a man to defray his own and his family's expenses and to meet the demands of his business, or otherwise to save and invest."

Wouldn't that be tragic?

Mr. Kahn also wants us to give back the railroads to the stockholders, with that government gift of the right to lower wages and raise the cost of living, contained in the Underwood and Watson bills.

Among the men who have been driven into the organized labor movement during the present year, due to their inability to maintain their previous standard of living at their old salaries, are the scientists employed in government departments here. Men with university degrees, many of them authors of scientific books, or discoverers of valuable methods of treating raw materials—these men have formed a new local of the National Federation of Federal Employes, with 500 members signing the charter roll.

Dr. Rodney H. True of the Bureau of Plant Industry is president and Dr. P. G. Agnew of the Bureau of Standards is secretary of this organization of scientists under the American Federation of Labor. They frankly declare that trade unionism is the only road to dignified and effective dealings with the boss, which is Congress, on questions of salary and the conditions of their work. The Federation of Federal Employes has been in the field for three years; in that time it has secured more concessions from Congress than all the private and political "pull" secured in a generation.

To-day the Federal Employes' locals in the national capital have about 25,000 members. The past year has witnessed the formation of the local union of railway clerks, also, with 3000 members, and the rise of the unions of high school and grade school teachers. The city of Washington has now almost 100,000 trade union members—putting it upon the map of the labor movement to stay.

These 100,000 members of the labor movement have endorsed Miss Alice Deal, president of the High School Teachers' Union, as their candidate for member of the Board of Education, which is appointed by the District Supreme Court judges. Miss Deal is the labor official who made a local and national issue of the action of the reactionary board, some months ago, in fining a teacher a week's salary before warning her against doing the thing for which she was fined. And the offense she committed was a failure to agree with the opinions held by some of the board (unknown to her at the time) as to whether a Bolshevik is a Nihilist. This high-handed denial of the right of an employe to draw her pay, quite apart from the attempt to suppress private opinion, has aroused the labor unions here to make a finish fight on this Board of Education. If the judges fail to select Miss Deal for the place which will soon be vacant on the board, there will be further developments worth printing.

Even the school janitors have taken warning, and have organized under the A. F. of L.

Malays live in their houses until they collapse from old age, and then build new ones. Usually one finds around the house various kinds of fruit trees, especially the cocoanut, the nuts from which are generally gathered by trained monkeys. These monkeys have a short tail, about an inch long, and are unusually intelligent. When a cocoanut is wanted the monkey is sent up the tree and he will there select any particular nut that his master tells him, from perhaps a bunch of twenty. It is quite common to hear a conversation between monkey and master.

Demand the union label.

THE MINIMUM NEED.

(By W. B. Rubin.)

The principles of minimum wage and maximum profit are economically necessary in our present industrial system, for the time being, at least, regardless of what other views we may hold as to their philosophical soundness.

If, however, you merely fix a minimum wage and not a maximum profit, you only raise the evil which you seek to remedy to a higher level, and it makes very little difference to the stomach whether one is hungry at the base or the summit of the mountain of life's struggles.

If a minimum wage is to be fixed,—and that can only be done by legislation, provided it is constitutional,—if such legislation earnestly seeks to remedy all the evils that ensue from inadequate pay, then the legislature must fix a maximum profit as well, thereby creating a standard below which no wage shall be paid and no greater profit shall be charged, so that the minimum pay will always be sufficient for the purchasing power necessary to a fair living. But if you create a minimum wage and do not create a maximum profit, and sometimes even when you fix a maximum profit, you nevertheless make for an unnatural situation because what may be an adequate minimum wage or reasonable profit to-day, after the adjournment of the legislature may prove to be vastly different.

If we are to have a minimum wage and a maximum profit as an expediency of the times, bottoming it on that premise, then the legislature ought to delegate its power to a commission, not only with rights and duties to collate evidence as to what would constitute minimum wage and maximum profit within a given period, but with the express power to shift and change the two so as to adjust the wage to the profit and the two to the situation at hand.

These things are fundamental:

1. Man desires to live.

2. Man desires to live decently.

3. What constitutes a decent living must be compatible with the American conception of a decent living, which includes,—

a. A fairly comfortable home.

b. Fairly comfortable clothing.

c. An adequate quantity of food of the proper quality.

d. An ample opportunity for recreation.

e. All the reasonable incidentals that a to d both inclusive carry with them to their proper consummation.

In the desire to live are found the natural animal instincts,—all the hopes the human mind is capable of generating and the heart of holding.

The ability to provide for a decent living measures the American standard of living. Hence the corollary,—to live decently, one must have sufficient earning capacity to acquire a decent living.

Therefore, while a wage of One Hundred Dollars per month to-day may be ample to provide for a decent living,—such as the great average of Americans will declare a decent living,—it may not be so a month hence when the increased cost of living has out-distanced the raise in wage.

There can be no such thing as a fixed wage,—not even a fixed minimum wage, for that depends not upon the old theory of supply and demand, but upon organized supply versus organized demand. But one thing can be fixed beyond equivocation, beyond debate, and that is the minimum need that every person must have to supply his normal physical, moral, and social desires, that he may live a normal life, and that the state may have the benefits of such normal life.

Therefore, the thing for the legislature to do is not to dabble with minimum wage, doubtful in its constitutionality, doubtful in its philosophy, doubtful in its workings, doubtful in its results, but to standardize the minimum need of so much housing per person, so much clothing, so much food, so much entertainment, and so forth, under the broad police powers, where the constitution finds refuge from successful attack, and it is not merely a suggestion, a legal camouflage from court attack, but an appeal as rational as true. Then it will matter little how life's market fluctuates in profits and losses, for if the wage shall be gauged by the minimum need, then the evil sought to be remedied shall have been fully reached, and those who gamble in the necessities of life will be met at every increment of profit with a corresponding increment of wage, at all times ample to satisfy the minimum need of man.

THE SEAMEN'S ACT.

(From the Springfield, Mass., Republican.)

The last protocol of the draft convention to govern the world's labor, adopted by the peace conference, provides that none of the high contracting parties shall be asked or required to "diminish the protection afforded by its existing legislation to the workers concerned." Specially in the minds of the framers of the convention was the American Seamen's Act of four years ago, which is believed to be slated for attack at the next session of Congress. Some government figures that have just been issued are well calculated to meet such an attack, demonstrating that while benefiting the sea labor of the world, the act has been and is to the distinct advantage of American commerce.

A vital point of the act is its protection of the foreign sailor in his right to leave his ship at an American port, and to receive from his employers one-half of the wages that have been earned. The president of the International Seamen's Union, Andrew Furuseth, who worked for twenty years for the passage of the law by the American Congress, maintained that its effect would be toward equalizing the pay of sailors of countries carrying on commerce with the United States. That this prophecy was sound is strikingly demonstrated by the report of the shipping board's marine and dock industrial relations division, which has been under the direction during the war of former Governor Bass of New Hampshire. Wages of British seamen and firemen ranged in 1911 from $20 to $25 a month, while American wages were from $30 to $50. The American rate for both seamen and firemen had by the end of 1918 reached $75. With foreign sailors free to seek employment at these wages foreign ships were faced with the alternative of raising wages or losing their crews.

An examination of the articles of twenty-one British ships clearing from New York last December showed that seven had hired all or part of their crews in New York and all but one were paying the American rate of $75 a month. The other fourteen were paying their British crews a bonus in each case of $15 a month, bringing their actual pay to $72.50 for seamen and $75 for firemen. Each of eight Norwegian ships, four of six Danish ships and three of four Swedish ships paid the American rate in dollars, while the remaining Scandinavian vessels paid bonuses of from 120 to 140 per cent. in addition to the low national scale of about $21.

This glimpse of the foreign records indicates a rapid passing of the time when the foreign merchantmen could underbid American vessels as carriers. The tables of wages show not only an actual steady increase in pay of American sailors, but an increase relative to the cost of living. The service has become attractive to a higher quality of labor. Governor Bass's board also demonstrates that compared with conditions before the war the cost of operation of American ships is less than that of their foreign competitors. The United States clearly has everything to gain and nothing to lose by continuing the law that sets the pace for the merchant navies of the world.

The waters surrounding the Hawaiian Islands outside of the coral reefs, which make beach bathing safe, are infested with enormous sharks to such an extent that a Japanese expert in fishery has organized a comprehensive plan of shark hunting for the oil and skins.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

self-preservation and upon its desire for the preservation of society upon its present foundations of reason and sanity.

"There is nothing that savors of unreasonableness in its stipulations, or in any other clause in the proposed bill of rights for the vast mass of the peoples of all countries.

"It is peculiarly fitting, too, that these pledges and declarations should be made a part of the treaty of peace.

"This war has been fought and won primarily to liberate man—to liberate him from the horror and the menace of invasion; to vindicate his freedom, his sovereignty and the integrity of his home and his soul.

"It would have been a grave act of omission if in the definition of the new and juster foundations of the new order of the world the rights of nine-tenths of its population—its workers—had found no affirmation.

"The eight-hour law, the prohibition of child labor, a reasonable living wage—all these declarations are expressions of the new brotherhood of man, the new realization of the right of peoples to govern their own lives and to work out their own des tinies.

"Labor has a right to specific inclusion in this new brotherhood, this new guarantee of the freedom of self-determination and self-development.

"The world could not, in this unprecedented period of righting of wrongs, have denied to its working people—the foundation of its power and its happiness—the guarantees to which they are plainly entitled."

"Baby Aristocracy Means Chance to Live.

The Children's Bureau of the United States Department of Labor has created an "aristocratic" class for babies, and is battling to put every babe in this exclusive set.

To be a member of the "aristocracy" a baby must meet these requirements: The father must earn a fair wage; the mother must not have been gainfully employed either during the year before or the year after the baby's birth; the mother must at least have fair medical care when the baby is born; both father and mother must be able to read and write; the house the baby lives in must be well ventilated, clean, sanitary and not overcrowded.

After a study of 25,000 cases the children's bureau reports that these five conditions are absolutely necessary for a baby to secure entrance into the "artistocracy" class.

In a study of Brockton (Mass.) babies, the bureau says that only 205 of the 1210 babies born alive in that city during the year could meet the "aristocratic" requirements. Fifty-five per cent. of these babies were barred from the "aristocracy" because their fathers' earnings were less than the standard established.

A number of babies were unable to qualify because their mothers could not read and write. The report points out that invaluable sources of information on the care of the baby are closed to the illiterate mother. The greatest mortality was found among the babies who live in the most congested homes, although Brockton, it is stated, has no acute housing problem. The report recommends the passage of laws that will make overcrowding impossible.

No General Increase.

If the workers could subsist on butter and eggs they would now be enjoying a substantial decrease in food cost. The weather has affected these commodities, and their decreased prices for February 15, 1919, as compared with January 15, 1919, according to the United States Bureau of Labor Statistics, was as follows: Fresh eggs, 33 per cent.; storage eggs, 22 per cent.; butter, 19 per cent.

During the same period 11 articles increased in price, ranging from less than five-tenths of 1 per cent. for sirloin steak to 5 per cent. in the price of onions, cabbage and coffee. There was no price change in rib roast, plate beef, bread and corn flakes.

Because of the slump in butter and eggs a total decrease of 7 per cent. for the month is recorded, when in fact, other of the score of food commodities have either remained stationary or been advanced.

In February, 1919, the cost of all articles of food combined was 7 per cent, higher than in February, 1918. Round steak, chuck roast and plate beef each increased, per pound, 24 per cent.; sirloin steak, chuck roast and prunes, 23 per cent.; rice, 21 per cent., and coffee, 20 per cent. Navy beans decreased 24 per cent., and strictly fresh eggs, 17 per cent.

Can't Examine Men to Break Unions.

Physical examination of workers cannot be used to break up unions, declares Ethelbert Stewart, director of the investigation and inspection service of the United States Department of Labor.

"Many of our large corporations have a medical examination of employes," he said. "Sometimes it is all right; more often it is not. Very often these medical examinations are made with the man's questionnaire in front of the doctor; in other words, it is simply a blacklisting proposition. If a man has ever had any sympathy with a trade union, that fellow is not able to do the work; he has something the matter with his heart. There is a feeling among the workmen of the United States that that thing is being used by the company doctors to blacklist trade unionists. In a great many instances they are wrong, but they are right in enough cases to make them mighty chary of the whole proposition. The use of the company physician for examination has been so abused and is so capable of abuses—in some instances it is so infernally rotten—that no help for medical or physical examination by privately paid company or corporation doctors can be secured; in fact, it will be fought from start to finish.

"I believe that every one will agree with me that the place in which any man or woman works is society's business, absolutely; but when society undertakes to regulate that, and puts the regulation into the hands of men who use that power to accomplish an entirely different purpose, a protest is going up from this country that will stir things up a little."

COURTS ASSAIL UNION TREASURY

(Continued from Page 7.)

court's mind but that that strike was ordered down there for that purpose to prevent the mining of non-union coal in these plaintiffs' mines; that the strike was called by those who were the instrumentality of the greater organization, the general organization, the defendants, and that their act was its act, and that they put into motion the force that destroyed this property, and that that force was put ino motion for the purpose of preventing the mining that coal, the shipping of that coal, the running of these mines.

Would Not Have Been Trouble.

"'Why, this court has not a thought that there would ever have been any trouble there if it had not been for the prevention of the mining of non-union coal. Now, that is the judgment of this court and if it were my duty to decide it I would decide it here. Now you are not bound by my opinion. I have a right to give you my judgment, however, you are the sole and exclusive judges of the facts and it is for you to determine these issues of fact independent of my judgment, and this court believes you ought to determine it and under your oaths as jurors agree upon a verdict.'"

The jury of the Federal District Court at Fort Smith, Ark., rendered a verdict of $200,000 damages against the United Mine Workers of America. Under the provision of the Sherman anti-trust law this amount was automatically trebled.

The United Mine Workers' officers appealed to the Federal Circuit Court of Appeals from the verdict of the District Court. The court required an appeal bond amounting to $800,000. This requirement was met, and it is the decision of this court from which appeal is now to be taken.

CONCRETE FREIGHT CAR.

A gondola freight car with a body made entirely of reinforced concrete, shown in the May Popular Mechanics Magazine, is now in actual railway service. The finished car, first of its kind, was ceremoniously delivered by its designers to the Illinois Central Railroad on March 17. It was immediately started on a trial trip over the system, and for thirty days will encounter all the normal uses and abuses of the hard-working gondola-type car. At the end of that period it will be turned over to the United States Railroad Administration, which will thereafter dictate its use and service. While the model now in service has a solid body for the sake of simplicity, the principles of the design indicate ready modification into the dump-car type for subsequent production.

A special, light aggregate, developed by an engineer of Kansas City, Mo., found its first commercial application in the concrete mixture used for this car. The mixture was shot against outside forms by a cement gun inside the frame. The result of this process was a floor and walls unusually thin but very dense. The more bulky crossbeams of the underframe were formed by pouring in the ordinary manner The inside surfaces were left as the cement gun finished them, but the outside walls are quite smooth because of the close cohesion of the forms. Completed, the car weighed about 3600 pounds more than was calculated; subsequent similar models, however, can readily be kept within the bounds of 46,000 to 48,000 pounds, approximating the standard of steel gondolas.

It is well known that rapid cooling of hot metals hardens them. That the opposite is true has recently been demonstrated in striking fashion by the General Electric Company. One of their scientists annealed American ingot iron surrounded by hydrogen gas for three hours at a temperature above 1,600 degrees Fahrenheit. The product was very little harder than the softest copper and can be whittled with a knife.

THE PEACE TREATY.

Senator Johnson has asked the Senate to demand the full text of the treaty of peace prepared at Paris. The Congress and people have before them only a summary of this document. The complete text of the treaty has never been released. Between the published summary and the treaty itself there are said to be wide divergences. At any rate there is a difference of opinion as to how far the summary reproduces the spirit and exact demands of the treaty itself.

This situation is rapidly becoming intolerable. The secrecy which surrounded the making of the treaty has made the principle of "open covenants of peace openly arrived at" a tragic joke.

The Senate should not only have the full text of the treaty immediately, but President Wilson himself should be called upon to give a full and detailed account of everything that went on behind the barred doors of the Paris conference. President Wilson's Paris speech after the treaty had been presented to Germany indicated that he himself recognized that he had been defeated at many points. If this is so, he will welcome an opportunity to tell the nation what he sought to do, wherein he failed and why he failed.

The mass slaughter of millions of young men in this war, the starvation and distress sown broadcast over the earth, certainly demand a full accounting of what has been going on in Paris and how much hope our nation may entertain of any better world order proceeding from the proposed settlement.

The United States gets nothing out of the treaty; it asks nothing. If the old principles of imperialism have been applied for the benefit of England, Japan and the rest and America's only part in such a conclusion is to guarantee with the lives of future generations the security of these nations in such a settlement, then the whole nation should be completely informed so that it can deliberately say whether this is what we fought for and gave our blood and wealth to accomplish.

President Wilson has been the leader of the liberal forces in this crisis of civilization. The world has looked to him for enlightened leadership, for a new deal in diplomacy that would express the will and wishes of the plain peoples of all lands. If the President is to maintain that position he must make a frank accounting to the world that has built its hopes upon him.

That President Wilson has something interesting to say is indicated by the resignation of six members of the American peace commission as a protest against the Paris settlement. These men are members of the staff of experts taken by President Wilson to Paris to assist in advising on details of the treaty.

One of these men gave an interview in London in which he characterized the treaty as a treaty, not of peace, but of war, leaving millions facing an indefinite period of serfdom and despair with no motive except the single idea of revenge. Put it to Americans baldly, he said, will they be parties to the continuation of the pre-war scheme of balance of power, magnified a hundredfold in iniquity?

An appeal, signed by a number of eminent professors and others, including the bishop of Oxford, Arthur Henderson, leader of the labor party in the House of Commons, and H. G. Wells, John Masefield, Lady Gilbert, George G. A. Murray and Jerome K. Jerome, has been published in London urging the reconsideration of the terms of peace on the ground that they belie the spirit of the fourteen points of President Wilson.

Surely the American people whose destiny is now at the cross-roads are entitled to the fullest confidence of President Wilson. The Senate, by all means, should have the full treaty and in addition the full revelation from the President himself of every inside detail of the secret conference at Paris. If we can't have this we had better drop the word democracy.—San Francisco Call.

THE NEW BOGEY.

The capitalistic press has discovered a new bogey, or scarecrow, or terror, or horror, or what you choose to call it.

In the very old days the Labor party was the thing they used to point at and say: "Now, children, run for your lives."

Then they seized on Socialism, and, calling it a tiger, bade the populace to run for safety just as fast as its legs would carry it.

Next along came Disloyalty. It, too, they pointed at, and whispered "Monster!"

Now, when all the old bogeys have been played out, a new one must of necessity be produced to rattle the crockery on the shelves, and to precipitate that essential feeling of fear. And Bolshevism is the one they've decided on.

Naturally enough, they are converting it into a very imposing monster—mainly because they have a few liars at one of the cable-wire, and more fools than are good for us at the other.

But this new monster isn't likely to impress worth tuppence once the aforementioned simpletons realize that it is stuffed with sawdust, and that its fangs were gummed on by somebody who wasn't a dentist.

Eventually it, too, will be played out, and then, of course, another monster will have to be invented.

In the meantime, Labor Unionism, Socialism, and Bolshevism are calmly pursuing their respective ways in various parts of the world, and, for some reason or other, those who know them best apparently fear them the least.—Sydney "Worker."

Fur farming is becoming a very profitable business in several parts of the country, especially in the foothills of the Adirondacks, where a number of skunk and silver black fox farms are in thriving operation. Although it is estimated that 10,000,000 fur-bearing animals are killed each year in North America, the price of furs continues to advance, because of the shortage of the supply, as compared with the always increasing demand, and unless domestication of fur-bearers is continued on a still larger scale the cost of fur clothing must continue to advance.

Demand the Union Label.

Labor News

Public school teachers of Houston, Tex., are organizing and will affiliate with the trade union movement. Unions of this calling now exist in Austin, Galveston and Denison, and Dallas and San Antonio teachers are discussing organization.

The Tennessee Legislature has passed a cossack bill, despite opposition by organized labor. The Manufacturers' Association secured the support of the colored people for this sinister measure by claiming that it would prevent lynching.

President R. E. Evans of the Oil Field, Gas Well and Refinery Workers' union reports that eight new unions were organized during April, several of them in California. He also reports that unions are being formed all over the country, especially in Texas and Oklahoma.

Eighty-eight thousand, nine hundred and seventy-two men are being trained in various trades and occupations in the Army according to a report of the War Department. The total includes 71 business trades and occupations. Out of the total receiving special training only 3712 were negroes.

An influx of oriental labor, as predicted by Abraham Bowers, immigration secretary of the Y. M. C. A., in an address before the Illinois State Americanization Committee in Chicago recently, cannot take place, it is stated at the Department of Labor, unless Congress should repeal present restrictive laws.

The validity of the new North Dakota law establishing the eight-hour day for coal miners in that State has been upheld by Judge Charles F. Amidon of the Federal Court. The decision was rendered in denying an application for an injunction filed by a coal mining company to restrain enforcement of the law.

The college started in Boston by the Central Labor Union opened its doors with more than 150 enrolled students. The purpose of the college is to provide higher education for the workers. The students include both sexes and all ages. In one instance a father and daughter sat together. Among the first lessons are: "How to Write English," "Shop Committees and Collective Bargaining," "Masterpieces of Literature," and "The Distribution of Wealth."

Scientific and technical employes of the Government have organized a trade union and affiliated with the National Federation of Federal Employes. Some of these workers favored an independent organization "that would not interfere with their work," but they were outvoted after they failed to indicate how affiliation with the trade union movement would deny them any rights they now have. Trade union advocates showed that if they formed an independent association they would have no influence.

The several thousand locked-out employes of the Porto Rico American Tobacco Company have rejected the company's pension plan as a settlement for the present differences. The plan provided that the company would set aside $100,000 and would add to it five cents a week for each person employed by the company, provided the employes would contribute five cents a week. From this fund it was proposed to pay weekly benefits to all employes on strike until work in the factories could be provided for them.

Frank J. Phillips, a member of the Marine Firemen's, Oilers' and Watertenders' Union of the Atlantic and Gulf, last heard of in San Francisco, Cal., April, 1916. Anyone knowing his whereabouts will please notify Mrs. Frank J. Phillips, P. O. Box 521, San Pedro, Cal. 2-19-19

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

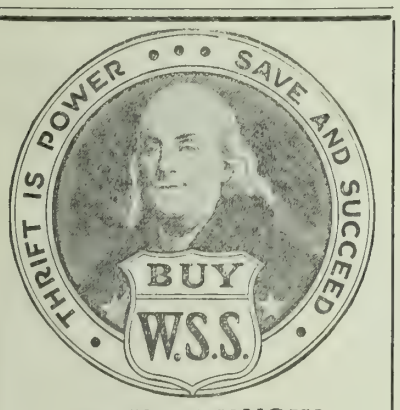
"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

THE PUBLIC
122 E. 37th St., New York City



DO YOU KNOW

That War-Savings Stamps pay 4 per cent. compound interest?

That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?

That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?

That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?

That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?

That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?

That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

INFORMATION WANTED.

Relatives of Axel Hansen, the seaman for whose murder Capt. Pedersen, or "Hell-Fire Pedersen" of the bark "Puako," is to be tried May 15, at New York City, please communicate with the undersigned. Any seaman knowing aught of Hansen or his relatives, please write. The names and addresses of one or two witnesses who have known for some time past Capt. Pedersen's reputation, the way he is reputed to have handled his men on board ship, are also desired to communicate with the undersigned. Silas B. Axtell, 1 Broadway, New York City.

THE APPEAL OF VICTORY FOR THRIFT

The painting represents a winged victory, with lowered sword, bearing in her up-raised hand a branch of palm. The painting is an artist's protest against the ugliness and horror of war, and represents his conception of the beauty and tenderness of peace. The picture bears the legend: "Share in the victory, save for your Country, save for yourself. Buy War Savings Stamps."

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

Carl Hansen, a native of Soon, Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis. 8-17-18

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S B Axtell, 1 Broadway, New York City.

Members of the S. S. "J. O. Neil" will please call or write to the undersigned attorney relative to salvage services performed on the 18th day of January, 1919, to the S. S. "Oregon." Silas B. Axtell, 1 Broadway, New York, N. Y. 4-21-19

Home News

A woman has been elected Police Commissioner of Fargo, North Dakota. Mrs. F. H. Wilder who was chosen to fill this office will have entire direction of her department.

The United States Public Health Service is launching an active campaign in 730 cities in America with a population of 8000 and over, with an idea of intensifying the fight against venereal diseases and getting the most suitable organization in each city to co-operate.

The number of farm tenants has increased 40 per cent. in Kansas in the last 18 years. The number of acres farmed by tenants in the State has increased 80 per cent. in the same period. Governor Allen has begun a campaign to eliminate the farm tenant as far as possible by providing State aid for those who wish to buy farms and who will farm them.

The State of Wyoming has created a new office—that of state historian—and has appointed a woman to fill the position. The first state historian is Miss Eunice G. Anderson, of Cheyenne, who has been employed in state service for the last nine years. The new office was created by the Legislature as a means of preserving in adequate form the history of the state's pioneers.

The Federal Farm Loan system is now doing about 15 per cent. of all agricultural land loan business in the United States. A report of the Farm Loan Board at the conclusion of the second year of operation shows that loans closed in the last 12 months amounted to $120,238,000. The aggregate of farm loans made by all agencies, public and private, is estimated at about $800,000,000 annually.

Considerable interest has been aroused in Washington diplomatic circles over the arrival of a woman diplomat, who comes as secretary of the Danish Legation. Miss Gerda Anderson, who is filling this important post, is an expert in five languages. She was formerly secretary of the Danish Legation at Petrograd and later held a similar position in the Ministry of Foreign Affairs.

Vice-President Marshall in recent address before the American Academy of Political and Social Science, in support of the League of Nations, declared the Covenant did not infringe upon the rights of the United States Congress and expressed the opinion that much of the opposition to the plan results more from political than patriotic reasons. Agitation over the Monroe Doctrine was characterized by Mr. Marshall as a "tempest in a teapot."

There are evidences that the gospel of the Nonpartisan League is spreading. From isolated States here and there come bits of information that show the widespread nature of the agricultural revolt. Farmers in Iowa, Kansas and Nebraska are beginning to grow restive as they watch Idaho and North Dakota. Such indications are very hopeful, but the brightest bit of information of all comes from Texas and carries the first implication of political progress in the South that will link it up with the North. The recent organization of the Texas League of Cotton Planters and Farmers may bear fruit in the South, for it is sponsored by some of the most prominent farmers and cotton planters in the State. It is distinctly modeled after the Nonpartisan League.

Domestic and Naval

The "Richard B. Silver", abandoned at sea in sinking condition on a voyage from Santos for Havre, is a British schooner of 400 tons.

The "War Nepigon", which put in at St. John's, N. F., leaking and with boiler trouble, is bound from Halifax or Falmouth. She is a wooden steamer of 2300 tons, built at Pt. Arthur Ont., in 1918 for the British Government.

The steamship "Blue Hill" (ex-"Yuma"), 2194 tons gross, 1828 net, carries about 4000 tons deadweight, machinery aft, built at Cleveland, O., in 1893, and owned by the United States Shipping Board, has been sold to the Massey S. S. Co. for $150,000.

The Russian bark "Professor Koch", reported stranded at Scituate, Mass., has been floated and taken to Boston. The hull is badly damaged and loss to cargo of wool and hides will amount to about $100,000. Claim has been made for $150,000 salvage.

The following steamers owned by Messrs. Howard Jones and King, Cardiff, are reported sold to the Maindy Shipping Co., Ltd., Cardiff, for about £450,000: "Cedartree," 1780 tons gross, built in 1913; "Elmtree," 2686 tons gross, built in 1916; "Firtree," 2488 tons gross, built in 1917; "Kinsale," 2412 tons gross, built in 1896; "Tricord," 2827 tons gross, built in 1905; "Woodburn," 2360 tons gross, built in 1900.

The American steamer "Lake Placid" struck a submerged mine near the island of Vinga, near Gothenburg, Sweden, on May 20, and sank in five minutes. All those on board were rescued. The steamer "Lake Placid," 4200 tons, was owned by the United States Shipping Board and under assignment to the Atlantic Transport Company for operation. She left Baltimore April 26 with a cargo of coal for Gothenburg.

The British steamship "City of Hamburg," 1200 tons gross, 687 net, built at Sunderland in 1881; "City of Cadiz" (ex "Corcyra") (Br. iron s. s.), 780 tons gross, 464 net, built at Stockton in 1862, and "City of Belfast" (ex "Tudor") (Br. iron s. s.), 891 tons gross, 522 net, built at Kinghorn in 1876, passed second survey in 1911, which were all detained at Hamburg since 1914, and all owned by Messrs. Palgrave & Co., Dublin, have been sold to a British firm for about £45,000 the three.

The proposed sale to a British syndicate of the British-owned ships and assets of the International Mercantile Marine Company—a transaction involving five British companies and 750,000 tons of shipping valued at approximately $135,000,000 -has been approved by the board of directors and finance committee of the company. A stockholders' meeting to vote on the proposition was called for June 16. The transaction was declared by P. A. S. Franklin, president of the company, to be the largest recorded in the history of shipping. American and Belgian vessels owned by the International are not affected by the projected transfer, according to Franklin. He added he did not know what disposition the British syndicate intended to make of its acquisition, about 50 per cent of which is represented by ship tonnage and the balance by securities and cash.

News from Abroad

The French Government, after long delay, has given its reluctant consent that the Nansen Commission shall undertake the feeding of Russia.

Simultaneous with the Korean uprising, all the Korean students who had been enrolled in colleges and universities of Japan abandoned their relationship with the institutions.

The railroads owned by the Government in Sweden are being electrified. It is found that the trains can make twice the speed with electric power and, besides, it saves the coal. The current will be developed from the water power of which there is a great abundance in Sweden.

On April first the Union Parliament of South Africa passed a bill giving votes to women. The bill was passed by a very slim majority, the vote being 44 to 42. Suffrage bills had been introduced in 1912, 1914, 1917, and February, 1918. Each time the bill was introduced the majority against it was decreased.

Two hundred thousand acres of forest land in Great Britain are to be replanted at a cost, for planting and maintenance for the first ten years, of $17,000,000. Foresters are being trained and the necessary saplings are being prepared. If the experiment is successful, it is proposed to increase the amount of reforested land to 1,770,000 acres within the next forty years.

"German militarism has been broken forever," is a statement attributed to Field Marshal von Hindenburg, who has written to Fritz Ebert, President of the German Republic, that he is to retire into private life. General Groener, former head of the Department of Munitions, who has been the Field Marshal's chief of staff, is mentioned as his chief's successor, according to news received from Kolberg.

Official confirmation has been received in London of local famine conditions in India, a fact to which scarcely any publicity has been given owing to the world's preoccupation with the Peace Conference and industrial troubles. Little definite information concerning the famine is available. Private advices, however, suggest "that India may be on the verge of a worse food famine than the visitation of 1900."

The United States and Great Britain will not maintain any part of the armies of occupation which by the terms of the treaty handed to the Germans on the 7th will remain on the Rhine for at least fifteen years. The occupation of the left bank of the Rhine will be maintained by French and Belgian troops, the great majority, of course, being French. These two nations receive virtually all of the indemnity for the collection of which Allied troops are to be retained on German territory.

The announcement of the resumption of the Paris-Constantinople service by the International Sleeping Car Company is supplemented by the statement that the re-establishment of the Orient Express between Paris and Bucharest is a foretaste of the facilities for reaching all parts of the Near East that will be provided in due course of time by the International Sleeping Car Company. At present the trains are running twice weekly and direct connections with Warsaw and Prague have been made.

With the Wits

Prudent Girl.—Jack—Did you tell her that what you said was in strict confidence?

Ethel—no; I didn't want her to think it was important enough to repeat.—Answers.

The Mathematics of It.

She had seven million dollars
Placed in bonds and stocks and rents;
He had 'leven million dollars,
So they merged their sentiments.
Now they've raised a son who's value
Is exactly thirty cents.
—Boston Transcript.

Stand and Deliver.—A New York restaurant advertises that it will open at the historic home of the famous Captain Kidd. Business carried on at the old stand.—Columbia State.

Cheering Him Up.—Bevis—I've got a beastly cold in my head.

Miss Whitty—Never mind, Bevis. Don't grumble. Even if it's only a cold, it's something.—Tit-Bits.

Worse.— Tytephist—Is there anything more exasperating than to have a wife who can cook but won't do it?

Dyspeptic—Yes—to have one that can't cook and will do it.—Boston Transcript.

Kitchen Logic.—"Please, mum, there ain't no coal left in the cellar."

"Why on earth didn't you tell me before?"

"Because there was some then."—The Passing Show.

Another Mess. Proprietor—(just demobilized)—Yus, I've been through it—officers' cook two years—wounded twice.

Tommy (tasting the soup)—You're lucky, mate. It's a wonder they didn't kill yer.—London Opinion.

Better for Her.—"How's your husband getting along, Mrs. Fogarty?"

"Well, sometimes he's better an' sometimes he's worse, but from the way he growls an' takes on whin he's better, Oi think he's better whin he's worse."—Boston Transcript.

Those Lost Letters—"Did you mail my letter?"

"I'm sorry," replied the absent-minded husband. "I forgot all about it."

"Well, don't take it to heart. The post-office would probably have done the same thing."—Washington Star.

Decided Too Soon.—"Was papa the first man who ever proposed to you mama?"

"Yes, but why do you ask?"

"I was just thinking that you might have done better if you had shopped around a little more."—Louisville Courier-Journal.

Secure and Profitable

HUMBOLDT SAVINGS BANK

733 MARKET STREET, Near Fourth
SAN FRANCISCO

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

CO-OPERATION IN SHIPPING

Italian Seamen's Federation Ready to Manage Merchant Marine

Co-operative societies are no longer confining their activities to dry land affairs. Greece already possesses several co-operative enterprises operating merchant vessels and from Scotland comes word of the contemplated organization of a small co-operatively-owned trawling fleet to engage in the fishing industry. Of still greater importance is the national co-operative society recently formed by the Italian Seamen's Federation.

The object of this newly incorporated body which enjoys the backing of all organized labor in Italy is explained in the article printed on this page. This idea appears to have met with a favorable reception in Government circles. State control of shipping is deemed objectionable, for the reason that it involves the creation of a large and costly bureaucracy, while private shipping combines are attended by serious drawbacks.

Some of the largest Italian shipyards are said to have been successfully run by the trade unions, and as the Federation embraces every class of seaman, it feels able to undertake the operation of a merchant fleet in all its branches.

Discussing in the "New Age" the project of having shipping operated for the State by a co-operative society formed by the Italian National Confederation of Seamen, Mr. Odon Poe remarks that the application of co-operation to shipping has been tried successfully in Greece, where already several co-operative societies manage their own merchant service. But these Greek societies are neither industrial unions in origin nor are they national in aim; their purpose is profit and not the social transformation of industry, and in consequence, they are of little or no social importance. They are vastly different from the experiment made by the Italian seamen.

The Italian National Federation of Seamen is without doubt the most advanced and highly developed industrial organization in the world. It has, in fact, all the requisites of a complete national guild. Not only does it admit under its rules every class of worker, but its membership actually embraces all classes, from captain and cabin boy, and this not merely locally, but nationally. Its monopoly of labor, if relative, is complete. In relation to competing organizations of a private character it has had many struggles, particularly with the great ship combines, but upon practically every occasion it has won a victory. Shortly before the war, indeed, the Federation was preparing to take over the whole of the shipping of a considerable combine whose workmen were on strike, and to demonstrate by a practical object lesson that the demands of the men might occasionally be considered. The war, unfortunately, put an end to the experiment before it was fairly begun, and under the circumstances the strike was settled in the usual way.

The Federation has shown itself during the war to be as mindful of its duties as its rights. Over and over again, the seamen, acting in their Federation, have given abundant evidence of their willingness to sacrifice sectional to national interests. Their claim to responsible management has thus been signally fortified, and by reason of their experience they now feel themselves fully entitled to demand the control and management of the whole of the shipping in the national interest.

Last August the Italian Reconstruction Committee passed the following resolution:

"The committee warmly approves and recommends to the Government the proposal made by the seamen's representative that certain of the ships lent to Italy by the Allies be placed under the management of the seamen themselves in their industrial organization."

In the following month, a co-operative society of seamen was formed under the title of "The Garibaldi," with the declared object: to conduct shipping under the Italian flag, to develop the Italian mercantile marine, and to raise the economic and moral status of all Italian seamen.

Aware that its intention of controlling shipping would arouse the hostility of the private shipping interests, the State naturally looked to the Federation and the co-operative society fostered by it for support.

The Minister of Transportation said, in fact, that the State would not hesitate to assist the co-operative seamen and to hand over to them such ships as the State might build, and as an earnest of its intention the Italian Treasury announced that it was about to transfer to co-operatives the capital accumulated from several sources and amounting to several hundred million lire.

In thus allying itself with the Federation, the State had more far-reaching objects than the settlement of an immediate problem. At the back of its mind was the knowledge that the State control of such an industry as shipping would, if directly assumed, involve the creation of an enormous and costly bureaucracy. If, on the other hand, left to the trusts, the difficulties would be equally insuperable. Under the circumstances, therefore, it was a wise policy that sought to raise the Federation to the status of partnership with the State, and to solve by this means the triple problem of management, bureaucracy, and profiteering. Only such a Federation (or, if I dare say so, guild) can satisfy equally the demands of the State, the industry, and the seamen.

Another consideration that must have been taken into account by the State is the growing difficulty experienced by the State and the private shipping trusts in carrying on shipping without the co-operation of the Federation, for the Federation, it was clearly seen, would soon be in a position to enforce its demands, or, in the alternative, to make it impossible for either the State or the trusts to guarantee regular service.

Anticipating the probable course of events, we may expect that after an experimental period during which the Federation, we may hope, will prove its capacity, further ships will be transferred to its control. Moreover, it has allies in the great co-operative shipbuilding yards at Genoa and elsewhere, where already building and repairing have been carried out under union management to the satisfaction and admiration of the Entente Admirals. These, together with the co-operative societies of the Dockers, may certainly be counted on to co-operate with the Seamen's Federation. In due course, likewise, the Fishermen's Union will be affiliated with the rest of the unions, and then in the end, all the sea-workers will be in control of their industries co-operatively.

As for the private shipping companies, their absorption into the Federation is sure if slow. By virtue of its economic power, the Federation will demand in the first instance representation on the governing bodies of each of the shipping companies, not in order to share in profits, for the Federation is opposed to profiteering—but for the single purpose of exercising and of finally assuming complete control. It will not rest until all shipping has been brought into the hands of the men engaged in it.

It may be remarked that the Federation has no desire to "own" the ships, and in this, again, is in complete accord with the National Guildsmen in England. Its object is to control and manage the shipping industry, and since this is quite compatible with the State ownership of the ships themselves, the question of ownership does not arise. The State is the sleeping partner, the Federation is the active partner. The former owns, and by virtue of ownership, exercises the right of control, chiefly, I should say, in matters of high policy. The latter manages, and, by virtue of its monopoly of labor and skill, exercises also its right of control, namely over the condition of its industry.

There we have the germ, and more than the germ, of a true National Guild—a partner of the State, with a monopoly of its labor, and responsibly discharging a national service in the equal interest of the men, the State, and the public. In course of time, no doubt, this problem will be followed by other industries, and our industrial system will have undergone a beneficent and orderly revolution from within.

CONCRETE SHIPS.

Concrete was first used in constructing buildings in Europe, especially in France. A celebrated flower pot made by Monier in 1849 or thereabout was the first example of concrete construction, and the French were pioneers in the use of concrete in building factories and dwellings.

Reinforced concrete was first used in making a boat in France in 1849, but its use languished from 1849 until 1887 when a small concrete boat was built in Holland. This boat was first used by duck shooters on account of its high stability, and in 1918 it was still in use by a cement-products company in Amsterdam. Italy, Germany, and England next fell in line, and a revival of concrete boat construction in France took place in 1916. Concrete boats were constructed also in New South Wales, Canada, China, and Spain. After the outbreak of the great war, as her ships were destroyed by submarines, Norway naturally lost no time in building concrete ships. At the Fougner plant, as Moss, the "Nannsiffiord," a 200-ton concrete cargo vessel was built and, after a successful trial trip, engaged in traffic between Norway and England and along the Norwegian coast. This was practically the pioneer seagoing self-propelled concrete ship.

The magazine Concrete, for February, 1909, contains the first mention of the construction of concrete boats in the United States. It says: "A Baltimore man built a reinforced-concrete yacht 11 years ago. Craft in 1909 one of the fleet of the Baltimore Yacht Club. Dimensions: Length, 65 feet; beam, 18 feet. Man who built it convinced that if steel boats were seaworthy a stone boat would be." On this assumption we have been building concrete boats ever since, but concrete shipbuilding in this country really began about in 1912, when the Furst Concrete Scow Construction Co. built a 500-ton concrete scow for the Arundel Sand & Gravel Co., of Baltimore, Md. Vessels of this type have been in use ever since that time by this company and have rendered excellent service. In the same year a concrete barge of the Gabellini type was finished at Mobile, Ala., and it is still in service. Concrete pontoons built on the Panama Canal in 1914 are still used as landing stages for small steamers. Concrete motor boats, yachts, tug boats, and rowboats have also been built in this country. In 1918 the construction of two fleets of concrete barges, each barge measuring 20 by 130 feet and of 550 tons capacity, was begun at New Orleans, La., and at Seattle, Wash. In 1918 the "Faith," a concrete self-propelled merchant vessel of 5,000 tons dead-weight capacity, was launched at San Francisco, Cal.

From 1849, when the first concrete boat was made, to 1918, when the "Faith" was launched, seems a long period, but, after all, the leap from the rowboat to the 5,000-ton freight carrier may well cover two generations, and it must be remembered that it is practically only since the outbreak of the European war that there has been any large construction of concrete ships. The enormous destruction of shipping by submarines and the immense demand for new shipping to meet the requirements of the war made the construction of concrete vessels almost imperative.

In the stress to supply new ships reinforced concrete was adopted as a building material mainly for the following reasons: First, the concrete materials required are easily obtained, and the steel needed is employed in a form and quantity which make no strain on the rolling mills; second, the labor is less skilled and is recruited from a class totally different from the ordinary shipyard labor, so that the work does not increase the stress on the existing shipyards; third, a concrete ship costs no more than a steel ship and requires less expenditure for its upkeep; fourth, the time of construction is shorter.

When these facts are coupled with three considerations which make reinforced concrete most valuable for shipbuilding there seem to be abundant reasons for its present larger use for that purpose. These considerations are: First, the concrete ship can be made practically waterproof; second, the reinforcement can be completely inclosed by the concrete so as to prevent rusting; third, concrete and reinforced concrete are absolutely fireproof.

Concrete used as construction material improves with age; there is no definite knowledge of its durability in time. It is not known to be attacked by insects, mold, vermin, and bacteria find no soil for growth in it; and consequently ferroconcrete vessels can easily be kept clean. The ease of repairing a concrete ship by the simple application of new concrete is also a distinct advantage.

A chapter of "Mineral Resources of the United States" on Cement in 1917, published by the United States Geological Survey, Department of the Interior, includes a section on concrete ships, by Robert W. Lesley, Associate of the American Society of Civil Engineers, one of the pioneer manufacturers of Portland cement and a member of the committee on concrete ships of the American Concrete Institute. Mr. Lesley gives a full account of the ship "Faith," the investigations of the American Concrete Institute, Government construction, and patents for concrete ships, also a bibliography of concrete in shipbuilding The chapter can be obtained by applying to the Director, United States Geological Survey, Washington, D. C.

In carrying out its emergency shipbuilding program the Government made contracts for a large number of concrete ships. After the armistice the general program was changed; the total output of steel, wood, and concrete ships was curtailed, but the infant concrete shipbuilding industry will probably continue to grow, for it still affords great opportunities for research and development.

It is a mistake on the part of labor to attempt the refutation of the "class" theory by insistence upon the mutuality of the interests of labor and capital. These are merely elements of the same principle—the productive capacity. To speak, therefore, of the mutuality of interest between labor and capital as of two principles is of itself to recognize two classes, the laborer and the capitalist.

Even the beasts of the field know the value of sticking together.

GERMAN SHIPPING.

The plan which will probably be adopted by the United States in disposing of the German ships, is that the value of the German ships will be paid over to the Reparation Commission, less the actual cost of rehabilitating the ships for service as a result of the wilful wrecking of their machinery. The German property seized in this country was so considerable that a large balance will accrue to the credit of Germany, which will be turned over to the reparation fund. It is obvious that such an arrangement does not suit Great Britain, whose liner fleet suffered considerably as a result of the U-boat campaign. As regards Italy and Brazil, which both have a considerable portion of the former enemy fleets on their hands, the situation is complicated by the fact that neither of these countries is in a position to pay much to the reparation fund, should the policy to be followed by the U. S. Government be adopted in principle. The claims of Brazil are based upon money due to the State of Sao Paulo for coffee seized at Antwerp, while those of Italy are more or less nebulous. The German tonnage seized by the Allied and Associated Powers during the war is indicated in the following table published last April in the "Neue Hamburgische Borsen Halle:"

Seized by—	Tons net.
United States	614,979
Portugal	241,798
England and Colonies	292,000
Brazil	236,193
Italy	139,844
Chile and Argentine	60,000
Russia	52,000
Uruguay	42,863
Peru	42,863
China	36,974
France	35,437
Hawaii	35,023
Greece	19,567
Siam	19,253
Cuba	17,750
Japan	4,117
Declared lawful prize	145,950
Captured by the Allies and sunk	310,000
	2,346,611

The present tonnage of the German Mercantile Marine is given by the same journal as 3,296,000 tons, to wit:

	Tons net.	Tons net.
Tonnage in 1914		5,073,000
Less losses shown above	2,346,611	
Tonnage lost in countries allied to Germany	30,000	
War and marine losses in the North Sea	150,000	
	2,526,611 or say	2,527,000
		2,546,000
Plus new tonnage		750,000
		3,296,000

The man who confines himself too closely to the facts of the labor movement is as little qualified to judge the scope and direction of that movement as is the man who stands right up to the cornerstone to judge the height and symmetry of a cathedral. In both cases distance lends proportion as well as enchantment to the view.

It is quite natural, of course, but none the less significant, that most of the fault-finding concerning trade unionism comes from those outside of that institution.

Consider the opponent of trade unionism, and you will find one who lacks system in most of his thoughts and actions.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Bethlehem Steel in Line.

The Bethlehem Steel Company has signed a collective bargaining plan with its employes, who are represented by a general committee of over 100 members. Several months ago the national War Labor Board ordered the company to establish a system of collective bargaining. For various reasons this order was postponed by the company, while the unions have continuously urged its application. When the first shop election was held to elect delegates to a convention that would choose members of the committee that would represent the men, the company attempted to secure the election of non-unionists, but the organized workers controlled the convention and nominated representatives. Since then delays have occurred until the present time.

While the agreement does not recognize trade unions as such, it is an advanced step, which the Pennsylvania Labor Herald declares to be "a great victory." Editor Williams, who is also business agent of the Machinists' Union, has been in the thick of this contest, together with A. F. of L. Organizer Duffy. Williams is not unduly elated, as is indicated by this word of caution printed in the last issue of his paper:

"The working success or failure of this plan will depend upon the men standing by their respective unions. Remember the different committees that made twenty-four trips to Washington, and the trips to New York City were made possible by the labor unions."

Labor Must Meet Educational Tasks.

The "Labor News" of Salt Lake City, Utah, warns labor that it must meet the educational tasks in the following language:

"Education of the public to a right understanding of organized labor, of its true principles and higher ideals, is the great task that confronts the working man to-day. Education is essential to the creation of favorable public sentiment, to the enlistment of public support. Public sentiment is the mainspring of achievement and public support is the assurance of accomplishment. Public sentiment and public support are the essential elements of the one invincible power in the world—unity.

"Labor is seeking to achieve unity. Hence the task that lies before it of educating the people of the world to a proper understanding of the aims and objects of labor. This task is no mean one, because of the long and adroitly conducted campaign of mis-information which has been maintained by the enemies of organized labor to prejudice it in the eyes of the world.

"Organized capital, of the autocratic brand, has conducted a ceaseless campaign of propaganda to saddle the undeserved odium of anarchism, I. W. W.-ism, bolshevism and all the other 'isms' upon the name of organized labor. It has sought by every means to make the word 'union' a synonym for destructive conspiracy instead of constructive co-operation as it really is. By this mud-slinging method its enemies have been able to place an undeserved stain upon the name of labor, but through the medium of education labor will remove an unwelcome and unwarranted odium and reveal itself in its true light to the world.

"When the day comes that the public is educated to a proper understanding and appreciation of the righteous aims of labor, then will organized labor come into its own. Let the educational task of removing prejudice, the prejudice of ignorance and misrepresentation, progress unceasingly, that labor may flourish."

Defray Living Cost While Settlers Train.

The Dominion soldier settlement act, which is intended to place returning soldiers on the land, is being applied by the Canadian Government in an energetic manner.

To carry out the spirit of the act the government has ordered allowances to be paid for the support of families of settlers. The allowances apply to soldiers who are receiving training at an agricultural center and their dependents, and for those soldiers who are receiving agricultural training while employed with the farmer, and their dependents. In the first case, if a man is married, he may receive a maximum of $60 a month, which includes $35 for himself and wife and $25 for his children. Lower maximums are announced for unmarried men and for men who are being trained while they are living with farmers. These allowances are outside of any money the settler may receive for work done on farms.

Under this soldier settlement act, any discharged member of the Canadian military forces or widow of same will be loaned money up to $4,500 to purchase land. The settler is required to pay 10 per cent. cash down on purchase, but this can be waived in the case of one who has had agricultural experience or who is regarded as a desirable settler. The loan is repayable in 25 years at 5 per cent. interest. After the settler has secured his land the government may loan him money up to $2,000 for the purchase of livestock, implements and other equipment, and loans up to $1,000 for the erection of buildings.

Mental Defects.

That society pays a heavy penalty for the neglect of its children is shown by a study of mental defects in a rural county made in an eastern State by the children's bureau of the United States Department of Labor and the United States Public Health Service. The study included 192 feeble-minded children.

The county, says the report, is a backward rural county, such as may be found in many sections of the United States. The parents of 54 per cent. of the white children and 71 per cent. of the colored children who were living in their own homes, were without the means to provide properly for their families. The schools are inadequate for the needs of even normal children, and most of them are of the one-room-one-

World's Workers

Portugal is the latest country to adopt the eight-hour day by law. The law becomes effective June 1.

The French General Labor Federation announces that the next International Syndicalist Congress will be held at Amsterdam on July 30 and succeeding days.

Out of work pay at the end of March was being paid in Great Britain to 1,077,686 persons. There were, at this date, 240,015 unemployed in the London and Southeastern district alone.

The agitation for a six-hour day has been going on for some time in the ranks of labor in Alberta, Canada. Some members of the present Legislature are known to favor the shorter day.

Thirty-five thousand employees of Canadian railway shops have presented demands to the Railway War Board for a forty-seven hour week and a maximum wage rate of 80 cents an hour.

More than 70,000 workers have already joined the recently established Greek Federation of Labor. These workers come from twenty-five different industries and are grouped into 200 unions. The union is a purely industrial organization.

The British Labor Gazette for April reports that the supply of seamen at the principal ports in Great Britain was equal to or in excess of the demand. Among the ports where the supply was in excess of the demand were London, Liverpool, Southampton, the Tyne ports and Glasgow. The number of seamen shipped during the three months ended March showed a decrease of 36,655, or 29 per cent., as compared with the corresponding quarter of 1914.

Labor in the Argentine gets pretty much what it wants, according to Robert L. Barrett, lately commercial attache of the United States Embassy in Buenos Aires, who is in Boston on business of the United States Department of Commerce. The reasons for Labor's strength are to be found within, not without, the country, Mr. Barrett declares. During his year and a half, recently terminated, in the Argentine capital, he saw practically no evidence of German or Russian influence. He saw plenty of evidence of stupidity on the part of employers, and of unity of action on the part of the workers.

At a meeting of the cotton manufacturers, held in Milan, Italy, the announcement was made that they had agreed to concede to their operatives a forty-eight hour week, that demand having been previously presented to the cotton manufacturers by the workers. It became effective May 1. The manufacturers also named four delegates and three substitute delegates to act in concert with the textile trades and representatives of the other trades unions (who are supporting the textile workers), to construct a working agreement to make effective the shorter hours and to adjust increased wage rates. The shortening of the hours was only agreed to when it was learned by the manufacturers that the same concession had been made to the textile workers of Great Britain. It was further understood that each side would work to the end that the same reform shall become international as soon as possible.

THRIFT IS POWER • • • SAVE AND SUCCEED
BUY W.S.S.

DO YOU KNOW

That War-Savings Stamps pay 4 per cent. compound interest?

That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?

That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?

That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?

That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?

That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?

That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

Pacific Coast Marine.

Bering Sea winter ice off Nome, Alaska, cleared away suddenly early on May 27, according to a wireless message received at Seattle. The Nome break-up this year came earlier than in any year since 1913. Last year Nome was ice-bound until June 26.

Seventeen whales have been taken by the three vessels of the American Pacific Whaling Company's fleet to date this season. Of this number, the Aberdeen took four, the Moran seven and the Westport eight. Of the seventeen captured, two whales were sperms.

Judge Edward E. Cushman in the Federal Court at Tacoma has issued an order restraining the officials of Grays Harbor county from selling the Belgian schooner "Gaby" for taxes and ordering that the owners of the schooner place a bond of $4,000, which will insure the payment of taxes, providing the suit now pending in court is against the owners of the vessel.

In discussing proposals to substitute new types of ships for those now contemplated for construction in Pacific Coast yards, Director of Operations Rosseter of the United States Shipping Board is quoted as saying that American builders had been offering to build ships for Great Britain and France for $142 a ton, whereas the price to the United States had been $199.

Captain Richard Nelson, naval pilot at Pearl harbor, was chosen one of the pilots at Honolulu harbor at a recent meeting of the Honolulu Board of Harbor Commissioners. Nelson will enter his new duties July 1, taking the place of Captain John R. MacCaulay, who has retired after twenty-seven years of service. Captain MacCaulay departed on the transport Sheridan for a tour of the mainland and a visit to his boyhood home in Scotland.

Deepening of the water at the entrance to Coos Bay has resulted from the dredging work of the Government, which was commenced a short time ago, says Captain A. J. Storrs, marine superintendent of the Pacific Steamship Company, who has been on an inspection trip which has taken him to all Pacific Coast ports made by the Admiral line. When the Government undertook its dredging operations the depth of water was about twenty-one feet at low water. Now it is twenty-eight feet.

Two wooden hulls, built for the Rolph shipping interests, were launched at the Eureka shipyards during the past week. The first to dip into the water was the tug "Storm King" and the second was the barkentine "Rolph." Both vessels will be towed to San Francisco to be rigged and outfitted. Mayor Rolph of San Francisco announced, following the successful launching of two vessels at his yards, that he would continue to build ships at the capacity limit of his local plant.

Vessels of an aggregate dead-weight of 105,200 tons will slip from the ways of the Moore Shipbuilding Company in Oakland this summer, officials of the company announced during the week. One 10,000-ton vessel and three 9,400-ton ships will be launched about June 7. Two 9,400-ton vessels will leave the ways in July, and in August or September two 10,000-ton ships and four 9,400-ton vessels will be launched. Keels for three of the six vessels to be completed in August have been laid and three will be built on the ways from which three ships will be launched next month. Officials of the company are planning to postpone the launching of the six vessels to September 9, Admission day.

A portion of the shipment of cocoanut oil in the cargo of the schooner "William Olson," wrecked on the Island of Niihau, has been salvaged, according to advices received from Honolulu. One hundred and forty-four barrels have been removed and about seventy more now on the beach will be saved. The salvaging has been done by the motor schooner "J. A. Cummins" with the assistance of twenty Hawaiian swimmers. The coast where the vessel is wrecked is rocky and it was impossible to work there with boats. The natives performed salvaging stunts among the swirling waters amid the rocks that could not have been carried on in any other way. A part of the copra is also being salvaged.

The first 7,500-ton vessel of the Government's new concrete shipbuilding program was launched at Government Island, in San Francisco bay, during the past week. The new vessel is a tanker and was christened the "Palo Alto" by Mrs. Rudolph J. Wig, wife of the chief of the concrete ship division of the Shipping Board. The launching of the vessel was made the occasion of a celebration in Oakland, organized by the Chamber of Commerce, the San Francisco Shipbuilding Company, officials of the city and the Shipping Board. The "Palo Alto" was launched sideways and a tremendous wave resulted. This swept across the estuary and would have swept many of the small boys into the water if it had not been for the prompt action of the police, of lumber which composed the cargo of the auxiliary schooner "Janet Carruthers" when she was wrecked recently near the Grays Harbor jetty has been removed, and an effort will be made to get the lightered hull back into the water on the coming June high tides, according to J. H. Price, who bought the wreck and cargo.

The mortorship "Trolltind," owned by the American Mortorship Company, which was built on the Sound for the concern controlled by Norwegian capital, is loading grain to be transported to Copenhagen. The vessel carries 300,000 feet of lumber on deck. The owners have two similar vessels under construction in the northern plant and others are expected to be ordered in the immediate future. The "Semmeltind" was launched last week and the "Kirketind" will take to the water within ten days. All of the vessels are propelled by full powered Diesels and the Norwegians have the experienced engine-room crews at hand prepared to take charge as soon as the ships are completed. The Scandinavian shipping concerns are expected to have a big fleet of Diesel ships in operation on the Coast before the Americans and others get well started.

The hull of the Emergency Fleet steamer "Aroturous" was launched at the McEachern yards during the week and another vessel was added to the fleet which the Astoria plants have built for the Government. This hull is of the Hough type, is the eighteenth vessel launched from this yard and is 100 per cent. completed. The craft has been taken to the plant of the Astoria Marine Iron Works to have machinery installed. Another launching will take place at who forced the crowd back just before the vessel splashed into the water. The vessel as launched is 90 per cent complete, and all that remains to be done is to install the machinery. The ship is 435 feet in length, 54 feet beam and 38 feet deep. She has twenty-one tanks, with a capacity of 3,000,000 gallons, and will be operated as an oil carrier along the coast as soon as completed.

There has been no change in the Navy's policy of creating two fleets, the Atlantic and Pacific, Secretary Daniels told the House Naval Committee during the week, and by the latter part of the summer a large number of every type will be in Pacific waters. "There will be two fleets of equal strength," the Secretary said, "with two of the best Admirals of the Navy in command. I took this up with Admiral Benson recently and believe the time has come to put the plan into effect. After a long war the Navy is apt to grow stale, and we can stimulate interest by having two fleets which can come together every year either in the Atlantic or Pacific on a program to be worked out by the War College. In time of need, of course, the fleets would be combined." Secretary Daniels said he did not mean that half of the Navy's ships would be in the Pacific all the time, however.

The affairs of the Martinonlich Shipbuilding Company at Dockton stand a show of being cleared up following the filing of voluntary bankruptcy proceedings in the Federal Court at Tacoma. This company has had three vessels under construction for the Dockton Shipping Company of New York. One vessel, the "Dockton," is now finished. The schedules filed show the total permanent investment amounts to $78,333.15, and including plant equipment and supplies runs to $125,813.15. It is shown that contracts to purchase three vessels were entered into with Egilnaeshim, the purchase price being $310,000, on which $45,000 is still due; Lars Christensen for $310,000, on which $132,000 is due, and another hull for $310,000, on which $163,000 is still unpaid. This gives a total amount for the plant and contracts of $492,599. The debts are listed at $134,789.10.

An explanation of the report circulated in San Francisco financial circles for several weeks that the Standard Oil Company of California had purchsed Winehaven on the east shore of the bay from the California Wine Association has been furnished in an announcement by the Standard that the corporation had purchased land near Winehaven to be used in the expansion of the wharfage facilities of the oil company. Officials of the Standard said about one acre was bought from the Richmond Belt Railway. The Standard Oil Company has not purchased Winehaven and will not purchase the property, according to a statement given out at the Standard's office. Standard Oil tankers load case oil and crude oil at the Point Richmond wharves, taking the fuel to all parts of the world. In providing more room for the steamships, land has been purchased at various times in the last few years. One big purchase was that of the Mintzer Estate property, comprising 243 acres, which adjoins the company's refinery on the north between the deep water channel the Standard has dredged and the Richmond Belt Railway at the base of the hills to the west.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, JUNE 4, 1919.

"PERFECTLY SIMPLE."

Where ignorance is bliss 'tis folly to be wise.

The nautical expert of the San Francisco Chronicle is at it again!

This wonderfully wise man has always had a ready made solution for any problem, no matter how difficult, if it relates to ships and seamen.

Here are the pearls of wisdom from one who "thinks" he knows:

> The talk about what "government" should do to help re-establish an American merchant marine goes on and on and leads to nothing.
>
> There is a perfectly simple, well known and generally applied expedient which at any previous time or now would assure us that part of an American marine which is essential to American commerce.
>
> That method is postal contracts covering a reasonable term of years with such lines of ships as are necessary to assure regular communication between American ports and such foreign ports as it is desired to reach. Such contracts are necessary, and all that is necessary to secure all the American lines which we need. Without such contracts to cover the loss in operations during the earlier years nobody will put money in new lines and trade will go to the countries which give such contracts.
>
> Bulk freight, which is the majority of tonnage, goes mainly in tramp ships. That is a different problem. The business will go to the tramps which will make the lowest rates. Those will not be American ships unless there are some changes in American law. The present law was not enacted in the interest of the American sailors, but of aliens serving on American ships. The number of really American deep sea sailors has always been negligible.

Simplicity itself, indeed!

Open the gates of the United States Treasury; let the struggling shipowner walk in and help himself. My, how perfectly simple! The word "subsidy" is not used at all in the charming solution offered by the sly old expert—but that, of course, is the sum and substance of his marvelous expedient.

To be sure, our most esteemed friend, the expert, does not propose to adopt any halfway measures. So, in addition to the raid on the U. S. Treasury he finds it necessary to emasculate the American Seamen's Act.

"Perfectly simple" is a most appropriate title. Anybody surely would be enabled to profitably operate ships anywhere under the conditions outlined by the far-visioned expert.

Coolie crews, together with a liberal Subsidy from Uncle Samuel, will most assuredly do it. Three cheers for the "expert."

Now, as regards "the interest of American sailors." It would be expecting entirely "too" much to receive any information upon this subject from the Chronicle expert.

It is a fact, nevertheless, that the beneficent features of the American Seamen's law have already greatly increased the percentage of native-born and naturalized American citizens employed in the United States Merchant Marine. This has been such a perfectly natural sequence that no one but our "expert" friend has had the nerve to deny it.

In proof of the contention that the percentage of native Americans who follow the sea has been rapidly increasing it is only necessary to make comparisons of pertinent statistical data.

The numerical strength of the Sailors' Union of the Pacific has been approximately the same during the past three years. A nationality census of this union's membership compiled three years ago showed 529 native Americans on the live records. A like census just completed shows no less than 1251 native Americans in the same records. No wonder the cheap labor brigade wants the Seamen's Act amended. It has been entirely too practical.

As regards our friend's assertion that "the number of American deep-sea sailors has always been negligible," a few historical facts should carry their own answer. A Federal statute enacted on March 3, 1813, prohibited the employment on board of any of the public or private vessels of the United States of any person or persons, except citizens of the United States. Subsequent legislation, i. e., the Act of March 1, 1817, prohibited the payment of fisheries' bounties to vessels unless the officers and at least three-fourths of the crew were citizens of the United States or persons not the subjects of any foreign prince or state. The act of May 31, 1830, exempted from tonnage duties vessels of the United States of which the officers and two-thirds of the crew were American citizens. This gradual decrease in the rigid requirement of citizenship of all those employed on vessels of the United States culminated in the act of June 28, 1864, which repealed the requirements as to the citizenship of the crew, retaining only the provision "that officers of vessels of the United States shall be in all cases citizens of the United States."

This has remained substantially the only requirement up to date. The Seamen's Act of 1915 does not specifically require the employment of American citizens. But it has established conditions which encourage and induce "real" Americans to go to sea. And that is exactly what bothers the expert. Under the present law, if properly enforced, he cannot operate American ships with coolie crews.

The spirit of Canadian democracy was strikingly exemplified when the House of Commons voted to request the King of England to refrain in the future from conferring titular distinctions upon persons living in Canada. This vote, no matter how George may feel about it, virtually means the end of titled aristocracy in the Dominion.

SELLING LABOR POWER.

The question of the shorter workday and the related questions of efficiency, output, etc., are very much in evidence these days.

In this connection it is significant and certainly interesting to note that some of the large labor organizations across the Atlantic are refusing to accept the assumption that a decreased working day must or ought to mean an equal or increased output. The National Transport Workers' Federation of Great Britain and Ireland accompanied their application for a 44-hour week with a demand for an increase of 20 per cent. in the piecework rates, and it was claimed apparently on the ground that the shorter working week would deprive the pieceworkers of earnings they would have received during the hours which are now to be cut off from the normal working week. The Federation, moreover, claimed that they had never in any of their negotiations given any countenance to the suggestion that their members should increase their output during the shorter working week. They did not deny that the new time arrangement can be made to yield as much in output as the present week, but they contended that this is the employer's business.

Their point is that the average worker has been worked too long and too arduously in the past, and that the time has come for the new theory on the selling of labor-power, namely, that the worker sells his time.

Putting it in different language, the worker demands a guaranteed minimum of pay for minimum period of engagement, and if the employer is not sufficiently businesslike to make the best use of that time it is his fault.

During the early struggles for the shorter workday it was freely contended that a reduction of the working hours did not necessarily imply a lessened output. Columns and volumes of more or less weighty arguments have been written upon this very point. And now, at least one strong and influential group of workers has boldly discarded the theory of equal output.

Obviously, this is not only a new theory but also a new conception of the selling power of Labor.

It is just a little in advance of the "Hours of Labor" section in the reconstruction program officially promulgated by the American Federation of Labor. But however that may be it proves again that all our fellow workers in England are not prepared to quietly accept the established order of things, even though it is hinted in Governmental circles that this is necessary to "save the nation."

PROFIT AND SUBSIDY.

Mr. George P. Hampton, managing director of the Farmers' National Council, has made public a statement regarding the conference on the ownership and operation of the American merchant marine, just held in Washington.

The Farmers' National Council is a union of farm organizations with a membership of about 750,000 united to carry out the reconstruction program adopted by a delegate meeting held in Washington last January. This program calls for Government ownership of the ships constructed by the Government and their operation for the benefit of all the people.

"The conference on the merchant marine," said Mr. Hampton, "emphasized again the

old plea of the shipping combine for Government subsidy, direct or indirect, but at any event as large as possible."

This is, as anticipated. The majority of the delegates to the conference represented banking interests, corporate shipping interests and other big business interests of America. No new plea was offered for the bonus which they have so persistently and vigorously sought in the past. The selfishness of most of the pleas is not novel but is growing stale. Several of the speakers demanded that the Government sell the ships to private companies at a very low figure, some of them even suggested $35 or $40 per ton against a construction cost for some of the ships of as high as $150 per ton. After getting the ships at these low figures, which would involve a loss to the Government of hundreds of millions of dollars, the shipping combine wants the Government to keep hands off. Several special pleaders even urged that the Government do not control ocean freight rates.

Particular attention should be called to the misinformation of some of the speakers who claimed that the shipping companies before the war did not average over 6 per cent. profits. Mr. Rosseter, in charge of the Division of Operations of the Shipping Board, when asked on what capitalization, inquired what difference that made. Of course a watered stock capitalization of $3,000,000 for a company worth $1,000,000 would mean, at a 6 per cent. basis, a profit of 18 per cent. instead of 6 per cent. Official figures show that the White Star Line paid 60 per cent. in 1911, 30 per cent. in 1912 and 65 per cent. in 1913. The Orient Lines paid 5 per cent. dividends and 50 per cent. bonus in 1911 and in 1912. On September 21, 1912, Shipping Illustrated, a New York shipping paper, stated: "At the present it is the easiest thing in the world for cargo steamers of any description to make as large a profit as 40 per cent. on the present freight rates." Since the European war started, and before we entered it, American shipping lines made as high as 42.10 per cent. on a very generous capitalization.

All representatives of organized farmers at the meeting were opposed to subsidy of shipping companies. Mr. Hampton is positive that an overwhelming majority of the organized farmers of America favor Government ownership of the ships constructed during the war and democratic operation for the public good instead of for private profit.

Now, if Mr. Hampton will submit a binding guarantee that "public good" will never be construed to mean a necessary sacrifice in the seamen's wages, working hours and general living conditions, his case would be ever so much stronger. This much we know, however, from long and bitter experience: (1) that wages and conditions in Government-owned ships never set the pace but invariably, reluctantly follow improvements secured in vessels under private ownership; (2) that the usual economic methods of the workers for securing improved conditions can not be successfully applied "against the Government."

When we are inclined to marvel at the denseness of the person who questions the value of trade unionism, let us remember that the mole, too, probably cavils at that other law of nature, the recurrence of day and night.

FEUDALISM IN CALIFORNIA.

The "Survey" Reviews the State Immigration Commission's Recent Report on Large Land Holdings.

"The great mass of the land is held by an insignificant few, who do with it as they will, and the ideal of a rural society composed of many small-unit owners, each a tiller of the soil—the ideal of socially minded men in all times—is one for which there is not the slightest present basis of hope." And again: "The old concentration of land ownership . . . has in a large degree persisted; and superimposed upon this is the new concentration of ownership afforded by modern wealth. No statute or ruling by the state government, so far as known, has interposed any bar to this persistence of the old system or the development of the new." These quotations are not from a report on Posen or from a pre-war speech of Lloyd George. They are taken from the report on Large Landholdings in Southern California, recently, after a controversy between the department responsible for it, the California Commission on Immigration and Housing, and the Board of Control, in charge of state publications. Had the report been couched in the typical, exaggerated style of the single tax propagandist, it might have been allowed to pass unchallenged; but it would have defeated its own purpose. As it is, full of carefully assembled facts conservatively stated, it is one of the most deadly weapons against land monopoly that has ever been forged in this country.

The land of the sunset and of the unrivaled climate which since the forties has figured in the literature of the world as a new garden of Eden, not lost but to be gained and developed as an abode of human freedom and happiness for all time—that land has been as ruthlessly exploited for the benefit of the few as any country; indeed, the very climate has been made a commercial asset of the speculator and mitigated against the success of agriculture and the welfare of the people. The price of land, in these southern counties, no longer has a visible relation to agricultural productivity. We read that the approximation of price to productive value "is most remote in the vicinity of Los Angeles, where climate, optimism and proximity to a populous center are all capitalized and fused into the price."

"In Ventura county the recent enormous rise in the market price of lima beans might have been expected to lessen the gap between the price and the productive value of the land; but with each leap in the price of beans the price of land has taken a corresponding advance. One may hear on good authority, in that county, of an owner refusing $1,000 an acre for the best land. In San Diego county it is a common saying that no farmer can possibly pay 5 per cent. interest on deferred payments on the market price of local farm land and make a living. In every southern county the seeker of farm land is confronted with prices which he knows, if he pays them, involve grave risk to himself in the attempt to get commensurate results from the soil. When he pays these prices he does so because for other than strictly economic reasons he has fixed upon some particular locality for his home and he is willing to take the gambler's chance with a dubious investment."

But these are merely glaring details from a canvass rich in pictures of that kind. There is a feeling throughout the state that land is priced far above its productive value; and the only reason for it is that land is deliberately held out of use, or—what comes to the same thing—out of the most productive use to which it might be put, until the community is forced to pay the owner, either in purchase price or in rent, whatever he may ask. Not only the climate but also the "optimism" of California is capitalized and forms a large element of the price. That hold-up is possible only, of course, by concentration of ownership; and it is for that reason and not for any theoretical moralizing that the "gross unfairness" with which land ownership in the state is distributed becomes the legitimate object of inquiry by a commission charged with looking after the interests and welfare of a large section of the population. Its findings are as follows:

"1. That in the eight counties of southern California there are 279 holdings (reducible by allowing for duplications to about 255 holdings) each of more than 2,000 acres, comprising an aggregate of 4,893,915 acres;

"2. That the Southern Pacific grant lands and 'lieu lands' in five of these counties (there are none in the other three counties) aggregate 2,598,775 acres;

"3. That of the total of non-railroad and non-public rural lands in these counties, roughly approximated by the federal census figures of 'lands in farms' (4,587,581 acres), 2,295,140 acres, or 50 per cent., are owned in about 250 holdings;

"4. That apart from the railroad lands, there are at least 32 holdings each of more than 15,000 acres; that seven of these holdings exceed

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., June 2, 1919.
Regular weekly meeting came to order at 7 p. m., Joe Faltus presiding. Secretary reported shipping good; more members ashore.
HARRY INGWARDSEN, Secretary.
Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., May 26, 1919.
No meeting; shipping slow; members scarce.
J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., May 26, 1919.
Shipping fair; prospects good.
W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, May 26, 1919.
Shipping fair; few members ashore.
H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, May 26, 1919.
Shipping dull.
P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, June 26, 1919.
Shipping fair.
ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, May 26, 1919.
Shipping rushing; men scarce.
JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, May 26, 1919.
Shipping very good.
HARRY OHLSEN, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, May 19, 1919.
Shipping dull; prospects poor.
JACK EDWARDSON, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., May 29, 1919.
No meeting; no quorum. Shipping fair.
EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, May 22, 1919.
No meeting. Shipping very good; scarcity of Cooks, Bakers and Butchers.
LEONARD NORKGAUER, Agent.
Grand Trunk Dock, Rooms 203, P. O. Box 214. Phone 2233.

San Pedro Agency, May 22, 1919.
No meeting. Shipping good; very few members ashore.
JOE MACK, Agent.
No. 613 Beacon Street. Phone Sunset 336. P. O. Box 54.

DIED.

Johan F. Eklof, No. 679, a native of Finland, age 34. Died at Palo Alto, Calif., May 28, 1919.
Einar Helgesen, No. 2339, a native of Norway, age 30. Died at Plymouth, England, November 2, 1918.

Two destroyers were launched at the Union plant of the Bethlehem Shipbuilding Corporation on May 28. They were the "Wood" and "Zelin." The "Wood" was named in honor of a former medical director of the United States Navy and was sponsored by Mrs. George Kirkland Smith, 1600 Lake street, San Francisco. Mrs. Smith is a granddaughter of the late officer. The "Zelin," named in honor of the late Brigadier-General Jacob Zeilin, United States marine corps, was christened by Mrs. W. P. Lindley, wife of Lieutenant-Commander Lindley, who has charge of the construction of the destroyers here under the supervision of Captain D. C. Nutting. Mrs. Lindley lost two nephews in the war. Both were Anzacs and were shot and killed in action at Gallipoli. Her brother, Major C. Smith, also an Australian, was severely wounded. A son, Lieutenant H. G. Lindley, U. S. N. R., has for the last year been engineer officer on the U. S. S. Indianapolis, doing transport duty on the Atlantic. Al S. Gunn, general manager of the Bethlehem Company, and Lieutenant Frank Johnson, in charge of construction and repairs for the Government, were present, together with Captain Nutting and numerous other officials, including Commander Lindley.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Glenn E. Plumb, who is leading the battle of the 2,000,000 workers on the American railroads for the protection of their present standard of wages and conditions, has been promised by President Gompers an hour and a half, on June 10 at Atlantic City, to lay his plan of battle before the convention of the American Federation of Labor. Plumb is employed as counsel by the 90 per cent. of the railway workers who are now members of the trade union movement. His plan of settlement of the railroad problem calls for squeezing about nine billions of dollars' worth of water out of the nineteen billions that the companies claim their properties are worth. It provides that the Government shall buy the ten billions' worth of property, put it under a Government corporation, and have that corporation directed by a board of fifteen men. Five would be elected by the 2,000,000 wage workers to represent themselves and their interests. Five would be elected by and from the 20,000 men in the management. Five would be selected by the President of the United States to represent the general public.

If this plan is adopted, half of the net profits—after paying the necessary interest charge of the ten billion dollar investment—would go to the employes and managing force and half to the Government corporation for further investment. If profits rose beyond a certain margin, rates would be reduced, but at all times there would be a chance for every worker in the industry to win a bonus from efficient operation of the whole system. Studies and experiments looking toward new efficiency in every detail of the industry would be encouraged by committees of the railroad workers and management separately and jointly. Every man would have a direct pay-incentive to do his own work better and to help his fellows to do their jobs with less waste of effort.

All of the railway workers' organizations, Plumb announces, have endorsed this democratic scheme of real efficiency, which will give them immediate returns in better pay without sacrificing their personal independence or dignity or skill. It makes them true partners in the railroad business.

There is every indication that when this constructive program is put before the convention of the American Federation of Labor, it will be endorsed without a dissenting vote.

Plumb's campaign is called a battle because the overwhelming majority of the new Congress is wholly sympathetic with the junkers who own the controlling share in the railroads, and who demand that the property be put back in their hands with a guaranteed annual tribute, above the present high freight and passenger rates, of about half a billion dollars. If Congress dares to do what it wants and threatens to do, it will defy organized labor and turn back these railroads with this perpetual tribute of public money. But it will at the same time be doing more—it will be placing in the hands of the officials of the Pennsylvania, and other notoriously bitter foes of labor, the power to plunge the nation into a vast strike in the hope of driving the unions out of the industry. Signs that railroad shop work will be put back upon a peace basis, and that the conditions won through the Railroad Administration are to be challenged as soon as the Government takes its hands off the lines, are evident to officials of the international unions who have been in conferences here.

But the big battle does not stop with the issue of "turning back" the railroads. It is exactly the same with the telegraphs and telephones. At the moment when a cheerfully reactionary Congress is proposing to "turn back" the wires from Burleson to Burleson's dear friends the Western Union Telegraph Company and the American Telephone and Telegraph Company, with generously increased rates, the organized telephone and telegraph operatives and the electrical linemen are flatly opposed to any such action. Last year they demanded public ownership and public operation, with democratic control of these wires, in order that they might not be compelled to enter into a long and costly strike for decent working conditions. What they got was the same old Western Union and Vail autocracy, under the added insult of Burlesonism.

To-day these organized workers in the telephone and telegraph industry are prepared by an overwhelming strike vote to walk out. Why? Because they have been cheated of real public ownership, public operation, and democratic control. The return to the old situation means a new struggle, under harder conditions than a year ago. The big strike of the telephone girls and the linemen in New England was won more promptly when Burleson was officially responsible than it would have been won if Theodore Vail of the Bell telephone trust had been in complete charge of the properties. They are not fooled by Burleson's sabotage against public operation. They want the real thing, regardless of the haste of the politicians in Congress to serve Vail and the Western Union stockholders in their anti-labor program.

Then there is the Shipping Board and its plan to sell all the great fleet of Government-owned ships to private operators. Conferences are now being held here, under call by Chairman Hurley of the Shipping Board, at which scores of bulky shipowners and their lawyers and agents are solemnly testifying to two things. The first is that "an American merchant marine cannot be established and maintained except by private initiative," and that therefore the Government must sell all of its ships, immediately, at very reasonable terms, to shipping companies which must largely be organized brand-new in the port cities around the whole country. The second is that the Government must guarantee these companies against any loss in the operation of these Government-built ships in foreign trade for a period of years, or else the Government must keep and run them on the unprofitable routes until those routes become profitable.

Emil P. Albrecht, a member and spokesman of the executive board of the National Mercantile Marine Association, let the cat out of the bag when he declared for American officers and crews on all these ships, to be required by law, and complained against the "discrimination in favor of foreigners" caused by the fact that men wishing to sail on the merchant ships had to join the Seamen's Union and "sit around union headquarters, waiting for a call."

The inference was clearly given by Albrecht and by those who applauded him that "turning back" in the merchant shipping industry had its own peculiar meaning for organized labor. P. S. A. Franklin, president of the International Mercantile Marine Co., said that the "alterations" in the Seamen's Act desired by the shipowners would not reduce wages nor reduce the percentage of Americans in the crews. He seemed anxious to make it appear that whatever he might do in the way of chopping holes in the Seamen's Act would be done for the good of the seamen!

Then there are the Government navy yards and arsenals, fully unionized, which have excited the jealousy of private manufacturers and some of their friends in Congress. There is afoot a propaganda in favor of "turning back" most of the gains made in this direction by reducing the forces and sending a lot of work out to contract shops.

During the war there were some 34,000 men employed in the arsenals. Nearly half of these men have been let out since the signing of the armistice, and the night shift has been abandoned. About the same changes have followed the ending of the war in most of the navy yards. The question as to whether the Navy shall have a big or a small expansion in the immediate future is now up to Congress, and will be fought out there, but meantime Secretary Daniels will have to resist a great deal of pressure from Republican Congressmen from Pennsylvania, Ohio and other regions, where manufacturers want to get some more war contracts at the expense of the Government yards.

In the War Department the situation is different in this way: there are Army officers in charge of figuring the estimates of cost of doing jobs in the arsenals who formerly were connected with private firms. They have a clever knack of figuring a lot of overhead items of cost upon arsenal work that doesn't belong there. The arsenal workers, through their committees, have fought this inside opposition, and appear to be winning out.

Secretary Baker yesterday gave his promise to N. P. Alifas, president of District 44 of the International Association of Machinists—the district covering the arsenals and Navy yards—that he would create a special board, in which the workers shall name their own spokesman, to put into operation a plan for keeping at least 20,000 men employed in the arsenals. They will arrange for making all sorts of metal goods for other departments of the Government—such, for example, as locks for mail sacks—in the arsenals in time of peace.

This plan of getting some use out of the vast permanent investment in the arsenal plants will soon raise a fearful howl in Congress, and it will probably cause a hard fight against the appropriation for the arsenals, but Alifas is confident that it will stick. It is the one instance, thus far, in which the administration is not surrendering to the "turn back" forces.

It is only fair to Burleson, in this connection, to point out that he does not want the telegraph and telephone employes to be "turned back" to the same condition as they suffered before he got into the camp of their enemies. He has written Congress-

man Moon, saying that his Wire Control Board (mouthpiece of Burleson, Carlton and Vail) suggests that no alteration in the wage schedule in the wire industry shall be permitted, under the law returning the business to private control, except after the Interstate Commerce Commission shall have approved the change and shall order a raise in rates to meet the raise in wages. Before the proposed wage increase may go to the Interstate Commerce Commission, however, he would have it threshed out and decided by a special tribunal, in which labor would have one-fourth of the vote.

Telephone and telegraph employes, then, would first have to win a one-to-three contest in the wage board, and then win a benevolent award from a wholly non-labor body which decides rate increases. That's the new Burleson democracy.

There are signs in the sky that the Atlantic City convention will generate a stroke of lightning that will clear up this whole "turn back" danger. A thunderbolt for the railroad and wire and shipping and political profiteers is on the way.

THE IDEALS OF WAR.

(By W. B. Rubin.)

War has never had an ideal, although ideals have been brought into being, frequently, out of the bloodshed and horrors of war. Begotten, sometimes, during the struggle and turmoil of conflict, the birth of an ideal follows at a much later date; and in many instances, an ideal, begotten before the war, comes to life after its end. No war in itself was ever begun because of an ideal, notwithstanding proclamations to that effect at the beginning or conclusion.

An ideal, like man, is conceived, not in human genius, but in the nature of things. Genius may contribute pedigree, as does prize breeding, but the life of an ideal, like that of an individual, comes into the world only after suffering and travail.

History attests that this great war was conceived in the desire for territorial aggrandizement and commercial supremacy; that Belgium, Alsace-Lorraine, Fiume, freedom of the seas, and so forth, were but the pawns upon the chessboard which selfish monarchs, powers, and nations sought for themselves.

Years and years ago, the thought, "Make the world safe for democracy," was conceived. Nature was responsible for it, and the human soul was pregnant with the embryo, but not until the very midst of this terrible struggle was the ideal brought to life. And if the child lives to fulfill all the hope which is centered about it, then the bloodshed, the waste and devastation, even the suffering and loss of life, shall have been well worth while, just as the birth of a healthy babe justifies the mother's risk.

But the war is now over, we hope, and the ideal, "make the world safe for democracy!" will not, for long, remain a suckling infant. It must begin the manhood struggle of real, earnest life.

Great men are now gathered around the peace table in France. The ideal, however, for the time being, seems to have given way to the claim and clamor of various peoples and races there represented. One might almost imagine that the peace table was a creditors' meeting, with the creditors making every effort to get as much salvage out of insolvent Central Powers as possible, some seeking preference rather than their legal pro rata distribution.

But all in all, let us not think that we fought this war in vain.

The ideal, safely brought to life, must survive, but it cannot live by itself.

It must be cared for.

It must be fed and nourished.

It must be given employment and duties.

This is an age of interdependence. No one man longer can live by himself, and this is also true of any one thought or ideal.

If the ideal, "make the world safe for democracy" is to flourish with all the enthusiasm with which it has been invested, let us, with full patriotism, energy, and sacrifice, see that its fruits are gleaned in the golden glow, in a world made better for being battle scarred in its attempt to achieve its ideal.

INSURANCE AGAINST SICKNESS.

The passage of the Workmen's Health Insurance bill by the New York Senate, after a hard struggle in which progressive Republicans and the Democrats joined forces against the reactionary "Old Guard," is the greatest legislative victory of the year for organized labor.

The State Federation of Labor and the women's trade union organizations took the lead in the fight for the Health Insurance bill as the next step in protective legislation following workmen's compensation. They were joined by many prominent civic, social service, and women's organizations, as well as by some far-sighted employers and physicians. Strong support was given to the bill by leading newspapers and the labor press. This favorable action gives New York the leading place among the States in advancing social insurance against sickness.

The purpose of the bill, as passed, is to conserve the health of the workers by establishing, under State supervision, funds jointly supported and managed by the employers and employes out of which workers in time of temporary sickness up to twenty-six weeks will receive benefits both in cash and medical care.

These benefits include a cash payment of two-thirds of wages, up to $8 weekly, during temporary illness or extended disability not covered by workmen's compensation, also medical and surgical treatment and supplies, hospital service, nursing attendance and dental care, and in addition a burial benefit of $100.

There is a special provision for maternity benefits. Working mothers and wives of insured working men will be given special care and adequate medical and obstetrical and nursing care at childbirth. For wage-earning mothers there is provided in addition a cash maternity benefit for two weeks before and six weeks after childbirth in order that they may be able to stop work at this time.

No physical examination of workers is required in order to secure the health insurance benefits and the bill permits entirely free choice of physician by the patient.

By making the health insurance system universal, with all profit-taking casualty companies eliminated, the cost to the insured workers will be only about 20 cents weekly in order to secure the full cash and medical benefits. Under the bill the employer is now compelled to share the burden of illness which the workers have hitherto carried alone.

HOME OF THE TORNADO.

The home of the tornado is the Mississippi basin. It never ventures east of the Alleghenies or beyond the mountain barrier of the West. The physical contour of the United States is responsible for this seemingly freakish favoritism. The Mississippi basin is walled in by high ranges, and with spring the warm, moist winds of the Gulf move up the valley. Then a cold wind sweeps down from the Northwest and the two are hemmed in. When they meet under the right conditions they go "round and round," forming what in popular parlance is a "cyclone." In meteorological text-books there is a distinct difference between a cyclone and a tornado. A cyclone is an atmospheric disturbance of from 100 to 500 miles in diameter, in which the wind moves in a circle in the opposite direction to the hands of a clock. All great storms which cross the United States from west to east are cyclones.

Demand the union label.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

teacher type, and many of them are so situated that numbers of children could claim exemption to attendance because of the distance to be traversed. Irregularity of attendance caused by farm work, berry picking and making holly wreaths for Christmas time further reduced the schooling of children in this county.

Rockefeller "Union" Having its Troubles.

The Rockefeller "union" is headed the way of all trade union substitutes, and has been rejected by Sopris, Colorado, employes of the Colorado Fuel and Iron Company, a Rockefeller subsidiary.

The Sopris workers show by this declaration that this scheme was forced on them:

"That the aforesaid company permit their employes at the mines to hold an election without interference by officials of the company, where a vote will be taken to determine whether or not we will continue to work under the representation plan as now in vogue."

These employes call on all workers employed by the company, "individually and collectively, to join with us in demanding that we be accorded the same treatment as the great majority of the coal miners of the United States are now enjoying."

Copies of the resolutions have been forwarded to officers of the company, to John D. Rockefeller, Jr., and to the United Mine Worker, official magazine of the United Mine Workers.

Set Child Standards.

Minimum standards for the welfare of working children were drawn up in tentative form as a result of a three-days' conference on child welfare standards, held in Washington, D. C. These standards will be further discussed at regional conferences to be held during the next three weeks in several cities under the auspices of the children's bureau of the United States Department of Labor.

Sixteen is set as the lowest age at which children can go to work in any occupation during the months when school is in session. Nine months' schooling, either part or full time, for children between 7 and 18 years is proposed as the minimum educational standard. A child of 16 cannot go to work unless he has completed the eighth grade. Education beyond the eighth grade is to be provided for employed children between 16 and 18 years old by attendance at day or continuation schools.

The work day of minors shall never be longer than eight hours and for children between 16 and 18 years shall be less than the adult's working day. Night work and employment in hazardous occupations shall be prohibited.

Unions Speak For Labor.

The claim of anti-unionists that the organized workers cannot speak for 30,000,000 unorganized workers is answered by the Washington Herald, which declares that "unions represented labor when they had but 5 or 4 or even 1 per cent. organized."

"The policies they expressed with 100,000 members drew to them 2,900,000 more," says this paper. "They could give no more convincing proof of approval. Organizing the 27,000,000 more would not change the policies.

"The unions represented all labor in industrial struggles. That 10 per cent. in a union, have thousands of times called, conducted and won strikes with the consent and loyal allegiance of the remaining 90 per cent. does not prove intimidation, but that the unions voiced the aspirations of all. Denouncing such a situation is simply scolding facts.

"Reactionary employers and radical demagogues agree that unions do not represent labor. The experience of half a century proves them wrong. What the unions think and do to-day, all labor thinks and does to-morrow."

PASSING OF CAPITALISM.

It has been freely admitted that this world, socially and industrially, can never be the same henceforth as it was previous to the great war; and, forsooth, it will not.

The history of the world, or of Humanity, is naught but a record of ceaseless mutations in its social and economic life. There has in fact never existed anything like a quietus neither of physical nor mental functions. We can go back to the very origin of life itself and invariably find a state of progression or retrogression.

We are, after all, only an insignificant, though animated, part of this terrestrial sphere floating in infinite space, subject to all the environments which the elements have created, be they beneficial or detrimental, genial or militant against the fullness of animal life.

It would not be a tenable assertion to say that everything in nature is perfect; for she has her defects. We are told by many how well arranged everything is in this universe; but they never tell us how much better many things could have been. Nature is both liberal and penurious, harmonious and chaotic, relaxing and inexorable; she builds and destroys, gives and takes, kills and creates, works by laws that are without apparent conscience or design. Hence we have learned that even nature, if she is to serve a useful purpose in conducing to our physical welfare or otherwise, must, if possible, be guided by intelligence.

Mankind, a product of nature, is one of the results of a few hundred thousand centuries of combining and molding some heterogeneous substances. Socially, industrially, and perhaps even physically, it is yet in its formative period. The human race has nearly passed through four social epochs; namely, Savagery, Barbarism, Feudalism and Capitalism. The first three served their purpose, and were by turn compelled to give way to a succeeding form or system more fit and adapted to conditions, and which is our modern system, termed capitalism. This system, whose industrial activities are carried forward for no other object than the acquirement of a maximum of private profit and on whose instability and fluctuations the masses of the people must depend for their sustenance, has also well-nigh run its course, as it can no longer minister to the needs of modern society. It is at best only a monstrous makeshift, with inconsistencies and inequalities that have generated a lot of social horrors, such as poverty, crimes and disease. It cannot survive, if the Human species is not to utterly degenerate.

What is the next? This can best be answered by presenting the conclusions of scientific data gathered by expert students of economic evolution in Europe and America. And these in a summarized form are: As modern labor-saving inventions have more and more socialized production, so the need of socializing the means of production has ever more come to be realized by those who use the machines of production, but do not own them; namely, the producing wage-workers; that the seed of the new proletarian spirit which had been maturing in Europe for a hundred years needed just such an impetus as was furnished by the cataclysmic upheaval to impel its potential powers into practical operation; and that the present rising of the toiling millions is not a cause, but an effect of the peculiar circumstances of economic determinism.

The last phase of this evolution was perhaps partially unexpected by the ruling monarchs and commercial exploiters, but wholly anticipated by every student of the social phenomena. One of the essential facts which have caused labor to combine internationally is that, as the interest of capitalism is identical the world over, so also must the interest of labor be identical irrespective of national boundaries.

There can be no lasting peace or real democracy on this earth before a working-class republic is established in every land, and in which all shall be workers. The beginning of such a democracy will of necessity be marked with many blunders and mistakes by the untrained servants from the ranks of the sons of toil, but they are nevertheless the raw material of which future society must be built. And, then, the arts and sciences and the inventions are our legacies, the storehouse of nature and our power to produce is unlimited.

When there is only one class in society—the working class—and all are allowed to work, and when idle or useless members shall no longer exist, an equal distribution of all the wealth will be the beneficent result: there will be enough for all, but needless opulence for none. And when Man has thus ceased to struggle for an existence and emancipated himself from his mere animal life, he can be at leisure to begin the cultivation of his mind and the improvement of his body; which eventually shall result in an intelligent, cultured, healthy and contented race inhabiting this globe.

JACOB JOHANSEN.

OUR WASTE OF LUMBER.

The Forest Service estimates that American lumber mills produce no less than 36,000,000 cords of waste every year. About one-half of it goes into the furnaces as fuel: the rest is burned as refuse. A comparatively small quantity, 20,000 tons or more, is ground into wood flour, just as grain was ground in old-time mills. The product is divided between two widely different industries, the manufacture of dynamite and the manufacture of inlaid linoleum. Both require a white or very light-colored flour, which is obtained mainly from spruce, fir, white pine, and poplar. The flour used in making dynamite must be very absorptive, so that there will be no leakage of nitroglycerin from the finished product; it must also be white, since lightness of color in dynamite is regarded as a sign of freshness.

FEUDALISM IN CALIFORNIA.

(Continued from Page 7.)

50,000 acres each; that one of them is of 101,000 acres and another of 183,399 acres;

"5. That of the 2,295,140 acres mentioned above, at least 666,886 acres, or 29 per cent., are now or are potentially tillable;

"6. That a considerable part of this tillable land lies idle, and that another considerable part of it is not devoted to its most beneficial use; that, though there are many thousands of persons eager to get access to this land, much of it is not for sale under any circumstances, and that such portions as are for sale are held under prices usually beyond the productive value and on terms of payment which mean great hazard or ruin to the purchaser."

The large holdings are in part an inheritance from Spanish-Mexican times. Some of them have remained almost intact, others have been consolidated to even larger holdings, some have been reduced in size, but only a few have been broken up into small holdings. Other big estates are now consolidations for speculative ends. A considerable variety of the motives are presented why at various times various owners have laid field to field and of the manipulations, oftentimes dishonest, by which they contrived to secure the wealth necessary for that foundation of semi-feudal estates. Here, for instance, is the estate of the Rindge family, in Los Angeles county, representing "an American succession to a Spanish-Mexican ownership and the establishment of a manorial estate."

"It is the instance of a little principality, defiant of the law and of public sentiment, determined to live its independent life regardless of the demands and the interests of a society with which it is in perpetual discord. Its conflict with the outside world is an ever-recurring issue in the courts. It holds to its land, of which it makes small use, merely through an obstinate pride of possession."

There are, of course, among the large estates some that carry on legitimate and useful ranching and farming enterprises on a large scale; but such operations are apt to be over-capitalized and over-systemtized and, sometimes, carried on at a loss, especially when owned by absentees. and over-systematized and, sometimes, carried on succeeding generations of the same family, more from sentiment than because they pay, and with insufficient capital to develop them for maximum productivity. And again, even more analogous to the English prototype, there is the large estate with its "home farm" carried on by the owner, and the greater part of the tillable land leased out to tenants under rigid restrictions.

There are no uniform, traditional conditions and terms of sale; these depend, rather, "upon the land hunger or the financial ability of the purchaser, the need or the momentary purpose of the seller, or the caprice of either." Sometimes there are rigid demands for the construction of houses and other improvements within a stipulated period; terms of repayment are usually short and sometimes almost amount to cash transactions. Harsh as they are, the terms cannot, of course, always be enforced; and since the purchaser is forced to pay interest on deferred payments, at a high though not necessarily usurious rate, the seller can afford to be lenient.

How the more recent consolidations have been accomplished is known history and need not here be restated in detail. "The great frauds," as the report states, "practiced upon settlers in California form a chapter in the State's history which is an ineradicable disgrace. The spent savings and the toil of thousands of ruined lives have gone to the making of a few fortunes, and for all this deceit and robbery there has been little or no redress. Powerful interests stand determinedly in the way of any effective reform." But the actual conditions under which the land of California affords a home and livelihood to its present population is of the gravest consequence to the prosperity, not only of the State, but of the whole nation. Tenancy is on the increase. and will further increase as the difficulty of securing wage labor becomes more pronounced. It does not follow, however, that laborers become tenants and that tenancy is merely a step towards independent farm ownership. "Such transformations," we are told, "are too few and scattered to affect the general conditions." Towns and cities pay their tribute to the masters of the soil. The influence of wealth, rung from an exploited people, reverberates in the halls of the Legislature.

What are the remedies? The commission, in making its report. had before it three proposals: that of the single-taxers for an exclusive tax on unearned increment in land values; that of the Tax Commission—based upon an investigation made in 1917—for a scientific classification of lands and the assessment of land at full value "with a heavier burden to be placed upon unimproved and undeveloped lands than is placed upon those that are beneficially used;" and the land colonization plan already in partial operation.

The commission, after discussing these proposals, makes three recommendations preliminary to any specific reform:

"First, there is needed a formal declaration by the State of a land policy . . . broad enough to aim at an immense increase in the number of tillers of the soil and the creation of a prosperous and secure rural society.

"Second, there should be a genuine co-ordination of every bureau, commission or other state agency having to do with rural land and the supply of water.

"Third, there should be legislation requiring from the county assessors the annual gathering and tabulating of statistics regarding the size of farms, the number of landholders, and other useful information regarding agrarian conditions."

On this basis, the commission—with arguments which we have not here space to reproduce—earnestly pleads for the adoption of a graduated land tax in California, based upon value (not acreage) and implying a clear distinction between land that is actually or potentially agricultural and land that is not. In addition, it would favor a great extension of State aid for the establishment of small holdings on the plan already adopted in California and carried out by the Land Settlement Board, with the addition of land purchase and settlement on a larger scale outside that plan. The great need, it contends, is first of all to make large landholdings unprofitable—no sound state policy is possible except on that foundation—and then to give such help by State provision of different kinds as will enable the citizens of California, and the newcomers attracted to the State by its great natural advantages, to build up that garden of wealth and happiness which has been the dream of untold thousands.

"NO ANNEXATIONS."

(By W. N. Ewer in the London Nation.)

Editor's Note.—The announcement that the British Empire is to be the "mandatory" for German East Africa, German West Africa, Naura, the German Samoan Islands and all the German island possessions south of the Equator, has provoked an English poet in the London Nation to the following satiric lines:

"No annexations?" We agree!
We did not draw the sword for gain,
But to keep little nations free;
And surely, surely, it is plain
That land and loot we must disdain,
Who only fight for liberty.

But, still—we cannot well restore
To the grim Teuton's iron yoke
The countries that e ruled before,
Rebind on liberated folk
The cruel fetters that we broke,
The grievous burden that they bore.

Of course it happens, as we all know,
That "German East" has fertile soil
Where corn and cotton crops will grow,
That Togoland is rich in oil,
That natives can be made to toil
For wages white men count too low.

That many a wealthy diamond fine
Makes Southwest Africa a prize,
That river-dam and railway line
(A profitable enterprise)
May make a paying paradise)
Of Bagdad and of Palestine.

However, this is by the way;
We do not fight for things like these,
But to destroy the despot's sway,
To guard our ancient liberties;
We cannot help it if it please
The Gods to make the process pay.

We canot help it if our Fate
Decree that war in Freedom's name
Shall handsomely remunerate
Our ruling classes. 'Twas the same
In earlier days—we always came
Not to annex, but liberate.

The man who insists upon "running his own business" would be more consistent and more successful if he would recognize the line between his business and the business of the human race.

If consistency were a marketable commodity the average employer would probably keep in stock an entirely different brand of anti-union argument (?).

Labor News

The Government-owned Pauama Railroad has put into effect an eight-hour day for the longshoremen on the docks at Christobal and Balboa. The entire canal service now is on an eight-hour basis.

Wage increases averaging about $15 a month for approximately 70,000 employes of the American Railway Express Company has been announced by Director General of Railroads Hines. The increase represents an advance of $25 a month above the wage scale in effect the first of the year.

Employment in Michigan shops and factories was given to 693,688 persons last year, an increase of 67,631 over 1917, according to the report of the State Labor Commissioner. Average daily wages of Michigan workers increased from $3.26 to $4.14, while the aggregate daily pay roll increased from $1,775,855.86 in 1917, to $2,521,181.82 in 1918.

New York is faced with the possibility of a walkout of 17,000 school teachers if they do not get an increase in pay, Mayor Hylan was told at a public hearing in the City Hall on the Teachers' Equal Pay bill. A number of teachers were present to plead with the Mayor to sign the bill, but it was opposed by representatives of real estate interests and others.

According to statistics gathered from the Canadian Department of Labor, the year 1918 shows a big increase in the trade union membership in Canada. At the close of 1917 the membership stood at 204,630, comprised in 1974 local branches. The increase in 1918 was 44,257, bringing the reported membership to 248,887, comprised in 2,274 branch unions, an increase of an even 300.

Complete returns from the April elections in the Central West indicate numerous successes for the new Labor Party in the smaller towns. All candidates have been elected in Fort Madison, Iowa, Beardstown, Marysville, and Westville, Ill. In Kankakee five Aldermen out of seven were elected. In Aurora (population 30,000), the entire ticket was elected by 1,200 plurality, an electrician being elected Mayor and a bricklayer City Clerk. In Kewanee a Mayor and two Commissioners out of four were elected; in Collinsville, a Mayor, the City Treasurer and two Aldermen; in Batavia, a Mayor, two other city officers and two Aldermen. Joliet was lost by 297 votes and Bloomington (population 30,000) by 168,—all in Illinois.

The commission of employers sent to Europe by the Department of Labor to report on industrial conditions in England has just made public its report, signed early in March, covering impressions of the spirit that governs employers and employes in British industry. What the commissioners learned, they say, proved a revelation to them. Underneath the seething unrest expressed in speeches and in newspapers they found a remarkable harmony of purpose between Government officials, conservative employes, and virtually all employers. These groups are united in urging "the spirit of cooperation by recognizing and encouraging organizations of employers and employes" and "the need of maintaining production, former ideas of restriction on output having been discarded."

NOTICE.

Masters, Mates and Pilots' Association of the Pacific has opened a branch office at 529½ Beacon St., San Pedro, Cal.; Capt. H. C. Frerichs, Agent.

INFORMATION WANTED.

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

INFORMATION WANTED.

Relatives of Axel Hansen, the seaman for whose murder Capt. Pedersen, or "Hell-Fire Pedersen" of the bark "Puako," is to be tried May 15, at New York City, please communicate with the undersigned. Any seaman knowing aught of Hansen or his relatives, please write. The names and addresses of one or two witnesses who have known for some time past Capt. Pedersen's reputation, the way he is reputed to have handled his men on board ship, are also desired to communicate with the undersigned. Silas B. Axtell, 1 Broadway, New York City.

MARITIME HALL ASSOCIATION.
SUMMARY OF RECEIPTS AND DISBURSEMENTS.
April 1, 1918, to April 30, 1919.

Receipts:—		
Rents:—		
Alaska Fishermen's Union	$1,950.00	
Sailors' Union of the Pacific	1,950.00	
Associated Milk Producers, Inc.	2,900.00	
Total		$6,800.00
Interest:—		
Hibernia Savings and Loan Society		46.67
TOTAL RECEIPTS		$6,846.67
Disbursed:—		
Taxes	1,391.82	
Check Writer	27.50	
Insurance	439.20	
Salaries	270 00	
Operating Expense	321.33	
Repairs	1.50	
Attorney Fee	50.00	
TOTAL DISBURSED		$2,501.35
Excess of receipts over disbursements		$4,345.32
Cash on hand April 1, 1918	$4,927.92	
Excess of receipts, as above	4,345.32	$9,273.24
Less:—Dividends		7,000.00
Balance		$2,273.24
Overdraft at Seaboard National Bank		337.16
Total		$2,610.40
On hand in Hibernia Savings & Loan Society		$2,610.40

NOTE:—The overdraft at the bank was covered by the deposit on May 1, 1919, of the rents for May.

Respectfully submitted,

I. N. HYLEN, Secretary.

FINANCIAL REPORT by certified public accountant T. E. Atkinson for the year ending April 30, 1919, is herewith submitted as follows:

We have to report that we have made an audit of the accounts of the Maritime Hall Association for the period of thirteen months, from April, 1918, to April, 1919, both months inclusive, and make this report of the same.

The income and disbursements are properly recorded and we find that all receipts are fully accounted for, and there are proper vouchers on file covering the expenditures.

The records are in their usual good shape testifying to the careful work of the Secretary and Treasurer.

The Summary of Receipts and Disbursements attached hereto furnishes the following data:

Total of rents received the sum of	$6,800.00
Interest on Sinking Fund the sum of	46.67
making a total of receipts in the sum of	6,846.67
The total of disbursements is the sum of	2,501.35
for the expense of operations, leaving an excess of receipts for the period of	4,345.32
and with the balance on hand April 1, 1918, of the sum of	4,927.92
give the sum of	9,273.24
to be accounted for.	
Dividends paid in 1918 and 1919	7,000.00
leaves a balance of cash on hand of	2,273.24
which is exclusive of the overdraft of	337.16
making a total of	2,610.40

covered by the SINKING FUND on hand.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

Carl Hansen, a native of Soon, Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis. 8-17-18

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City.

William J. Farrell, last heard from at Seattle, Wash., July 25, 1918, is inquired for by his father. Edward Farrell, 338 Commercial Avenue, South San Francisco, Cal. 4-30-19

Home News

Five-cent bread is to be demanded by 10,000,000 or more consumers in a petition to Congress drawn up and sent throughout the country by the National Housewives' League, Mrs. Julian Heath, president of the league, has announced. The petition calls on Congress to take such action at the special session as will relieve the flour market and bring the price of bread to the pre-war figure.

Regarding the salaries now paid to customs officials as "nothing short of a national disgrace," L. S. Rowe, Assistant Secretary of the Treasury, speaking at the National Conference of Collectors of Customs and Appraisers of Merchandise, just held at the Customs House, urged that Congress make possible a speedy readjustment of salaries to assure employees of the customs service a living wage.

Compulsory health insurance for workers is recommended as a foremost "measure of essential and enforcible health protection" in a report made to the Governor, by the New York State Reconstruction Commission. The Commission's recommendation is in line with the conclusions of legislative commissions in New Jersey, California, Ohio, and Massachusetts, which after investigations of sickness conditions among workers all urged the adoption of compulsory health insurance laws.

Dr. Henry Glassberg, teacher of history in the Brooklyn High School, accused of having defended Bolshevism before his pupils, while admitting to members of the Board of Education who tried him on the 9th that he was a Socialist, said: "I claim the right to hold whatever views of a religious or political nature I wish so long as I do not use force in making them known or, as a teacher, talk them to the pupils of my class. I do not encourage my boys to discuss views antagonistic to the Government."

The Supreme Court of Connecticut has ruled that, under statutes of that State, compensation should be paid to illegitimate children of an employee killed by accident: Compensation is not awarded either as the price of fault or as a measure of duty owed to the injured employe. The underlying principle is lifting from the shoulders of unfortunate victims of industrial mishaps and their dependents some measure of the resulting burden and casting it upon the industry which occasioned it, and through that industry on society at large."

Among the facts contained in a recent report on lynching the following figures are cited: For the thirty years' period from 1889 through 1918 the North had 219 victims, the South 2834, the West 156 and Alaska and other localities 15. Georgia leads in this ascendency with 386 victims, followed closely by Mississippi, with 373 victims, Texas with 335, Louisiana with 313, Alabama with 276, Arkansas with 214, Tennessee with 196, Florida with 178, and Kentucky with 169. Fifty colored women and eleven white women were lynched in fourteen States. Thirteen of the fourteen States in which women fell victims to mobs were Southern States, Nebraska being the only State outside the South which lynched women. The North and West together have lynched 21 persons during the last five years' period, whereas during the same time 304 persons were lynched in the South.

Domestic and Naval

The "Lake Blanchester", which has arrived at Panama with forepeak leaking and will have to discharge is laden with general cargo from Baltimore. She is owned by the Shipping Board, 2346 tons, built at Cleveland, O., in 1918.

The three-masted British schooner "Lucille," 164 tons reg., built at Parrsboro, N. S., in 1906, and owned by Geo. A. Hankinson, has been sold to A. Moulton & Co., and I. H. Mathers & Son, Halifax. She is registered at Bridgetown, Barbados.

Three of the four battleships which helped destroy the Spanish fleet off Santiago in 1898—the Indiana, Massachusetts, and Iowa—are to be placed out of commission, the Navy Department announces, and their names reassigned to new super-dreadnoughts.

The "War Toronto", bound out from Montreal, and reported to have grounded in the St. Lawrence, has the distinction of having started the season of such mishaps in that river. She is a wooden steamer of 2300 tons, built at Toronto in 1918 for the British Government.

The Cunard Steamship Co., Ltd., of Liverpool, have placed an order for a large steamer with Messrs. R. & W. Hawthorn, Leslie & Co., Ltd., Hebburn-on-Tyne. The dimensions of the vessel are said to be not entirely settled as yet, but the contract is an important one.

The steamer "Queen Alexandra" (Br.), ex "Elfland," 4,211 tons gross, 2,670 net, carries about 7,350 tons deadweight; built at Newcastle in 1914 and owned by the Dunlop S. S. Co. Ltd. (Thomas. Dunlop & Sons, mgrs.), Glasgow, is reported sold to Cardiff owners on the basis of £20 per ton d. w.

The Bethlehem Steel Co. expects to build a floating drydock at Quincy Point, Boston Harbor, to be operated in conjunction with the Fore River Plant of the corporation. The plans call for a sectional dry dock capable of accommodating two 500 ft. steamers of 10,000 tons each, or one 700-ft. ship of 18,000 tons or upward. The dock will be accessible at mean low water to vessels drawing 30 ft. and will be ready within about four months from the time of beginning work.

With the clause in the draft of the Peace Treaty making German shipyards available for the construction of 200,000 tons of shipping annually, doubt has been expressed whether there is sufficient scope in the world to-day to keep busy all building slips in the United States which are adapted to the construction of steel ships. Of wood and concrete, nothing need be said as both propositions are already dead issues. There is urgent demand in Scandinavia for small coasting boats which could be taken care of by the shipyards on the Great Lakes, but there is little hope of orders being forthcoming from Great Britain, while France will probably find it more to her advantage to build in Germany and credit the cost thereof to the reparation account for the heavy losses which her shipping sustained as the result of the submarine warfare. The liner losses of Great Britain were enormous and it is quite indicated that she will have first call on such great establishments as those of Blohm & Voss and Vulkan in Hamburg, and Schichau at Danzig, for the rebuilding of her liner fleet.

News from Abroad

Tenants of Buenos Aires are organizing a strike against high rents demanded for dwelling houses as well as buildings used for business purposes.

The Copenhagen street car system, which is owned by the municipality, is proposing considerable extensions and the purchasing of additional cars to the value of $300,000.

Svensk Handelstidning of Stockholm says the Finnish Government is purchasing one industrial company after another, lately having bought the majority of shares in the A/B Tornator, whose capital stock is $3,000,000.

Dr. Fridtjof Nansen, head of the Commission to Feed Russia, is having difficulty in getting into touch with Nikolai Lenine, the Russian Bolshevist Premier, concerning the revictualing of Russia on condition that the Bolsheviki cease hostilities.

Eating in Great Britain is cheaper by far than in the United States, which produces the food, say Congressmen just back from visiting that country and France. "In England you can get a good meal at one-half the price charged in Washington," declares Representative William R. Green of Iowa.

According to the Copenhagen Berlingske Tidende, the Norwegian government expects to establish three new factories, one each at Aalesund, Haugesund and Vaagane, for making oil and fertilizers from herring. The combined output is calculated at 800 tons of oil and 6000 to 7000 tons of fish meal.

The cost of living in France at the close of the war as compared with its beginning is forcefully shown in a table published by Commerce Reports. Manufactured articles for the most part rose 500 per cent.; soap 1000 per cent.; apples 400 per cent.; kitchen coal 376 per cent.; and the lowest increase is in sugar, which is 231 per cent. The article is contributed by United States Consul Lay, of Paris, who states that the labor shortage in the devastated regions is probably 2,000,000.

The agreement of the Negro and native population of South Africa to refrain from political agitation for the duration of the war was formally renounced at a mass meeting of the colored citizens of Claremont called by the African Political Organization. An aggressive campaign of organization and agitation was determined upon and a resolution supporting "any action the African Political Organization may take to obtain the deletion of the 'color bar' from the Act of Union" was unanimously adopted.

All Scandinavia is busying itself with free ports. Copenhagen has had one for twenty-five years, and for several years past has been extending and improving it. Since the result of the war has become known, these activities have increased with a view to making serious competition with Hamburg for general distribution of foreign goods in northern Europe, especially around the Baltic. Then the competition was followed up by Stockholm, Goteborg, and Malmo, Sweden; and Christiania and Christiansand, Norway. Christiansand is more easily accessible to the regular ocean traffic than Christiania, but is not so good a distributing point for railroad traffic, and in general not such a banking and business center.

With the Wits

"Pessimism never pays." "Oh, I don't know. Dentists find looking down in the mouth profitable enough."—Boston Transcript.

Knicker—The postoffice has issued victory stamps. Bocker—Any stamp that succeeds in getting there is a victory stamp.—Cleveland Press.

Redd—The doctor said he'd have me on my feet in a fortnight. Greene—And did he? Redd—Sure. I've had to sell my automobile.—Yonkers Statesman.

Unlucky Motorist (having killed the lady's pet puppy)—Madame, I will replace the animal. Indignant Owner—Sir, you flatter yourself.—New Pork Post.

"The ancients disputed how many angels could dance on the point of a needle." "That's nothing. How many could dance on the Fourteen Points?"—Denver Post.

"How do you like my new hat, dear?" "Is it all paid for?" asked her husband. "Yes." "By George, it's the best thing I ever saw you wear."—Boston Transcript.

"What's the disturbance in the market place?" "It's a mass meeting of the women who've changed their minds since the morning and want to alter their voting papers."—Punch.

"How's your husband getting along, Mrs. Fogarty?" "Well, sometimes he's better and sometimes he's worse, but from the way he growls an' takes on whin he's better, Oi think he's better whin he's worse."—Boston Transcript.

"Young Jobbles has bought a rakish roadster." "It's spite work, I fear." "How so?" "The money spent for that car was intended for a bungalow. Young Jobbles wants to show the girl in the case that he has no intention of proposing a second time."—Birmingham Age-Herald.

"From what you tell me, Sam, you've been a busy man all your life." "Yes, sah; yes, sah." "You've done a great deal in your time and day, Sam, I guess." "Yes, sah. Dat is, I's done a good lot in mah day, but it was in de boss' time, sah."—Yonkers Statesman.

"Young man, did you kiss my daughter in the hall last night?" questioned the stern mother. "I thought I did," replied the diplomatic young man, "but really you look so young I can't always tell you and your daughter apart." Whereupon the storm passed over.—Houston Post.

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

VOL. XXXII, No. 40. SAN FRANCISCO, WEDNESDAY, JUNE 11, 1919. Whole No. 2542.

THE U. S. STANDARD OF LIVING

Normal Requirements of the Average American Family

The Department of Labor has issued a statement containing the information that it requires $2500 per year to keep the average family going at present prices. That means that the American standard of living cannot be maintained on less.

The American Federation of Labor understands exactly what is required to maintain a decent standard of living and for that very reason it took the stand when the armistice was signed that there should be no reduction of wages.

It is a moral certainty that the average wage earner is not getting $2500 per year. The American Federation of Labor has declared that in many cases wages need to be raised. Labor knows what it is talking about, for it speaks for the men who have to fight the battle of making wages meet standard of living. Once more, wages must not go down!

Will "Captain" Dollar and his soulmates kindly take note of the figures given out by the Department of Labor?

A year's study by the United States Department of Labor of living conditions in this country shows that salaried family men of the $2500 class or less find saving difficult. According to the tabulations many families can show a surplus of only $50 at the end of the year and that most show a deficit. Meanwhile the cost of living continues to soar.

The investigation shows that approximately 20 per cent. of the total income is all that the "average family" has left after making necessary expenditures for food, clothing, rent, light, heat and furniture. Out of this 20 per cent. surplus must come all costs of medicinal attendance, amusements, entertainments, donations to churches, education and miscellaneous expenses.

In order to get reliable information as to the average income of the average American wage earner, the News Bureau of the American Alliance for Labor and Democracy communicated with the officers of a number of international unions. While definite figures are difficult to secure, the answers received make certain the fact that if the standard of living which the United States Department of Labor bases its figures is to be maintained there must not only be no reduction in wages, but there must be, on the contrary, a further increase. In not a single reply to the inquiry sent out was there an assertion that the average wage received would meet the cost of living contemplated in the report of the Department of Labor.

While by no means exhaustive, the replies received are an excellent indication of the wages paid in the basic industries. It is clear that the standard of living of the average wage earner is not up to the standard contemplated in the Department of Labor's report.

The local wage scales of the United Brotherhood of Carpenters and Joiners have just been published in the official magazine of the organization. These show that the highest scale for carpenters is $7.70 per day. In not more than six or eight cities does the wage run as high as $7 or over. The wage for carpenters in a great number of cities is between $5 and $6 a day. Even if all carpenters received the high wage of $7.70 per day, and worked every working day, there would still be a wide margin between the amount received and the $2500 a year calculated as necessary by the figures of the Department of Labor.

Frank Morrison, Secretary of the American Federation of Labor, in reply to the inquiry had this to say:

"While numerous figures have been compiled in various sections of the country by Federal and State authorities based on an investigation of a certain portion of the employes in that particular calling, I know of no figures that will permit of an expression such as you suggest. It is safe to say, however, that these figures were compiled and would include the yearly wage of the migratory workers, the seasonable trades, the thousands of unorganized employed in localities where the wages are low and in the tenement sections of our large cities, it would be found that the grand average for one year is surprisingly low."

Joseph F. Valentine, president of the International Molders' Union, says that the records of his office do not show the average wage paid throughout the country. He does say, however, that:

"So far as the question of reducing molders' wages is concerned, we are to-day making an effort to advance them throughout the country and to establish the eight-hour day, which we should have had long ago."

President Valentine goes on to say:

"As to reducing the wages of the workers, I will say that I think it would be the height of folly on the part of an employer to do this now, as the cost of living is much higher to-day than it was a few months ago."

This reply surely does not indicate that the molders of America are able to enjoy a standard of living costing $2500 per year.

William Dobson, secretary of the Bricklayers, Masons and Plasterers' Union, says that there is no record made of the wage received by the membership of that organization. He then goes on to make a statement that has almost the value of actual figures because of his wide knowledge of conditions. Secretary Dobson says:

"We can say, however, through general knowledge of our membership and the wage scale per year received, that $2500 per year is fully 100 per cent. more than the average wage received. As to the actual amount received for the period of one year, this is only known to the recipient and his employer."

John Golden, general president of the United Tetxile Workers of America, answered the inquiry as follows:

"There are very few, if any, textile workers with such incomes ($2500) outside of a few in the very highly skilled trades. The average income among the textile workers is very difficult to get at for the simple reason that there are so many different branches of the industry, comprising cotton, woolen, worsted, silk, flax and jute, involving several hundred crafts. To reach a fair average is almost impossible. Even when you do so, it does not tell the real story.

"In the two largest branches, for instance, namely, the cotton, woolen and worsted (the two latter practically being one branch) the wages of unskilled workers will run as low as $12 per week up to between $25 and $30 in the skilled departments. It would be a fair estimate to say, taking all classes of textile workers together and averaging their wages—I question then whether they would reach $20 per week."

W. D. Mahon, president of the Amalgamated Association of Street and Electric Railway Employes of America, fixes $1,198.79 as the nearest he could come to estimating the average wage of street railway employes. President Mahon says:

"The wage established by the War Labor Board for at least one-half of our membership during the past year in the northern cities runs in part of the cities to a maximum of 48 cents an hour after one year in the service of the company, commencing at 43 cents for the first three months and 46 cents an hour for the next nine months. In the smaller cities the maximum is 40 cents an hour and the majority of the larger cities 40 to 42 cents an hour."

President Mahon points out that during the last year:

"The men have done all kinds of extra work on tripper and other work of that kind," continuing to say that "to bring them to their real work day and striking an average of 45 cents an hour and working them 313 days a year only allowing them Sundays as one day each week, he would have for his income $1,198.79. So you see that the street car men are very far behind the living conditions yet, and cannot live if they do not do lots of extra work.

"In many cases now they get time and a half for overtime, and by doing two hours' extra work they get three hours' extra pay, which has brought up their wages during the war period when so much extra work had to be done."

While these figures are of course inconclusive and are not given out with the idea that they will serve as final, it is contended for them that they are, for the field covered, a positive refutation of arguments made by certain employers to the effect that wage reductions can be effected.

DEMOCRACY IN INDUSTRY.

In the midst of trammels imposed upon thought, wage earners of America must collect their senses. Neither lust of gain, the vanities of the world, nor the passion for authority should make the workers forget their mission to civilization.

The problem is not how to construct the future on the ruins of the present but to demonstrate how it is now in our power to create prosperity for those deprived of the necessities of life without imposing unfair and unjustified conditions on those who are more fatuously situated.

The democratic idea no longer means liberty and equal rights for the few; it means liberty and equal political, economic and social rights for the whole people. For the working men and women it means participation in the management of industries; claiming their legitimate right to the enjoyment of the advantages of wealth and prosperity. No one, today, will affirm in the name of justice that productive labor—this principal and necessary part of human life—should be condemned forever to the anarchy of arbitrary rule.

When we examine the past we are indignant that the seignior possessed the right of mortmain and a hundred others over the wretched peasants whom he taxed and robbed without mercy. We have equal cause for protest and indignation to find that our industrial population to-day should have little power over the immense factories that they build and run and that the proprietors can stop their work or change it as they will.

To the Romans of the time of Caesar, the new sect of Christianity appeared to be only a body of disagreeable fanatics who under religious scruple refused to do their master's bidding. The early American colonists were regarded by King George and his people as a lot of uncouth, troublesome customers who wanted to get rid of paying their debts and taxes and evade rendering service to their divinely appointed rulers. The early Puritans built up their communities on religious liberty, but it was religious liberty for themselves alone. They were horrified when Roger Williams demanded religious liberty for himself. And so to-day we still find employers, who, like the Bourbons of old, are demanding freedom for themselves and the right to dominate and control the freedom and liberties and the rewards of toil of all others.

No matter under what form servitude may disguise itself, whether it be by direct slavery, or through serfdom, peonage or industrial bondage, it inspires horror and arouses the most vicious passions in man and rightly so. To-day the best minds are agreed that it is contrary to common sense that the government of the people should be delivered into the hands of the arrogant, the incapable or the unworthy. The alleged divine right and the assumed right by might by a few to control the affairs of government and direct the lives and the destinies of the vast majority of peoples are things of the past. It is likewise contrary to the social and industrial interests of our country and our people that the manufacturing, transportation, farming and all other useful activities of mankind should remain longer subject to vicissitudes caused every day by worthless industrial, commercial and financial leaders, who by right of inheritance or accident or undemocratic methods come to take the place of their predecessors and who, by their temporary economic advantages, undertake to deny the right of the workers to organize and collectively undertake the improvement of their conditions of work and life and protect their economic rights of free men in this great democratic republic of ours.

The idea of democracy to-day means industrial as well as political liberty and freedom. The people to-day means the nation entire, and the idea of industrial democracy no longer permits of servile functions. Industrial democracy can be best and most firmly established through the trade union movement. The trade union movement is not a fanaticism. It is an effort to cure fanaticism and particularly the kind which at present threatens organized society the world over.

Every effort made by employers to prevent the workers from uniting to protect and promote their interests and to deprive them of their right to participate in the management of industries is an attempt to dehumanize the workmen, to prevent the democratizing of industries and to decivilize the nation.

The right of the workers to organize and to bargain collectively for their services must be made secure, and the American Bourbons yet within our country must be made to realize that the day of abstraction, autocracy and dictatorship in industries has passed.—The American Photo-Engraver.

WAS IT ERICSSON'S GALLEY?

A traveler in Norway has been looking at the two ancient ships, in one of which, though probably in neither, Lief Ericsson may have reached the western world five centuries before Columbus. Nothing proves that either of them was Ericsson's galley: nothing proves that it wasn't. The ancient pagan custom that buried the craft of the sea-hero preserved the galleys away in the soil of Norway, thanks to a covering of potter's clay, and a Twentieth Century farmer recovered the second one. The savants looked it over, and dated it from the Ninth Century, contemporary with the adventurous Ericsson, possibly his own ship. About seventy feet long, the vessel is shaped not unlike a double-pointed rowboat, flat and low, with forked uprights for 15 pairs of oars, and the conventional dragon carved on bow and stern. Under the floor are the compartments where the voyagers doubtless stored their provisions. One can imagine the watcher at the prow, the helmsman tugging at the tiller, the galley-master high in the poop beating with his great hammer, the rhythm for the 30 oarsmen. It is far more difficult to imagine how they slept and ate in rough weather.

The Ojibway, the Cree, and the Montagnais are said to be the most wonderful canoe men in the world. They possess a sixth sense in rapid running water and if they say "run it" one can safely lay a bet at odds that they will run it and come through dry—even through water a mere glimpse of which makes one's hair stand up and sends chills chasing up and down the spine.

THE HABIT OF THRIFT.

Every American workman ought to be able to look all comers in the eye with his head up. Nothing brings his shoulders back and his chest out like the knowledge that he has money in the "old sock." But he would be foolish to allow it to stay there.

You have helped him get better wages. You can help him save them if you keep alive the habits of thrift all learned to win the war. A man may have personal independence; he may have industrial independence, but no man can have complete independence if he is financially afraid. No man can have financial independence if he spends as much as he finds in the pay envelope. Any man can be financially independent if he saves first and spends afterwards.

That is what you can help him do, if you continue to keep War Savings Stamps and Thrift Stamps before his mind's eye. No labor union member appeals willingly for sick benefits or other financial aid if he has money of his own.

In times of industrial distress, it is only when his funds are gone that the union is called upon. One dollar a week invested in War Savings Stamps would give every union member $683.68 at the end of ten years. And he can get the money any time he has to have it.

The sole end of the War Savings Stamp campaign is not to finance the Government in the period after the war. If it were, the Government could obtain the money by other means with less effort and expense. But if the habits of thrift and saving can be made permanent, every man, woman and child will benefit.

Every dollar saved and safely invested means resumption of industries on a peace basis, quick relief from temporary unemployment and better conditions for all. In Thrift and War Savings Stamps the Government is providing an absolutely safe means by which every man can invest even the smallest amount at a fair interest.

If you help those who work for wages to realize and remember these facts, you will help him to meet possible sickness, disaster or unemployment with his head up. Tell him to save first, spend afterwards.

P. A. S. Franklin, President of the International Mercantile Marine, has been appointed by the United States Shipping Board as chairman of a committee to make, through the Shipping Board, recommendations to Congress as to such changes as are needed in our Navigation Laws in regard to the measurement of vessels operating under the American flag, revision of rules regarding standardization, construction inspection, and other matters of a technical character, the object being to place our seagoing tonnage on approximately the same basis as the vessels with which ours will enter into competition. Other members of the committee are J. Parker Kirlin, an admiralty lawyer of New York; H. F. Alexander, a shipowner of Seattle; Eugene E. O'Donnell, shipowner and a former United States Steamboat Inspector of Boston; Homer L. Ferguson, President of the Newport News Shipbuilding & Drydock Company; Alfred Gilbert Smith, a shipowner of New York, and David T. Warden, also of New York.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Apply Espionage Act To Striking Negro.

Joe Denis, a negro, has been found guilty in the United States District Court of violating the espionage law by urging a strike on the Texas & Pacific railroad, near New Orleans, September 14, 1918. It is stated that this is the first conviction of its kind in the United States.

Denis, while employed as foreman of a section gang, was charged with interfering with the movement of troops because he urged workers to strike for better conditions. Attorneys for the defendant will appeal the case.

The New Orleans Labor Advocate says that the responsibility for the conviction rests with Judge Foster, who charged the jury to bring in a verdict of guilty "if it found the facts bore out the contention of the Government attorney, that the defendant had hampered the government in the operation of railroads."

Invoking the espionage law to convict the negro appears rather far-fetched, says this paper, which declares that "the intent of that measure, as we understand it, was for a means of handling German spies during the war with Germany.

"To invoke it to convict an ignorant negro worker because he asked his fellow workers to join him in a demand for living wages not only appears to be wholly inconsistent, but inhumane as well.

"We believe the judge, whether intentionally or not, has taken a step that will stir up considerable more turmoil than he anticipated. To attempt to deny workers the right to strike is a decidedly serious matter."

Six-Hour Day Practical Says Employer.

A book written by Lord Leverhulme, British manufacturer, in favor of the six-hour day, will make interesting reading for American chambers of commerce and manufacturers' associations, says Prof. Wm. F. Ogburn, formerly of the University of Washington, in a review of the book which is published in the Monthly Labor Review of the United States bureau of labor statistics.

Lord Leverhulme is pictured as anything but a moralist, a sentimentalist or a fanatic, and is strongly opposed to all forms of philanthropy and charity. "He is a hard man," writes Prof. Ogburn, who quotes the Britisher:

"There could be no worse friend to labor than the benevolent, philanthropic employer who carries his business in a loose, lax manner, showing 'kindness' to his employes."

In the book are several pages of evidence to show that by using machinery continuously at its highest point of productivity for two six-hour shifts, the worker will produce more than under present systems. Lord Leverhulme thinks the time is ripe now for the six-hour day in England with the same wage rate as is now paid for eight and ten hours. He favors not only high, but still higher wages, but wants the employes to share in the profits of industry. His profit-sharing plan, which he terms "co-partnership," is in no sense the usual American substitute for a living wage, but is a return over and above the trade union rate of wages and acts in no sense as a bar to further wage increases.

He wants to abolish poverty, and in advocating good homes for the workers would limit the number of houses on an acre of ground so that every home would have a garden.

According to Lord Leverhulme, industrial success is concerned quite as much with consumers as producers. Many leaders of industry have seemed primarily concerned with production, and their interest in consumption consists largely in marketing. Lord Leverhulme seems to have a broader conception of marketing and makes his social philosophy turn a good deal on this point of consumption. Raising the standard of living means creating a market. Hence, higher wages are good because they mean a better market.

"Ninety per cent. of the consumers of the United Kingdom are workers," he says. "The six-hour day means two more hours of leisure, which furnish opportunity for education, the higher life and the expenditure of more money, thus improving the market. The plan of two shifts means enabling the non-spending unemployed to become consumers and thus to develop the market. It also increases the purchasing public."

Prof. Ogburn says Lord Leverhulme's conception of reform is along lines of increased production of commodities of wealth at a lessening cost of production per unit, at the same time shortening hours of labor and paying higher wages. The foundation stone is increased production.

Gompers Won't Quit; Scorns "Sympathy."

President Gompers has rejected the "sympathy" of those who would create an honorary American Federation of Labor office for him because he is "war-worn." The plan was printed in a New York newspaper, under a Washington date, and stated that the suggestion was being considered because of the death of President Gompers' daughter, the illness of his wife, his own recent accident and the fact that he was "war-worn."

This sort of "sympathy" had a contrary effect on the American Federation of Labor Executive, who issued this statement:

"The enemies of the American Federation of Labor, who would weaken or destroy it, have every year publicly declared and privately avowed their determination to defeat me at each forthcoming convention. They hid their hatred of the American Federation of Labor by aiming their shafts of bitterness and opposition at me.

"I am neither war-worn, nor weary of the work. I am not a quitter, nor can there be any easy berth provided for me. I shall be the President of the American Federation of Labor or a worker among the rank and file.

"Those who want to get rid of me as President of the American Federation of

World's Workers

A cablegram from Tokyo states that a Government bill which proposes to permit Chinese labor to enter Japan and also to grant the privilege of mining and property rights to foreigners, has been introduced into the Parliament.

The Governments of India, New Zealand, Italy and France subsidize co-operative societies by making loans. This policy has the advantage that it makes it easier for societies to start and expand, it is said, and the disadvantage that it creates a spirit of dependency upon the political state.

A strike of the editorial staff of the Buenos Aires La Prensa prevented the publication of that newspaper on April 30th. La Prenza had discharged one of its editors and an employe of the business office who were among the organizers of the new union of journalists, which has demanded their reinstatement, and is supported in its strike by the Graphic Federation, including the printers, pressmen and others.

Reports received by the Bureau of Labor Statistics indicate that food prices are still on the increase in France. Removal of maximum prices has led to unexampled profiteering. The French Minister of Reconstruction estimates that the available water power in France is practically ten million horsepower, of which only seven hundred thousand is utilized. He says that the water power question assumes as much importance in this day as the construction of railways did in the last century.

The organized women workers of Great Britain were responsible for the introduction into Parliament by Mr. Spoor of a Woman's Emancipation Bill. The object of the bill is to place men and women on a footing of complete civil and political equality. Its effect would be to open all professions and all judicial offices to women, to make it possible for peeresses in their own right to sit in the House of Lords, and for women who might be elected to Parliament to hold ministerial offices. It would further remove the restriction which prevents women under thirty from voting. The bill has the backing of the Labor Party. The women hope to secure the support of the government for the measure.

Mr. Appleton, general secretary of the Federation of British Trade Unions, writing in the Federationist, says that the federation's reserve now stands at £265,000 but no one had ever held that anything under £1,000,000 was satisfactory. The sum at present in reserve might easily meet all thoroughly organized and well-directed efforts to secure improvements in wages or hours, but the present tendency to rush strikes without regard to economic conditions or competitive possibilities endangered funds much larger than those possessed by the general federation. "Many of the recent strikes," he continued, "have been engineered by irresponsible people at a time when industry and commerce were seeking to readjust themselves to peace conditions. In some instances unauthorized action has already seriously depleted funds that were never quite adequate to meet the demands that may be made upon them when the world reverts to normal production."

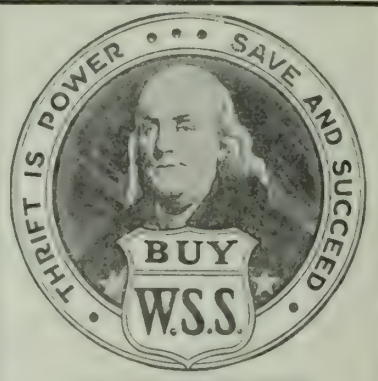
THRIFT IS POWER • • • SAVE AND SUCCEED


BUY W.S.S.

DO YOU KNOW
That War-Savings Stamps pay 4 per cent. compound interest?
That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?
That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?
That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?
That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?
That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?
That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

Charles L. Carlsen, No. 1834, who disappeared from the barge "Isaac Reed" at Eureka, California, on December 31, 1918, is inquired for by his wife, Mrs. C. L. Carlsen, 107 Courtland Ave., San Francisco, Cal.

Pacific Coast Marine.

The Skinner & Eddy shipyard at Seattle, on June 7, launched its fifty-first steel ship, the "Elmsport," 9600 tons. It was sponsored by Mrs. L. H. Biggs, wife of L. H. Biggs, chief hull inspector of the Shipping Board.

Announcement was made at Portland, Ore., on June 5, of a further rise of $2 a thousand feet in the price of lumber for export. Dealers considered the development an indication of a further general rise in prices in the near future.

June shipments of wheat and flour from Portland, Ore., will break all records since the war if present prospects are fulfilled. The Federal Food Administration plans to clear ten steel steamships from there with wheat and flour cargoes for Europe.

The Seattle port commission has sold $325,000 of Smith Cove Pier B bonds at highest figure yet accruing on such an issue. The purchasers were Hornblower & Weeks, coupled with William P. Harper & Son of Seattle. Their tender was for the entire sum of $325,000 at par value plus accrued interest and a premium of $3737.50.

The Young interests plan the purchase of a powerful tug and harbor boat for Honolulu at an approximate cost of $100,000. Jack Young is booked to leave for San Francisco to arrange details of the purchase or construction of the boat. It is intended that the tug be equipped with fire apparatus. Honolulu is at present practically without facilities for fighting a water front fire, other than the ordinary city fire department.

Federal Inspectors James Guthrie and Joseph P. Dolan of San Francisco announced a suspension of three months in the license of Thomas Johnson, master of the Standard Oil tanker "Bradford." Johnson was found guilty of intemperance and general misconduct during a South American voyage in April. He was charged with having abused native pilots and with having ordered the chief officer of the vessel thrown into irons.

The first pile for the construction of what is believed will be the longest marine railway in the world was driven at Astoria, Ore., on June 5. It is expected the marine railway will be ready for service within four months. Work on the proposed new great drydock to be built there also will start immediately. The marine railway will have a lifting capacity of 6500 deadweight tons and will be able to lift four standard United States submarines at one time.

Representative Osborne of Los Angeles has conferred with Secretary Daniels over the latter's visit this summer to the Pacific Coast navy yards. Daniels said he would be in Los Angeles the first week in August and the following week in San Francisco. He will spend more than a month inspecting the Pacific Coast yards. Daniels said he is particularly interested in the report of the Helm commission on the proposed new navy yard on San Francisco bay. He said he will make a thorough inspection of the sites when he arrives in San Francisco.

A. C. McNeil, port commissioner of Montesano, Wash., who has just returned from Seattle, where he went to consult with Government engineers in regard to the improvement of Grays Harbor bar, reports that the Government will spend $10,000 and the port commission such further sum as may be necessary in order to deepen the channel of the inner harbor, the main shoal of which is opposite Grays Harbor city. The Government engineers have again recommended to Congress the maintenance of a dredge for the outer harbor similar to ones now used for the purpose of keeping the Columbia River bar in shape.

Tsuura Hisakichi and Okude Moichi, respectively cook and steward on the Japanese steamer "Takai Maru," were sentenced to six months in the San Francisco County Jail during the past week. They pleaded guilty to an indictment charging them with conspiring to illegally land five Japanese aliens in this country. Sentence was imposed by United States District Judge F. H. Rudkin. The five Japanese, stowaways in the case, are held on Angel Island for deportation. During the voyage the cook and steward supplied them with food and water. The stowaways told immigration officials they were to pay $150 each for being landed here.

The Shipowners' and Merchants' Tugboat Company of San Francisco is not responsible for the loss of the ocean-going raft of piling which was wrecked on Peacock Spit at the mouth of the Columbia River in September, 1911, according to a decision rendered by Judge Eakin of the Circuit Court in the action brought by the Hammond Lumber Company against the towboat company to recover damages of approximately $104,000. The raft was being towed to sea by the tug "Dauntless," assisted by the tug "Hercules," both owned by the defendant company, when it drifted on to the spit and went to pieces. Negligence on the part of the defendant in handling the raft was alleged by the complaint.

W. C. Dawson & Co., Seattle shipping agents, announced during the week they had been asked to become the Puget Sound representatives of a new line of cargo steamships soon to be put on a direct run between Pacific Coast ports of the United States and the large Atlantic ports of Europe by the United States Shipping Board. The new fleet will be made up of 8800-ton steel steamships and will operate through the Panama Canal. Sailings will be from Seattle, San Francisco and San Pedro. News of the establishment of the line reached the Dawson company through Williams, Dimond & Co., San Francisco. The San Francisco firm has been asked by the Shipping Board to direct the establishment of the line. Sailings will be frequent.

That "too much" speed does not pay is indicated by instructions just issued from the engineering department of the Shipping Board to increase the cold water pressure used by inspectors in testing the tanks and hulls of the new steel ships building here. This has been done, it is said, because several of the vessels have developed leaks while being loaded. Recently the big 12,000-ton steamer "Diablo" was being loaded with flour at Port Costa and the loading operations had to be ordered stopped while a gang of riveters was called. At one of the shipbuilding plants the testing of the tanks in the double bottoms indicated leaks and an investigation proved that some one had "slipped" and a number of blind rivets was found to be responsible for the leaks. It is said that now that the riveting contests have been done away with there is less weakness exhibited when the tests are made.

The schooner "Jennie Griffin," Captain Charles Slocum, called at Santa Barbara, Cal., during the week. As far back as thirty-five years ago this schooner, fitted with the same rigging she carries to-day, plied the island coves for sea otters and the valuable fur seals, abundantly found in these parts. At that time whole fleets of craft pursued this trade out of Victoria and San Francisco. Then the Government restricted the enterprise owing to the fact that it was claimed the seals were becoming extinct. The new law specified that south of the 34th parallel, which crosses the coast in the vicinity of Port Harford, the trade must not be plied. Thus the "Jennie Griffin" and sister craft of her time have bent their sails to the wind in some exciting rides over the Pacific. The "Jennie Griffin" recently changed hands at Oakland, has been fitted with an auxiliary engine, and will now fish for the peaceful albacore.

San Francisco Bay and Pacific Coast shipbuilders who do not have enough contracts to keep their yards busy will be supplied with additional contracts at any time by the United States Shipping Board, Chairman Hurley stated after a conference with Senator Phelan. Oakland and Alameda shipbuilders, as well as other yards on the Coast, have been complaining that they fear they will not have enough work to keep the yards working at full time. Phelan announced that any yard that wants more contracts may communicate with him or with Hurley and the contracts will be immediately arranged for. This statement is more important to the Coast shipbuilding industry than appears on its face, because it means that the United States Government intends to keep all the Coast shipyards busy, giving steady employment to more than 120,000 skilled mechanics on the Coast, 50,000 of whom are employed around San Francisco bay.

Reinstatement of contracts with Pacific Coast shipyards which may have been unjustly treated in the cancellation of orders for steel ships since the signing of the armistice was promised by Chairman Hurley of the Shipping Board, at a Washington conference with West Coast shipbuilders and Senators and Representatives from California, Washington and Oregon. The builders told the Shipping Board that they had not been fairly treated, and Hurley conceded that probably some individual injustices had resulted from the suspension of contracts. Harrison Robinson of San Francisco, spokesman for the builders, said 1,745,924 tons of steel vessels had been built by the eighteen Pacific Coast yards between August 3, 1917, and May 15, 1919, or 55 per cent. of the total production in the United States during that time. When it came to cancellations, he said, the board had left the yards with 750,000 tons of contracts, cancelling 785,000; whereas on the Atlantic Coast 2,250,000 tons were being built. Pacific Coast costs, he said, were $199 a ton, while Hog Island had averaged $256 per ton on the first seventeen ships. "We'll not know the cost at Hog Island until twenty-five or thirty ships have been delivered," Chairman Hurley interrupted. "I think your costs are a little high." Robinson rejoined that the Government was furnishing the plant at Hog Island and had to provide for other costs as well which the Pacific Coast builders were taking care of themselves.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, JUNE 11, 1919.

INDUSTRIAL UNIONISM.

Joseph Taylor, president of the Pacific Coast District of the International Longshoremen's Association, with headquarters at Seattle, delivered a typical I. W. W. "one big union" lecture to the San Francisco Labor Council the other night.

There is something distinctly pathetic about the manner in which the Pacific Coast longshoremen have from time to time attempted, "in the name of industrial unionism," to assimilate the organized seamen.

Now, it so happens that the longshoremen utterly fail to practice what they preach.

From one end of the Pacific Coast to the other they are organized in "locals" whereas the seamen have for decades had a real "one big union" embracing all the seamen along the Pacific Coast. For convenience sake only, the three branches of seamen, i. e., the sailors, firemen and cooks, maintain separate headquarters and hold separate meetings. But for more than twenty years—in fact, ever since the formation of the International Seamen's Union of America, there has been perfect co-operation and unity of purpose among all seamen in any move to increase wages or improve working conditions.

Thus, it is humbly submitted to our friends, the longshoremen, that before issuing any more proclamations for a one big union of transport workers they ought to establish a "one big union" of their own craft.

When they have actually organized and perfected such a union it will at least be logical to talk about "gathering in" of allied crafts.

It is apropos in this connection to point to the fact that while the longshoremen are "talking," genuine and eminently practical industrial unionism is again being furthered by the organized seamen of the Pacific Coast through the contemplated alliance of all men aboard ship. The two organizations of licensed men, engineers and deck officers, have not always worked in harmony with each other nor in co-operation with sailors, firemen and cooks. In the future, it is hoped, things will be different in this respect. Slowly but surely, the links of a chain are being forged which will solidify all the toilers of the sea.

This step, however, is merely the result of natural development, and certainly not the effect of new-fangled or high-sounding names of organizations.

Industrial Unionism, in the minds of some of its most enthusiastic and ardent advocates, is but a poorly disguised effort to abolish the present democratic form of the trade-unions and substitute in its place an arbitrary autocratic power in the hands of a few individuals.

This may be deemed progress by visionaries who can accomplish everything on paper; but to those who have seen the growth of the great American labor movement from less than 50,000 to the present membership of over three million and a quarter it is not progress at all.

A labor movement that is not ruled from the bottom up is not one destined to bring permanent results.

WHAT'S DOING IN ENGLAND.

The editor of the San Francisco Argonaut is not a man prejudiced or predisposed toward organized labor. To the contrary, the chief scribe of our local contemporary is strong, almost to a ferocious degree, for the right of the scab to work, when, how, and for as low a wage, as he pleases. His views on the labor situation in Europe, gathered during a three months' visit just concluded, are therefore of exceptional value for the purpose of getting at the truth of things.

Here are some of his choicest gems:

> The basic condition of the British world in recent times has been industry, organized by capital and privilege, sustained by a vast mass of cheap and docile labor, with government inspired and administered by a small but highly intelligent and highly trained minority. The cornerstone of the structure has been a submerged, underpaid labor.
>
> Now labor is in revolt, partly under necessity, partly under an advancing sense of human equity, partly as a result of the extension of suffrage to the laboring classes and to women. Only last year, be it remembered, there was added to the poll lists classifications numbering in the aggregate upwards of six million votes. Unconscious preparation has long been making for establishment of a new order of things in the form of trades-unionism, which is represented by a numerically strong political party and led by men of energy and capability.
>
> Labor has taken stock of the situation, appraised its grievances, and formulated its aims upon considerations and with reference to standards hitherto unrecognized in British life. It is urging demands which logically imply reconstruction of the social fabric; and it is massing forces to support these demands.
>
> In times past the submerged labor of England has stood cap in hand in grateful acceptance of beneficence and charity. But to-day, under the inspiration of participation in the war and under a new sense of its powers, labor has given over these traditional reliances. It presents its program, not in terms of appeal, but in terms of force. There is no department or class of British labor, from the coal pit to the domestic kitchen, that has not defined its wishes and that is not insistent for reform.

Coming from one of the most conservative citizens of California these observations upon doings in old England are truly enlightening.

It would be a mistake to assume, however, that organized labor of Great Britain has not heretofore "taken stock of the situation." It is far from being a case of "unconscious preparation."

Long before the war, back in 1912, at the Rochester convention of the American Federation of Labor, Robert Smillie, President of the Federation of Miners of Great Britain, and fraternal delegate from the British Trade Union Congress, gave details of the proposal to nationalize the coal miners of Great Britain. Said Brother Smillie:

> We have drafted a bill which proposes to nationalize the mines of Great Britain, that the government should take over the mines from the present owners, and should work the coal mines in the interests of the whole community and not for private profit. We propose that the government should pay a certain value for the mine and the stock there, a value which we fix by a certain computation which we consider fair, but we do not propose that the government should pay the landowners any compensation for the minerals which lie in the bowels of the earth. We are going to set on foot an agitation—the whole labor movement, organized labor in Great Britain, will join us in this agitation—and I venture to say that within ten or fifteen years the probabilities are that the coal mines of Great Britain will be owned by the community and worked by the government in the interests of the whole community of Great Britain.

So it must be admitted that this is far from an "unconscious preparation." True, the nationalization of the mines will most likely come a trifle sooner than anticipated. And in true British fashion it will come not with machine guns and street barricades, but as the result of a parliamentary commission. The Commission on Coal has recommended—and its findings will doubtless prevail—that the mines be nationalized and run for the benefit of those who use coal. Title will vest in the people of Great Britain; the administration to be in the hands of a board made up from the organized miners and the present management.

The trouble with the learned editor of the Argonaut, and 90 per cent. of those who move in his circles, is that they have been living in a world of their own. Economic problems have been mere academic and abstract issues with them. They have always been able to see all the evils of labor unionism and they have never failed to launch their grossly unfair denunciations of organized labor upon the slightest provocation.

It is gratifying, therefore, to find a sane discussion of merciless, economic facts in the columns of our own would-be union-busting weekly. Let no one ever say, hereafter, that the war has not accomplished wonders. It has made blind men see!

THE SHIPPING BOARD.

The Information Bureau of the United States Shipping Board sends out the following "news" regarding Thomas A. Scott, of New London, who has been appointed a member of the Board, vice Bainbridge Colby, resigned:

> Mr Scott is a Republican and belongs to the Congregationalist Church. He is a thirty-second degree Mason, a member of the Connecticut Society of Civil Engineers, and of the following clubs:
>
> The Engineers of New York.
> Transportation of New York.
> Fishers Island Sportsman's Club, New York.
> Thames of New London.
> Harvour of New London.
> Entre Nous of New London
> Exchange of Boston.

The information regarding Mr. Scott's political, religious, fraternal and social affiliations is interesting, to say the least. The JOURNAL has no first-hand information upon the subject but believes that the other four members of the Board could doubtless qualify under the title of "popular club men."

However that may be, it is earnestly hoped that some auspicious day, if the Board is to remain in existence, another brand of affiliation will also be honored with recognition. And that is membership in a labor union.

There is a great deal of talk these days anent an alleged "new order of things," about a "partnership between labor and capi-

tal," etc., etc. But always, actions speak louder than words, and performances were ever greater than promises. "Three against two" usually makes the scrap difficult enough for the short end. But "five against none" makes it a hopeless case unless—well unless there is pressure from the appointing power. But, of course, that is another story.

AN ECONOMIC TRUST?

It is a singular state of affairs that the full text of the proposed peace treaty is being withheld from the American people although the same document is said to be public property in Europe.

An editorial review of the Paris Conference and the proposed League of Nations, printed in the JOURNAL three months ago, concluded with these paragraphs:

As matters now stand the constitution of the league can be made either the greatest international proclamation of human rights the world has known, or it can be made as worthless and useless a treaty as was drawn in Vienna, a century ago.

What is needed at this stage of the game is a genuine awakening of the people to the grave and potential consequences of any League of Nations which is not founded upon the principle of "Human Rights First!"

That human rights have been given very meager consideration is now openly charged by men with perfectly clear records on humanitarian issues. Senator Johnson, of California, for example, is quite certain that this League of Nations which America will shortly be asked to endorse "is not a league to prevent war." To the contrary, Senator Johnson contends that:

The League contains within itself the germs of many wars, and, worse than that, it rivets, as in the Shantung decision, the chains of tyranny upon millions of people and cements for all time unjust and wicked annexations. It is a great world economic trust, wherein a few men, sitting in secret, may control the economic destinies of peoples. It is not a league of peoples, nor does it anywhere concern itself with peoples.

Instead of coming closer to those about whom you are concerned, the men and women for whom governments should exist, the league goes a step farther from them. The representatives of ruling powers sit far away in secret. If those who wrote this document really wanted to prevent war, they would have permitted the men and women who must bear the burdens of war, to determine by their votes whether or not there should be war.

The answer is, this is not a league to promote peace, but to protect power. Those who advocate it dare not amend it so that the issue of war shall be made by the men and women who must fight and die for it.

Truly, these are grave assertions and serious charges. But how are the American people to judge for themselves as long as they are treated like children, who may have only such news and facts as are deemed good for them by their new mentors in Europe?

Approximately 550 delegates are in attendance at the thirty-ninth annual convention of the A. F. of L., now in session at Atlantic City, New Jersey. This is a record number. For the first time the British Trades Union Congress is represented by a woman—Miss M. Bonfield. Her colleague fraternal delegate is S. Finney. The delegates from the International Seamen's Union of America are: Andrew Furuseth, Victor A. Olander, Percy Pryor, I. N. Hylen and Patrick O'Brien.

Filibusterers in the Sixty-fifth Congress couldn't see any good in the United States Employment Service. Yet in one week in May it found jobs for 65,263 individuals. The employers showed what they thought of it during the same week by making requisition on the service for 110,446 workers.

STEFANSSON'S EXPLORATIONS.

Some Interesting and Instructive Deductions on the Practical Results of Arctic Explorations.

Vilhjalmur Stefansson is a living example of the beneficial effects of an Arctic exploration. The public has always regarded a polar journey as one fraught with the greatest of dangers, generally followed by the physical deterioration of the explorer as a result of the rigorous climate and strenuous experiences and hardships. Mr. Stefansson puts a quietus on this long cherished belief He also negatives for all time the theory that an Arctic exploration is the last word in hazardous enterprises. The Manitoban explorer is a splendid specimen of vigorous manhood. His description of his travels almost, if not quite, brings the Arctic Circle within the range of practical things as a summer resort.

Stefansson is of the opinion that it is hard to judge in advance what might be the most important results of any expedition or investigation. He says: "Often the things that at first appear of least value eventually turn out to have the greatest. To take an instance from the domain of exploration: When Columbus sailed west from Spain he was in search of a direct water route to Cathay, and when it was realized that he had found something else his expedition from that point of view was considered to be a failure. Later on when people began to realize that America might have a value of its own, the first thoughts of people turned to the minerals, and those who were not in search of perpetual youth commonly explored it with the hope of finding gold. No one was looking for the potato, and when it was discovered it seemed more a curiosity illustrating the peculiar food habits of the aborigines than a thing of economic value to Europe. Yet it has proved that the discovery of the potato was of far greater value to the world than have been all the gold mines of the two continents.

"When an early Greek, or whoever it was, first discovered that the square of the hypotenuse of a triangle is equal to the sum of the squares of the other two sides, it is certain that his associates failed to see any so-called 'practical value' in the discovery, and it is like that the discoverer himself would have been puzzled to defend it as a thing of economic value unless possibly as applied to the measuring of land. But now our navigators sail the widest seas and our engineers build bridges and tunnels and skyscrapers on the basis of that and similar theorems, and their value is greater than anyone may compute.

"If ten years ago a representative of the press had visited some student of acoustics and discovered him engaged year after year in the study of the speed of sound and the effect upon it of changes in temperature or barometric pressure or atmospheric humidity, both the interviewer and the student would have been at a loss to show exactly how this study would have great value of the sort vulgarly known as practical. And still those of us who have followed the technical side of the European War, either in the field or through the scientific journals, know that these very students of acoustics left their homes in whatever country they lived and went to the battle lines to become some of the most useful participants in the struggle on the western front, for by a thorough knowledge of these laws, which seemed so impractical ten years ago, they were able to locate with a margin of error of only a few yards, a big gun that had been fired from a secret place as much as fifteen miles away.

"Considerations such as these prevent me from answering definitely what the main scientific results of our expedition may be, for I am modest enough to realize that my ranking of their importance is almost certain to be wrong. However, I can answer the question by putting our discoveries somewhat in the order of the interest which they seem to evoke among scientific men and especially among geographers.

"When we sailed north, the task assigned us by the Government of Canada had many scientific aspects, but geography was considered the most important, and its main feature was to explore as much as possible of the 1,000,000 square miles of unexplored area that lay white on all properly constructed maps to the northward of Alaska and to the west of the already known Canadian Islands. Roughly speaking, we have explored over 100,000 square miles of this, sounding parts that are found to be ocean, and discovering that the Beaufort Sea, as this part of the ocean is called, is not shallow, as many geographers had supposed, but over a mile, and in many places over two miles in depth. These soundings and other observations on the moving ice most geographers will rank as high as our discovery of three islands of considerable size and several smaller ones, filling up the gaps previously known as Gustav Adolph Sea and Crown Prince Gustav Sea, to the north of Prince Patrick Island and west of Axel Heiberg Island. We have sounded the channels between many of the previously known Canadian islands, as well as between the islands we discovered, and have taken tidal observa-

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., June 9, 1919. Regular weekly meeting came to order at 7 p. m., E. A. Erickson presiding. Secretary reported shipping good.

HARRY INGWARDSEN,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., June 2, 1919. No meeting; shipping slow; members scarce.

J. ETCHELLS, Agent.

Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., June 2, 1919. Shipping fair; prospects good.

W. G. MILLARD, Agent.

58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, June 2, 1919. Shipping fair; few members ashore.

H. L. PETTERSON, Agent.

2016 North 30th St. Tel. Main 808.

Seattle Agency, June 2, 1919. Shipping fair.

P. B. GILL, Agent.

84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, June 2, 1919. Shipping fair.

ED. ROSENBERG, Agent.

P. O. Box 280. Tel. Main 557.

Portland Agency, June 2, 1919. Shipping rushing; men scarce.

JACK ROSEN, Agent.

88½ Third Street. Tel. Main 6013.

San Pedro Agency, June 2, 1919. Shipping very good.

HARRY OHLSEN, Agent.

128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, May 26, 1919. Shipping dull; prospects poor.

JACK EDWARDSON, Agent.

P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., June 5, 1919. No meeting; no quorum. Shipping fair; plenty of members ashore.

EUGENE STEIDLE, Secretary.

42 Market Street. Phone Kearny 5955.

Seattle Agency, May 29, 1919. No meeting. Scarcity of members.

LEONARD NORKGAUER, Agent.

Grand Trunk Dock, Rooms 203, P. O. Box 214. Phone 2233.

San Pedro Agency, May 28, 1919. No meeting. Shipping fair; some members ashore.

JOE MACK, Agent.

No. 613 Beacon Street. Phone Sunset 336. P. O. Box 54.

DIED.

Johan Ludvig Carlsen, No. 946, a native of Norway, age 35. Died at Gaviota, Cal., June 4, 1919.

Another ancient anchor was fished from the bottom of San Francisco bay during the week, when the mud hook of the motor-ship "Trolltind" was being weighed off pier 46. One week ago the schooner "Georgette" fished up an anchor and thirty fathoms of cable off Meiggs wharf. These accidental finds have occurred frequently during the past few months. On an average the anchors are worth several hundred dollars each. Captain T. P. H. Whitelaw, who has perhaps recovered more anchors than any other person, said that it is all a matter of luck, for he has at times spent weeks searching for an anchor and failed. He has at times, however, recovered one he was not looking for.

A phonograph is said to have been put to a very novel use by certain seal hunters of the Pacific. A large instrument, but one which is of a convenient shape for transportation, is made use of, and it is set up near the rendezvous of the animals, and soon its music attracts their attention and they lift their heads well above the water. A hunter reports that he has been able to shoot large numbers of them while they are under the spell of the sounds so strange to their ears.

OUR WASHINGTON LETTER.

(By Lauren e Todd.)

Ten billion dollars is the proposed expenditure by the Government of the United States for the coming fiscal year. Five billion dollars is the estimated total of the revenues of the Government. That means that we face a deficit of five billion dollars, which must be met either by further national indebtedness, bearing interest which the wealth-producers must pay, or by quick and sharp reductions of expense on the one hand and inceases of taxation on the other. And these new taxes must go upon the shoulders able to bear them, or we shall have worse industrial trouble than we have known in this generation.

Control of the taxing power is now in the hands of the regular Republican organization in Congress. Senator Penrose of Pennsylvania, lifelong reactionary and spokesman of "predatory wealth," now chairman of the Finance Committee in the Senate, has become alarmed at the probable result of his running up another huge deficit, and has privately declared that prosperous business will have to carry a larger share of taxation. Even Penrose, who will not admit that a labor movement and a high cost of living exist, is frightened by the outlook for next year. The war profiteers may have to disgorge, in order that public feeling against them and their ruinous control of the taxation policy may be kept within bounds.

Information reaching the national capital from Western Canada is to the effect that the failure of the Canadian government to control the cost of living and to curb the profiteers, during and since the war, are to be chiefly blamed for the enthusiasm with which the rank and file of Canadian labor has joined in the general strike movement. Tens of thousands of returned soldiers in Winnipeg, Calgary, Edmonton and other cities were in need of jobs that would keep them decently fed and clothed and sheltered, and the government at Ottawa was at the height of its anti-labor arrogance, when the movement for One Big Union began. The returned soldiers' organizations in the cities were protesting at the high cost of living. When the Winnipeg metal trades bosses refused to deal with the unions on the forty-four-hour week and other demands, the spark was struck which iginited the industrial tinder everywhere westward from Lake Superior. To-day the eastern half of the Dominion is reported to be involved, and Premier Borden has agreed to call a Dominion council of labor and employer spokesmen in the hope of reaching a settlement on a new basis. Unless such an agreement is soon reached, the 325,000 members of organized labor in Canada, together with other hundreds of thousands not yet organized, will inevitably be drawn into the struggle.

On our own side of the line the general conditions are to-day much better than in Canada, and if the standpatters in Congress will rise to the crisis and force the war-millionaires to hand over the bulk of their income to the Government treasury, there may be no such development in the United States in the coming year as we are witnessing in Canada. If Congress refuses to meet the deficit, no resolutions and no sentiment of any kind can prevent empty stomachs from crying out angrily, in all of the industrial centers from New England to California.

Of course there is more than a protest at the high cost of living, in this Canadian prairie fire. There is a struggle for industrial solidarity under the name and form of One Big Union, in the belief that through industrial solidarity the labor movement in the Dominion can make more rapid progress than under the trade union system. This belief is held by a militant majority, and is rejected by a seasoned minority, who nevertheless are on strike with the rest. The majority is determined to continue the fight until the Canadian labor movement is entirely cut off from the internationals that comprise the American Federation of Labor. The outcome of this determination no man can now foresee. That they will win concessions as important as those taken by the Triple Industrial Alliance in Great Britain recently is confidently expected by the leaders.

Since the St. Paul convention of the American Federaton of Labor last June, two great developments have marked the growth of the movement of labor in this country. First is the winning of the 44-hour week by nearly half a million workers, chiefly in the region of New York and New England, upon the example set by the Amalgamated Clothing Workers, who are outside the Federation. Scarcely a national or international organization is not at present getting ready to fight for this point, or is announcing successes in the fight.

Second is the solid organization of the workers on the railroads of the country, and the establishment of their joint legislative understanding that the Plumb plan of public ownership and democratic management of the railroads shall be supported against all the schemes which Congress, the railroad security holders, the railroad presidents, the bankers and the United States Chamber of Commerce may try to hatch.

The 44-hour week has supplanted the eight-hour day as the slogan of American labor. With it goes generally a program of other improvements in the conditions of the workers. Thus the 45,000 New York cloakmakers affiliated with the International Ladies' Garment Workers, after a two weeks' strike, have secured not only the 44-hour week but twelve other "points," including the week-work system; complete unionization of shop; discussion of every discharge of union member between the manufacturer and union official, with burden of proof on employer; limit of eight hours overtime in any week, and in not over eight months a year, and no overtime Saturdays or Sundays; equal distribution of work during slack seasons; manufacturers must register sub-contractors to certify fulfilment of union conditions by latter. Operators are to get $44 per week, cutters $39, piece tailors $38, top pressers $38.60, and underpressers $32.

The International Typographical Union is now taking a referendum vote on the establishment of the 44-hour week on May 1, 1921, by negotiation and agreement with the employers. The only locals not endorsing the move, so far as can be learned here, are those in which a majority wants the shorter day to come sooner. "Big Six" in New York City has completed its vote on two propositions, the first of which was this plan sponsored by the international, and the second a local proposition to get the 44-hour week in the book and job shops by October of the present year. On the first plan the vote was 618 in favor and 5656 against. On the second plan the vote stood 6078 in favor and 310 against. In the same election the "radical" element in "Big Six" polled one-fifth of the total vote on president, and one-sixth of the vote on secretary-treasurer of the local.

When the shorter hours are enforced nationally in the typesetting industry, the Boston local will take particular pleasure in watching the surrender of the anti-union newspaper plants there to the new order. It may not be generally known that when the Christian Science Monitor was established, the Typos had all but two or three of the sixty men in the composing room, although the management was hostile to any dealings with organized labor. Since that time these union men have one by one been replaced by non-union printers, until the early hope of organizing the shop by patient negotiations has been pretty definitely abandoned. The Boston Transcript has followed the same policy—a policy made notorious in America by the late Harrison Gray Otis of the Los Angeles Times. This policy is maintained only by means of granting the union scale of wages and hours at all times, in order to attract men who otherwise would join the I. T. U.

Henry Sterling, legislative agent of the American Federation of Labor, was astonished and pleased, when he dropped in upon the Senate Committee on Education and Labor, yesterday, to find that committee ready to act immediately upon a labor measure. The bill in question was drawn by the Federal Vocational Education Board, of which Arthur Holder is the labor member. It provides for the teaching of new trades to all men crippled by industrial accident or sickness so that they cannot follow their former callings. The Federal Government is to match each dollar voted by a State to pay for this re-education of the maimed soldiers of industry. Senator McLean of Connecticut, a standpatter in most affairs, offered the motion for an immediate favorable report. It was adopted, and Senator Kenyon, the chairman, reported the bill and told the Senate he would ask for its early adoption.

While Sterling was being thus cheered up, at the Senate end of the Capitol, the United States Employment Service appropriation was being struck out of the deficiency appropriation bill in the House, on a point of order by Blanton of Texas. Blanton is a rabid anti-labor politician, who made a speech recently defending Burleson's record as the owner of a convict-farm.

Assurance that Andrew Furuseth has returned from Paris and will attend the Atlantic City convention makes it certain that the effect of the Paris treaty upon the American labor movement will be fully discussed by at least two speakers—Furuseth and Samuel Gompers. A great deal depends upon the opinions brought home by these two labor officials, because while almost the entire movement was supporting the Wilson plan for a League of Nations as understood in December, a very large proportion of these endorsers now believe that the League embodied in the Paris

treaty represents a defeat of President Wilson's essential principles and an aggrandizement of the British and Japanese empires at the expense of democracy. If Messrs. Gompers and Furuseth, who have been on the ground while the treaty was being formed in Paris, prove to agree on its value, then the American Federation of Labor will undoubtedly take a strong stand. If they disagree, then the convention will register a majority and a minority opinion, that will be used by either side in the Senate.

Labor's decision may determine the attitude of the Senate on the ratification or rejection of the treaty. Just at present the opponents of the treaty seem to be the stronger, due in part to the refusal of the British government to hear the leaders of the Irish independence movement who asked the right to go to Paris. To-morrow the balance in the Senate may incline the other way.

A WORTH-WHILE SCHOOL.

Atlantic Coast readers of the JOURNAL will be interested in the announcement that the second summer season of the Rand School of Social Science will begin on July 7, 1919, and will extend to August 16. This period will be divided into three terms of two weeks each. The aim of the summer courses is to give to people living outside of New York City an opportunity to study the social sciences, economics, and current history from the socialist point of view. At the same time, a visit to the school will afford an opportunity to exploit the rich vacation possibilities of New York City and its environs.

The courses will largely duplicate the regular work of the school term, and will be conducted by the regular staff.

Fees for the full term, $15; for single courses, $3.50; matriculation fee (required of all students), $1; single admission to public lectures, 25 cents. The fee for the term includes admission to any course and to all lectures and concerts.

Classes will be conducted from Monday to Friday, chiefly in the forenoon. There will be occasional Saturday morning lectures.

Courses: (1) Methods of Using Social Facts; (2) Control of Public Opinion; (3) Fundamentals of Socialism; (4) Evolution of Society; (5) Revolutions in Europe; (6) The Soviet Government; (7) The Economics of Reconstruction; (8) Modern European History; (9) Revolutionary Epochs; (10) American History; (11) Modern Problems of Reconstruction Period; (12) Capitalism; (13) Labor Problems of the Reconstruction Period; (14) Comparative Government; (15) Interpretation of Social Facts; (16) Elements of Political Science; (17) History of the Socialist and Labor Movements in America; (18) Ideals in Education; (19) Economic Foundation of Ethical Standards; (20) Social Forces in Literature; (21) Epochs of Civilization; (22) Social Aspects of the Modern Drama; (23) The Awakening as Reflected in Music; (24) Appreciation of Modern Literature.

Descriptive circular may be had upon application to Bertha H. Mailly, Executive Secretary, 7 East 15th Street, New York City.

A FRENCH LABOR DECLARATION.

The following declaration, addressed "To Public Opinion, To the Workers," and signed by the Confédération Générale du Travail, is taken from l'Humanité of April 18.

From August, 1914, to November, 1918, we were told repeatedly that we were fighting the war of right. This assurance implied that peace would confer upon the nations the liberty of self-determination and that it would be based on general disarmament, the only possible method of liquidating the debts of war.

To-day these solemn promises are being broken. Our diplomats offer us a plan of a League of Nations which is not the society of nations described in the Fourteen Points of President Wilson. The peoples of the whole world in their thirst for justice have acclaimed these fourteen propositions. We have made them ours.

The French working class, faithful to its conception of "war against war," rises against the sabotage of peace.

On coming out of torment, the nations cannot be condemned to have no other object than the payment of taxes destined to support the burden of armament.

The Confédération Générale du Travail condemns any foreign policy of blockade, of force, of diplomatic or armed intervention.

It recalls the formula of the French Revolution: "Each nation by itself has the right to make its laws, the inalienable right to change them; to wish to despoil a foreign people of that right is to become the enemy of the human race."

The C. G. T. vigorously protests the expedition against Russia, a friendly country against which no declaration of war has ever been made.

The continuation of this policy of intervention makes France a power guarding the privileges and the reactionary institutions of all countries.

The working class, the French people, can never subscribe to this humiliating and dishonorable attitude.

Since liberty of thought and opinion was the very foundation of the Declaration of the Rights of Man, the C. G. T. appeals to the public opinion, to the conscience of the trade union organizations, to agitate against this state of things.

The C. G. T. condemns any continuation of the war, and urgently demands the conclusion of a real peace to which all peoples can subscribe.

It was quite a common thing at one time to go to the village blacksmith for tooth extractions. His principal qualification for the job was a strong pair of pincers. After gripping the offending tooth with the pincers he would screw the long handles in a vice so that the patient could not move. Then, putting a bar of iron in the fire till it was blazing hot, he would dab it at the victim's nose. He would, of course, violently draw back, leaving the tooth behind. It was all done very quickly and cleverly.

With a view of bringing the school system of China up to American standards a Chinese government commission is studying the educational progress of the Philippines.

CHINESE BEGGARS.

Not only in Canton, but in every part of China beggars are one of the sights that proclaim loudly the poverty of the country and the maladministration of the government. In well-governed countries beggars are not tolerated in public places; in China the presence of beggars is one of the necessary evils of society. In truth, begging is regarded as a very ancient institution, and hence arises the toleration of the people and the government. But begging in China is reduced to a fine art (says the Canton Daily Times). All the tricks in the trade are carefully treasured and handed down reverently from one generation to another.

The beggars that one sees in the streets are more often than not the offspring of a generation of beggars. "Once a beggar always a beggar" seems to apply with peculiar force to Chinese beggars. The native system of employment seems to abet rather than dimish begging. For instance, no shop or household would think of employing any one without a recommendation or guarantee from some reliable person or shop. As the beggar, if he is at all minded to an honest job, is an outcast, it stands to reason that he will not be able to furnish either the recommendation or guarantee necessary to obtain a position, and the result is that he continues to remain a beggar all his lifetime.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

Labor will have to try their hand at the convention, where the bona fide delegates will have their right of selection, nor can I be coaxed out of service by a pretense of over-kindness.

"When ferreted down, the rumor that I desire to retire from the Presidency of the American Federation of Labor, will be found in the wish of some one who hates me for my Americanism or for my loyalty to the cause of labor, and who has conceived this gentle method of trying to dispatch me from the field of active work in the great cause of labor, justice and humanity."

British Co-operative Movement Grows.

Since the armistice was signed a new interest has been developed in the British co-operative movement, reports United States Trade Commissioner H. G. Brock, stationed at London.

The Department of Commerce has made public this report, which states that there are some 2,500 of these societies in operation with a total membership of over 3,500 000 persons, and a total share, loan and reserve capital of over $375,000,000.

"On the whole," says the commissioner, "the war has had a favorable effect on the progress of co-operation in Great Britain. Controlled prices have helped rather than hindered the movement, since in the case of the controlled commodities, for which everybody must pay a certain retail price, members of the co-operative society have an advantage over non-members in that they receive a dividend on all purchases. Co-operative stores are the only stores paying such a dividend, and in many cases this has been an excellent argument to prove the soundness of the co-operative system.

"The number of members of individual co-operative societies has shown a fair increase, and this increase would undoubtedly have been much greater had the societies been able to obtain sufficient supplies.

"The British Co-operative Wholesale Society (ltd.), with headquarters at Manchester, England, and the Scottish Co-operative Society (ltd.), with head offices at Glasgow and Edinburgh, Scotland, are the most important single units in this co-operative movement in Great Britain. The British society commenced business on May 14, 1864; and the Scottish society on September 8, 1868. The membership of both societies is made up entirely of individual co-operative retail societies.

"Up until the past two or three years the contract between the co-operative societies and the trade unions has not been at all close. Recently, however, there has been a definite attempt to persuade trade unions to do their banking business with the banking department of the co-operative wholesale society, and the important scheme of agricultural and industrial development, which will shortly be announced by the society, will tend, it is believed, toward establishing a closer working arrangement between the co-operative societies and the trade unions.

"Among the projects contemplated under a development-bond scheme is the acquisition and operation by the society of flour mills, tanneries, jam factories, boot and shoe factories, corn mills, dairy farms and similar enterprises. Not long ago the co-operative wholesale society began the manufacture of textiles.

"Another big development foreshadowed is the acquisition of large coal fields in Yorkshire. Already the society owns a coal mine near Newcastle. During the war the society has spent large sums for the purchase of farm lands and factories.

"Development bonds, ranging in amounts from $100 to $5,000, and totaling $12,500,000, are now being issued to carry on these proposals. These bonds will bear 5½ per cent. interest and may be redeemed at the end of 10 years."

One Firm's Meat Profits.

Some idea of the tremendous supplies of meat furnished by the packers to the government during the war is given by the Cudahy Packing Company, smallest of the "big five" packers, in a memorandum submitted to the war department. The company reports that it made in 1918, after paying interest and taxes, "practically the same rate of net profit as in the pre-war year 1914."

Deliveries of dressed beef for the army and navy from May, 1917, through November, 1918, totalled 39,508,035 pounds, which cost $8,465,246.18. Of canned meats, 50,620,042 pounds were used, the total cost of which was $14,782,033.54. Bacon cost $13,657,320, and weighed 31,440,600 pounds. During the latter part of the war the company furnished the government over 1,000,000 pounds of bacon per week. The total value and volume of supplies furnished the government amounted to $41,250,000. The number of pounds of meat sold the government was 102,709,545. The above figures represent deliveries which never equaled 25 per cent. of the company's total production.

By way of comparison of the Cudahy business with that of the other packers, the Cudahy total sales of 1918 were $286,660,971, while sales of Swift & Co. for the fiscal year of 1918 were $1,200,000,000, and those of Armour, exclusive of business from Argentine plants, $861,000,000.

FIRST ATLANTIC FLIGHT.

In the successful crossing of the Atlantic by Lieutenant-Commander Read, the first effort at transatlantic flight should not be forgotten. It was on October 15, 1910, that Walter Wellman left Atlantic City in the airship "America" bound for Europe and kept the air for three days and nights, making about 1000 miles of the journey before being compelled to abandon the attempt. Motor trouble and a gale from the tropics put the "America" practically out of commission, and the airship was abandoned. Wellman and his crew of five men being left in mid-ocean in the lifeboat which hung beneath her during the journey. They were picked up by a steamer from Bermuda, and in his book, "The Aerial Age," Wellman afterward wrote: "Good old 'America,' farewell. Thank you for the noble comrades and rare experience you have brought me, for the lesson you have taught us. In the years to come many aircraft will cross the Atlantic; and you will be honored as the ship that showed the way."

STEFANSSON'S EXPLORATIONS.

(Continued from Page 7.)

tions at many widely scattered points. It is probable that a study of these tidal observations will throw considerable new light on the tidal problems of the polar sea, for they were taken at points remote from observation spots attained by other expeditions.

"We have found coal and other minerals on most of the islands visited, and, with the exception of one island no more than fifty miles in diameter, we have found all the lands visited to be covered with vegetation of varying degrees of abundance, but always sufficient to support both winter and summer grazing animals in large numbers.

"We have shown that Findlay Island, indicated on all recent charts as being about ninety miles in diameter, does not exist in that form but must be broken up into an island twelve miles in diameter where the north tip of the big island is supposed to be, and three little islands where the south coast formerly was shown on the maps, with a strait between sixty miles wide and 172 fathoms deep. We completed the mapping of Prince Patrick Island between the farthest points attained by McClintock, and Mecham. Victoria Island was discovered by the British explorers in the early part of the last century, but its mapping was not completed. In the beginning of the present century Amundsen, who was wintering near its southeast corner, succeeded in mapping a considerable part of the previously unknown east coast, but beyond the farthest point reached by his expedition there still remained about 100 miles of coast line undetermined. This gap we have now filled in. We have discovered to the northeast in Melville Sound a new island which we did not visit, but which seems to be between twenty and thirty miles in length.

"It must, of course, be understood that it is impossible to give an adequate synopsis even of the geographic work alone of the expedition, and as for trying to epitomize the whole scientific work, that is beyond the range of possibility, as may well be seen from the fact that we expect the scientific results of the expedition to fill between twenty and thirty octavo volumes, that are already being prepared or projected. Three of these volumes are now in the press.

"Our expedition, on account of being large, had several aspects and operated in many parts of the Arctic. The 'Karluk,' under Captain Bartlett, on the drift that preceded her sinking, made certain contributions to our knowledge of the depth and character of the ocean between Alaska and Wrangell Island. The 'Alaska,' under Dr. R. M. Anderson, did a good deal of detailed scientific work on the north coast of Alaska, and more especially in the vicinity of Coronation Gulf. The 'Mary Sachs,' and later on the 'North Star,' under George H. Wilkins, did some useful work in Banks Island, and sledge parties farther north made the geographic discoveries mentioned above and picked up what odds and ends they could of scientific information.

"It must not be supposed that the main part of the scientific results of the expedition was gathered by the three commanders of branches of it mentioned above or by myself personally. The expedition had the very generous support of the Canadian Government, so that we sailed north with a staff of thirteen scientific men, eleven of whom had training equivalent to that of college professors—they were university graduates and most of them had done a great deal of post-graduate work in their specialties and had elected those specialities as their life work. As no other expedition has had so large a staff of men equally trained, it was to be expected that, in certain departments at least, the information gathered would be very full. Of course, the loss of most of the work of the five scientists of the 'Karluk' cut the hoped-for results far below what would else have been the case, but even then we had left a staff unusual among polar expeditions, both in numbers and training."—Christian Science Monitor.

A little old lady was waiting patiently for a street-car, but it chanced to be just at that hour when many were going out of service. When the first one came along she stepped into the street, but the car growled past without even slowing down. The next one did, however, but the conductor, leaning over the rail, bawled out, "Going to the barn." Twice this happened and the little old lady, who at first accepted the "going to the barn" with resignation, had reached the boiling point when for a fourth time a car stopped and the conductor, yanking the bell, chortled, "Going to the barn." "Well, go to the barn, yuh durn jackass; it's just where yuh belong," yelled the indignant one, brandishing her umbrella.

WAGES AND SEAWORTHINESS.

Editor SEAMEN'S JOURNAL:

The following case of Claude M. Richards, plaintiff, against Gaston, Williams & Wigmore S. S. Corp., defendant, should be of interest to seamen in general.

The action was started in the City Court of the City of New York. This court was formerly known as the Marine Court of the City of New York, and still has jurisdiction of certain admiralty causes in this city. The material allegations of the complaint alleged a maritime contract, whereby plaintiff signed regular shipping articles as chief engineer on defendant's motor-ship "Grays Harbor" on or about June 21, 1918, for a voyage to Santos, Brazil, and return to a final port of discharge in the United States, at $170 and 25 per cent. bonus each month; that on August 19, 1918, while in the performance of said contract, the said vessel, by reason of her unseaworthy condition, and the negligence of the defendant in causing and permitting said vessel to be sent to sea in said unseaworthy and unsafe condition, had an explosion off the coast of Brazil, took fire and became a total loss; that by reason thereof, plaintiff was unable to complete his contract, and thus made claim for his wages, transportation and maintenance en route, from August 19, 1918, the time of the loss of said vessel, to November 13, 1918, the date of his arrival in New York, in the sum of $1000.

The defendant company interposed a demurrer, stating that the complaint did not state facts sufficient to constitute a cause of action. The question of law was therefore brought to issue, and was as follows:

It was claimed by defendant that plaintiff was not entitled to his claim because of Sec. 4526 of the U. S. Rev. St., where it is provided:

"In cases where the service of any seaman terminates before the period contemplated in the agreement, by reason of the loss or wreck of the vessel, such seaman shall be entitled to wages for the time of service prior to such termination, but not for any further period. Such seaman shall be considered as a destitute seaman and shall be treated and transported to port of shipment as provided in Sections 4577, 4578 and 4579 of the U. S. Revised Statutes."

Thus the construction of the phrase "the loss or wreck of the vessel" mentioned in the above statute required interpretation and construction.

It was shown by plaintiff by a long line of authorities that there is an implied warranty that a vessel is seaworthy at the commencement of the voyage. These authorities were both American and English and also of New York. Hence, the statute did not mean to do away with that warranty. And it was further shown that by "loss or wreck of the vessel" was meant loss or wreck by extraordinary perils of the sea, and that it did not apply where the loss or wreck had been caused by the act of the master or owners of negligence or fault, when there was no fault or negligence on the part of the seaman or seamen, or by the breach of the warranty of seaworthiness which is imposed upon the owner and vessel.

And the Court therefore properly held in upholding plaintiff's view, that the vessel and her owner were liable to a seaman for his wages for the entire voyage, his maintenance and transportation, where the vessel was lost or wrecked and the voyage abandoned through the fault or negligence of the master or through the breach of the warranty of seaworthiness imposed on the vessel at the commencement of the voyage.

Very truly yours,
SILAS B. AXTELL.

New York, June 5, 1919.

TREASURE ISLAND.

Nauru Island is 2000 miles away from Australia. The English name is Pleasant Island. It is Pleasant Island because, inch for inch, it is said to be the richest spot on the globe.

This Treasure Island is only five miles long and three broad. But those few square miles are covered with vast guano deposits containing phosphoric acid equal to 80 per cent. tribasic phosphate of lime. Nauru is rich; it is surpassingly rich; the guano deposits are almost gold deposits. They can be sold, and will make other lands rich. Nauru contains enough phosphate to fertilize the world for at least half a century. It is in soft rock form, and only requires an easy pulverization and treatment with sulphuric acid. Hence (for the white man) Nauru is the "Pleasant Island." It belongs by natural law, wealth and all, to its natives. But that is not the white man's idea. He became interested in the souls of those dusky natives, and the Germans became possessed of the island. Then the Germans were turned out. Now W. M. Hughes claims it for Australia "by right of capture and garrison" (March 17), William Massey claims it for New Zealand "on general principles," and Lord Milner claims it for Great Britain because, he says, "Great Britain can develop it better."

Hughes is on the warpath in usual style. On St. Patrick's Day we read that "he uncompromisingly presented to the Peace Conference a memorandum setting out that Australia 'wrested the island from the enemy, maintaining its garrison throughout the war.' This did not impress the delegates, who declare that the 'wresting of the island' consisted merely of the landing of a whaleboat from the cruiser Melbourne." Lord Milner was pained that Australia and New Zealand should not see that Treasure Island would be "best attached to the British groups, administered by the High Commissioner of the Pacific." . . . He urged a plump British annexation—or perhaps it might be called a mandate.

It is pull devil, pull baker for the Treasure Island! . . . It is all a question of who gets the phosphate—which, if it belongs to anybody, belongs to the natives, who are not cannibals at all, but quiet, inoffensive fisher people. Australia's sole claim to the golden atoll 2000 miles away is the landing of that whaleboat. . . . It is a very edifying and instructive spectacle indeed. Now, why not let the natives have their own, and let them sell to those who offer the most? Bah, that's not business!

(Since the foregoing was editorially printed in the Hobart "World," the cable has informed us that the problem of the ownership and control of Nauru has been solved by Britain, Australia, and New Zealand each acquiring a third interest in the island and its resources.)

Labor News

It is reported by the Department of Labor that the United Mine Workers of America and the Bureau of Naturalization are to co-operate in a movecmnt to induce foreign-born members of the miners' unions to become American citizens.

From the discussion of the child question under the auspices of the Department of Labor, it has been concluded that a central employment agency for children should be established, offering occupational advice and supervision during the first years of employment.

The Department of Agriculture denies the claim that soldiers who came from the farms are not returning to the farms on their discharge from the military forces. It was stated that from 75 to 95 per cent. of the farmers in the army were seeking other occupations. The Department of Agriculture reports that it has found that in one camp alone 98 per cent. of the discharged soldier-farmers have returned to that employment.

After a nine years' struggle for collective bargaining, the Amalgamated Clothing Workers last week obtained an agreement with the Wholesale Clothiers' Association of Chicago. There is provision for a preferential union shop, the 44-hour week, time and a half for overtime, and the establishment of a trade board and an arbitration board similar to those created by the agreement with Hart, Schaffner & Marx. About 30,000 workers are affected.

Wage increases were given by the Shipping Board to 1200 employees of tugs and dredges. Captains, foremen and engineers who formerly received around $200 a month were advanced to $215, on smaller dredges from $183.75 to $195, cranemen from $152.75 to $165, firemen, oilers and watchmen from $119.75 to $135, and deck hands and scow men from $108.75 to $124. Variations were made in the scale for Chicago, Buffalo and Cleveland, because of special conditions.

A demand for a labor party was unanimously adopted by the convention of the Pennsylvania Federation of Labor last week. A special convention is to be called to form the party. Pennsylvania's delegate to the American Federation of Labor convention was instructed to do all in his power towards the formation of a national labor party. Resolutions adopted demand the immediate release of all political prisoners, the withdrawal of American troops from Russia and the immediate lifting of the blockade against Russia.

As a result of the conciliatory efforts of the Minister of Labor of Canada, an agreement has been reached between representatives of the shipbuilding plants between Halifax and Port Arthur and the executive committee of the Marine Trades and Labor Federation, which disposes of a dispute affecting 18,000 transport workers. The territory named is to be divided into zones, and terms arranged to be satisfactory to each. At the conference it was practically agreed that the eight-hour day will be adopted over the jurisdiction of the Federation, and four hours on Saturday, making a forty-four hour week. Wages will be 80 cents an hour minimum, with the helpers averaging 50 cents an hour.

INFORMATION WANTED.

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

INFORMATION WANTED.

Relatives of Axel Hansen, the seaman for whose murder Capt. Pedersen, or "Hell-Fire Pedersen" of the bark "Puako," is to be tried May 15, at New York City, please communicate with the undersigned. Any seaman knowing aught of Hansen or his relatives, please write. The names and addresses of one or two witnesses who have known for some time past Capt. Pedersen's reputation, the way he is reputed to have handled his men on board ship, are also desired to communicate with the undersigned. Silas B. Axtell, 1 Broadway, New York City.

CARRY ON!

Uncle Sam is releasing from his service the men who went "over there" to free the world from autocracy. Thousands of soldiers are daily receiving their honorable discharges; they pocket their pay, bid farewell to their comrades, and sally forth—civilians.

There is one army, however, which must not be demobilized. That is the army of War-Savings Stamp buyers. More recruits are needed to carry on the campaign of readjustment which follows the signing of the armistice.

The army of fighters has achieved its purpose.
The army of savers must remain in "action."
"Carry on" to a lasting peace under the banner of W. S. S.!

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

Carl Hansen, a native of Soon, Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis. 8-17-18

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City.

William J. Farrell, last heard from at Seattle, Wash., July 25, 1918, is inquired for by his father, Edward Farrell, 338 Commercial Avenue, South San Francisco, Cal. 4-30-19

Home News

The Department of Labor reported that an increase in housing facilities for negroes in Cincinnati had resulted in a lowering of the death rate and a decrease in the number of arrests.

The State Legislature of Kansas has approved a law by which the State may purchase lands, develop them by construction of irrigation projects and otherwise, and sell them under long-term contracts to actual owners.

Formal notice of a contest in the election of Truman H. Newberry, Republican Senator-elect from Michigan, was given on the 19th with the filing in the Senate of petitions by Henry Ford, defeated Democratic candidate, asking for an investigaiton of campaign expenditures and a recount of ballots.

In an appeal to make motherhood safe, the Children's Bureau says that 16,000 preventable deaths of mothers occur annually in the United States from childbirth. The United States has a higher maternal death rate than any other of the principal countries except Spain and Switerland, Sweden being lowest.

Announcement has been made by Emmett J. Scott, special assistant to the Secretary of War, that the Chief of Staff has personally directed the Commanding General at Camp Meade, Md., to revoke the finding of the Army Board which declared that negroes were unfit to serve as officers and leaders of men.

The Benicia (Cal.) arsenal is to be made a big depot for artillery material, machine guns and other Army supplies and will be developed into one of the largest arsenals in the country. This was announced after a conference between Representative Curry, Major-General Williams, chief of ordnance, and Colonel Pierce, assistant chief of ordnance.

Marriage statistics for 1918 show the greatest excess yet recorded for weddings of bachelors with widows over those of spinsters with widowers. In California last year 5195 bachelors married widows or divorcees, while only 2827 spinsters married men of prior matrimonial experience, the excess for the former being 2368, or 83.8 per cent.

In March the geological survey of the Department of the Interior classified 1,135,933 acres of land under the enlarged homestead and stockraising homestead laws. This brings the total so designated up to 15,780,614 acres. The stockraising homestead law permits entries of land for grazing and the raising of stock up to 640 acres, and the enlarged homestead act up to 320 acres. States in which land was classified for homestead purposes during March were Arkansas, Colorado, Idaho, Montana, Utah, Washington and Wyoming.

The United States Attorney General has informed the Commissioner of Internal Revenue that the manufacture of any sort of beer is in violation of the law and should be so treated. This information is in answer to Commissioner Roper's request for a decision on questions involved in the controversy over the making of 2¾ per cent. beer. The opinion of the Attorney General is in the hands of the legal advisers of the Bureau of Internal Revenue, and will be printed in the form of an order and distributed to the officers concerned.

Domestic and Naval

The steamer "Joseph J. Cuneo" (Nor.), sunk off Lewis, Del., has been raised and towed inside the breakwater

The schooner "John Bracewell," ashore on Block Island, is of 195 tons reg.; owned by B. F. Nealy, Rockland, Maine.

The schooner "Mabel Davis" (Br.), on a voyage from Gibraltar for Harbor Grace, N. F., has been abandoned in the Atlantic.

The steamer "Sao Vicente" (Port.), New Orleans for Rotterdam, at Brest with water in hold, will discharge. She is 3264 tons, requisitioned by Portuguese Government.

The steamer "Elinor," at Bermuda disabled, is bound from Montevideo for New York with general cargo; 4295 tons, built in 1918 and owned by the Shipping Board.

The steamer "Eirini" (Gr.), Vancouver for Costa Rica and Philadelphia, at San Francisco with engine trouble, is owned at Andros, 2662 tons, built in 1903, and was formerly the "Maygrove."

G. Cohen Sons & Co., shipbreakers, London and Swansea, are reported to have acquired twenty-five German submarines from the British Government for breaking up. The price is said to be about $12,166 for each boat.

The aux. bqtn. "City of Mobile," burned at Motevideo after an explosion, had petroleum cargo from Port Arthur, Tex. The loss is estimated at $500,000; 1802 tons; built in 1918 and owned by H. Piaggia, Orange, Tex.

The S. S. "Yellowstone," built by the Moore Shipbuilding Company in 1918, recently arrived in New York Harbor after having been raised from the bottom of St. Nazaire Bay, France, where she was sunk for seventeen days after running into a breakwater. This prolonged immersion did practically no damage to her Westinghouse geared turbines. After they were cleaned and the oiling system washed with kerosene to remove all dirt, they were found to be in excellent condition and, in fact, brought her back with no trouble whatever. No repairs of importance were needed when the ship arrived at New York.

In 1905, 60 per cent. of Iceland's trade was with Denmark, but at the beginning of the war this was reduced to 40 per cent. The Iceland merchants have to a certain extent made direct connections with the producing countries instead of taking the goods in transit via Copenhagen as "Danish goods." Iceland's exports are also going direct, for instance, codfish to Spain and Italy, wool to America, and herring to Norway and Sweden. The war made still further changes in the foreign trade. Iceland had to close agreements with the Allies giving them first right to purchase all products at a fixed price, and in return was able to obtain most of its necessities direct from America. During the war Icelandic ships have sailed regularly between Rykjavik and New York. Danish merchants are now planning to regain connections with Iceland. That this will be no easy matter is shown by the fact that the turnover with America has increased from $402,000 in 1915 to $3,886,000 at the present time. German and English competition will make it still harder for Denmark to regain the Iceland market.

News from Abroad

A new company has been established in Copenhagen under the name of Dansk-Baltisk Handelskompagni, which will work in connection with the Dansk-Finsk Handelskompagni in Helsingfors. The capital stock is $268,000.

The anti-Japanese boycott which is being fostered by the national students' organization in Peking is spreading throughout China. The authorities are unable to check the movement and the Minister of Education and the Vice-Minister have resigned.

Returns from the election just held at Manila, P. I., indicate a sweeping victory for the Nationalist party, which supported the sending of the recent "independence mission" to America. The Nationalist vote was especially heavy in Manila. The "independence mission" was a group of leading Filipinos which journeyed to Washington to ask that the Philippine Islands be given their independence as a nation.

The Japanese shipowners who had vessels sunk by U-boats have organized for the purpose of obtaining compensation through the inter-allied reparation commission, but reports to hand indicate that the Japanese are anything but modest in their ideas as to what they should claim from the Germans. In all, 32 Japanese vessels were sunk approximating 130,000 tons, and the amount claimed is said to be in the neighborhood of $100,000,000, or at the rate of $750 per ton!

The committee appointed by the city of Christiansand to decide whether the municipality should have a free warehouse only or a free port as well, has reported that the latter will be necessary if Christiansand is to compete with the seaports of neighboring countries, and recommended that a free port be built up along with the general harbor extensions, as a natural consequence of the growth of the trade, since economic reasons prevent this being undertaken in full at once.

Canada has always been generous in the matter of granting compensation to steamship companies for the purpose of insuring the periodicity of sailings for the benefit of the Canadian export trade. Such compensations should hardly, however, receive the name of subsidies, because such money payments are rather in the nature of a guarantee against certain loss. The Canadian estimates for the new fiscal year ending March 31, 1920, have been prepared and provide for an increase of $863,666 over those for the year just elapsed. The total amount to be voted will approximate $2,467,120.

Dr. Ping Wen Wuo, president of the National Higher Normal College at Nanking, China, who is in this country with a group of Chinese educators, says that it is his mission to arrange with the United States Department of State and Bureau of Education for the coming to the United States in September of the Chinese Educational Commission to Europe and America, the most important educational commission that China has ever sent to a foreign country. It will be the purpose of this commission to secure the information necessary for a reconstruction of the Chinese educational system along recent Western lines, and away from Japanese influences, which now prevail.

With the Wits

"Smith was educated at Oxford, wasn't he?"

"No, he merely went there."—London Opinion.

"Has Tom had any accidents since he got his automobile?" "No; the only thing he has run into is debt."—Boston Transcript.

Stella—A sad romance? Bella—Yes; he proposed by letter and she accepted by wire, and neither message was delivered.—New York Sun.

Small Scout—Dad, what are the silent watches of the night? Indulgent Father—They are the ones which their owners forgot to wind, my son.—Boys' Life.

"Has your wife a sense of humor?" "I don't think so," replied Mr. Pynhed. "I have told her the same joke over and over, and I don't believe she has laughed at it more than twice in her whole life."—Washington Star.

Editor—Your friend Deeply left some verses with me yesterday that were quite amusing.

Friend—Indeed! I didn't think he was a humorous writer.

Editor—Neither does he.—Boston Transcript.

He—If I should kiss you, what would you do? She—I never meet an emergency until the occasion arises. He—Well, if the emergency arose this very minute, how would you meet it? She—Meet it face to face.—New York Globe.

"There's no excuse for a loafer."

"Maybe there is," replied Farmer Corntossel. "So long as excuse has been made fur not fightin', I don't see why a loafer couldn't describe himself as a conscientious objector to' work."—Washington Star.

Ida—But perhaps he was bashful. You should have thrown out some hint that a kiss would not be objectionable. May—I did everything possible. I told him I had such a sore throat that I couldn't scream, no matter what happened.—Tit-Bits.

Miss Chatterbox—I must tell you the sad story of my sister some day. Poor girl, she's a widow, and she's looking for a captain to steer her through the stormy seas of life. Naval Friend—She doesn't require a captain—it's a second mate she wants.—London Opinion.

"Does this dog growl?" asked the lady at the dog dealer's. "Oh, yes, ma'am," was the answer. "Well, I want a dog that doesn't growl." "Don't you want something that will growl when strangers come around?" "No. My husband will attend to that."—Yonkers Statesman.

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 41. SAN FRANCISCO, WEDNESDAY, JUNE 18, 1919. Whole No. 2543.

REPRESSION OR RECONSTRUCTION?

Basil Manly Surveys America's After-the-War Economic Ills

Basil M. Manly, Joint Chairman of the National War Labor Board, needs no introduction to readers of the Journal.

The Survey of American Industrial Conditions presented on this page by Mr. Manly is strikingly pertinent and has a direct bearing on recent developments.

The near future will tell whether unrest is to be met with repression and oppression or enlightened reconstruction of economic ills and evils. Mr. Manly's views upon these problems are right to the point and worthy of careful perusal.

We are about to enter a period of the most acute industrial unrest and the most bitter industrial controversy that the American nation has ever known. Unless effective and radical steps are taken to bring about a better understanding between labor and capital and to establish an equitable basis for orderly industrial progress, we are certain to see within the next year strikes and mass movements of labor beside which all previous American strikes will pale into insignificance.

Since the signing of the armistice we have had a large number of small strikes and a few great spectacular strikes—the Seattle strike, the New York harbor strike, the Lawrence strike, the garment trade strikes, the Toledo strike, and a number of others of lesser consequence. But these have been so limited in comparison with the labor upheavals in other countries—in England, in Germany, in Canada, in Australia and in the Argentine—that there has been a public disposition to regard the industrial situation with complacency and to assume that, having passed through the first part of the period of transition without serious industrial disturbance, we were about to enter an era of industrial peace.

But those who take this complacent attitude are deceiving themselves. Since the armistice American labor has been waiting. It has been waiting because the outstanding leader of the American labor movement, Samuel Gompers, was on an important Government mission in Europe. It has been waiting because the American labor movement, expecting the war to continue much longer, had not formulated its definite policy before the signing of the armistice. Labor has been waiting also for the completion of the demobilization of troops and for the transition of our factories from war production to peace production.

The period of waiting is now nearly completed. Demobilization is nearing an end. Our industries are beginning to swing into their normal production and next week, here in Atlantic City, there may be formulated, at the convention of the American Federation of Labor, a definite policy for the American Labor movement.

I am making no threat that Bolshevism or Spartacanism is about to sweep the United States. The American labor movement will not go Bolshevik unless it is driven to that course by the goadings of selfish and unenlightened capitalists and capitalistic agents.

Those who regard the American industrial situation with complacency ignore both the psychology of the workers and the compelling facts. The workers of the Allied world have been told that they were engaged in a war for democracy; that out of the ruins of the war would arise a new and more beautiful world. They are asking now, "Where is that democracy for which we fought? When are we to enter into this new world with its greater regard for the rights of the common man?" They see no change for the better, but they find themselves in conditions in some respects worse than those against which they protested before we entered the war.

The masses of the people are being rapidly disillusioned, and when the people lose their illusions there is danger ahead. They have seen the prices of nearly every commodity, including rents, advance to beyond the increases which they have secured in their weekly wages since the beginning of the war so that they are now actually able to buy less of the necessaries of life than before the war began. There are exceptions, it is true, where the percentage of wage increase has been greater, but if you will examine these cases of unusual wage increases as I have examined them you will find that in a majority of instances these increases have come to groups of workers who are admitted, even by their employers, to have been miserably underpaid during the pre-war period.

During the war, it is true, the increases in prices were in a measure compensated for to the wage earners by the greater steadiness of employment and by the frequency of opportunities for overtime, as well as for large earnings at piece work. But that time is now past and the masses of American workers, I say with some degree of assurance, are actually able to purchase less of the necessaries and comforts of life with the wages which they receive to-day than they were able to buy with the wages which they received before the beginning of the world war.

No hope is held out to them of relief from this condition through a rapid or even a gradual recession of prices. Judge Gary tells us that prices will remain high over a long period of years. Otto H. Kahn, the spokesman for the American bankers, tells us the same thing, and Julius H. Barnes, formerly an operator in the Chicago grain pit and now successor to Herbert Hoover, tells us that there is no hope for cheaper bread.

But it is not merely that the cost of living is high and beyond the capacity of the wage earner's pocket book. This might be endured with some degree of patience and fortitude if the people who toil believed that no one was profiting from their necessities and that all were bearing the burden alike. But they have seen with their own eyes and heard with their own ears of unconscionable profiteering of American corporation during the war and they know that that same profiteering is now continuing unabated. I have just completed a study of the earnings of eighty-two representative American corporations, a record of whose profits is available for each year from 1911 through 1918. This is not a list selected either because the profits were large or because the profits were small. It is a list of all the corporations whose earnings covering this entire period were available to me. A compilation of these figures shows that the same eighty-two corporations which, in the pre-war years, had an average net income of 325 million dollars, had net incomes in 1916 amounting to more than a billion dollars, in 1917 to 975 million and in 1918 of 736 million. This is after the deduction of every dollar of state and federal taxes and the deduction of every conceivable charge which these companies could devise for reducing and concealing their apparent profits.

I am convinced as a result of my study that the actual profits even after the payment of taxes in 1917 and 1918 were just as great as in 1916, the difference being accounted for by the fact that in 1917 and 1918 these corporations set up all kinds of excessive reserves for depreciation, amortization, and other unspecified and fanciful contingencies for the purpose of evading taxation and concealing their excessive earnings from the public and the tax collector.

But even taking the figures as they stand we find that these eighty-two corporations earned, net, $3.00 in 1916 and 1917 for every dollar which they earned in the pre-war period and over $2.00 in 1918 for every dollar earned in the pre-war period. This is profiteering with a vengeance and the profiteers may well tremble lest the people may avenge themselves for their shameless exploitation during a period of the nation's greatest necessity.

And yet, with the people and particularly the workers in this state of exasperation as a result of their daily struggle with an unjustly inflated cost of living, attempts are already being made by selfish and foolish employers to reduce wages. Sometimes these attempts to reduce wages are made directly, but far more often by the device of shutting down the plants for a short period to repair the ravages of high speed war production and then employing new men at reduced rates, and the burning shame of it is that in many instances these new men who are being hired at reduced wages are our soldiers, the gold-striped veterans of the great war, who return to America ignorant of the new wage levels and are easily made the dupes of unscrupulous and unpatriotic employers.

There were indications at the recent convention of the National Association of Manu-

facturers that a concerted movement to reduce wages would be made by a large group of American manufacturers. Those people who banqueted so sumptuously at the Waldorf Astoria while they concocted their plans for widespread reductions in wages were playing with dynamite, and dynamite infinitely more dangerous, both to the capitalists and to the public, than all the May-Day bombs of the anarchists.

American labor, whether organized or unorganized, will bitterly and effectively resist any such attempt to reduce wages until the price level has dropped far lower than it is to-day. Labor knows its advantages and it knows now, as it has never known before, its stupendous power. All intelligent labor leaders know, even if the manufacturers appear not to know, that for the next generation there is to be a world-wide labor shortage and that this shortage is almost certain to be greatest in America. They know that more than seven million men were killed in the war and that even a greater number were incapacitated. They know that there has been virtually no immigration to the United States since July, 1914, and that there is likely to be little in the years to come. They know that emigrants are leaving the United States in such great numbers that the American Bankers Association has passed resolutions directing National attention to this phenomenon.

Wise men know also that the labor movement has greatly increased its strength in recent years. At least two million men have been added to the ranks of organized labor in America during the war. A million have been organized on the railroads alone and more than a million have been added to the unions affiliated with the American Federation of Labor in other branches of industry.

American labor is more conscious than ever before of its power and of its rights. It will demand the abolition of age-old injustices. Labor has been in the harness for untold centuries. The harness has become heavy and galling, but labor does not now ask that the harness be lightened or that the share of oats and hay be enlarged. Labor now demands the right to climb into the driver's seat and help control the machinery which drives the lumbering chariot of modern industry.

The president of the United States and all other enlightened citizens recognize that this new status which labor is demanding will either be granted graciously or will be won after industrial battles of a severity and extent which wise men seek to avoid. But individual employers and financiers are still unenlightened. They believe that what has been will be and that there is no new thing under the sun. In a recent issue of Law and Labor, the organ of the American Anti-Boycott Association, it is shown that one-third of its membership of American manufacturers is opposed to any form of collective dealing with their own employees, even though they are unorganized and have no assistance from outside trade unions or labor leaders. The National Association of Manufacturers apparently expects to return to antebellum standards. The slave owners of the south might just as well have expected to have their slaves back after the Civil War as for American employers to expect to return to the position of industrial absolutism which the majority of them occupied before the world war.

There is an active minority of powerful capitalists and employers intent upon establishing in the United States a dictatorship of the plutocracy. There is an equally active and even more determined minority on the labor side determined to establish a dictatorship of the proletariat. Neither can succeed except by wrecking the existing industrial and social structure of the United States. We cannot have either a dictatorship of the plutocracy or a dictatorship of the proletariat except upon the ruins of American industry. If we are to save ourselves—if we are to save American productive industry and American social life from disaster, we must find a method and a means of orderly progress to the new status and new conditions which the workers of American have been promised and now demand.

This does not seem to be possible through our existing political institutions. There is no hope for orderly industrial and social progress through the present Congress. The 66th Congress of the United States is the least enlightened, the most reactionary Congress this generation has known. I do not except even the dark days of Cannonism and the Payne-Aldrich tariff. The present Congress contains as many hard-shelled fossils as Cannon adn Aldrich numbered among their supporters. But this Congress has no group of young, hard-hitting progressives such as threatened to depose Cannon from the speaker's chair and all but defeated Aldrich in the Senate. The progressives now in Congress are relatively old men, tired with twenty years of hard fighting. They have not quit fighting and they have not lost their ideals, but they have lost their old punch and aggressiveness.

There is another reason why we can hope for nothing through the ordinary political machinery. That is the Espionage Law, which has terrorized countless thousands into ignominious silence. The Espionage Act was bad enough under war conditions. It is infinitely worse to continue it on the statute books since the signing of the armistice. It will be an outrageous invasion of the most sacred rights of Americans to enact any such legislation to apply to peace times. But I am informed that a majority of the reactionaries of the House and Senate are intent upon the enactment of statutes of suppression and oppression more stringent even than the war-time Espionage Act. I have faith that President Wilson will veto any such federal legislation. But I see, with equally great alarm, that some of the states have already enacted vicious legislation of this character and I am informed that the predatory interests are determined and have the power to put such bills through the legislatures of perhaps a majority of the States and to secure their approval by the governor of those States.

The suppression of free discussion during a critical period such as we are now entering upon is of the greatest danger to the very life of the nation. There must be a safety valve of free speech and free assemblage if we are to escape the destructive explosions which a policy of suppression and coercion will render inevitable. The present Espionage Act should be immediately repealed and every State should purge its statute books of every such act limiting the rights of its citizens.

Although the possibility of orderly industrial and social progress through our political institutions thus seems remote, it is nevertheless possible that we will find other means of reaching the same end. What we need is a national understanding, not of politicians but of people. There is no reason why such an understanding as is necessary to avert the catastrophe which seems to be impending cannot be reached by those leaders who much more directly and truly represent the people than the men who sit in Congress. I mean that through a national conference of the representatives of labor and of capital, with proper representation of those public groups which have no direct affiliation with or dependence upon either labor or capital, an effective understanding can be reached which will provide the means for orderly progress toward better conditions and better relations between all groups of American society.

This is the method which England was forced to adopt when, according to Frank A. Vanderlip, she was threatened with impending revolution. Lloyd George did not then go to Parliament for a solution. Instead he summoned an industrial parliament made up of several hundred leaders of British industry. They reached an understanding and the British revolution was averted.

Some weeks ago the cables carried an intimation that President Wilson contemplated the adoption of some such method of dealing with the industrial situation in the United States. It is true that this was not specifically confirmed by the President's message to Congress, but a message to Congress was obviously no place for the President to reveal any plans which he might have for such an extra-legal method of procedure.

I do not doubt, therefore, that when the President returns and finds the nation confronted, as it seems now inevitable that it will be, with actual or impending industrial controversies which threaten national stagnation, he will turn to the device which has proved so effective in England and summon, first, a small conference of the outstanding leaders of American labor and the great financiers who control industrial capital, to be followed by a great industrial congress embracing leaders from all industries and from all sections of the country.

We are told by pessimists that such conferences and such a congress would result only in endless talk and final disagreement. I can not accept that view. I cannot believe that the great American financiers are such fools that they will risk the possible destruction of all that they possess and control rather than make concessions which will satisfy the fair-minded majority who form the strength of the American labor movement. Nor do I believe that the leaders of American labor will put forward such unreasonable demands that an agreement will be impossible. If this congress were to be made up of provincial labor leaders and of employers whose knowledge and interest does not extend beyond the front doors of their own small shops, agreement might be difficult, if not impossible, but if the conference and congress are made up, as I trust they will be, of men accustomed to deal with large affairs in a large way, I am confident that the result will be an understanding and an enunciation of principles and policies far more effective for orderly progress than any legislation.

I love America. I foresee troublous times confronting her, but I have faith in the American people and am confident that out of the turmoil and dissension which are ahead will come a better understanding among all groups and all classes, from which will be evolved a life of greater comfort and happiness for all the people of America and an enduring basis for that citizenship which alone makes a nation truly great.

A. F. OF L. CONVENTION NOTES.

(By Chester M. Wright.)

Out on the far end of the great steel pier at Atlantic City, N. J., 547 delegates sit in deliberation on the problems of the working people of America, striving to reach conclusions that will result in progress, avoiding both the chaos of Bolshevism and the reaction of the Bourbons.

Underneath them the waves of the Atlantic lap ceaselessly at the piers and tumble carelessly toward the sand. Along the boardwalk a block away the promenade of the lame and the halt and the luxuriating idlers goes on early and late in "the mirth place of the nation." Between the American Federation of Labor Convention hall and the boardwalk there is a great medical exhibit, staged by the American Medical Associaton which is in convention here. Plain clothes men amble through the crowds on the alert for bomb plotters, much to the disgust of the labor men who see no sense in such proceedings. But the mayor has ordered the sleuths to pussyfoot and so they pussyfoot ceaselessly.

There are some fourteen colored delegates in this convention. Four or five years ago there were none. Finally one straggled in and the number has increased rapidly. They represent Pacific Coast oil field labor mostly. Their particular fight is for an anti-lynching resolution. They flock together and make themselves as unobtrusive as possible.

Matthew Woll has been re-elected President of the International Labor Press Association. The convention of the association was a lively one, with some fifty or more labor editors present. They recorded a general progress for labor papers.

When James Duncan reported for the last labor mission to Europe he said that after the Americans had conferred with the French Confederation of Labor the Frenchmen asked the Americans not to divulge what had taken place as it would injure the Frenchmen whose position had not accorded with the American position. What was the American astonishment to find next morning in La Battaile, organ of the French Confederation, a complete report of the proceedings. European labor diplomacy was a devious proposition.

President Gompers has not regained all his old-time vigor and he protects himself from over-exertion, but he is rapidly gaining strength and the convention will suffer not a bit from the effects of his recent accident. Mrs. Gompers occupies one of the visitors' chairs, as in former conventions, a kindly little lady who speaks softly and gently despite misfortune's harshness.

When the International Labor Press Association adopted that section of the President's report approving the work of the American Alliance for Labor and Democracy and urging support for it, the labor editors voted their "yeas" with pep. It was unanimous and enthusiastic.

Forty newspapermen report the convention proceedings. At least ten of them

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Seek Shorter Hours.

At the annual delegate meeting of the National (British) Union of Journalists the executive committee was instructed to take a ballot on the question of affiliation with the Printing and Kindred Trades Federation, and to effect an agreement if the ballot should authorize such action. It was pointed out that what benefits they had gained in the past had been on the back of the Typographical society.

On the subject of hours of labor, the following resolution was passed: "That if it be an instruction to the national executive committee immediately to take action for securing shorter hours for journalists on the following basis: A seven-hour day for day workers, a six-hour night for night workers, and a 5½-day week of not more than 38½ hours for day workers and of not more than 33 hours for night workers."

Bronze Symbolizes Labor.

"Triumph of Labor" is the title of an interesting bronze that has been on exhibition in a public art gallery in Washington.

Two years ago it was presented to the American Federation of Labor by the British Trades Union Congress, but owing to the war it was never sent to this country. On his recent return from Europe President Gompers brought the gift with him.

The bronze is the work of a British artist and has been awarded a medal by the royal academy of art of Great Britain. The central figure of the bronze is symbolic of labor's triumph. The victory is represented by a male figure, standing on a dying octopus. In the rear of the figure an endless procession passes, and on either side are symbols of the various trades. The bronze is mounted on oak taken from the ship Victory, commanded by Lord Nelson at the battle of Trafalgar in 1805. The bronze will be removed to Atlantic City, where it will be viewed by delegates to the American Federation of Labor convention, and then placed in the American Federation of Labor building in this city.

High Prices Won't End.

There is no immediate prospect for lower living costs, according to Julius Rosenwald, head of Sears, Roebuck & Co. In a letter to Secretary of Labor Wilson, the Chicago merchant says:

"It is my belief that the range of prices for the necessities of life will average little, if any, lower than at the present time. Of course, there will be some exceptions, but I do not look for a sudden or violent reduction in the near future aside from those which have been artificially stimulated.

"There exists a tremendous demand in our own country for all kinds of commodities. This demand will not diminish materially until war-wrecked Europe re-establishes herself on a peace-time production basis. I fully agree with those who believe that the reconstruction is going to tax our efforts perhaps even harder than did the war, and that there is cause for rejoicing in these conditions, even though accompanied by high prices, for, after all, it is not a question so much of the price one has to pay as to what relation this price bears to one's own income."

On the same subject Otto H. Kahn, New York banker, writes to Secretary of Labor Wilson his belief that prices will not be materially lowered for a number of years, if at all, and that for all practical purposes at least the war has brought a new level of prices, the existence of which must be recognized.

The New York banker quotes Prof. Irving Fisher of Yale university:

"Business men should face the facts. To talk reverently of 1913-1914 prices is to speak a dead language to-day."

Owners Fail to Produce Title Deeds.

The remarkable spectacle of titled aristocracy being subjected to a rigid cross-examination on how they secured title to coal lands was witnessed at hearings by the Sankey coal commission in London, England, when Robert Smillie, president of the British Miners' Federation asked these lords, dukes and earls many embarrassing questions.

Vast acreages and princely incomes are involved and the trade unionist, with cold dignity, challenged the noblemen, again and again, to produce the authority on which they hold these lands.

Vague assertions that "the land had been in the family since before the Roman conquest," or "if the land were not mine it would have been claimed by some one else," did not satisfy the miner's official. He wanted every statement of the lords backed by documentary evidence and in many cases the witnesses were unable to do this, and indicated no desire to show their title deeds.

The Earl of Dunham was not clear as to why he claimed ownership of 12,411 acres of coal land, and which nets him a revenue of $200,000 a year. He said he never read the title deeds to these lands, and he could see no reason for the present inquiry.

"You have caused my agent," he said, "a great deal of inconvenience by saying you wanted the title deeds here."

The attorney of one duke, whose income on coal lands is represented at over a million a year, could see nothing unfair in the fact that the duke was getting a shilling a ton royalty on the coal, while the coal digger who risked his life was paid less than that sum a ton for mining it.

"What has this commission got to do with me?" angrily asked the Earl of Northumberland, who owns mining rights that cover 250,000 acres of land and has an annual income of over $300,000. The Earl opposes the nationalization of mines. He said the miners "were trying to monopolize the mines for themselves."

The Marquis of Londonderry insisted that he had as much right to the 5,000 acres of coal land held by him and the income of $45,000 a year, as he has to the coat on his back.

The Marquis of Bute who owns 126,582 acres of coal lands, and has an annual income of over $550,000 admitted that King Edward VI was a boy between 10 and 14

SOUTH AFRICA.

Amalgamated Society of South African Seafaring Men and Fishermen, 355 Point Road, Durban, Natal.

World's Workers

Virtually every man, woman, and child in London, Canada, now works eight hours a day or less and receives as much if not more wages than when the longer period was worked. This change has all come about within a year.

While a ministerial committee was still considering the question of the legal adoption of the eight-hour day, Danish employers and employes concluded an agreement providing for the eight-hour working day before January 1, 1920.

Members of the Victoria, (British Columbia) branch of the provincial Civil Servants' Association have voted overwhelmingly in favor of becoming affiliated with organized labor, by applying for a charter to the Trades and Labor Congress of Canada.

The Swedish upper House rejected the bill dealing with the eight-hour day question. According to a statement by a member of the government, the two chambers will consequently be dissolved and new elections will take place before an extraordinary session which is to be held this summer is convened.

The Australian Federal Government has assured the States an advance of $3125 for every returned soldier who settles on the land, and between $150,000,000 and $200,000,000 for expenditure on public works or the acquisition of land in order to give employment to repatriated Anzacs, according to an announcement made by the minister of repatriation.

More than 100,000 British farm workers are unionized. Their organization is known as the National Agricultural Laborers' Union. They have more than 2,000 locals. They are urging now a minimum wage of $12 a week for a six-day working week of 44 hours the year around. They would work unavoidable overtime at time and a half for week days and double time for Sunday.

A co-operative society of the Belgian spinning mills of flax, hemp and jute has just been founded at Ghent, Belgium, for the purpose of the buying and selling of flax, tow, hemp and jute, and everything in general, necessary or useful for the supplying of material and for the operation of the affiliated spinning mills. This society is also founded for the protection of the common interests of these industries in Belgium.

The British Ministry of Labor states that 10,000,000 receipts for unemployment have been sorted and checked from Nov. 25 last up to the end of March and the work is still in progress. The mere classification of the army demobilization forms according to occupation and the resorting of these forms under the names of some 27,000 towns and villages around employment exchages, is no light task, some 150,000 of such forms, during busy periods, being dispatched each day. The alphabetical index, consisting of loose leaf registers of all insured workers, contains 10,000,000 names, of which thousands are identical. Some 6000 names, for example, are John Smith, 2000 John Brown, 2300 William Brown, 1300 William Jones, 1000 John Macdonald, and 1000 William Davies. The statistical section, with its wonderful accounting and tabulating machinery driven by electricity, is of great aid in the present pressure of work.

INFORMATION.

I have been informed that a number of attorneys have requested members of the crew of the S. S. "Abangarez" to file claims for salvage services rendered to the bark "Ninfra." For the information of such seamen, it might be said that a settlement has been effected in the sum of $50,000 through an arrangement made by me as representative of a few of the crew, with the attorneys for the owners of the "Abangarez." It is agreed that the crew shall receive one-fourth of the award, about $12,500. All the crew need to do to get their money is to apply to the owners. Members of the union applying here can get their funds without any charge whatsoever for services rendered by this office. S. B. AXTELL, 1 Broadway, New York, N. Y. 6-18-19

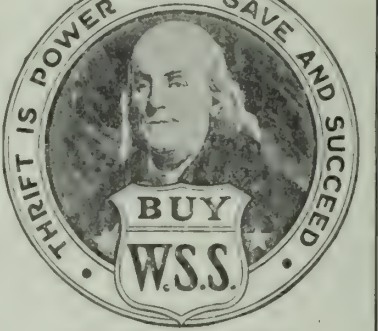
THRIFT IS POWER • • • SAVE AND SUCCEED


BUY W.S.S.

DO YOU KNOW

That War-Savings Stamps pay 4 per cent. compound interest?

That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?

That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?

That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?

That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?

That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?

That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

Pacific Coast Marine.

The 9400-ton steel steamer "Mulpua," which was recently completed by the Moore Company, has completed the official trial trip, and has been accepted by the officials of the Shipping Board. The vessel has been turned over to Struthers & Dixon for operation and management.

The barkentine "Kohala" sailed from Wellington for Eureka June 4, according to advices received at San Francisco. This is the first time a sailing ship has cleared from the South Pacific for the Humboldt port since the war disturbed shipping conditions on the Pacific. The vessel will load a cargo of redwood at Eureka.

The thirtieth launching at the Moore Shipbuilding Company's yards, at Oakland, took place when the 9400-ton freighter "Mehanno" slid from the ways on June 7. The vessel was sponsored by Miss Constance Martignoni. The "Mehanno," like the other twenty-nine ships, was built for the United States Shipping Board. Miss Martignoni earned the right to christen the vessel by her work for the Victory Loan.

Navigation on the Yukon River was opened on June 10, when the first sailing of the year was made on a White Pass and Yukon River boat for Dawson. Another sailing will be made shortly as far north as Fairbanks. The river boats "Julia B" and "Seattle No. 3" are also awaiting at St. Michael for freight from the "Victoria" and "Senator" to begin the first voyage to Tanana. The Yukon River at this time is at its lowest stage on record.

According to local shipping men, who have just returned from the East, the Pacific Steamship Company has opened negotiations with the Government for the purchase of the former Hill liners "Northern Pacific" and "Great Northern." These vessels, both of which will not be released from troopship duty until August, are to be utilized by the Pacific Steamship Company in either the Panama trade or in the freight and passenger service to Hawaii out of San Francisco.

The steamer "Roosevelt," formerly Admiral Peary's flagship, which he used in Arctic explorations when he discovered the North Pole, has been taken to Seattle from Bremerton and tied up, pending her sale to private parties. The "Roosevelt" was purchased at New York in 1915 by the Government, and in 1916 was brought through the Panama Canal to Seattle. She has been making trips three and four times a season to the Pribiloff Islands to furnish supplies to the fur stations.

Expert Kanaka swimmers have salved 300 tons of cocoanut oil that was comprised in the cargo of the schooner "William Olson," which was stranded and wrecked on Nihau Island, H. T. According to Frank Malony of the Breck-Mitchell Company, the oil, in barrels, was drifting about between the rocks in the vicinity of the vessel, which had broken up. The natives, who are expert divers and swimmers, managed to make their way to the stranded craft, extricate the barrels and get them ashore.

The Marconi Wireless Company has announced its intention to open new offices at 300 California street, San Francisco, in anticipation of the Government giving permission to operate the sending and receiving stations at Bolinas and Marshall Bay. The Navy Department has relinquished control of the big plants, but the right to resume commercial operation has been withheld. It is expected that the plants will be working within a few weeks owing to pressure being brought to bear by all of the shipping and overseas commercial interests, who affirm business will be benefited if the wireless is resumed and all congestion in the overseas cable and radio systems is eliminated.

As a result of the establishment of the new line of Government steel steamships in the direct service between San Francisco and other Pacific Coast ports and Europe, under the operation of Williams, Dimond & Co., there have been numerous changes in pier assignments on the water front by the Board of State Harbor Commissioners. Williams, Dimond & Co. will need all of pier 17, and the result is that the Gulf Mail line, which has shared that assignment, will shift to pier 23. The Albers Milling Company will be at pier 7, and the White Flyer line will shift the operation of the "Humboldt" from pier 22 to pier 7. The Parr-McCormick line will also operate from pier 7.

The 800-ton submarine "S-36," completed at the Union plant of the Bethlehem Shipbuilding Corporation, slid down the ways at 6 o'clock p. m., on June 3, being one of the forty of that type now under construction for the Government. The submarine was sponsored by Miss Helen Russell, fourteen-year-old daughter of Lieutenant George L. Russell, United States Navy, assistant to the inspector of engineering materials at the Union plant. Eleven other submarines of the "S" class are under construction at the Union plant, five of which were launched recently being nearly completed. During the war the plant built six submarines of the "R" type that were delivered to the Government.

The steamship "City of Berkeley" was launched on June 14 at the plant of the Union Construction Company in the Key Route basin in Oakland. C. A. Farnsworth of the Federal Reserve Bank of San Francisco was the orator of the day. He told how Berkeley won the right to name the ship, because of the high percentage of oversubscription made by Berkeleyans to the Fourth Liberty Loan. Mayor S. C. Irving responded to Farnsworth's address. Miss Berkeley Howell christened the ship. The Committee in charge of the launching was headed by E. F. Louideck. The "City of Berkeley" is a steel ship 417 feet long and will draw twenty-six feet of water. The carrying capacity is 9400 tons and the cost is about $1,800,000. It is the third vessel to be launched at the plant of the Union Construction Company.

The manager of the marine department of the Chamber of Commerce announced during the week that the shortest route for ships traveling between New York and Yokohama was via San Francisco. The actual distance between New York and the Japanese port, via Honolulu, is 10,108 miles. Vessels steaming via the port of San Francisco save 298 miles. The general opinion existing is that distance is saved by steaming via the island port. The experts are of the opinion that the matter of 298 miles would not figure even if it were against San Francisco. This belief is based upon the known fact that all of the ships plying between the Atlantic and the Orient are coal burners and all have to renew the supply of fuel in the bunkers at some port. This can be done more expeditiously at San Francisco, where the facilities are more than adequate for present needs. According to the officials of the King Coal Company, there is no difficulty in bunkering a total of 50,000 tons or even more each month, and if necessary the facilities can be enlarged. The saving of time in coaling is too important a factor to be ignored in ship operation, and it is believed that nearly all of the steamers plying between the Orient and the Atlantic will make this a port of call.

The Star Trading Corporation of New York has announced its intention of establishing a line of freighters on the Pacific to be operated between San Francisco and the Far East as soon as the shipping conditions will permit. The announcement was made by Robert J. Kilbey, vice-president, who has arranged to open offices at 40 California street. There will be ten offices, covering an entire floor. Kilbey was formerly traffic manager for the Java-Pacific line and was succeeded by Jack Stubbs. Kilbey went to New York several weeks ago, and, owing to the demand of the Eastern firms to get representation here, had the choice of a number of concerns. The new line proposes to take in Batavia, Manila, Cheriban, Samarang, Soerabaia, Macassar nd Hongkong. It is expected that the fleet will be initiated with 8800-ton oil burners and that there will be not less than two sailings each month. The announcement of the American concern is taken as an indication that big business developments are expected between this country and the Orient, including the Dutch East Indies. The Dutch steamship concerns have enjoyed what was nearly a monopoly among the islands of the Far East for many years. It is contended that American ships giving adequate service will obtain a fair share of the business.

W. R. Grace & Co., general agents on the Pacific Coast for the Johnson line, well-known Swedish concern, have been advised from Gothenburg that the motor-ship "Lima" had been substituted for the "Kronprinsessen Margareta" and that the big 9200 deadweight ton ship would sail from that port for San Francisco June 29. The "Lima" will proceed to Chille after passing through the Panama Canal before coming to San Francisco. The "Balboa" has also been added to the fleet to operate here. This vessel is of the same class and type as the "Lima." The difference between the motor-ships to be sent here from Scandinavia in the future and those that came here in the past years is that the former ships are bigger. Nearly all of the Swedish, Norwegian and Danish shipping concerns have decided to put their steamships in the discard. In the future they will consist of big craft with sufficient power to travel at twelve or thirteen knots when fully loaded. The initial ship of the internal combustion engine class to come here was the East Asiatic motor-ship "Siam." This was one of the early and smaller type and differed vastly from the "George Washington," which made motor-ship history on the Pacific recently. It is the general opinion here among shipping men that the Scandinavians have made such rapid strides in the new type of construction that it will be difficult to catch up with them.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

Advertising Rates on Application.

Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

UNION LABEL TRADES AND LABOR COUNCIL SAN FRANCISCO

WEDNESDAY, JUNE 18, 1919.

THE WASHINGTON CONFERENCE.

As the result of the Ocean Marine Industrial Conference, held under the auspices of the United States Shipping Board in Washington, D. C., on June 4 and 5, resolutions were adopted recommending that representatives of the shipowners in the Atlantic and Gulf Districts meet with representatives of the marine labor organizations and representatives of the Shipping Board in New York on June 23, to consider matters which the Atlantic marine labor organizations had submitted for consideration. It was also recommended that the joint committee take other action with regard to establishing agencies for conciliation and arbitration as recommended in the resolutions. The New York meeting will be held at 10:30 a. m. in the Assembly Hall of the Merchants' Association, Woolworth Building.

Following is the text of the resolutions adopted, in full:

Whereas, Certain agreements fixing compensation and conditions of labor on the Atlantic and Gulf coasts have expired, and certain demands have been made by organizations affiliated with the International Seamen's Union and licensed officers' organizations; therefore, be it

Resolved, That these demands received on or before June 7th be submitted to the American Steamship Association and other shipowners in the Atlantic and Gulf districts for their consideration; further

Resolved, That the conference recommends that various shipowners should appoint representatives to confer with representatives of the unions and of the Shipping Board, for the purpose of reaching an agreement, and that this committee shall meet on June 23, 1919, at New York; further

Resolved, That the conference recommends that this committee should also consider and make recommendations as to the establishment of local grievance committee at Atlantic and Gulf ports, and also the establishment of a central appeal board.

It will be noted from the foregoing that the avowed object of the Washington conference "to create some permanently established national agency for the consideration and adjustment of labor issues," etc., has not been accomplished. At any rate, discussion of that subject has been postponed to a future date. There seems to have been too great a difference of opinion upon the nature and character which such a proposed national agency should assume.

The organized seamen's representatives at the conference, in effect, favored the establishment of a national joint advisory council of merchant shipping upon the following basis:

First. That such a council is to be composed of representatives elected by the existing organizations of shipowners and seamen;

Second. That both parties have an equal voice and vote in the deliberations; and

Third. That the council must not interfere with, or assume to restrict the freedom of action of either party.

Other interests at the conference were strongly inclined for the creation of a national board or council with rather autocratic powers, to decide compensation, hours of labor, etc.

The greatest difference of opinion, however, was over the old question of "preference to unionists" in hiring a ship's crew.

As already stated the conference finally adjourned without arriving at a mutually satisfactory conclusion. But this much has been gained. There has been a frank and free discussion of the whole subject matter. And as long as men will meet in conference and talk about the problems confronting them prospects for ultimate understanding and harmony are always in evidence.

Here's hoping that the New York meeting will be more successful!

WAGES VERSUS PRICES.

That an increased wage does not necessarily mean "more eats" is clearly illustrated by data just made public by the Department of Labor.

A comparison of changes in trade-union wage rates and in retail prices of food from 1907 to 1918, shows that an hour's wages in 1918 purchased but 79 per cent. as much food as in 1913, and a week's wages but 77 per cent. as much.

As compared with 1907 an hour's wages in 1918 bought but 72 per cent. as much food and a week's wages but 69 per cent. as much food.

The remedy for this state of affairs is obviously along different lines than "more" wage raising.

Clearly, the point of attack must be changed. When retail prices continue to "go up" at a much swifter pace than wages there must be something wrong with the distributive machinery.

As long as the machinery of distribution remains under the control of a third party the middleman,—there can be little hope of reform in this quarter. One way out of this dilemma is the co-operative method of buying and selling, now officially advocated by the American Federation of Labor.

Will it work?

Well, this is what Justice Brandeis of the United States Supreme Court has to say about it:

The power of wealth and of privilege can be successfully met by the people only by utilizing to the full extent the power of numbers; utilizing that power not only politically but industrially. . . . Emancipation can come only through the utilization by the people not only of their power of production but of their own purchasing power.

The essence of the trust is a combination of the capitalist, by the capitalist, for the capitalist.

The essence of the co-operative society is association of the people, by the people and for the people.

So, why not try co-operation as a remedy for industrial ills?

SELF-EXPRESSION.

We hear much these days about the right of peoples for self-expression and self-determination.

But how about the individual's rights in this respect? Manifestly, ambition can live only when the worker has an opportunity for self-expression. It will not suffice to say that any man or woman who has the qualifications may still get to the top. To be sure there have always been exceptional people; but we are dealing with the masses, who, it must be confessed, are very ordinary, but who, nevertheless, are human beings with an undisputed right to live. Not all the poor have the power of initiative, but even though they had, physical disability due to poverty or sickness often prevents them from executing their wills.

That considerable percentage among us known as "the poor" cannot afford to rest during times of illness. They must keep on, for to stop means even greater poverty than they are enduring. It is this inability to properly care for themselves physically that results in an early death, or at best, an old age at a time when they should be enjoying the vigor of full manhood and womanhood. True, a few have risen from the ranks of poverty to positions of power and influence, but in very rare cases did these come from the class who are cursed with the extreme poverty found in most of our cities. Most of those who have succeeded despite the handicap of poverty came from the farm, where, even though they may not have had the advantage of good clothing and education, nevertheless developed strong bodies, which gave them the power to struggle against the most adverse circumstances. Those who have risen from poverty to high positions in life had this physical capital to bank upon, thus possessing an asset of which the tenement-bred children, for the most part, are deprived.

What right, what opportunity, have these kiddies for self-expression?

HARBOR TRANSPORTATION.

The Information Bureau of the United States Shipping Board has supplied the JOURNAL with a copy of the following resolution adopted by the Harbor Transportation Section of the recent Washington Conference called "to promote efficiency and industrial harmony in the marine industry":

Resolved that it is the sense of this conference that the adjustment of all matters between employers and employes in the operation of marine harbor equipment is a matter of local concern affecting only the particular port involved and that the adjustment of any differences should be by collective action of the parties in interest and in order that this may be encouraged be it further

Resolved that this conference recommend that in each harbor where satisfactory arrangements do not now exist a local board be created consisting of equal numbers of representatives of employers and representatives of employes to settle and adjust all matters in dispute between them, and that in case of a deadlock the local board shall select an impartial umpire in such manner as it may determine.

Ninety-four and three-tenths per cent. of the men in the army were fit for service at all times, and of the 5.7 per cent. of non-effectives, only 3.4 per cent. were rendered so by disease. Of 195,000 Americans who were wounded, the lives of 182,000 were saved.

THE FLYING AGE.

Closely following upon Lieutenant-Commander Read's successful flight to Europe, via the Azores, two young British officers have realized the final goal of all the ambitions which flying men have ventured to dream since the Wright brothers first rose from the earth in a heavier-than-air machine. All of Monday's papers featured the news that Captain Alcock and Lieutenant Brown had landed on the Irish coast after the first non-stop flight across the Atlantic. Their voyage was without accident and without unforeseen incident, so far as can be learned. It was a straight-away clean-cut flight, achieved in 16 hours and 12 minutes—from Newfoundland to Clifden, Ireland, more than 1900 miles.

Really, the time seems to be rapidly approaching when flying will be as popular as motoring. Already British manufacturers are said to be overwhelmed with orders for business and pleasure craft, and are turning them out as rapidly as possible, their aim being to please all tastes and purses. A leading firm is advertising the "poor man's flyer," a 46 horsepower plane comfortably seating two persons "in the upholstered cockpit," for a measly $1250.00. The cost of the upkeep is reported to be about equal to that of a small car. The same firm is supplying business concerns and commercial travelers with a flyer named the "Kangaroo" of the war coastal patrol type. It does 70 miles an hour, carries passengers, a ton of baggage and samples. Other designs of air taxies and runabouts and large family flyers are also advertised.

British seaside resorts are besieged with applications from promoters of air joyrides, which are likely to be a popular feature of the summer holidays. A private company has established an aerodrome in North London for pleasure flights in the metropolis.

The British Air Ministry has arranged a series of aeroplane flights to various parts of the world in order to demonstrate the excellence of the British aeroplanes. Cambridge University has established aeronautical chairs, £200,000 being donated by Emile Mond in memory of his son who was killed while flying. And so on and so forth.

When all has been said, however, the glorious historical fact will remain that an American aviator in a United States plane negotiated the first trip "across."

The struggle of the labor movement has never been a kid-glove affair. It has been a hard, rough, uphill battle. Like every other movement making for freedom, it has had its martyrs, and its earnest, fearless, inspired leaders. And it has been ever true to its traditions, because its ideals and its needs keep it true to the causes of humanity. Today, as never before, it is fighting for human happiness and free institutions.

Soldiers who fought in the war with Spain lost in weight on an average of twenty-two pounds each; the average American soldier at the end of the fighting in 1918 weighed twelve pounds more than when he went into the army. Contrasting the work of the quartermaster and the medical and the sanitary departments in the two wars isn't exactly comforting to the present-day critics.

SHIPPING BOARD FINANCES.

Chairman Hurley Submits Request for Funds to Chairman of House Committee on Appropriations.

Following is a copy of the letter from Chairman E. N. Hurley of the United States Shipping Board to Representative James W. Good, chairman of the House Committee on Appropriations:

Hon. James W. Good, Chairman Committee on Appropriations, House of Representatives, Washington, D. C.

My Dear Congressman:

In presenting to you the request of the United States Shipping Board for funds, I feel it my duty to give you an outline of our shipping problem as a whole. The interrelation of the shipbuilding and ship-operating industries is very close, and the unprecedented conditions which the war has imposed upon both of them cannot safely be adjusted to normal without carefully considered action by the Government, at whose call they abandoned the normal limitations of commercial organization and adjusted themselves to the abnormal conditions of war. Moreover, the importance of those two great industries to the prosperity of the American people is so great that the necessity for establishing them upon a healthy commercial basis is widely recognized as a prime matter of national policy.

During the nineteen months in which our country was actively engaged in the war, the United States Shipping Board Emergency Fleet Corporation expanded the shipbuilding capacity of the United States from an unimportant position among the world's producers of ocean-going tonnage to first place. At the same time it has increased the overseas merchant fleet of the United States from a negligible quantity to second place. Our program has been molded, and its closing-out has been planned, with the idea of leading the two industries Congress consigned to our administration during the war up to the point at which they may strike out and develop on a commercial basis. The consummation of our efforts is dependent upon and now awaits the action of Congress in granting our request for funds, and in directing the manner in which we shall dispose of the Government fleet. Congress has authorized $3,671,000,000 and appropriated $2,625,451,000. We shall need all the money which has been appropriated, and in addition we shall require $673,368,301. However, the sum of these two amounts ($3,298,819,301) is $372,180,699 less than the amount Congress already has authorized us to spend.

The shipbuilding program has been greatly reduced since the signing of the armistice. We have suspended or cancelled contracts for 754 ships aggregating 3,797,825 deadweight tons, which would have cost $797,564,276 to complete. The cost of cancelling these contracts will be about $202,853,456, and the saving effected by cancellations will approximate $594,710,820.

The following is an account of our financial operations to date:

Actual expenditures and net commitments for shipyard construction, housing, transportation, etc., amount to $270,482,975, and it is estimated that the salvage will be $81,272,700. This means that we shall have to charge off from our shipyard, housing and transportation investment, $189,210,275, which is 5.6 per cent. of the total amount Congress has appropriated and is requested to appropriate.

On March 31 we had spent in the administration of the home office, the field establishment, and the district offices, $24,173,000. By July 1 this item will reach $29,500,000. It will require an additional sum of $15,500,000 to complete the program. This makes a total administration outlay of $45,000,000, or 1.37 per cent. of the total amount Congress has appropriated and is requested to appropriate.

The three net expenditures described in the last four paragraphs total $437,063,731. The subtraction of this amount from $3,298,819,301, the total appropriations made and requested, leaves $2,861,755,570 to be accounted for in ships. For this sum we have built and expect to build 2434 vessels aggregating 13,885,106 deadweight tons. On its face, this ratio of tonnage to monetary outlay would indicate a cost of $206 a deadweight ton. However, the actual cost of the ships to the Government is considerably less than this amount for the following reasons:

Some shipbuilders have paid into the United States Treasury income and excess profit taxes aggregating $40 a deadweight ton on the vessels they have constructed. Others have paid the equivalent of $30 a ton. It is estimated that at least $25 a deadweight ton has been returned to the Treasury in this manner by all shipbuilders. This $25 does not include any taxes paid by the hundreds of subcontractors who manufactured the steel, the boilers, the machinery and the many other things which go into the ships; but when multiplied by 13.885,106 deadweight tons, it indicates a rebate of $347,127,650, which, when subtracted from $2,861,756,570, leaves $2,514,527,920, or $180 a deadweight ton as the actual cost to the Government of the fleet which played an essential part in the

(Continued on Page 10.)

OFFICIAL.

JOE MACK, Agent.
No. 613 Beacon Street. Phone Sunset 336. P. O. Box 54.

The wooden Ferris type steamer "Cabria" was launched from the McEachern Ship Company's plant at Astoria on June 13. The "Cabria" is the eleventh hull of the McEachern Company and will in all probability be the last vessel to take the water from the Astoria yard. Unless present plans are changed the "Cabria" will be completed only as a barge.

The port of Seattle Commissioners has adopted a resolution favoring the free port plan and the secretary of the Commission was instructed to bring this action before the New York Merchants' Association in New York, on June 30, where the free port proposal will be discussed. It was suggested that Lake Union serve as Seattle's free port zone.

According to Seattle fisheries headquarters of the Government, 4000 seal skins, 667 blue fox and thirty white fox furs were taken from the Pribiloff Islands fur stations to San Francisco on the radio tender "Saturn." The blue fox skins are valued at an average of $100 each, the white fox $35 each, and the seal fur $65 each.

OUR WASHINGTON LETTER

(By Laurence Todd)

At last we have the strike of the Commercial Telegraphers' Union, which will be reinforced in ten days by the strike of the International Brotherhood of Electrical Workers. Postmaster General Burleson, facing the showdown of a strike, has quit cold, as President Konenkamp of the Commercial Telegraphers pointed out to-day. Rather than face the resistance of the men whom he has driven to fight, when all they wanted was good faith and a square deal, the Texas land baron has hastily thrown the telegraph and telephone systems back into the hands of the private corporations. He has run away after planting his industrial explosive.

It is unfortunately true that the commercial telegraphers have not been well organized in the past. The great numbers that have joined the union during Burleson's terrorist regime of the past year may not be proof against the cajolery and trickery that Carlton of the Western Union Telegraph Co. and Vail of the Bell telephone trust will employ to break up the strike. It may be that the strike will be only partially effective in some parts of the country. But in other regions it will be fully effective. And when the Electrical Workers get into the fight on June 16, the whole situation will be changed from what the public sees in the first days of the walkout. The one chief "gas attack" which Carlton and Vail will employ will be the suggestion that Burleson has kept the company and its employees apart, and that in each locality the local manager will see that every man or woman who quits the strike will be given all the demands made—except union recognition.

One of the answers to this hypocritical plea will be the quick formation of committees to tell the strikers' side of the case to the public and to the returned soldiers especially, for it is among the returned soldiers that the immediate danger of the securing of strikebreakers exists. If the men just out of khaki refuse to be made the catspaws of the wire trust and the political industrial junkers, then the strike will be won in a few weeks.

By the time these lines are printed a resolution calling for the dismissal or impeachment of Burleson will have been introduced in the Atlantic City convention of the American Federation of Labor. Thos. F. Flaherty of the National Federation of Postal Employees, E. J. Gainor of the National Association of Letter Carriers, and E. J. Ryan of the Railway Mail Clerks are the delegates who will draft it. The resolution will instruct the executive council to ask President Wilson to dismiss Burleson, and in the event of the failure of the President to do so, it will instruct the executive council to appeal to the present Congress to impeach the Postmaster-General. Reasons for dismissal or impeachment will be furnished, based upon Burleson's systematic cruelty to individuals and venomous hostility to trade union organizations within the postal and wire services.

That the convention will deal with Burleson and Burlesonism as well as with the private autocrats in the telegraph and telephone companies is certain. Konenkamp will be in Chicago, directing the wire strike, but his organization will have spokesmen at Atlantic City who will report on the battle and make any appeal for co-operation that may be found advisable. The 550 delegates now on their way to the convention will not be slow to give support. They realize that now is the best time the country presented, for a winning fight.

Organized labor is in fine shape. The report of the executive council to the convention shows that the total vote of the unions to be represented at Atlantic City, based on the average per capita tax paid for this year to the A. F. of L. is 3,384,900. Last year it was only 2,837,500. In 1914 it was 2,118,500. From the standpoint of numbers, the labor movement was never so well prepared to close up the gaps in its ranks as it is today.

One of the biggest of the new factors in the movement is the organized woman in industry. The National Woman's Trade Union League has just been in convention in Philadelphia, and was in session when the Senate was dragged over the line for the final passage of the suffrage resolution for amendment of the Federal Constitution. Twenty million women will be voters about two years hence, who have not been voters thus far. It is likely that the Woman's Trade Union League will be the most influential body in the United States in molding the political and economic action of these new voters.

What do they want? Well, yesterday they adopted some resolutions, among which was one calling for the 44-hour week. Another demands that this limit be applied, with a daily limit of eight hours, to the work of the 2,500,000 women and girls now engaged in domestic industry—in hired housework. For the 18,000,000 women who do their own housework they demand the application of more labor-saving inventions, most of which are now the possession of the rich only.

Also, they demand that American and Allied troops be recalled from Russia, that the food blockade against Russia and other nations be raised at once, and that the Russian Soviet government be recognized. Mrs. Raymond Robins, Miss Elizabeth Christman, Miss Alice Henry, Miss Anne Hogan, and Miss Pauline Newman favored the resolutions. No speeches were made in opposition, and only nine of the 300 delegates voted in the negative.

Just to show that they were real trade unionists, the whole convention went on picket duty with the striking employees of the Keystone Telephone Co. after the day's session. And they adopted a resolution asking the governors of the States to call special sessions of the legislatures to secure immediate ratification of the suffrage amendment.

One of the disappointments which these women, and possibly most of the men, in the convention will get from the report of the executive council is its failure to recommend any action on health insurance. The issue has been carried along from year to year, while State labor bodies have gradually moved over into the camp of the advocates of public insurance of the health of the wage workers. This year the council states that its special committee made a report which was considered by the executive committee, and that "divergent views were manifested by some of our members," so that the executive committee now asks authority to investigate on its own account and make public its own findings "as the position of the A. F. of L. upon health insurance." What the committee's report was, and who objected to it, is not indicated.

More immediately interesting to the delegates, no doubt, will be the old question of proposed changes in the form of organization—the trade union versus the "One Big Union" plan. While the labor papers in the territory where the latter plan is now strong—in Western Canada and the Pacific Northwest—carry a great many items of news indicating that the One Big Union is the favorite of a big majority of the locals and of the members attending meetings, yet the officers of international unions involved in the reported dissolution of ties between these locals and the internationals still declare that their members are standing fast within the internationals.

For example, Vice-President Anderson and General Secretary Davison, of the International Association of Machinists, said to-day that the supposed secession of their membership in Western Canada was imaginary, or on paper. One lodge in Vancouver, it was admitted, voted to quit, but half of its members promptly formed a new local and they expect to get back all but a score of the original members. The two officials insist that the One Big Union movement has "flattened out," and that it cannot be seriously considered.

"They have no talking point," said Davison, "because the machinists have for years advocated the amalgamation of all the metal trades unions, and at Atlantic City we are going to put up that proposition. We shall ask for a conference which shall be urged by the federation to bring about the amalgamation of all organizations in the metal industries."

Organizer Thomas Williams, who attended the recent conference of steel workers in Pittsburgh, called to consider means of organizing that industry, reported here that the majority of the delegates were insistent upon an industrial union, and that because of lack of agreement upon this point the result of the conference was not quite satisfactory. The expected steel strike is now postponed.

The machinists, incidentally, must again fight their jurisdictional battle with the Flint Glass Workers this year. The report of the executive council indicates that the executive council would like to compel the machinists to surrender to the decision of previous convention, but that it is no longer willing to recommend the expulsion of any of the bigger organizations. The Flint Glass Workers, of course, will demand that the machinists be expelled for refusing to comply with the jurisdictional decision. They will be beaten on that point.

Uncle Joe Cannon was commenting on a certain governmental bureau. "It's a mighty polite bureau," he said thoughtfully. "Why, they never fire a man in that department. They ask him to tender his resignation. And tendering, you know," and Uncle Joe smiled, "tendering makes it less tough."

COMMERCIALIZED LYING.

The revolution in Russia has given rise to the greatest flood of mendacity we have known in our day and generation.

And when it is reflected that we live in an age that has commercialized lying, and turned what was once an individual art into an organized industry, it will be recognized that the pre-eminence accorded to Russia in this respect has something behind it both sinister and significant.

Lying of this description is not indulged in for the pleasurable exercise of the inventive faculties, nor as a stimulus to the imagination. It's a business proposition. Self-interest is the animating principle in it, and you can depend upon it that somebody expects to reap an immense advantage from the enterprise.

What then, is the advantage looked for? And who is hoping to get it?

* * *

When the Czar was deposed, and the Russian Republic proclaimed, there was much rejoicing in all the strongholds of Capitalism.

Cheers went up from the Stock Exchanges of the world. Chambers of Commerce carried enthusiastic resolutions congratulating the new-born democracy. And in a hundred Parliaments of Reaction there were expressions of solemn delight at the overthrow of autocracy!

It was evident from all this that it was not anticipated that the revolution would disturb the supremacy of capitalism in Russia. It might even open up new fields of exploitation, for aristocratic brigands sometimes get in the way of plutocratic highwaymen; and competition in theft is apt to diminish the profits of the game.

But when the second phase of the revolution was reached—when Kerensky, the tool of the allies, was swept from power, and the Russian workers and peasants took control, and set up their Soviets—there was a sudden change in the attitude of the world's capitalists.

It was then that the deluge of lies began. The prostitute press got busy. Awful tales of Bolshevik atrocities made their first appearance in the columns of the newspapers.

The politicians who are kept to do the dirty work of capitalism were given the tip, and started squirting mud and spitting venom. Sleek parsons, fattened on the skimmings of the thieves' pot, stood up in their pulpits, and in the name of Divine Truth propagated the gospel of the Father of Lies.

The Bolsheviks were murderers; they were violators of women; they were devourers of children; they bottomed such depths of bestiality as made the fierce baboon a gentleman in comparison.

And day after day this wild outpouring of falsehood continued; at the present moment it is raging with undiminished fury.

What is the reason of it? Why do they lie about Russia in this unprecedented fashion?

* * *

It is because they are afraid.

Capitalism has gone the way of Czardom over there, and they are in mortal terror lest the example prove infectious. And when rogues are panic-stricken they resort to two weapons of defence—slander and violence. They will stab their enemies with a foul knife or poison them with a foul tongue.

That is exactly what has taken place in this instance. The Bolsheviks are being hideously maligned in every capitalist country, counter-revolutionaries and foreign foes are being bribed to attack them, and in the North of Russia the allies have landed an invading army.

All because the capitalists of the world are afraid. They tell you they are, themselves. They fear, they say, that the doctrines of Bolshevism will overrun the earth; but they take care to add that such a triumph would be a terrible calamity, throwing civilization and all its hallowed institutions into the hands of the vilest wretches unhanged.

They are so afraid, fear has so unbalanced their judgment, that they cannot perceive that the slander refutes itself.

If Bolshevism were the abomination they represent it, its spread need not be dreaded. The mass of the people do not love murder and rapine; they would never be captivated by the preaching of crude and bloody scoundrels.

Bolshevism, of course, is not at all what they say it is. It is to find out what it really amounts to, and what it is actually doing, so much has Russia been isolated by the flood of lies let loose upon it. But gradually the truth is becoming known.

That eminently respectable paper, "The New Statesman," published in London, recently informed its highly decorous readers that it had received from sources on which it placed "complete reliance," information about the operations of the Bolsheviks which it felt bound in the interests of truth and justice to publish as far as its voice would reach.

And this was the gist of "The New Statesman's" information:

"Order in Russia is more thoroughly established than at any time since the fall of the Czar."

Factories are rapidly restarting work. "Management of factories by committees of employers failed, and management by Soviets has been substituted with growing success."

The Bolsheviks are "cleaning the country of bribery and corruption."

"The great mass of the professional and petty bourgeoisie have gone over to the Bolsheviks." "In the large towns the workmen are almost unanimous supporters of the Soviets. . . The great majority of the peasants are now keen supporters of Bolshevik rule."

"The New Statesman" also makes it quite clear that the allies are not invading Russia because the Bolsheviks have repudiated the public and private debts owing to foreigners. As a matter of fact they are "willing to pay the interest in food and raw materials, to surrender their gold, and grant timber and mining concessions in the Urals and elsewhere," on the single condition that the allied armies are withdrawn.

Instead of which those armies are being reinforced, while the inundation of falsehood never ceases. The capitalists of the world are so afraid! They are so afraid that Bolshevism will win the approval of their own peoples, and that capitalism everywhere will perish, as it has in Russia.

That is why the American Delegation, as we were told by cable this week, "has decided not to publish the report of Mr. Bullit, an American journalist who recently visited Russia as a sort of unofficial representative of the American Government."

The cable adds: "It is persistently rumored that Mr. Bullit brought back a proposition from Lenin, that the report is decidedly pro-Bolshevik, and declares that the Soviets are the de facto government of a large part of Russia." The American Delegation refuses to publish that report because it fears the truth. The capitalists of the whole world fear the truth.

* * *

The methods of the Bolsheviks might not be followed in all other lands. In this Australia of ours they certainly would not be, for peaceful means are available.

But the spectacle of a working class owning and controlling the instruments of production, and successfully carrying on all the administrative functions of society in such a vast country as Russia would be inspiring everywhere.

So the torrent of lies goes on. Is it to be wondered at, when the truth would be fatal?

Capitalism is doomed, but we can hardly expect it to dig its own grave, and invite us to push it in.—The Australian Worker.

Demand the union label.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

years of age 360 years ago when he signed documents conveying the lands which now form the Bute estates.

The Marquis said he should be paid for these lands if they were nationalized, even if it were shown that the signature of the boy king on these documents was forged.

Lord Tredegar was impatient with the commission. This nobleman's annual income is $425,000. He said he was "somewhat rusty" about the title to these lands; that they were in his family from time immemorial and that if he didn't hold them "some one else would." One of the commissioners presented proof that large tracts in Lord Tredegar's holdings were never purchased. It was shown that the witness has an income of $95,000 a year from a railroad one mile long which cost $200,000 to construct. Other coal operators are forced to use this line, which is called the "Golden Mile" railroad.

Employment Board Urged.

Secretary of Labor Wilson has appealed to Congress to create a permanent public employment service.

There was an appropriation of $272,000 in the deficiency bill to continue the United States employment service, but this was stricken out by a parliamentary move by Congressman Blanton of Texas and now the service must curtail its activities and possibly be forced to disband temporarily.

In his letter Secretary Wilson says that the placing of workers should not be left solely to private fee-charging agencies.

"Inasmuch as the interests of the private fee-charging agencies are fostered by constant shifting of workers from one employment to another," he says, "they are under constant temptation to which, unfortunately, they sometimes yield, to encourage restlessness among laborers and thus to increase the evils and economic loss which inhere in a large labor turnover."

Burleson's "Paternalism."

Refusal of Postmaster General Burleson to observe the postal eight-hour law is inflicting hardships upon postoffice clerks and depriving former soldiers and sailors of an opportunity to get employment. The statement was made by Gilbert E. Hyatt, president of the National Federation of Postal Employes in a speech in Washington.

"In the city of Minneapolis," he said, "We have the spectacle of postoffice clerks being worked 10 and 11 hours a day while soldiers are begging quarters and dimes from passers-by in front of the postoffice. Our appeals to Mr. Burleson to restore the eight-hour day in this and other offices, and thereby give the former military man a chance for a job, have been in vain."

Federal Home-Loan Banks.

To obtain information regarding the present condition of building and loan associations in all parts of the country and to ascertain the sentiment in regard to the establishment of federal home loan banks, the United States Department of Labor recently sent out a questionnaire, the returns from which contain valuable information on the building situation.

According to the questionnaire returns, 63 per cent. of the associations are now being offered more business than at this period of last year. Many of the reports show increases of from 10 to 1,500 per cent. over 1918 in the volume of business.

No "Short-Cut" Road to Industrial Peace.

There is no "easy" way to solve industrial and social problems, declared President Gompers, replying to a Washington (D. C.) newspaper which has revived the plan to hold a national conference to meet in that city and discuss these questions.

The newspaper asked President Gompers' views on the proposal, and the trade unionist replied:

"A conference of the character indicated may be helpful in bringing men to a better realization of each other's point of view and the claims which the workers make upon society as a more adequate reward for service performed.

"If, however, there is in the project the thought that a 'set of basic principles for guidance in solution of labor problems and assurance of industrial peace' can be adopted, it will utterly fail. There is no royal road to a final solution of the 'labor problem,' nor can 'industrial peace' be secured by a set of resolutions.

"I have endeavored to do my share to help solve the problems of the day and of the time, and to bring about as nearly an approach to industrial peace as perhaps any other man in our country, but to entertain the idea that the 'labor problem' can be solved or permanent 'industrial peace' attained is following a will-o'-the-wisp.

"An intelligent, rational discontent for a better time and better conditions of life and work is the harbinger of progress and a better day. It is the ignorant, irrational unrest which must be understood and educated and brought within the common activities of all our people in order to open the path to our greater progress and our higher civilization."

Eight Hours in France.

Organized employers in France have notified their striking garment workers that the eight-hour day and the 44-hour week will be established and the union recognized. The employers first refused to grant any demand or to recognize the union, but the workers' solidarity gradually forced them to a complete surrender.

The 25,000 striking bank and bourse employes won an 11-days' strike against the kings of finance when Minister of Labor Colliard, acting as arbitrator, ordered a 30 per cent. wage increase for several large institutions. Other establishments in this city and the provinces will pay rates, according to circumstances. The strikers' demands for holidays and improved working conditions will be worked out through a committee. The bankers refused to recognize the bank clerks' union despite the fact that the French law guarantees workers the right to organize and legalizes collective bargaining. The Minister of Labor was accepted as sole arbitrator when he threatened to requisition the banks and conduct them as state institutions.

The Boot and Shoe Workers' Union has compelled employers to sign an eight-hour agreement that will run for three years. The eight-hour law enacted by parliament last April provides that its details shall be left to agreements between employers and employed in each industry.

SHIPPING BOARD FINANCES.

(Continued from Page 7.)

winning of the war, and which is now a permanent commercial asset of the American people.

On yesterday we sold one of our 7500-ton feighters to the National Shipping Corporation of New York for $210 a deadweight ton, and we have received from the Skinner & Eddy Shipbuilding Corporation an offer to buy at present construction costs four 8000-ton freighters which the Skinner & Eddy Corporation itself is building. To-day we sold one of our 5075-ton freighters to the Omega Steamship Company of New York for $210 deadweight ton, and we have received from another firm an offer to buy four ships at the same price.

A recapitulation of the foregoing figures is appended for your convenient reference.

In giving you this picture of our finances, I have confined myself to facts and figures. I have made no mention of the unusual conditions under which our work was planned and carried out. However, it is interesting to note that the cost of our steel and machinery was three times its normal cost, and that the wages we paid to labor were based upon double the normal rate. Also, it is interesting to consider in connection with the foregoing figures the fact that we expanded the shipbuilding industry tenfold in ten months with high-priced materials, and under the handicap of transportation delays which made the work very costly. In the prosecution of our work, we have made many blunders, and finally, when we were compelled by the signing of the armistice, suddenly to stop and reverse the ponderous machinery we had been driving at full speed, we found ourselves confronted with new problems, through the mazes of which we are happy to report that we can now see our way clearly.

Sincerely yours,

E. N. HURLEY, Chairman.

Washington, D. C., June 4, 1919.

Net cost of 13,885,106 deadweight tons of ships.....	$2,514,627,920	

Average net cost of ships, per deadweight tons, $180.

LIFE'S COMBAT.

(C. M. Cook in "The Carpenter.")

It's fun to fight when you know you are right,
And your heart is in it, too.
Though the fray be long and the foe be strong,
And the comrades you have are few,
Though the battle heat bring but defeat,
And weariness makes you reel,
There's a joy in life that can know such strife
And the glory and thrill you feel.

It's fun to dare in the face of despair
When the last lone chance seems gone,
And to see hope rise in the angry skies
Like a promise of rosy dawn;
For victory's sweet when it crowns defeat,
And you learn this much is true—
It's fun to fight when you know you're right
And your heart is in it, too!

Demand the union label.

A. F. OF L. CONVENTION NOTES.

(Continued from Page 2)

are Bolsheviks and some of the Bolsheviks do not represent Bolshevik papers. Basil Manly, former Joint Chairman of the War Labor Board, is at the press table. So is Carl Sandburg who has just tied for first prize for the best book of poetry published by an American during the year.

Andrew Furuseth is the most pessimistic delegate. He doesn't want to be interviewed, but he did say to one reporter that he couldn't see the "dawn of a new day" visioned by so many. On the contrary he sees the "sun setting on human liberties." He finds few to agree with him.

Funny questions are asked by the new members of the newspaper contingent. Here are some:

"Who's leading the opposition?"

"What will the fights be about?"

"Who is going to run against Gompers?"

Old timers catch their breath and just say repeatedly, "Nobody," or "Nothing."

Margaret Bondfield, one of the British fraternal delegates, finds congenial friends among the more radical delegates. She is going from here to Chicago to attend a convention called for the purpose of protesting against invasion of civil rights, to which a great many known as pacifists are going. She is a smiling little body who seems to enjoy buzzing around.

B. Suzuki, of Japan, is here after an absence of two years. He represents the Japanese Friendly Society and always makes a speech of which fully half is understood. He's as congenial as the cherry blossoms of his island home. Labor organization is his life work and though he smiles like cherry blossoms there are few flowers in the real life of a Japanese labor organizer.

A quiet little woman in black usually sits close to President Gompers on the platform. She signs her letters "R. Lee Guard" and sometimes gets replies beginning "Dear Sir." For years Miss Guard has been private secretary to President Gompers and few men have a more intimate knowledge of the labor movement than she possesses.

There are three or four women at the press table, one of whom represents the "Weekly People" of New York, Socialist labor paper organ. Her predecessor in the job is now in Russia helping Nick Lenine.

W. C. Roberts, veteran Labor reporter, who compiled the new Labor year book and encyclopedia, is getting praise from all sides. Roberts had to read the records of thirty-eight conventions, aside from a great mass of other material, in compiling the book. Besides that he had to read proofs of everything in the book.

There is another reading stunt worth mentioning. John P. Frey, editor of the Molders' Journal, is here doing his first active work after a long siege of illness. Frey is an inveterate reader. He reads all manner of deep stuff, scientific lore and ancient history. While confined to his bed he took a course in architecture. Compelled to lie flat on his back, he had an apparatus built that would hold a book in position where he could look up at the pages. Few editorials get closer attention than those Frey writes for the Molders' Journal. He doesn't write upside down.

NEW ZEALAND'S TRANSPORTS.

The wonderful transport work done from New Zealand during the last four years is indicated by figures recently issued by the New Zealand General Staff. It took 111 ships, totaling 764,011 tons, to transport the 100,444 men of New Zealand's expeditionary force, and this was accomplished without the loss of a single transport while under New Zealand's charter.

The first transports to leave New Zealand were the "Moeraki" and the "Monowai," which conveyed the expeditionary force that occupied Samoa. They left on August 13, 1914, only 11 days after the outbreak of war.

The "Waunganui" and the "Tahiti" each made 11 trips outward with troops, after which they made three voyages across the Atlantic with American troops on board. The "Willochra" made 10 trips and the "Tofua" nine. The transports took several routes. They went around the Horn, round the Cape of Good Hope, through the Suez Canal, and by way of Panama. Two drafts of reenforcements reached France through Italy. The "Athenic" went aground at Jamaica and her troops had to go on by another vessel. The only two transports sunk were the "Aparima" and the "Waitemata," both of which had been transferred to the imperial government.

Mention should also be made of the two New Zealand hospital ships, "Maheno" and "Marama," which have been in commission since 1915, each making several voyages between England and New Zealand. It is all a wonderful object lesson in sea power and its application to victory.

NORWAY'S REVISED LOSSES.

Norwegian shipping losses during the war were greater than those of either Sweden or Denmark. The Royal Norwegian Navigation Bureau has officially announced that Norway's loss at the end of 1918 comprised 629 steamships, aggregating 1,031,360 gross tons; 178 sailing vessels, aggregating 194,777 tons; 17 motor boats, aggregating 10,591 tons; and 5 barges, aggregating 3,327 tons, making a total of 929 vessels, aggregating 1,240,055 gross registered tons. The loss of life was 1,155. At the outbreak of the war Norway's registered merchant fleet consisted of 3,405 vessels, aggregating 2,626,708 tons. The total loss, therefore, calculated on a percentage basis, is 24.11 per cent. of the vessels and 47.08 per cent. of the tonnage.

A college professor who is very absent-minded got on a crowded electric car and had to stand up. As the conductor came to take his fare the professor suddenly perceived a well-known society woman of his acquaintance. He at once put his hand into his pocket, took out a nickel and handed it nonchalantly to the woman, then, turning, he made an elaborate bow and shook hands cordially with the conductor.

Labor News

A $5-a-day minimum for customs inspectors is favored by Secretary of the Treasury Glass, who has submitted an estimate to Congress of $11,385,000 for wage increases in the customs service.

As a result of a decision of the railway adjustment board No. 2, the carmen of the Nashville, Chattanooga and St. Louis railroad receive over $60,000 back pay. Each man gets from $100 to $350.

The reporters of Salt Lake City, Utah, were locked out of the daily newspapers for trying to form a union. When it became known that an effort was under way to form an organization, the publishers held a conference and agreed to employ no reporter who had taken any part in the movement. A charter will be applied for and a fight will be made for recognition.

Gun men fired into an open air meeting of striking textile workers at Columbus, Georgia, and killed one person and seriously injured six others. Prior to the assault the speakers were subjected to insult and a din was maintained by rattling tin pans in an effort to silence the speakers. Trade unionists are protesting vigorously against the outrage and are demanding the prompt punishment of the gun men. The Carpenters' union has voted $1,000 for this purpose.

Awards have been made by the National War Labor Board in the case of four unions in the New England fisheries dispute. The wages were fixed as follows: Captains of beam trawlers, $125 monthly and 3 per cent. commission on gross stock of vessels; mates, $110 monthly and 2 per cent. commission. Members of the Fish Handlers' Union receiving less than $25 weekly, a 15 per cent. increase; those receiving $25 or more weekly, 10 per cent. increase. Overtime to be paid for at the rate of 75 cents per hour.

Carl C. Van Dyke, Congressman from the St. Paul (Minn.) district, died suddenly after a very short illness. Deceased was 38 years old. He was entering upon his third term as Congressman, being supported by trade unionists in his district because of his activity in behalf of postal employees. During the last two Congresses he was a leading figure in the Congressional labor group, and was also a member of the House Labor Committee. Seven years ago he took an active part in the fight for anti-gag legislation. As a member of Congress he never forgot his trade union affiliation and was constant in voicing the workers' aspirations.

The result of a continuous fight waged by organized labor against the Colorado cossack system is shown by a statement by the Governor that the system will go out of existence June 1 instead of July 15. The Legislature appropriated money enough to run the cossacks until July 15, but when the superintendent of the cossacks offered his resignation to take effect June 1, Governor Shoup took the position that as the Legislature intended that the cossacks should only continue until July 15, he would wind up the system six weeks earlier than intended. The fight on this question before the last session of the last Legislature caused a twenty-four hour deadlock before the friends of the cossacks were routed.

Seattle, Wash., Letter List.

Under a rule adopted by the Seattle Postoffice, letters addressed in care of the Sailors' Union Agency at Seattle can not be held longer than 30 days from date of delivery. If members are unable to call or have their mail forwarded during that period, they should notify the Agent to hold mail until arrived.

INFORMATION WANTED.

The widow of Otto Kivi, who fell overboard on the S. S. "Carlos" between San Francisco and Aberdeen, May 30, 1919, wants to know the names of the crew on the ship. Kindly assist his widow by giving this information to S. T. Hogevoll, attorney for the widow, 627 Pacific Building, San Francisco. 6-11-19

Members of the crew of the S. S "Oskawa" will please call at my office in relation to a claim for salvage against the S. S. "Westgrove." Silas B. Axtell, 1 Broadway, New York, N. Y. 4-21-19

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardmore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

INFORMATION WANTED.

Will any of the crew of the barkentine "Thos. P. Emigh" who were on her at the time Jacob Olsen was hurt by being thrown over the wheel on or about October 27, 1918, please call on or communicate with F. R. Wall, 324 Merchants' Exchange Bldg., San Francisco, Calif. Telephone, Sutter 5807. 6-18-19

The Public
A Journal of Democracy

Poverty is A Crime!

It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

CARRY ON!

Uncle Sam is releasing from his service the men who went "over there" to free the world from autocracy. Thousands of soldiers are daily receiving their honorable discharges; they pocket their pay, bid farewell to their comrades, and sally forth—civilians.

There is one army, however, which must not be demobilized. That is the army of War-Savings Stamp buyers. More recruits are needed to carry on the campaign of readjustment which follows the signing of the armistice.

The army of fighters has achieved its purpose.
The army of savers must remain in "action."
"Carry on" to a lasting peace under the banner of W. S. S.!

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal.
11-6-18

Carl Hansen, a native of Soon, Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee Wis.
8-17-18

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City.
1-1-19

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City.

William J. Farrell, last heard from at Seattle, Wash., July 25, 1918, is inquired for by his father, Edward Farrell, 338 Commercial Avenue, South San Francisco, Cal.
4-30-19

Home News

Lower prices of wheat, resulting in a reduction to the consumer in the price of bread, is an early prospect, according to Julius Barnes, Federal Wheat Director. Mr. Barnes conferred with grain handlers, millers, flour jobbers and bakers in the office of the Food Administration Grain Corporation in New York.

Action by Congress on equal suffrage—subject of a fight of forty years' duration—ended on June 4 in adoption by the Senate by a vote of 56 to 25 of the historic Susan B. Anthony constitutional amendment resolution. The proposed amendment, adopted by the House by a vote of 304 to 89, May 21, as the first act of the new Congress, now goes to the States, ratification by Legislatures of three-fourths of which is required for its incorporation in the Federal Constitution.

Fifteen members of the House—ten Republicans and five Democrats—have been appointed by Speaker Gillett to conduct five investigations of war-time expenditures of the War Department. Representative Graham of Illinois, Republican, was selected as chairman of the general committee, and the division of sub-committees, one for each investigation, will give the Republicans two members to one for the Democrats. The investigations will cover expenditures for aircraft, ordnance, camps and cantonments, quartermaster supplies and purchases abroad.

With a view to developing new varieties of beans which will flourish and yield profitable crops on the semi-arid regions of the southwest, experiments are being conducted by the University of Arizona on an extensive scale. One hundred varities of beans from South American countries have been imported and are being grown in experimental plots. By cross-breedings after observation of the habits of the imported sorts, it is expected to produce an edible bean that will be sufficiently resistant to the dry heat to produce profitably in the summer season.

The number of farm tenants has increased 40 per cent. in Kansas in the last eighteen years. The number of acres farmed by tenants in that State has increased 80 per cent. in the same period. Governor Allen has begun a campaign to eliminate the farm tenant as far as possible by providing State aid for those who wish to buy farms and who will farm them. The last Legislature voted to submit to the people at the next election a constitutional amendment which will authorize the State to invest money in lands and sell them to farmers on easy terms and at low rates of interest.

Eighty-three men dead and fifty others burned and maimed—many of whom will die—is the toll of a disaster in the Baltimore tunnel of the Delaware and Hudson Coal Company near Wilkes-Barre, Pa. Seven kegs of black powder, 300 pounds in all, were detonated and the dead and maimed were literally roasted by the superheated gas flames following the explosion. The tragedy occurred while the men were on their way to work. Owing to their working places being two miles from the mouth of the tunnel the men were making the trip in a train of fourteen mine cars drawn by an electric motor, the powder being carried in two cars in the middle of the train.

Domestic and Naval

The steamer "Congaree," at Bordeaux from New York, in a leaking condition, is a wooden Shipping Board steamer of the Ferris type; built in 1918.

The bark "Chin Pu" (China), beached near Nagasaki, has taken fire and will be a total loss with cargo. She was bound from Manila for San Francisco.

The steamer "Brandon," damaged by grounding at Bermuda, is bound to Savannah from Huelva; 1691 tons, built in 1910, owned by New England Coal and Coke Company, Boston.

The steamer "Phecda," Barry for New York in ballast, reported at Queenstown with machinery damaged, is one of the Dutch boats requisitioned by the United States Shipping Board.

"At the present rate with which the navy is bringing the army home from France we will have all the Expeditionary Forces except 400,000 men back in the United States by July 1," said Secretary of the Navy Daniels. "If necessary, we could bring back 300,000 of the men remaining in France during the month of July."

Boston has been gravely disturbed of late, lest the old United States frigate "Constitution" should be taken from the local Navy Yard and added to the old ships "Constellation" and "Hartford" as a permanent exhibition at Washington. The "Constitution" is essentially a Boston vessel, built and launched at that city in 1797, and successfully defended by a Boston poet, Oliver Wendell Holmes, when it was once proposed by the Government to break up the old frigate. That was before historic values were generally recognized. The poem saved the "Constitution" by its appeal to popular sentiment, and so did the nation a service that has ever since been appreciated. And now the "Constitution" will stay in Boston, although very likely in some more public location than the Navy Yard. In the old days she sailed from Boston against the Barbary pirates; and it was to the same port that she returned, battered but victorious, from her famous engagement with the "Guerriére" in the war of 1812.

The Navy Department says that the trans-Atlantic flight has cost the nation $1,000,000. The Secretary claims that it was as good an investment as the $50,000 spent by the United States Government on Professor Langley's airplane, the $40,000 spent by the army on the first Wright machine, and the first Baldwin dirigible bought by the army eleven years ago for $20,000. The N-C seaplanes represent a great advance in aeronautic engineering, and this advance gives America a distinction which cannot be estimated in dollars and cents since the honor of having first crossed the Atlantic through the air now officially belongs to the United States Navy. Specifically, the honor rests on the shoulders of Lieut. Commander A. C. Read and the daring crew of the seaplane NC-4, which swept into the harbor of Plymouth, England, at 2.26 p. m. on May 31. The NC-4, since it started from Rockaway Point at 10:04 a. m., May 8, has covered approximately 3,150 miles. The actual flying time for the entire distance to Lisbon was a little more than forty-three hours, or an average of seventy-four and a fraction knots an hour.

News from Abroad

Ex-King Ferdinand of Bulgaria has asked the Swiss Federal authorities for permission to reside in Switzerland.

Photographs of Japanese execution of Korean revolutionists are being issued by the American headquarters of the Korean Republic. The pictures show the victims tied to rudely constructed crosses.

Speaking of the Piedras Negras consular district in Mexico, Vice-Consul W. P. Blocker declares: "It can be stated with emphasis that conditions have improved very remarkably during the past twelve months and that each day adds to the security and safety of the country.

The milling plant for a new Zululand papyrus-pulp enterprise has been purchased in America. The mill has a capacity of 6,000 to 8,000 tons per year, but the material available is equal to an annual output of 100,000 tons. Motor boats equipped with mowing machines are used for harvesting the papyrus.

Joaquin Estevan, of Barcelona, Spain, has invented a straw compound as a substitute for coal. This combustible is said to have great advantages over coal for locomotives and agricultural tractors, as it develops sufficient heat in thirty minutes to give the machinery the necessary pressure. Besides, the ashes make an excellent fertilizer.

A German wireless message states that Germany and Switzerland have concluded a new economic agreement for six months, with one month's notice. Germany promises Switzerland, among other things, 50,000 to 60,000 tons of Ruhr coal monthly, 250 wagons of potash, and 125,000 wagons of flour. The Swiss counter-supplies will consist chiefly of provisions.

The British Government has closed an agreement with the Norwegian shipowners to build for them thirty-five boats, of about 50,000 gross registered tons, as a compensation for the losses suffered by the Norwegian commercial fleet under British requisitions. Furthermore, the Norwegian owners will have an opportunity to contract in England for about 250,000 tons in each of the first three years after cessation of hostilities.

A Pan-African Congress was held in Paris recently in which there were African representatives from many countries representing 200,000,000 Negroes and Negroids. This gathering dealt with the right of the African to justice and a share in the affairs of the world and the right of self-determination. In 1921 another Pan-African Congress for the protection of the natives of Africa and of peoples of African origin is to be held in Paris.

The French representatives have informed the other peace delegations that it will be impossible for the French to ratify the German peace treaty before August 24. This is important in its bearing on the provision in the treaty that it shall become effective when ratified by three of the great signatory powers. Under the French system the treaty must be considered by the delegates and by both Houses of Parliament, and the time allowed each of these several bodies for the purpose makes it certain, according to a French statement, that August 24 is the earliest date on which ratification can be accomplished.

With the Wits

Doctor—My dear sir, it's a good thing you came to me when you did. Patient—Why, doc? Are you broke? —Life.

Wilson—What did that pretty shop-girl say when you stole a kiss?

Johnson—She said, "Will that be all to-day?"—Tit-Bits.

"Were you very sick with the flu, Rastus?" "Sick! Sick! Man, Ah was so sick mos' ebery night Ah look in dat er casualty list for mah name."—Judge.

"I can't understand," said Uncle Eben, "why some folks think de only way to show dey's jes' as good as anybody is to act disagreeable."—Washington Star.

Wright—Don't these big headlines in the daily newspapers make you crazy? Penman—Almost. You see that's my business. I have to write 'em.—Yonkers Statesman.

Jones—If you were going in for music which instrument would you choose? Williams—Well, I've always thought I would like to be a soloist on a cash register.—Tit-Bits.

Brown (dictating to his typist)—But why do you stop so often? Can't you keep up with me? Typist (who is rather shaky in her spelling) —Oh, yes; but your language is so eloquent that I frequently find myself spellbound.—Tit-Bits.

"Some one has compared life to a game of chess. What do you think of that idea?" "I don't know. Any-pieces—when shoved into the wooden how, we are something like the box at the end of the game, king and pawn are of equal value."—Boston Transcript.

"What's the idea of starting this new sensational investigation?" "Well," replied Senator Sorghum, "it seems necessary to do something to take people's minds off a lot of other investigations that there doesn't seem to be any way to finish."—Washington Star.

"Betty, I wish you'd tell Billy and Anna to stop playing with those Ainsworth children. Their social standing is growing a bit questionable." "Why, is that right?" "Yes, it leaked out at a directors' meeting last night that they have the poorest stocked cellar in town."—Life.

Physician—You are burning the candle at both ends. Rich and Irritable Patient—Any cheap, old-fashioned doctor could have told me that. When I pay you $50 for an opinion, you ought to use a metaphor more in accordance with this age of gas and electricity.—Boston Transcript.

HUMBOLDT SAVINGS BANK

733 MARKET STREET, Near Fourth
SAN FRANCISCO

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 42. SAN FRANCISCO, WEDNESDAY, JUNE 25, 1919. Whole No. 2544.

PROBLEMS OF DEMOBLIZATION

An Analysis of Live Issues by Secretary Wilson

Few men in America are as well qualified to speak on Demobilization and Reconstruction Problems as is Secretary of Labor William B. Wilson.

His long and varied experience in the labor movement, his subsequent service in Congress and, last but not least, his splendid record as chief of the Department of Labor, readily qualify him as a worthwhile spokesman for America's workers.

The Journal deems it a priviege, therefore, to print herewith an address delivered recently by Secretary Wilson before the National Press Club, at Washington, D. C. The attention of the Journal's readers is especially directed to Mr. Wilson's lucid analysis of "essentials" for America's foreign trade.

Gentlemen: It was rather interesting to me to have the president of your club wonder whether or not he could find room for me on top of this platform. It was interesting because of the fact that for twenty-seven years of my life I had to find room for myself in no more space that is found between the floor and this platform, and that as a coal miner in the mines of our country.

I scarcely know what I am expected to talk to you about to-night; but generally I have been expected to talk on the subject of reconstruction. We have gone through our war period; we have dealt with the questions connected with the war, and I am sure that you will not be interested in any recital of the methods pursued in handling our industrial problems during that period. We are now confronted, however, with the demobilization of our armies, the demobilization of our war workers, and the remobilization of our normal activities, and that brings us, because of the peculiar situation the world is in at the present time, a great many difficult questions to deal with. In all of the early wars of the world, in fact up until very recent times, it was generally possible for armies engaged in conflict to find means of subsistence in the countries through which they were operating. That was true from the time that Joshua overcame the enemies of Israel until Sherman made his great march to the sea. In modern warfare that is no longer possible. It has been variously estimated, and it is only an estimate because no one has made a scientific survey to determine the facts, that it requires anywhere from six to ten workers in the rear to maintain one soldier in the trenches. Because of that labor became a very important factor in all of our war activities. It became necessary for us to take men and women from industries that were not considered essential and place them in industries that were considered imperative for the conduct of the war, for the production of material necessary for our armies. With the signing of the armistice it became our task then to take these workers who had been moved from non-essential industries into essential industries and bring them back into their normal peace-time work; and that, in a general way, has come to be spoken of as reconstruction.

The term "reconstruction" as applied to post-war activities we get from Great Britain. As early as 1916 the British War Ministry believed that they had a reconstruction question confronting them, and they appointed a committee to investigate the subject matter and report a solution of the prospective problem. But in a report made by the War Cabinet last year they very frankly admitted that there were so many phases of the situation that could not be determined until after peace had been signed, that it was impossible for them to develop any working progress of reconstruction until that time. But Great Britain has entirely different conditions to deal with from the situation confronting us, and she means something different and something broader when she uses the term "reconstruction" than we have in our minds in dealing with the same problem. The British people from the beginning of the development of the modern factory system have had to depend to a very great extent upon access to raw materials for their factories. They have not had within the limits of their own country the things needed to supply the factory system of Great Britain, and they have had to go out to the colonies and to other countries to get their raw materials. This is not the case with us. Nearly all the raw material we need in our industrial system is available in our own territory, and some of those that were not available at the beginning of the war we have developed methods of producing since the war began. The matter of raw material, therefore, is not one of our problems of reconstruction. With Great Britain a very large portion of the products of her factories have had to find a market abroad. She has been interested in her foreign trade and her foreign commerce, because foreign commerce is essential to the continuance of her industries. With us only a small proportion of our total product has been sent abroad; and in the natural order of things as they exist amongst us, we can only spare a small portion of that which we produce for foreign shipment. Whatever of access to foreign markets may be necessary for the welfare of our industries, we had already taken steps to look out for before we engaged in the war.

The first thing needed in developing a foreign trade is to find where the trade is to be had, and we had organized recently, but prior to our engaging in the war, a system of commercial attachés to our embassies, legations and consulates, whose duty it was, and is, to locate the opportunities for foreign business, and report the same to the Department of Commerce through the Department of State. That system is in existence and will continue in existence for the purpose of advising our business men of the opportunities that may be available in foreign countries for the extension of their trade.

The next step necessary in developing a foreign trade is the furnishing of the necessary credits suitable to the country in which the business is to be done. Those who are familiar with the development of the German commerce in South American countries know that she developed her immense overseas trade there principally by virtue of the fact that she furnished for the South American countries the best system of credits suitable to their circumstances that they were able to find in any of the commercial countries of the world, and because of those credits Germany built up a wonderful trade in South America. In the passage of the Federal Reserve Act, a clause was included that gave for the first time in our history the banking institutions of our country the privilege, under certain restrictions and regulations, of establishing branch banks in foreign countries, by means of which we can furnish the necessary credit for the building of our foreign trade.

The next thing necessary in taking care of foreign commerce is that of shipping. Our shipping has dwindled. It has gone almost out of existence. I can remember that even up in the hills of Pennsylvania, the campaign orators during our political contests spoke of the shrinkage of our merchant marine; the fact that our flag no longer floated in foreign ports; that all of our business was carried in foreign bottoms. I was so impressed with it as a landsman that when I came down to Congress, one of the questions that I turned my attention to was that of building up an American merchant marine with an American personnel. One of the bills that I succeeded in getting Congress to pass, and which, by the way, found a pocket veto on the part of President Taft after I had secured the passage of it, was what became known afterwards as the La Follette bill, and there has been a considerable amount of misrepresentation as to just what the La Follette bill, or as it was known in the previous Congress, the Wilson bill, proposed to do, or what it would do, and some misunderstanding as to what it has done. My investigation of the merchant marine situation disclosed to my satisfaction that there were two very distinct reasons why our merchant marine had been driven from the seas; and the first of those reasons was that our shipowners had to buy their vessels in an American market, a protected market, prices enhanced by virtue of that protection, and yet had to utilize their vessels in free competition with the vessels built in all of the countries of the world. In other words, it cost the American shipowner more for his vessel of the same carrying capacity than it cost his foreign competitor. It required the investment of a greater amount of capital to get the same business transacting plant. That was partly remedied by some of the legislation recently passed, giving to the American shipowner the privilege of American registry for certain kinds of foreign-built ships.

And the second reason was that it cost the American shipowner more for his operating expenses than it cost his foreign competitor. It

did not cost him anything more for his supplies, for his ordinary repairs, for his insurance, or any of the costs of that character. It cost him more for his operating expenses, because he had to pay more for his labor. He had to pay a higher rate for his seamen. As an illustration, in 1913-14, before the European war came on, before the Seaman's Act was passed, American seamen shipping from Liverpool to New York were paid $30 per month. British seamen shipping from Liverpool to New York were paid $25 per month. British vessels trading with the Orient, with the British colonies in the Orient, were able to secure foreign crews, British crews, lascars, at $8 per month, coming to Amercan ports, while the American shipowner had to pay $30 per month to secure a crew to engage in exactly the same trade. That meant that the American shipowner was at a decided disadvantage in his operating expenses; and it was not to be expected that American capital would seek investment in American vessels where it was placed at such a disadvantage in competition with the shippers of the world, when it could find more profitable investment in industries on land, so American capital drifted out of the shipping industry. The reason why the American shipowner was compelled to pay more for his seamen than his competitor was that the seamen under the maritime laws of the world, under the treaty obligations that we as a nation had entered into with some twenty-three commercial countries of the globe, were compelled to fulfil their civil contracts as to labor.

When a seaman signed a ship's articles in Liverpool and came to New York, and his vessel was in a safe harbor, there was no longer the community of risk that requires that the master shall be absolute in control. If he undertook to leave his vessel and seek employment on some other vessel, we were under treaty obligation to take that seaman wherever we could find him, take him back and put him upon the vessel that he had deserted from and compel him to fulfill his civil contract, something that we had never attempted to do in this country with the men who are engaged in industrial pursuits; and when a vessel came from Calcutta to New York with a crew of lascars at $8 per month, if they undertook to leave their vessels in New York and seek employment on other vessels, we used our police powers under our treaty obligations to run down those seamen, take them back on board the vessels they had shipped on, and compel them to return at the same rates and under the same conditions as they had signed for when they left Calcutta.

Advantage to Foreign Shipowners.

By our own treaty obligations, by our own police laws under those treaty obligations, we maintained for the shipping interests of the world outside of the United States, a labor advantage that was disastrous for our own shipping interests. What the Seaman's Act did do, and the principal thing that it did, was to give freedom to the seamen. It was based upon this principle: That the Constitution of the United States declares against slavery; that every man in the United States, irrespective of race or color, or previous condition of servitude, is a free man, and the principal of the Seaman's Law is that whenever any vessel comes into American waters under the jurisdiction of the American Government, and this vessel is safe from harm, then every seaman upon it becomes a free man. It provides that those seamen shall have the right to leave their vessels when in a safe port, when they are in any port of the United States, and the effect has been what the originators and advocates of the bill believed it would be. It came much more rapidly than they had expected it would come; but the effect has come, nevertheless, and to-day the wage rates of the British vessels and the Norwegian vessels and the other vessels of the world, with the exception of France and of Japan, are the same wage rates that the American shipohner is paying, and that is all that the American shipowner ought to ask.

I have every confidence in the skill, in the energy, in the business ability of the American skipper; and I believe that if you place him upon an equality with the skippers of the other nations of the world, with his ingenuity and skill and business ability, that he will get a uproper share of the business for American bottoms, and that alone would help to build up our merchant marine. But some things have interrupted and have changed the conditions since then. Our engaging in the war, the destructive submarine warfare carried on by Germany, the necessity of furnishing ships and ships and still more ships, as Lloyd George said, turned our attention to shipbuilding operations, and as a result we now have the second largest merchant fleet in the world, already floated; and we have more vessels in the stocks under construction, soon to be launched upon the waters of the world, than any of the other countries of the globe.

That will furnish us, then, the third necessity of overseas trade, and with these things in our hands, already prepared for us, when our business men have reached the point where it is necessary to develop overseas trade on an extensive scale, they will find the means of vitalizing the laws we already have in existence.

Before the war we were receiving into our body politic in the neighborhood of a million and a quarter aliens annually. Of that number 400,000 were returning, leaving us a net increase of 800,000 immigrants, nearly 600,000 of which were of working age. For four years we have not had that increase in our working population. With the beginning of the European war immigration fell off almost entirely. We were getting some, principally over the Mexican and Canadian borders, but the number coming in was about equal to the number going out, and so we have had a shortage of some 2,400,000 in what would have been the increase in our working population. We have taken a shipbuilding industry that had but a few tens of thousands in it, and we have built it up to the point where there is approximately half a million workers. That half million workers have been drawn from all walks of life. They have been gathered together in our shipbuilding centers and trained to new lines of activity. They are taken out of other industries for a prolonged period of time.

Demobilization and Unemployment.

Our armies will take time to demobilize. We possibly have a million and a half of soldiers now on the rolls of our military forces. In a year from now we are likely to have anywhere from half a million to a million. They have come from the industrial and commercial activities. So we have that shortage in our labor power, over what we would have had if there had been no war; and when we get back into our natural industrial swing, we will find ourselves short of that amount of man power; and hence my statement that the business man who fails to take care of his industrial organization during this period of readjustment will find himself at a decided disadvantage when he has to build up his organization after we get into our natural and proper swing.

There is a period, however, in which we are likely to have some unemployment. We are having some of it now. I am not one of those who fear that we are going to have a social or political revolution in the United States; I do not believe the conditions are such that any social or political revolution in the United States can be made successful. Whatever imperfections there may be in our institutions, the fact stands out to all the world that we have the most perfect democracy that has ever yet been created and that as a result of our more perfect democracy and the long period of its establishment, the great masses of our people have a very much higher standard of living than they have had elsewhere, and it is not to be thought that our workers would take the chances of bringing themselves to the conditions of the Russian workmen by the process of undertaking to overthrow our political and industrial institutions. And yet there has been some attempt to bring revolution to our own shores. I have a great deal of sympathy with some of the isms that are propounded. I can realize the motives of many of the men who are propounding those isms. I have no objection to their going before the people of the United States and endeavoring to convince them that their respective isms are sound and ought to be put into effect, but I have no use for the man, no matter what his ism may be, who proposes to put it into effect in a democracy by the use of force.

The use of force to overthrow an autocratic form of government may be the highest kind of patriotism, but the use of force to overthrow a democratic form of government is treason to the masses of the people. For two years the Department of Labor has been endeavoring to counteract some of these philosophies, particularly those that undertook the use of force or advocate the use of force for the accomplishment of their purpose. We have had a small group of workingmen going from one place to another and pointing out in the language of workingmen themselves the fallacies and the poisons existing in these philosophies, and among those have been the philosophies that have been taught by the Industrial Workers of the World, the Russian workmen's union, and more recently that which we have come to speak of as the Bolsheviki, and, as it has found expression in the United States, the philosophy of the Bolsheviki is identical with the philosophy of the Industrial Workers of the World. Under certain circumstances it is very alluring to the average workingman. They lay down certain basic principles that are sound, and then upon these basic principles build a structure that is absolutely false. They lay down as the basis of their philosophy, for instance, the theory that every man is entitled to the full social value of what his labor produces. To my mind that is a true ism. It is a Socialistic doctrine, partly Marxian in its origin. Every man is fully entitled to the full social value of what his labor produces. Not only the Socialist, but the individualist can subscribe to a doctrine of that kind. The difficulty, however, is that human intelligence has not as yet devised any method by which you can determine what the social value is of any one's labor, and until you are able to compute the value to society of the labor of the component parts of the society, it will be futile to lay down as the basis of any philosophy that every man is entitled to the full social value of what his labor produces.

The Results of Sabotage.

Then they follow with another ism—that is, that all property is valuable only in so far as profits can be secured from the property. And that also is sound economically. No one wants to retain property that is not valuable in some sense, if it does not bring returns either in finance, in pleasure or in some other way. If you destroy the value of the property so that it is impossible for it ever to earn profits, then the owner of it would not have any desire to retain the property. And that seems sound. And then they say the way to destroy the value of the property is to strike upon the job, to soldier, as we say here in the East. To do a stint, as they say over in England. To put sand upon the bearings, to destroy the machine in any way that it can be done with security to the person who destroys it. To mutilate the property, to do anything that will reduce the amount of production and increase its cost; and when you have reduced the production and increased the cost, then the profits will be eliminated, the owner will no longer wish to retain it, the workers can take it over, operate it themselves collectively and procure the full social value of what their labor produces.

Those who advocate and are advocating that theory and practice fail to realize the kind of minds the American workmen possess. The great bulk of them have more or less a smattering of industrial history, and they know that before the rebirth of the inventive genius of man, before the coming of our modern factory system, when everything that was produced was produced by hand, very much less was produced per individual than would be produced by any system of sabotage that they could possibly hope to carry into effect; and yet in those days there were still profits for the employers, there was still value to the property, and the only thing that did result was a very much lower standard of living for the wage-workers. And if these people succeeded in putting their philosophy into effect instead of destroying the profits of the employer and the value of the property, they would reduce the standard of living of the American workingman.

The employer and the employe have a mutual interest in securing the largest possible production with a given amount of labor, having due regard for the health, the safety and the opportunities for rest, recreation and improvement of the workers. These things being safeguarded, then the more that can be produced the better it is for all parties concerned. If these is nothing produced, there will be nothing to divide. If there is a large amount produced, there will be a large amount to divide. Their interests only diverge when it comes to a division of that wealth which has been mutually produced; and the wisest thing for them to do under these circumstances is to sit down around the council table and endeavor to work out the division of the product on a basis as nearly just as the circumstances surrounding the industry will permit.

Natural and Unnatural Discontent.

There have been many elements at work in endeavoring to spread these fallacies. There have been agencies beyond doubt that have come from over the seas. There have been the natural discontent that is bound to exist in any country with as great a population as ours has, but one of the greatest elements and one of the greatest factors in creating unrest has been the arbitrary disposition on the part of many employers in the country in dealing with the wage-workers of the country. Many of them have assumed that the wage-worker was simply a part of the machinery of their plant. They deal with them in exactly the same terms, although they are entirely different. If the machine is broken, it requires money on the part of the employer to replace it. There is a definite means by which the working strength and the breaking strain of a machine may be determined, and it may be so regulated as to keep it nicely within the working strain; but no man has as yet been able to determine any method by which you can calculate the breaking strain of a human being. The human being himself is unable to calculate his own breaking strain; and yet those people undertake to class that living, moving, sensitized human being in the same category with the inanimate machine.

The wage-worker has hopes, the wage-worker has aspirations; yet these people are doing all that they possibly can to destroy the faith of the workers in our institutions as a means by which they may progressively go forward to higher and to better things. Yet we can carry the message to the wage-workers, as we have been carrying it for years, that they have a mutual interest with the employer in securing the largest possible production with a given amount of labor, and that the point of contest and conflict between them is not at the point of production, but at the point of distribution; and if any conflict is to come at all, the conflict should come at the point of distribution. But when you have hundreds of thousands of workers idle for a prolonged period of time, men willing to work, anxious to work, eager to have an opportunity of taking care of themselves and their families, and yet, because of the disturbed conditions in society, unable to find employment, it doesn't appeal to them.

It doesn't appeal to the unemployed that there is a mutual interest between employer and employe in securing a large production when they have not even the opportunity of engaging in the production. For that reason, if for no other, all of our governmental divisions are interested in seeing that all possible public work shall be furnished to take up the surplus of the unemployed. I would not have them engage in public works purely for the sake of giving employment. There is plenty of public work

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

U. S. Supreme Court Assumes Its Powers.

Nowhere in the Constitution is the United States Supreme Court given the right to review acts of Congress, says Jackson H. Ralston in an 80-page pamphlet on "Study and Report for the American Federation of Labor Upon Judicial Control Over Legislatures as to Constitutional Questions." By authority of the 1918 A. F. of L. convention, the executive council requested Mr. Ralston to prepare the report.

The author is a well-known attorney, and has been associated with other A. F. of L. counsel in several notable legal cases. The study and report is an historic-sociologic-politic review of the United States Supreme Court and various State Supreme Courts. Authority is quoted to sustain the claim that no part of the judiciary act adopted by the Federal Constitutional Convention gave the Supreme Court jurisdiction over acts of Congress, and that at best this power is only inferred.

In many instances decisions that profoundly affect the life of the people are based, not on the Constitution, but on the personal views of the judges. Citations to this effect are printed and include the statement by Justice Field, who, in setting aside the income tax law, over twenty years ago, said: "The present assault upon capital is but the beginning."

From a political standpoint the author shows that the courts act as a check on the expressed will of the people, postpone remedial legislation and subordinate the law-making branch of Government.

The recall of judges, the author holds, is no solution as far as principle is concerned, and he favors a constitutional amendment which would prohibit acts of Congress being set aside, but would permit courts to pass upon acts of executive and inferior powers that exceed the authority given them by law-makers.

War Risk Checks Issued.

Through the Bureau of War Risk Insurance checks to the number of 959,906, calling for a total of $33,933,962.65, were issued to dependent relatives of soldiers, sailors and marines during the month of May.

By far the greater part of this amount was for allotments made from the men's pay, this total being more than $25,000,000. Insurance payments for the month were $6,781,894.05, and compensation payments to disabled veterans reached $1,774,121.20. Insurance is now being paid to the beneficiaries of 25,610 men who died in service.

How Exports Grow.

Exports of finished products in the last half year following the close of the war are three times as much in value as in the corresponding period preceding the war.

In the six months since the war for which figures are now available, finished manufactures have been going out of the country at the rate of $6,300,000 a day, while in the year before the war they went out at the rate of about $2,000,000 a day. The growth in the export of finished manufactures has occurred in the movement to South America, Asia, Oceania and Africa. In fact, manufactures form over 80 per cent of the exports to South America and Asia, 90 per cent of those to Oceania, 68 per cent of those to Africa, and 66 per cent of those to North America.

Advertises Labor Law.

The California State Industrial Commission is issuing a series of printed arguments to California employers who are urged to invest in State compensation. The pamphlets are written in a "catchy" style. Appeal No. 1, signed "Silent Appeal," is as follows:

"Mr. Employer—Your compensation insurance with a corporate company has been costing you 50 per cent. more than it should, and your business overhead has been unnecessarily loaded to that extent. Furthermore, your protection has not been as complete as it should have been.

"You are paying for 'salesmanship' of insurance agents and brokers which means nothing except wasted time and fallacious arguments against State insurance. Most of such arguments contain statements maliciously untrue. The insurance agent is everywhere and seldom are we given an opportunity to disprove his statements. I undertake to do it—absolutely.

"I am not a special agent with a good salary and a fat expense account. I am an economizer."

$25,000 Damages Awarded.

Joseph A. Bell, while riding on a car of the Milwaukee Electric Railway Company, in Milwaukee, was blinded by a live wire coming in contact with the car, causing an explosion. The case was tried in a Milwaukee court and the jury awarded Bell $25,000. The company appealed to the State Supreme Court, and in sustaining the lower court Justice Vinje said:

"It may be true that the present value of an annuity for the plaintiff based upon an earning power of $780 a year is only $11,927.76; but that measures only a portion of his damages—the destruction of his earning power, assumed to be stationary. It takes no account of his medical expenses, pain and suffering and his diminished capacity for enjoying life, as well as the added care and attention that must be given him by members of his family or others. The amount assessed for the injuries sustained cannot be held excessive."

Less Than Living Wage.

A survey by the Louisiana State Council of National Defense shows that 12 per cent. of the women in the State are not paid sufficient for existence. Wages, hours, living conditions, fatigue and accidents are estimated. Wages are the substance of the situation. The figures obtained on working women of New Orleans cover 11,383. The factory inspector estimates 13,536 are employed in industry. During the past five years wage increases have

World's Workers

The French Official Journal announces that the law prescribing an eight-hour day or forty-eight hour week in industrial and commercial establishments in France applies also to Algeria and the French colonies.

The executive committee of the General (British) Union of Operative Carpenters and Joiners have passed a resolution in which they strongly recommend their members "not to work on ships being fitted for conveying troops and munitions to Russia, and, further, are seeking the assistance of other unions connected with shipbuilding with a view to direct action."

A British Government committee that has been investigating the relation of women's to men's wages indorses the principle of equal pay for equal work. It is urged that the Government apply this principle in the civil service and that the separate grades and examinations for women clerks in this service should be abolished. The Government is asked to consider mothers' pensions for widows and for deserted wives with children of men physically or mentally disabled.

The German Socialist leader, Hugo Haase, delivered a speech at the Domenius Hall, Berlin, declaring that the entente terms of peace are justified. "If we consider vitally the peace terms without prejudice, all those who took part in the war know that Belgium and northern France have been terribly devastated and systematically plundered. Surely the ravages caused cannot all be justified by military necessities. Therefore we must repair. Justice does not demand that we be punished, but we must replace what we destroyed. You are all aware of the incalculable number of animals of all sorts we have extracted from the occupied countries, not only for the use of our army, but also to send to Germany for sale. Who is responsible for the facts? Have we not said over and over again to von Bethmann-Hollweg, von Hertling and Scheidemann, do you not see that your imperialistic war policy and your system of war in the end leads to poverty and destruction?"

A new labor magazine, the Rodo Sekai or Labor World, has lately appeared in Japan as the organ of the Yuaikai (Labor's Friendly Society). A leading editorial in the first issue gives the following statement of the attitude of the new periodical: "Capitalists should know that there is no capital without labor. Workers should try to elevate their character and to increase their efficiency, aim at the realization of the eight hour principle, organize trade unions on sound lines, demand a revision of the Factory Law so as to better their condition, urge the abolition of that part of the police regulation which imposes handicaps upon workers, and struggle to secure universal suffrage. The Government should on its part carry out a thorough revision of the tax regulations so as to place more of the burden on the rich, less of it on the poor. The peerage system, which constitutes a source of class prejudice, should be done away with." During the last few months the Yuaikai has largely increased its membership in industrial centers, particularly in Kobe and Osaka.

INFORMATION.

I have been informed that a number of attorneys have requested members of the crew of the S. S. "Abangarez" to file claims for salvage services rendered to the bark "Ninfra." For the information of such seamen, it might be said that a settlement has been effected in the sum of $50,000 through an arrangement made by me as representative of a few of the crew, with the attorneys for the owners of the "Abangarez." It is agreed that the crew shall receive one-fourth of the award; about $12,500. All the crew need to do to get their money is to apply to the owners. Members of the union applying here can get their funds without any charge whatsoever for services rendered by this office. S. B. AXTELL, 1 Broadway, New York, N. Y. 6-18-19

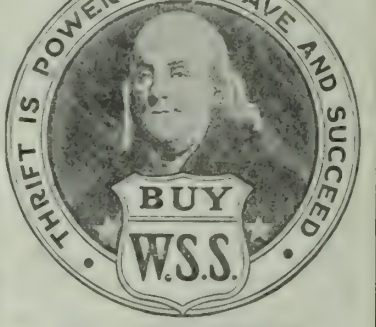
THRIFT IS POWER • • • SAVE AND SUCCEED


BUY W.S.S.

DO YOU KNOW

That War-Savings Stamps pay 4 per cent. compound interest?

That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?

That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?

That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?

That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?

That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?

That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

Pacific Coast Marine.

Lumber rates from Northwest ports to California have advanced another 50 cents a thousand feet, according to schedules promulgated during the week. The charges now are $7.50 to San Francisco and $8.50 to Los Angeles from Puget Sound, and 50 cents less from Willapa and the Columbia river.

The 9500-ton steel steamer "Coaxet" has been designated officially as the second vessel to go out from Portland in the fleet of the Portland Oriental steamship service of the Pacific Steamship Company. She will be turned over June 28 and will begin loading at once, according to officials of the company.

C. A. Yoakum, Pacific Coast head of the sales division of the Emergency Fleet Corporation, is in Seattle to attend a conference of Fleet Corporation officials. Questions concerning the sales of materials in shipyards are to be discussed at the conference. Millions of dollars' worth of such materials are now lying in the yards.

The torpedo boat "Fox," built in Portland in 1899 and which participated in the Boxer war, is in drydock at Seattle and being remodeled into a deep sea trawler for the Seaboard Fishing & Navigation Company, having been purchased from the Government at Bremerton two years ago. The "Fox" will make her first trip as a halibut fishing boat in thirty days.

That ten Emergency fleet steamers under charter to Christensen, Hanify & Weatherwax, will come to Grays Harbor to load lumber for the United Kingdom, was the nanouncement made by C. M. Weatherwax of that firm. Christensen, Hanify and Weatherwax have charters for twenty-five ships to load for England. The cargoes will consist entirely of ties and dimension lumber.

One hundred and twenty-seven thousand dollars are to be expended on the Bandon bar and the nearby channel, according to figures submitted to the Port of Bandon recently by the Government. Of this sum the port provides one-half and the Government the remainder. The improvements which are to be made are planned for a three-year period. And the major portion of the work is the removal of rock from the vicinity of the jetty.

The ocean-going launch "Anita D.," recently sold to an Imperial Valley syndicate for $5000, is being outfitted at San Diego for service between Colorado river points and Guaymas. The owners of the launch plan to handle all freight brought to Colorado river points for shipment to Guaymas, and thence to California points. The Colorado river is now navigable from the headwaters of the Gulf of California to the Black Buttes, a distance of nearly 100 miles.

Suit for $25,000 damages against the Donovan Steamship Company has been filed in the United States District Court at San Francisco by Mrs. Emma Kivi, who seeks compensation for the death of her husband, Otto Kivi, a tailor. Kivi was a passenger last June on the steamer "Carlos," owned by the Donovan Company. While the vessel was at sea, between Aberdeen, Wash., and this port, Mrs. Kivi says her husband became insane, and while in that condition jumped overboard and was drowned. She charges negligence on the part of the ship's officers, saying that they should have placed her husband under guard.

The ghost of the bark "Harvard" keeps coming to life at Honolulu despite all efforts to decently lay it away. The old ship was sold some time ago for port charges and captain's salary, after nearly a year in Honolulu. It brought only the paltry sum of $2700 at the auction sale and the Federal Court, by order of Judge Vaughan, refused to confirm the sale. Subsequently to the auction the attorney for the Inter-island Steam Navigation Company offered $5000 for her, and the bark has been ordered resold on June 24. It is anticipated the vessel will bring more than $5000 this time, as other bidders plan to compete with the Inter-Island.

Mayor A. C. Oullahan, of Stockton, accompanied by John P. Irish, Jr., secretary of the Stockton Chamber of Commerce; John M. Perry, C. L. Neumiller and Captain Benjamin Walters, have left for Washington to ask the Rivers and Harbors Committee of Congress to cooperate with the people of Stockton in improving the San Joaquin river and Stockton harbor. Stockton is arranging to vote a bond issue of $1,000,000 next fall for harbor improvements and Mayor Oullahan, just before his departure, said the committee would go to pledge the voting of bonds sufficient to meet the city's share of the improvements if Congress would do its just part of the work, chiefly down river dredging and widening steamer channel.

Joseph J. Tynan, general manager of the Bethlehem Shipbuilding Corporation, announced that the new concrete drydock at Hunter's Point is big enough to handle any of the six cruisers it is proposed to dispatch to Pacific waters upon completion. The length of the dock clear of caisson is 1000 feet and the breath on coping 153 feet. The depth on sides is 48½ feet and bottom breadth is 110 feet. The first boats to enter the dock were torpedo boat destroyers and three of these with a length of 310 feet each were docked simultaneously. Secretary of the Navy Daniels has been informed of the facts with the additional information that the dock will handle any vessel that has ever entered the harbor or that is ever likely to.

Letters received from Captain Durkee of the bark "Annie M. Reid," at Sydney, N. S. W., from San Francisco, say: "In the narrow escape from destruction which the bark experienced when south of the Tonga Island on March 29 and 30, when a terrific hurricane struck the vessel, during the height of the blow, the 'Reid' was blown down on her starboard side until she was practically on her beam ends, and her yards rested in the water. The cargo shifted somewhat and she was held down for several hours until her crew, after much hard work, succeeded in getting a large proportion of her cargo back and the bark righted herself. During these hours she strained considerably, starboard bulwarks were slightly started, one of her boats carried away and minor damage was done." The "Annie M. Reid" sailed from Sydney, N. S. W., May 30, for Newcastle and Honolulu.

A contract for the reinstatement of five 9500-ton steel steamers, to be built by the G. M. Standifer Construction Corporation at Vancouver (Wash.), has been drawn up by the United States Shipping Board and is to be signed shortly, according to a telegram received at the shipyards from G. M. Standifer at Washington. Officials at the shipyard said that, as far as they knew, this yard would be the first on this coast to receive reinstatements of contracts. The work will mean an outlay of approximately $10,000,000 for the five 9500-ton ships, and they will not be completed until well into the spring of 1920. By that time, it is hoped, the shipbuilding situation will have adjusted itself so that foreign contracts may be obtained. A representative of the French Government recently conferred with officials of the Standifer plant with reference to possible contracts, it was said.

Messrs. A. Gulowsen, A. S., of Christiania, who construct Grei crude oil and paraffin motors, and who some time ago set up a factory in Seattle, have put on the market a new type of 360 b.h.p. and 540 b.h.p. installation. The 360 b.h.p. model is a four-cylinder set, whilst the 540 b.h.p. outfit has six cylinders. In the construction of these high.powered motors the manufacturers have abandoned crank case compression in favor of the open crank-pit design with scavenging pumps, and have also done away entirely with the principle of water injection. The engines are directly reversible by means of compressed air, while the air injection system is also used, the fuel being pulverized by compressed air on entering the cylinder head. Lubrication is on, the force feed system with adjustable sight-lubricators. The circulating pump, which is of the plunger type, is direct driven from the crank shaft, while a direct-driven bilge pump, which can also be employed as a wash deck service pump, is also fitted. The fuel consumption of this new type is said to be no more than 250 grammes per b.h.p. per hour. These engines in general design are a close approach to the ordinary steam reciprocating set.

Captain Andrew W. Nelson brought the Pacific Mail liner "Colombia" into San Francisco from the Orient, on June 18. He went into the ship's office to straighten his papers. There, half an hour after the "Colombia" had been berthed at pier 44, Captain Nelson dropped dead of heart failure. He died beside the sea he had served for forty-three years. Captain Nelson was the commodore of the Pacific Mail fleet. Years ago he wrote a book, "Yankee Swanson," that recounted the adventures of himself, a lad before the mast at the age of 12 years. Thereafter he was known by the name he gave to his first book. Captain Nelson was born in Sweden fifty-five years ago. His parents were poor, and at the age of 12 years the boy shipped on a topmast fishing schooner of the North Sea. Forty years ago Captain Nelson came to the Pacific Coast. Nine years later he was in the service of the old Pacific Mail. He commanded one of the Panama steamships for twenty-five years, and remained in the Pacific Mail service after its reorganization by John H. Rosseter. For a few years Captain Nelson commanded the steamship "Beaver" on the San Francisco-Portland run. Then he returned to his old organization and went to the bridge of a transpacilc Pacific Mail liner. His first command was the "Korea." Captain Nelson was known to thousands of persons throughout the United States. For years many persons booked Pacific passage months in advance to travel on Nelson's vessel. Captain Nelson is survived by the widow and three children, Mrs. J. A. Bishoff of Oakland, Albert W. Nelson and Elmer M. Nelson.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, JUNE 25, 1919.

THE PLIMSOLL MARK.

A recent issue of the London Daily Herald contains some significant data on the results of raising the Plimsoll mark (load line) in 1906.

The British load line, it appears, was raised in November, 1906, which made it possible for ships to carry 5 per cent. more cargo than previously, and incidentally put from six to eight millions more profit into the pockets of the shipowners.

In 1913 Father Hopkins, of the National Sailors' and Firemen's Union of Great Britain and Ireland, drew up a summary of ships missing and foundered since the line was altered, in which he showed that between January 1, 1911, to May 1, 1912, the vessels reported as missing numbered 22, and those reported as having foundered numbered 42. In 30 of these cases the load line is recorded as having been altered; in 17 cases "no assignment" is entered.

Since the beginning of the war in 1914 still further changes in the load line seem to have been made. At any rate, the Chamber of Shipping supplied the London Daily News with a copy of a letter from the Board of Trade (Marine Department), dated February 8, 1919, in which it is stated "that the Shipping Controller has intimated to the Board that, in the present circumstances he can no longer ask for any relaxation of load-line rules on the ground of war emergencies."

This, so the Daily News properly infers, indicated (1) that the Chamber of Shipping attempted to keep the load line deepened; (2) that hostilities having ceased it would no longer be able to account all losses as due to enemy action.

Supported by the before mentioned evidence of the Chamber of Shipping, the Daily News now demands to know who is responsible for the 99 vessels lost during the war "without trace," involving the loss of many merchant seamen. Doubtless, Germany's ruthless submarine warfare accounted for many of them. But who will ever know how many of these gallant ships and brave seamen were lost as a direct result of raising the Plimsoll mark?

THE COST OF POWDER.

Not everybody; no, not even the average well-informed high school graduate can analyze a corporation's financial report.

So, here is an attempt to do that very job with the Hercules Powder Company's report.

Hercules powder earned $2,315,603 in 1918. This, it should be understood, was the sum remaining after the deduction of all charges and of taxes amounting to $3,992,000. The company subscribed for $5,350,000 in Liberty bonds. The report notes further that all of the war plants of the company have been written down on the books at a nominal value: that the excess working capital and other funds are being liquidated and that the company has set aside a "substantial amount" for the investigation and development of new lines of work. In plain language, the bookkeepers have done everything known to bookkeeping science to safeguard and protect the investments in Hercules powder.

The Hercules Powder Company was incorporated in October, 1912. The following year its net earnings were a million dollars. The net earnings for 1914 were a million and a quarter; for 1915, $4,886,102; for 1916, $16,658,873; and for 1917, $7,092,862. These figures are not illuminating. They simply tell what was left over after the bookkeepers had finished taking care of the company's property.

It will be admitted that holders of stock of the Hercules Powder Company have made "fair" returns on their investments during the past four years.

Too bad we cannot make comparisons with the net earnings of the workers employed in this hazardous industry. In nine cases out of ten the high cost of living has left the latter in exactly the same predicament as they were before the war, notwithstanding increases in wages. For high financeering and the high cost of living are twin brothers operating in perfect harmony —and with perfectly satisfactory results!

PLENTY OF CAPTAINS.

The recruiting service of the Shipping Board has framed some very enticing arguments to induce young Americans to join the Board's training ships. Here is a sample:

Lure of the Seven Seas and chances for advancement are both inducements to young Americans to join the Merchant Marine at this time. Boys now in this service are encouraged to keep their eyes open for promotion. There is nothing to prevent a country or city boy who enters this service now as a sailor becoming a ship captain in five years—and merchant captains are now earning as high as $4500 a year.

Of course, there is "nothing to prevent" a young fellow from becoming a captain in five years.

There is nothing to prevent any of us from acquiring riches, happiness or fame, whichever we prefer. Yet, somehow, the majority of mortals just struggle along without ever getting a full measure of either.

Now, just supposing all the boys who enlist with the Shipping Board for training should really become captains in five years. What then? Where are they going to get the captain's jobs?

Will the Shipping Board's recruiting service please answer?

UNCLE SAM'S SALES.

The Shipping Board has just announced the sale of an even dozen of its wood ships at a flat price of $450,000 each, representing a total sum of $5,400,000, to the Nacirema Steamship Corporation of New York City. Five of the ships are of 4000 deadweight tons (2667 gross tons), the other seven of 4500 deadweight tons (3000 gross tons). This makes a total of 31 wood ships which the Shipping Board has disposed of. Of this number 27 were sold to the Nacirema Company, three to the French-American Line and one to the Fidelty Trust Company of Boston. This latter one, the "Yahama," had been burned and it was the wreck which the Fidelity Company bought.

Almost immediately following the disposal of these twelve wood ships the Board effected the greatest sale of steel ships ever made in the history of the shipping industry. To seven firms of ship operators it has sold nineteen of its new steel vessels at prices ranging from $210 per deadweight ton up to $225 per deadweight ton. The vessels range from 5350 tons up to 9600 tons. The amount of tonnage disposed of in this sale is 128,472. The purchase price aggregates $27,821,120.

Thus the United States Government, which has taken rank as the leading shipbuilder of the world, is now the leading seller of ships. Moreover it is selling them at prices which show the keen demand for steel tonnage.

In commenting upon the sale, Chairman Hurley of the Shipping Board said:

The United States Government is the only country in the world to-day where ships can be sold for spot delivery. The purchasers of these vessels will get immediate possession and will place them in trade routes without delay. The operators who have taken them over are men of vision and experience. They recognize the incalculable advantage of being first in the field and with the opportunity of establishing connections at a time when so many are anxious to connect with reliable shipping firms.

Since the Shipping Board began selling ships a short time ago, it has disposed of 332,045 deadweight tons (221,363 gross tons). The total amount of these sales now aggregates $51,856,620.

SUBSTITUTES FOR JUSTICE.

To investigate the problems of labor and employment in Japan, a "Labor Protection Association" was recently formed within the Tokio Chamber of Commerce by a group of business men and Government officials. Within a short time the new organization had secured $250,000 with which to carry on its work. Mr. Oka, Superintendent General of Police, is president of the Association and two leading merchants of Tokio are the vice-presidents.—Press item.

This sounds very much like the formation of a Citizens' Alliance in the U. S. A. When business men get together for the purpose of protecting labor, nine times out of ten, it is a move to discredit or thwart the legitimate efforts of labor organizations. Any so-called Labor Protection Association that doles out benevolence as a substitute for justice is the poorest kind of makeshift. Moreover, all talk of labor protection by an organized group of employers is mere sham as long as the workers are unorganized and thus denied that all-essential representation without which the whole scheme of "protection" becomes odiously topheavy with misdirected goodness.

DREAMS AND THRONES.

What the late war has done to "thrones" and "crowned heads" is a fascinating bit of stern reality—indeed, prediction of the things that have actually happened would have been called an idle dream only a few years ago.

In 1914 approximately 400,000,000 people were governed under various forms of monarchy.

To-day the figure stands at about 120,000,000.

Russia went first, then followed Austria-Hungary, then Germany and all the smaller monarchies and royalties that were part of it. The "thrones" of Roumania, Bulgaria, Serbia, and the other Balkan States are very shaky, while Spain and Italy are by no means secure, and the near future will probably see the end of them.

Then will remain England. If the English workers become too audacious in their demands, there is not the slightest doubt that the British capitalists will sacrifice the throne in the hopes of retaining their own particular power.

Did not some lord in England quite recently talk openly of republicanism? Has not novelist Wells written of it? And has not King George stated that if he thought the people wanted a republic he would not stand in their light?

A contemporary calls attention to the "high cost of deportation" in Arizona. And this is literally true, since more than a million dollars in damages will be paid by several Arizona corporations, officials and individuals, to the men whom they deported from Bisbee, Arizona, in July, 1917, when striking copper miners and their sympathizers were rounded up and shipped in cattle cars out into the New Mexico desert, where they were left until the United States army rescued and cared for them. Civil suits totaling $6,150,000 were filed in the State courts against the corporations and persons concerned, and a settlement out of court is just being effected, on the basis of a payment of $1250 to married men with children, $1000 to married men, and $500 to single men. There were in all 1186 deportees, and the settlement is being delayed by the difficulty of locating some of the plaintiffs and securing their acquiescence to the terms.

Operating of the marine and seamen's division of the war risk bureau, which will be discontinued, now that the dangers from submarines and mines are over, resulted in a profit of more than $17,000,000 to the Government, i. e., the American people, without impairment of the $50,000,000 sinking fund provided by Congress. The division will return to the treasury more than $67,000,000. What a sigh of relief there will be when the insurance gentry are assured that this pernicious meddling with "their business" has definitely ceased.

Congressman Alexander has introduced a bill (H. R. 3619), amending Section 13 of the Seamen's Act. The only change which the bill makes to the section is that it includes lighthouse vessels, Coast and Geodetic Survey vessels, and the vessels of the Bureau of Fisheries on which the requisite experience at sea may be obtained to secure an able seamen's certificate. Otherwise the language is the same.

WOOD SHIPS STILL USEFUL

Craft of Glorious Tradition Will Live to Float the Stars and Stripes In New Epoch of Our Foreign Commerce

The life of a wood ship, like that of a man, is a risk. They have their Methuselahs as well as their early tragedies. Some ships are born to life upon the seas weak and misshapen. Others, through the proved eugenics of the shipyard—the mating of sound timber, the joining of stout beam and flawless plank—fare forth in vigor of strength and grace of line, fitted for long careers in the adventurous field of their predestined activities.

Man is taught that if he will keep himself in good condition he will prolong his years. The skill of the surgeon is at his command in the event of accident or a diseased part that can be cut away. The condition of a wood ship is in the keeping of the master of the ship, and as ship surgery is an exact science, its life may be prolonged indefinitely.

Some wood ships grow old after the manner of some men, shifting their occupations to match their failing strength, until, decrepit, and hopeless, they rot their lives away in utter uselessness. Others retain the vigor of youth and not only earn their own way but enrich others to the last of their days.

The "Dashing Wave," built on the Pacific Coast in 1854, and therefore 64 years old, is still in active operation on the coast, and, it is reported, is carrying perishable cargo and carrying it dry. Recently she put to her credit eleven round voyages between Tacoma, Washington, and San Francisco, within a period of twelve calendar months.

Wood ships of to-day can be and are as stoutly built as those of other days, and those built in answer to the demand of the hour, served a useful purpose in the war and will now pass on to the pursuits of peace. There is a record of performance behind them and they are in active service today. Those that are being sold by the United States Shipping Board are being sold from active service with the exception of wooden hulls in which no machinery has been installed. The fleet of wooden ships will aid in giving the proper balance to the new American merchant marine which is expected to travel all sea lanes in the development of the foreign commerce of the nation.

Yards that have been released from government service, especially those on the Pacific Coast, have announced that they will continue the construction of wood ships for private and foreign account, and the declaration that "wood ships are permanent necessities" has the support of veteran masters, ship operators and ship builders.

E. W. Wright, manager of the McEachern Ship Company of Oregon, and identified for the greater part of his life with shipping affairs on the Willamette and Columbia rivers, gives the following interesting facts about wood ships:

"Nearly forty years ago," he writes, "the wooden steamship 'Great Republic', 378 feet long, 44 feet beam, and with a carrying capacity of more than 5,000 tons, was in operation between the Orient and San Francisco. Not only was she a big carrier, but her wooden hull had strength sufficient to support machinery that gave her a speed of nearly twenty miles an hour in the river.

"Before and after the appearance of the 'Republic' and for years after the metal ships became numerous, the wooden steamer continued to play a prominent part on most of the ocean highways, and is still doing so.

"The durability of the wooden ship is another feature that has been time-tested. Owned on the Pacific Coast and engaged in the coastwise and off-shore trade out of Pacific ports are 350 steam and sail wooden vessels that have seen from twenty to sixty-eight years' service. Of this list sixty-eight have passed their twentieth birthday; fifty-three are from twenty to twenty-five years old; seventy-eight are from twenty-five to thirty years old; forty-six from thirty to thiry-five years old; forty-two from thirty-five to forty years old; forty-four from forty to forty-five years old; ten from forty-five to fifty years old; five from fifty to fifty-five years old, and still in service are three wooden sailers which were built sixty-one, sixty-five and sixty-eight years ago. In this list is the steamship 'Arcata', built in San Francisco forty-two years ago, and in her long career having tested her strength on every bar between Panama and Alaska.

"With anything like proper care and upkeep, most of these vessels are good for many years.

"It is a noteworthy fact that salt water, the very element that rusts and ruins the metal ship, is the best known preservative for a wooden ship.

"The truth of that old adage that history repeats itself never had a better prospect for verification than in the shipping outlook that will confront us at the close of the war.

"When the Civil War ended, a big fleet of

DIED.

Carl Koppel, No. 1369, a native of Russia, age 40. Died at San Francisco, Cal., June 22, 1919.

George H. Burnham, a chief deputy of the U. S. Marshal's office at San Francisco, is at Eureka to sell the contraband cargo of bottled whisky that was salvaged with the hull of the wrecked gasoline launch "Erie." The "Erie" was capsized on the bay while coming into Humboldt Bay from San Francisco on the way to an Oregon port. Two of her crew of three were drowned. The other, who was saved by the coast guard, informed them that the vessel was loaded with a cargo of whisky to be smuggled into Oregon, and that the drowned men were the owners of the vessel and cargo. When the vessel was picked up outside and brought into port forty-three cases of whisky were found in the hull and under orders from the Federal authorities the liquor and hull have remained under Government control at the coast guard station. No claimant for either launch or liquor has yet appeared and unless one does appear before June 28, Deputy Burnham will sell the launch at public auction and the liquor to the highest bidder.

OUR CONVENTION LETTER

(By Laurence Todd.)

"Ten million voices raised to reconstruct industry upon this or any other plan upon which they agree, means absolute control, and it rests in your hands. Gentlemen, the eyes not only of the entire nation today, but the eyes of your children and your children's children are resting upon you."

In these words Glenn E. Plumb closed his appeal to the biggest, most self-reliant convention ever held by the American Federation of Labor, when he explained the railway workers' plan for Government ownership and democratic control of the railroads. The delegates rose as one man, amid a storm of cheering, and pledged their endorsement of what the 2,000,000 workers in the railroad industry have undertaken.

This incident was a symbol of the 39th annual congress of the American labor movement. A definite, concrete, plain-spoken proposition for safeguarding a vast army of workers in a basic industry had been brought forward by the chosen counsel and spokesman of those workers. It led toward better conditions, better hours, better wages, better opportunity for every man. The delegates asked no more questions. Committees might later discuss the dotting of an i or the crossing of a t, but the convention was ready to say, "Go to it; we are back of you all the way to the end of your fight."

There were other big moments in this first week of session, which ended by adjournment over Saturday and Sunday in order that officers and delegates might go to Washington to join in the protest against war-time prohibition, staged in front of the capitol building. One of these climaxes came when Thomas F. Flaherty of the Postal Workers announced the resolution calling for the dismissal of Burleson from the cabinet. Another came when Secretary of Labor Wilson, pleading for moderation in methods, declared that he was still working to secure a new and fair trial for Tom Mooney. And still another came when Miss Margaret Bondfield, one of the fraternal delegates from the British Trade Union Congress, called upon the delegates to remember that the 3,500,000 wage workers in the American movement and the 4,500,000 wage workers in the British Trades Union Congress are making a common struggle for emancipation, and that they move forward together, each in a way that suits each best. There were cheers for the plucky and eloquent little woman—brilliant beyond most men on the platform in our day—who came as the first of her sex to speak for British labor on this side of the ocean. Even when the majority of the delegates disagreed with the British plan she described—the militant alliance of the industrial, co-operative and the political movements of the British workers in one program—she drew applause for the forcefulness and clearness with which she revealed how the struggle in Britain is going the workers' way.

But conventions can be spectacular only at moments. This one has been devoted thus far to business rather than to eloquence. Labor is out of military uniform and is getting back into overalls. There was interested attention and grateful applause for the reports of the various labor commissions to Europe, as made by Messrs. Duncan, Bowen, Golden and Frey, but if one thing stood out in the minds of the delegates from all the details given in those reports it was not the conferences in London or Paris or Rome, but the revelation by John Golden of the United Textile Workers that the Italian co-operative movement, during the war, was the economic mainstay of Italy. And in all the great news that Miss Bondfield brought, none was more quickly caught and applauded than her statement that the British co-operatives have taught the workers over there, by actual achievement, how to run big industries. There are over 116,000 persons on the payroll of the British co-operative concerns, and their business last year was over $350,000,000. Practical business is the first consideration, at the Atlantic City convention.

The Federation is growing. The report of the Executive Council shows that while the average membership upon whom dues are paid to the Federation is only 3,384,900, yet the number of new members secured by 66 of the international unions since May 1 of last year was 826,449. There were 1515 strikes in the past twelve months, involving a quarter of a million persons, and costing directly a total of nearly $1,500,000. Great strides toward standardization of demands in allied occupations were made, and the wages of virtually every member of organized labor were forced upward in the attempt to keep pace with the rise in the cost of living. That attempt, it is frankly admitted, has not been generally successful; the work of closer organization and preparation for renewed battle for what President Gompers described as "the right of the worker and his family to live a full life," is here going forward.

"The war," said Mr. Gompers on the opening day, "has brought into play and developed the thought that the relations between nation and nation must be better than they have ever been in the history of the world. And the relations between man and man, whether he occupy a position of supposed wealth and power or be he a skilled mechanic or a ditch digger—the workers of the world are determined that this new concept of the relations between man and man, and this new concept of the right of the workers to have a voice in the determination of the conditions of their lives, shall be recognized."

So the delegates introduced 211 resolutions, the largest number of which dealt with problems of organization, of resistance to the hostile schemes of employers and politicians, and of a policy looking toward greater power for the labor movement in its determination to make the industries pay to the worker a decent living in return for his service to the community.

Organization of the steel workers has been tackled again. Heads of all the 24 internationals interested in this problem are to meet in conference to lay plans for getting half a million men from the steel plants into the Federation. A long resolution introduced at the request of the National Committee for Organizing the Iron and Steel Workers, adopted today, dealing with the "company unions" on the Rockefeller plan that are being formed to fight the union movement, declares these organizations are "a delusion and a snare set up by the companies for the express purpose of deluding the workers into the belief that they have no need of trade unionism"; and that "we disapprove and condemn all such company unions and advise our members to have nothing to do with them; that we demand the right to bargain collectively through the only kind of organization fitted for this purpose, the trade union, and we stand loyally together until this right is conceded us."

City policemen have been granted an international charter, following the example set in Britain and developed recently in Canada. There was no debate on this action, but it was deliberate and unanimous, and the decision was greeted with applause by a crowd that knew how valuable would be the fraternal bond, in future, between organized strikers and organized peace officers.

Some twenty colored delegates, chiefly from federal unions of freight handlers and laborers in Virginia and the Ohio Valley. joined in a series of resolutions calling for a square deal for the negro from the labor movement. They proposed that either the Federation grant them an international charter for a union of skilled and unskilled colored workers, or that the Federation compel the internationals that now refuse to admit the colored man on equal terms with the white man, to so admit them. They asked that colored organizers be employed in regions where they will be most effective, and that a representative of colored labor be stationed in Washington to look after their interests.

When Chairman Duffy of the Organization Committee reported that no international charter could be given them on the basis of race, and recommended that colored workers shut out of internationals be granted federal charters directly under the Federation, there ensued an hour of testimony by representatives of international unions that their respective unions do admit negroes on equal terms, and speeches by colored delegates showing the dangerous effects of the refusal of certain unions to forget the color line in economic affairs.

"We don't want social equality; we want economic liberty under the trade union," cried the secretary of the colored central labor council of Norfolk. "We ask only what you have—the chance to earn bread for our families. The Railway Clerks shut us out, force us to appeal to Secretary Morrison before we can even be heard. We can get no protection in the movement. In spite of the dirty way we have been treated we have stayed loyal, have fought and died for you in the war, and we ask you to treat us as men when we have our bread to win."

The committee report prevailed, after President Forrester of the Railway Clerks predicted that his board would let down the bars to colored members when the board meets on July 1. He said he had been working for that change for more than a year.

Alfred Leavitt, discharged sailor in uniform, and Nathan Fine, in army uniform, were given an ovation when they spoke for the Soldiers, Sailors and Marines' Protective Association, an organization of the rank and file of ex-service men who demand

that none of these men be forced to become strike-breakers. They want Congress to give the discharged men each a year's pay—$360—and they ask that freedom of speech and of the press and of assemblage be restored, militarism be ended at home as well as abroad, and that ex-service men stand with the trade union movement in securing industrial freedom.

The first debate in the convention came on the resolution offered by Healy of the Stationary Firemen, endorsing the daylight-saving law. Fifteen speeches were made, ten of them being in opposition, and the vote was 154 in favor, to 180 against the law. The opponents had a chance to say that the farmers and labor had a mutual interest, and that this law hurt them both.

The only roll-call of the week came on the liquor issue, which was raised by the resolution offered by nearly 100 delegates, disapproving of wartime prohibition and demanding that the constitutional amendment establishing permanent prohibition be so amended as to permit light beer to be brewed. Duncan of Seattle and Birch of Seattle opened the fight against this resolution, arguing that their city had proved the value to the labor movement of "sober minds for the workers." The ypleaded that the children had a right to an inheritance which was impossible where liquor was used. Former Treasurer Lennon and others took a similar stand; but under the lead of President Gompers, John Walker and Secretary Frey of the Resolutions Committee the rejection of these arguments in favor of the one that great numbers of men would be deprived of employment by the closing of the breweries, was assured. The vote resulted—26,475 in favor, 4,005 against. The only delegations voting solidly in the negative were the Maintenance of Way Employes, Railway Mail Association, Spinners, Stereotypers and Teachers. The Typographical and the United Mine Workers were divided, and of the Railway Telegraphers four out of five voted no.

Mrs. Rena Mooney was given a sympathetic hearing when she took the platform on Wednesday, after John Walker had asked the privilege for her. Walker declared his belief that Tom Mooney is innocent. Mrs. Mooney begged the delegates to help get her husband and Warren Billings out of prison. The resolution which has been introduced in Mooney's behalf calls for continuous egorts by the Executive Council to get a new trial for the convicted men. It also proposes a referendum in the international unions, as a last resort, on the question of a 24-hour strike on the day following Labor Day.

In a convention of 550 delegates there was bound to be some talk of Bolshevism. President Gompers suggested that some of the Seattle resolutions would have the effect of making the United States Bolshevist. John Frey took a similar position. The New Jersey Manufacturers' Council, angry at the warning as to anti-union stupidity shown by certain big profiteers which Chairman Manly of the War Labor Board had expressed in a speech here, denounced Manly as a Bolshevik. Jos. D. Cannon read this attack in convention, and the delegates instructed the Resolutions Committee to report in endorsement of Manly's kind of Bolshevism. Then "Curly" Grow of Los Angeles made a speech warmly rebuking the chairman of the convention or anyone else for "casting aspersions" on Seattle's labor movement. Mr. Gompers denied that he had done so. Secretary of Labor Wilson contributed a warning against the anti-democratic character of Bolshevism as he understood it. And Duncan of Seattle wound up the first week's treatment of this strange animal with a request that the delegates study the four resolutions which had been criticized.

One of these pleads for the right of the Russian workers to establish a republic "of, by and for the workers," and asks that all internationals in the Federation take a referendum vote on this question: "Are you in favor of the United States Government giving recognition to the Russian Soviet Government?"

Another protests against the deportation of men to countries where they may be imprisoned or executed for alleged political offenses.

Another declares for nationwide prohibition, as a safeguard to labor.

The fourth present a plan for securing a uniform initiative and referendum system in all international unions, so that a given propostion may be submitted to the entire membership of the A. F. of L. at one time.

Injunction judges, particularly in Illinois, were bitterly denounced by John Walker, during debate on the proposed strike in Chicago to organize the ladies' garment workers. "Betrayers of this nation," he called them. The convention will endorse the strike. Judge Baldwin broke the strike of 1917 by an injunction under which 1,150 girls were arrested and locked up in police stations, and an old man of 70 years was given a sentence of 90 days in jail for contempt.

SIBERIAN FISHING RIGHTS.

Although the Russo-Japanese fishing convention, which was signed at Petrograd on July 15, 1907, may be renewed or modified by mutual agreement up to August 27 of this year, neither the Omsk authorities nor the Japanese Government has taken steps to initiate negotiations on this subject.

Conventional waters, extending from the Bay of St. Vladimir on the south to Cape Dejneff on the north, include practically all the Siberian salmon stations, and, the most-favored-nation privilege not being recognized in this agreement, no other country shares with Japan the right of exploiting these waters along with the Russians. The annual catch of salmon is now about 150,000,000, and, in the opinion of Director Lavroff, it might be doubled.

The valuable herring fisheries of the Siberian coast are not included under the terms of the convention. The herring zone extends from St. Vladimir Bay to the Korean boundary.

The waters north of Cape Dejneff have never been properly explored, but it is believed that there are many species of white fish, including some suitable for canning, to be found there. The Kolyma river is regarded as particularly promising, and one foreign firm has secured a concession and is expected to establish a large plant there.

The Russian fishing firms in the Far East are crippled by their inability to ship and market their last season's catch, by the high price of salt, by the fall of the ruble, and by the lack of tonnage for communication by sea with their establishments. Some of the plants are well equipped with American machinery and are operated in part by American experts, according to American methods.

Canning privileges were included in the fishing concessions auctioned to Russians and Japanese in March. Sixty-five valuable stations in the estuary of the Amur river, from Nicolaevsk to the sea, are to be auctioned shortly on the same conditions. Only Japanese and Russians may bid. In all cases a fishing station includes a parcel of land on the adjacent shore where fish may be cured or canned, or disposed of in any way that is thought desirable by the owner of the leasehold. Costly plants have been erected on many of these stretches of land.

While all foreigners, except Japanese, are excluded from conventional waters, there seem to be no insuperable obstacles to the acquisition of fishing concessions in other waters, through application to the Omsk authorities. Salmon are found, however, almost exclusively in conventional waters.

Demand the union label.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

reached 60 per cent., not sufficient to cover the living expenses by nearly 20 per cent. Budgets of individuals, government statistics and two big charitable organizations make it clear that 12 per cent. of the working women are earning less than the minimum existence, $6 a week. Forty per cent. receive under $9, which is considered the minimum comfort wage.

Accidents among women are startlingly on the increase, with three times the number of accidents as five years ago, with only 66 per cent. increase in the number of workers. The workers receiving the lowest wages are more than twice as liable to accidents and injury as any other.

ONE PROBLEM SOLVED.

The problem of what to do with the surrendered German high sea fleet seems to have been solved. At any rate, according to reports vouched for by the Associated Press, all the German battleships and battle cruisers, excepting the "Baden," and numerous smaller craft interned at Scapa Flow were sunk by their German crews while others went ashore in a half sunken condition.

The wholesale sinking of the German ships which were surrendered under the terms of the armistice seems to have been carefully arranged by officers and crews. All explosives had been removed and therefore the only means of destroying the fleet was by opening the seacocks. The ships went down slowly, with the German flag, which the crews had hoisted, showing at the mastheads.

The crews, composed entirely of Germans, under the terms of the armistice which did not permit of British guards aboard, took to the boats when the vessels began to settle.

Some very diversified comment upon the sinking, follows:

Arthur Pollen, the naval expert, in an interview in the Dispatch, regarding the sinking of the German warships in Scapa Flow, admires the spirit of the Germans in sinking their ships rather than to allow them to pass into the possession of their enemies.

Commander Kenworthy, M. P., told the Dispatch it was the easiest thing in the world to sink a ship by opening the Kingston valve or removing the covers of the condensers.

Commander Bellairs, M. P., declared no watch from the guard boats could have prevented the scuttling of the ships and that therefore the sailors on the spot are not to be blamed.

"The Admiralty is responsible," Commander Bellairs declared, "for they made the armistice, but did not think of the terms."

Admiral Sir Percy Scott, interviewed by the Sunday Times, regards the sinking of the ships as something to be expected.

"It serves us right," he said, "for trusting the Huns. They showed throughout the war that they were not a civilized race, and they never ought to have been treated as such; they are barbarians."

The Weekly Dispatch says that according to an officer who visited the Germans last month, the ships when they arrived in Scapa Flow were searched for explosives, but not stringently.

"The public will insist upon the disclosure of the blunderer, or blunderers, whose egregious trustfulness was so cynically abused," says the Weekly Dispatch.

Trials have been made by the Spanish engineer, Joaquin Estevan, of straw compound as a substitute for coal. This combustible is said to have great advantages over coal for locomotives and agricultural tractors, as it develops sufficient heat in thirty minutes to give the machinery the necessary pressure. Besides, the ashes make an excellent fertilizer.

FEMALE VOTERS IN SWEDEN.

Under the Swedish costitutional system the laws governing municipal elections are subject to revision without a constitutional amendment. The extraordinary session of the Riksdag last fall was able, accordingly, to pass sweeping reform bills granting full and equal suffrage in municipal elections to men and women without the requirement of a property qualification. These municipal elections have an added importance from the fact that the town and county councils elect the members of the first chamber of the Riksdag, and, in consequence, women already have an influence on the choice of the members of that body, although the Parliamentary suffrage cannot be conferred upon women without a constitutional amendment. In discussing the participation of women in the Stockholm elections, the Dagens Nyheter remarks that an active part was taken by married women of all classes and by self-supporting women, especially domestic servants. The percentage of women who voted was smaller than that of men, although the actual number was larger owing to the fact that there are more women than men qualified to vote. According to the election returns of two typical districts of Stockholm, it appears that approximately one-half of the women voted. The increase in the electorate has resulted in changes in the voting strength of the various political parties, these changes favoring the Socialists, who now comprise 52 per cent. of the voters of Stockholm.

NAVIGATION IN THE AIR.

How the aeroplane pilot may be able to make port at night was discussed, the other day, by electrical experts at the Pan-American Congress, in Atlantic City, and the discussion makes more believable the coming civilization in which aeroplanes making port from the sky will be a commonplace. Meantime the lighting of the aviation field remains problematical. Probably as seen from the sky it will present a differently-colored illumination from that of the cities; in fact, if the field is near a city, something strikingly different will be necessary. Probably, too, each aeroplane port will have its aerial lighthouse, differentiated from the lights of other ports by its signal, so that the man in the sky will recognize them as the helmsman at sea recognizes the lights along the coast. A suggested improvement over the maritime light is the presence of a watchman listening by microphone for aeroplanes and directing them by wireless where to land to avoid aeroplanes that may already be in the park.

A SEVEN MILE TUNNEL.

Recent advices from Tokyo are to the effect that a submarine tunnel under the Shimonoseki Strait will be started this year and it is planned to complete it in 1928. The authority for the announcement is the chief of the construction bureau of the Japanese Government Railways.

It is estimated that the tunnel will cost $10,000,000. Two years will be devoted to studying the geological formation of the strait bed and drafting the general plan of work in preparation for the tunneling. Japan will send engineers to the United States and Europe to study the tunneling achievements of the West.

The length of the tunnel will be seven miles, of which one mile will be completely under sea.

WOOD SHIPS STILL USEFUL

(Continued from Page 7.)

government transports were turned loose and many of them came around the Horn to the Pacific Northwest. These old wooden steamers opened up new trade fields and aided enormously in developing those already open. They ran to Alaska, to Central America, to Mexico, Hawaii and the Orient, and had the government at that time encouraged and protected shipping as it is now doing, our ocean prestige would never have been lost.

"Five years before the war began, the late James J. Hill, master of transportation, made the remarkable statement that the business of the country was increasing so rapidly that it was imperative that the railroads immediately expend $5,000,000,000 in betterments and equipment, this in the face of an increasing traffic at Panama and Tehuantepec. The extraordinary business due to the war was not needed to demonstrate that Mr. Hill was accurate in his predictions."

Mr. Wright believes that some relief from the inevitable congestion of rail traffic must be found in the water routes between the two coasts.

"There are immense possibilities for the development of this kind of traffic between the Atlantic and the Pacific Coasts," he continues, "and no other craft is so well adapted for this trade as the economically-built and economically-operated wooden steamer of from 3,000 to 5,000 tons.

"We want to use these vessels in getting into the rich trade fields from which the Huns have ousted themselves by their own folly and wickedness."

The wood ships built for government account under war orders were practically all steamers of from 3,500 to 5,000 tons and those that can be released from government service are now being offered for sale in a market where ship tonnage was never so scarce or freight rates so high.

A complete record of the performance of the wood ships kept by the Shipping Board gives in definite form the service rendered to the government by this class of vessels and the promise of future usefulness. Out of the entire fleet operated under control of the Shipping Board, Chairman Edward N. Hurley recently announced, but three wood ships have been lost.

The life of a wood ship, therefore, while a risk, would not appear to be so great a risk as is commonly believed. The actuary, as with lives of men, may be able to take a thousand wooden ships and figure the approximate mortality each year among a thousand new and sound ships, and figure the risk, but no man or group of men can point to a wood ship on the ways or newly launched and say what her years of active service will be. The youngest cabin boy may wither into old age and pass to his fathers while the wood ship upon which he spent his 'prentice years continues stoutly on her way, a useful and profitable trader at home or overseas.

In other days when the builders of houses built for centuries and not for the present as later became the fashion, timbers from wood ships that had been condemned were eagerly sought as the bulwarks of construction, and in the staunchest old houses of England today can be found timbers in such excellent state of preservation that they appear to have been petrified which were obtained from the hulls of wooden ships which have come to the end of useful careers after many years at sea.

PROBLEMS OF DEMOBILIZATION.

(Continued from Page 2)

to be done that is needed, and I would have them engage in needed public works in order to furnish buffer employment to the unemployed, tiding us through the period of readjustment to the period when we get into our post-war activities, carrying us through the possibilities of riot, carrying us through the period when there is likely to be disturbances in our social and political structure, if we have large numbers of unemployed men. And then, when we have tided through that, when we have gone through our period of readjustment, we can take up the questions of social reconstruction, political reconstruction, economic reconstruction, and deal with each of the problems deliberately, intelligently and without passion, working out our destiny in a manner that Almighty God intended it should be worked out—in a progressive movement towards the highest standard possible for human beings to reach.

A. F. OF L. CONVENTION NOTES.

(By Chester M. Wright.)

Romance, gaunt sincerity, blazing idealism, callous-fisted fighting—come to Atlantic City to find those things. Where the American Federation of Labor holds its Convention on the Steel Pier, that is the place to look.

Men who have come out of the elemental struggle with the tools and the materials of the world have stories back of them. Such romance as would make the most furious of Jack London look anaemic and such romance as would make the weirdness of Poe seem commonplace lies back in the life struggles of some of these men of labor. Stories of the sea in the wild old days, stories of the great steel mills when human lives were worth less than a nickle a throw, stories of the railroads, when a railroader had to be the equal of anything that wore shoe leather—stories could be told here.

There are men here who have gone through strikes at the head of great organizations who have won through by strategy that Napoleon might have been proud to have had at his command.

If Vice-President "Jim" Duncan would put into a book some of the stories that are under his grayed thatch!

If Andrew Furuseth would put between covers the thrill that is in the tales he tells of the black days when he was young!

If Sam Gompers would tell the world the little stories of the human heart and give to it the glimpses of the human soul that he has got in battles where men fought against starvation and brutality for the sake of children to come after them!

And if "Bill" Mahon could be coaxed to put into print some of his early days' experiences when American traction companies were organized by night to cut melons before sunrise! Great stories those would be—great thrillers and great human documents.

Mrs. Sara Conboy, Secretary of the United Textile Workers, has been selected by President Gompers to christen the good ship "Afol," which the Emergency Fleet Corporation has agreed is to be named for the American Federation of Labor. When President Gompers announced his selection to the Convention Mrs. Conboy was on the platform making a report for committee on organization. She made a pleasant acknowledgment of the honor and got a cheering round of applause from the Convention.

If some of the steel magnates could have looked in on a meeting of the committee to organize the steel industry they might have seen something worth seeing. They would have seen the finish of slavery in the mills if they had been here. At any rate, however, they will see it before long. John Fitzpatrick was elected permanent chairman and twenty-four internationals put their weight behind the campaign. International presidents will go into the Pittsburgh District if necessary to establish the right of free speech there.

No sane person will attempt to deny the right of the people to form and maintain political parties, regardless of what their fundamental purpose may be. There is, however, well grounded opposition to combining our purely economic movement with purely political movements.

ROBINSON ON SHIPPING BOARD.

Henry M. Robinson, who was recently appointed by President Wilson a Commissioner of the United States Shipping Board, arrived in Washington and assumed his duties with the Board.

Mr. Robinson was in Paris when he received the appointment. He had been summoned there as a special representative of the Shipping Board and since January has been engaged with the numerous problems concerning shipping and those related to shipping, which arose during the peace negotiations. He returned by the steamship Mount Vernon, one of the seized German liners which the Shipping Board intends to allocate to the South American service. The vessel is now being used as an army transport, operated by a navy crew.

"We came across from Brest," Commissioner Robinson said, "in six days and twenty hours. I imagine this is about as good time as the vessel, which was formerly the Kronprinzessin Cecilie, ever made while under the German flag. We brought home 5800 men of the Sixth division. Civilian passengers and crew swelled the total number to about 6800. Yet with this great crowd the vessel was kept as clean and comfortable as any liner in the regular passenger service."

While in Paris, Mr. Robinson served as United States representative on the Reparation Commission and as representative on the commission which considered the retention of enemy ships seized in American ports. He was one of five United States delegates on the Supreme Economic Council, and also acted on the commission for the creation of a permanent International Labor Conference. He said that a draft of this plan is now a part of the League of Nations.

ACROSS AFRICA.

Plans are under way in Africa for the restoration of the railway and steamer connection across the continent from where the Congo empties into the Atlantic to the former German capital at Dar-es-Salaam, or "Harbor of Peace," on the Indian ocean. The connection was completed just before the war, and the eastern terminal of the line was almost immediately destroyed when the town was shelled by British vessels. The German end of the line, now lost to Germany, ran for some 800 miles from Dar-es-Salaam to Lake Tanganyika, and a small steamer had been "made in Germany" and carried in sections over the new railway line to the lake, where it was to be put together and launched to ferry passengers across to the beginning of the Belgian part of the system. The Belgian railway ran from Tanganyika to the upper Congo, passing two unnavigable stretches of the upper river, and from this terminal the traveler continued by steamer to the Atlantic. Few ever made the journey, for the war began within a short time of the completion of the last link. But the next few months ought to see the development of a steady traffic back and forth across what was once called the "dark continent."

Labor News

The St. Paul Co-operative store, with a charter and capitalization of $50,000, has been formed and is doing an active business. Ninety per cent. of the membership of the company are trade unionists.

The Canadian Labor Gazette, issued by the Dominion Department of Labor, reports that in April, 1914, the retail price of the average family budget was $7.51. In the middle of April, this year, the cost had increased to $13.35.

Officers of the National Federation of Federal Employes are studying the question of life insurance for the members of this organization. Life insurance companies have presented several group plans and the study includes a review of insurance carried by various trade unions. A report on this question will be submitted to the next convention of the federal employes.

The Seattle Co-operative Association is reported to be out of debt. June 1, 1918, the association started with 133 members, who paid in $900 on their stock. Of that sum $750 was paid for the store, which invoiced $8300. As a result of the educational campaign the association now has 740 members. There are 15 other co-operative stores in the state, acting co-operatively with the Washington Rochdale Union.

Eight million, or 22 per cent., of all persons engaged in gainful occupations in the United States, are women, according to the women's division of the Federal Employment Service. Of this 8,000,000 more than 1,000,000 were women and girls employed for non-monetary returns on home farms. Roughly calculated, 19 per cent. of all paid employes in 1910 were women and girls who need employment information at some period in their lives.

Since the Oregon State Workmen's Compensation Law became effective in 1914, the Industrial Accident Commission has received from all sources $6,007,081 which it has disbursed in the course of business at an administrative expense of only 6.17 per cent., the balance being available for the payments of claims of workmen injured in Oregon industry. During the year 1918 there were 25,288 workmen injured in industry in the State, 182 of the accidents being fatal.

The five pottery firms located at Sebring, Ohio, have notified their employes that they will provide free life insurance for from $500 to $1000 each, depending on the length of time each worker has been in the employ of the companies. An employe can claim full face value of the policy while living if permanent disability occurs before the age of 60. No physical examination is required. The insurance is free, if the worker has been employed for not less than 60 days.

The board of arbitration in the case of the Montreal Tramway company and its employes rendered its finding, and it was accepted. The wage advance of motormen and conductors ranges from 37 to 44 cents an hour; an increase over the old scale, which was from 31 to 37 cents per hour. Shop workers are awarded a 12 cent raise. Other men employed by the hour get a 7-cent advance. Clerks and inspectors receiving less than $100 per month were increased 25 per cent., and those paid over $100 were given 20 per cent. more.

INFORMATION WANTED.

The widow of Otto Kivi, who fell overboard on the S. S. "Carlos" between San Francisco and Aberdeen, May 30, 1919, wants to know the names of the crew on the ship. Kindly assist his widow by giving this information to S. T. Hogevoll, attorney for the widow, 627 Pacific Building, San Francisco. 6-11-19

Members of the crew of the S. S "Oskawa" will please call at my office in relation to a claim for salvage against the S. S. "Westgrove." Silas B. Axtell, 1 Broadway, New York, N. Y. 4-21-19

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardmore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City. 10-16-18

The Public
A Journal of Democracy

Poverty is A Crime!

It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

INFORMATION WANTED.

Oscar Aberg, a native of Sweden, age 25 years, last heard of in Newport News, Va., March, 1917. Anyone knowing his whereabouts will please notify his sister, Mrs. Gurli Landee, Box 166, Millburn, N. J.
3-26-19

Anyone knowing the whereabouts of Daniel Shean, last heard from at Cleveland, will kindly communicate with his brother, Richard Shean, 7014 Cedar Ave., Cleveland, Ohio.
11-6-18

CARRY ON!

Uncle Sam is releasing from his service the men who went "over there" to free the world from autocracy. Thousands of soldiers are daily receiving their honorable discharges; they pocket their pay, bid farewell to their comrades, and sally forth—civilians.

There is one army, however, which must not be demobilized. That is the army of War-Savings Stamp buyers. More recruits are needed to carry on the campaign of readjustment which follows the signing of the armistice.

The army of fighters has achieved its purpose.

The army of savers must remain in "action."

"Carry on" to a lasting peace under the banner of W. S. S.!

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal.
11-6-18

Carl Hansen, a native of Soon, Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee, Wis.
8-17-18

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City.
1-1-19

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City.

William J. Farrell, last heard from at Seattle, Wash., July 25, 1918, is inquired for by his father, Edward Farrell, 338 Commercial Avenue, South San Francisco, Cal.
4-30-19

Home News

The Public Health Service reports that tuberculosis claims a life every three minutes in the United States.

The official Government figures upon the cost of living show a decline of 3 per cent. since December.

Five men have already been burned at the stake in the United States since the first of the year, and more than twenty persons have been lynched in that time.

Soldiers and sailors to the number of 4,522,724 have been insured during the war by the War Risk Bureau. The total insurance amounts to $39,561,994,500. The average policy is $8,747.

The Department of Labor announced that a committee of experts is now investigating the mortality from tuberculosis in those trades where there are processes involving a great deal of dust.

There are 51,143 more motor vehicles registered in California now than at this time a year ago. Figures issued by the Motor Vehicle Department show a net registration now of 345,275 and a gross registration of 379,400. The receipts are $3,775,227.97 this year, so far.

The Statistical Division of the War Department estimates that there will be on hand September 1st 7,599,000 pairs of shoes and 8,812,000 pairs of leather gloves and mittens; a sufficient supply of the former on the basis of an army of 500,000 to last for over five years, and enough of the latter to last for over seventeen years.

Charges that railroad bondholders are being paid as high as 40 per cent. on their investment and that this is responsible for present deficits under Government operation, has been made by the Farmers' National Committee on Transportation. The claim is made that on $7,000,000,000 of securities the railroads are not entitled to any dividends. Government ownership, with a maximum purchase price of $12,000,000,000, is favored as a remedy for present conditions.

Taxes amounting to $4,179,184 were paid over to the Minnesota State Treasury by the United States Steel Corporation subsidiary companies. They were in payment of real estate taxes for the first half of last year. Included in the list was a check from the Oliver Iron Mining Company for $2,134,985 to cover half its proportion on real estate holdings in iron ranges. Among other large checks was one from Mahoning Iron & Steel Company for $386,000 and one from the Northern Pacific Railroad Company for $100,000.

A scheme in making cities really "cities of homes" is being worked out at Wellington, Kansas, by the business men of that city, who are encouraging home ownership. They have founded the Wellington Home Foundation. The foundation plans to hunt up worthy workingmen of the city who now live in rented homes, provide them with a vacant lot and erect a home on it, to allow the workingman to pay for it in regular installments, like rent. He need not have a dollar to start with. The foundation has checked over all of the run-down, dilapidated old residences in the city, and is buying them. It plans to tear them down, or rebuild them into modern small homes and sell them to workingmen upon the same terms as if it built a home on a vacant lot.

Domestic and Naval

The British steamer "Winfield," 3215 tons gross, 2082 net, carries about 5600 tons deadweight, built at Port Glasgow in 1900, and owned by the Adelaide Steamship Company, Adelaide, is reported sold for about £130,000.

The British steamer "Earlswood," 2353 tons gross, 1480 net, carries about 4120 tons deadweight, built at Middlesbrough in 1898 and owned by the Federated Coal & Shipping Co., Cardiff, has been sold to the Aster Shipping Company, Cardiff, for about £65,000.

During the months of April and May last 255 ships were launched in the shipyards of the United States. During the same months in 1918, 120 ships were launched, according to the bulletin of the United States Shipping Board. These ships have a gross combined tonnage of 880,000.

The "Sinclair No. 275," the fifteenth United States torpedo boat destroyer to be made at the Fore River shipyards at Squantum, Massachusetts, has been launched. The ship is named in honor of Capt. Arthur Sinclair, who was in command of the American naval force at Lake Huron in 1814. Mrs. George Barnet of Washington, District of Columbia, grand-daughter of Captain Sinclair, acted as sponsor.

The International Mercantile Marine lost 43 steamers of 409,967 tons during the war through submarines and mines, according to the annual report for 1918 just made public. These losses were all covered by war risk insurance, and the company's operations for the year showed gross earnings of $38,042,093 and net earnings of $11,493,274. The combined income account for the year shows a surplus of $12,940,537, against $15,475,985 for 1917.

Early completion of the Alaskan Railroad to the navigable waters of the interior is necessary for the success of the entire rail construction prrgram in the territory undertaken by the Government, according to J. L. McPherson, engineer of the Alaskan Engineering Commission. In order that construction work may not be interrupted, the House approved an appropriation of $1,964,350 for the work in the general deficiency bill sent to the Senate. The present force of 1,500 men will be doubled this month.

A new policy has been adopted by the Shipping Board for the disposition of its fleet of wooden steamers. There will be three arrangements for payment for the steamers. The first basis will be on a cash sale proposal. Another basis will be 50 per cent. on delivery and the balance in quarter-annual payments over a period of two years. The third arrangement will be 25 per cent. on delivery, and the balance in quarter-annual payments over a period of three years. There will be a difference in the prices which the Shipping Board will accept for the purchase of these vessels under the above arrangements. The cash price will be lower than the price of 50 per cent. prepaid, and the 25 per cent. arrangement will carry a still higher price per deadweight ton. The Shipping Board will negotiate the sale of these vessels to foreign interests, but transfer of flag to foreign registry will not be permitted until the full purchase price is completed.

Ignace Jan Paderewski, the Polish Premier, made it known on the 1st that he had decided to ask President Wilson to name a commission of Americans to go to Poland and investigate the charges regarding the treatment of the Jewish population there.

The railroads owned by the Government in Sweden are being electrified. It is found that the trains can make twice the speed with electric power and, besides, it saves the coal. The current will be developed from the water power of which there is a great abundance in Sweden.

A woman's party, recently organized in Argentina under the leadership of Senora Julieta Santeri de Renshaw, has published a platform which demands equality with men in office-holding as well as in voting, and declares that any interpretation of the Argentine Constitution contrary to woman suffrage is "unworthy of the present state of civilization."

The Royal Dutch West India Mail Service, Amsterdam, which had five boats requisitioned by the United States Government last year, made a profit of fl.638,250 after setting aside fl.242,196 for depreciation. A dividend of 12% is paid out of the year's profits. The company is under the same management as the Royal Netherland Steamboat Co.

Since the armistice was signed a new interest has been developed in the British co-operative movement, reports United States Trade Commissioner H. G. Brock, stationed at London. The Department of Commerce has made public this report, which states that there are some 2500 of these societies in operation with a total membership of over 3,500,000 persons, and a total share, loan and reserve capital of over $375,000,000.

France has sent a mission to French East Africa to study the question of food supplies for France, and especially to determine the possibilities of cotton culture by the introduction of irrigation in Lower Senegal and about the mouth of the Niger. Engineers in the region have reported that within ten years half the pre-war demand of French cotton spinners could be supplied from a strip of land 500 kilometers in length on both sides of the Senegal, admirably suited for cotton growing.

A recent issue of the Japanese Advertiser gives an account, taken from what are said to be official sources, of an advance by Great Britain of considerable funds to the Government at Archangel, and the "consequent establishment of Great Britain's interest in the great forest resources of northern Russia." The Archangel Government has accumulated since August a debt of 70,000,000 rubles on domestic loans, a part of which fell due on February 15. Bonds issued against these loans are being used as legal tender, making it almost impossible for the Government to raise more money by domestic loans. Great Britain is counted upon to supply the necessary funds, for which large tracts of forest land will be pledged as security, establishing British interests permanently in northern Russia.

With the Wits

"What do you work at, my poor man?" "Only at intervals, lady."—Houston Post.

Furloughs were in order. "Every man who has a good reason for requesting a furlough step forward." "Company, halt!" the captain roared.—Everybody's Magazine.

"How is neighbor Flubdub's son making out as an artist?" "Doing fine. He has just finished his first picture, which he tells me he values at $5000."—Louisville Courier-Journal.

"If I draw my own will I'll do you out of a fee, I suppose?" "Not at all," said the lawyer, "not at all. When the contest comes my fee will be ten times as much."—Kansas City Journal.

Donald—D'ye ken Mac fell in the river on his way hame last nicht?

Willie—Ye dinna mean tae say he was drooned?

Donald—Not drooned, but badly diluted.—London Ideas.

"What's your grudge against Judge Wombat?" "Too hasty, too hasty. Gives a man no time to prepare his cases. Case of mine has been on the docket only ten years and he insists on my going to trial."—Memphis Appeal.

"I understand you have been telling people that I am feeble-minded." "Now, uncle, I didn't mean——" "Oh, it's all right. Only if that is the general impression I think I'll have an extra smart lawyer draw my will."—Kansas City Journal.

"This League of Nations matter seems perfectly simple to me." "That's the way with a lot of public questions," commended Senator Sorghum. "They have a way of seeming perfectly simple until you meet somebody who disagrees with you."—Washington Star.

"That was a great speech you made the other day," exclaimed the admiring friend. "I'm afraid," replied Senator Sorghum sadly, "that I am getting to be one of these silver-tongued orators. A number of people have told me it was a great speech, but none of them seem able to remember what I said."—Washington Star.

"And," continued the narrator of the thrilling experience on the Pacific, "the great waves rolled on and on, until at last my frail bark was arrested by an oncoming wave more powerful than the rest."

"Well, and what did you do when your boat was arrested by this wave?" asked the cynic.

"We bailed her out." said the adventurer, promptly.—London Answers.

An Invitation

We invite deposits from every one—rich, poor, old and young. We recognize no classes, but treat large and small depositors with the same courtesy and consideration.

HUMBOLDT SAVINGS BANK

733 MARKET STREET, Near Fourth
SAN FRANCISCO

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

NEW CONCEPTIONS OF JUSTICE

Authentic Information on Industrial Affairs in Great Britain

Every convention of the American Federation of Labor brings forth its crop of speeches ranging all the way from the very ordinary, mediocre effort to genuine and soulful oratory.

The editor of the Journal was not in attendance at the Atlantic City convention, just adjourned. But a perusal of the printed proceedings easily concentrates attention upon the address of Miss Margaret Bonfield, Fraternal Delegate from the British Trades Union Congress and the first woman to come across the Atlantic in that capacity.

After reading Miss Bonfield's address, reprinted herewith from the official proceedings, it becomes easier to understand why, during the previous year, the British Government denied a passport to the same outspoken little lady, although she had been elected a fraternal delegate to the St. Paul convention of the A. F. of L.

Mr. Chairman and Fellow Workers: I feel it a very great honor to be here this morning as a fraternal delegate to this immense convention from the British Trades Union Congress. It is perhaps significant of the times in which we live that the Trades Union Congress should for the first time have sent a woman to represent them. It is symbolic too, I think, of the fact that in our country women have not merely risen to the point of asking for rights; they have got far beyond that and they are now saddled with responsibility in the workshop, in the administrative work of our country. And because the men of our country recognize that the women are in industry, that they are coming into industry in increasing numbers, they desire that the same education, the same experience, and the same responsibilities which have developed them shall in turn develop the women workers of our country. There is, therefore, a very strong feeling of the importance of organizing the women into the unions and in helping them to understand the tremendous influence that they will bear upon industrial conditions.

It has been hoped by certain sections of the employing class that women would be an easy prey to the pressure of economic conditions, and that women would be able to displace men because they were cheap. On the contrary, experience has shown in the last four years that when the women are organized they are able to fight for conditions of employment, for the minimum standard of conditions, and they are not prepared to be used as tools and destroy the standards which men have been striving to build up for the last hundred years.

In reading the history of your Congress, that amazing publication which has just appeared, I was delighted to learn that as far back as 1894 your convention laid it down that you were going to demand the same compensation for women and men for equal work performed. In that you are entirely in line with the policy of the British Trades Union Congress. It is very vital, indeed, that these two great bodies, the American Federation of Labor and the British Trades Union Congress, should understand each other and should have the closest possible working agreement. We are more and more impressed with the fact that no country alone can work out its economic and industrial salvation, and those two great English-speaking countries will have a very important and a very responsible part to play in building up the new world. It would be absurd for me to attempt to suggest that the methods which we find adapted to our country are methods which you ought to copy, and I hope in nothing I say this morning will it be understood that I am making such an inference. We are all profoundly convinced that each country must find the method best suited to its soil, its temperament, its problems, and so on. What we have to do is to see to what extent we can learn from the different methods and the opposing methods which other countries are endeavoring to adopt. I want, if I can, in the time at my disposal, to tell you what we believe is the best way of developing for Great Britain.

We have been for four and a half years in the shadow of death. We have been moved to the depths of our souls by the tragic sorrow of our time. The sense of something immense is upon us. We feel that we have come to the end of a civilization. We feel that we are in the travail of the birth of a new world and that it will depend, to a great extent, upon the clear-mindedness, the clear-sighted vision of the labor forces of our country whether that new world is going to be better or worse than the old one. We are confident that in passing through this period of suffering we have secured a wider vision; we have, we hope, prepared to make newer claims on life, we are prepared for a fiercer recoil from the competitive old world we knew before the war.

There is grown up in our midst such a hatred of war, such a hatred of the things that caused war, that we are confident that spirit will carry us on in the reconstruction of a world in which war will have no place whatever. Out of this dark night we are looking towards a very grey dawn at present. Many people are concerning themselves in our country about who won the war. Last December our placards, about ten feet high, informed us that Mr. Lloyd George won the war. Numbers of other people are claiming they won the war. As far as the British labor movement is concerned we at this moment are terribly anxious to know when we will win the peace, and we are looking forward to know what is coming to-morrow, and the day after that. The fundamental thing at the present time is to know how the labor forces can use their powers to win a just and a lasting peace. That feeling has had an immense effect upon the structure of our movement.

During the war, when we were working under great disadvantages, when we were subjected for the first time in our history to the Defense of the Realms Act, Military Service Acts, Munitions Acts, and all these other repressions put upon the liberties of the people, we found this had an intensifying effect upon the spirit of the rank and file. The trade union movement was second to no movement in the world in helping the Government prosecute the war with all the vigor it could represent. I wish to make that perfectly clear. I belong to the Left. I am not in sympathy with the war policy of the trade unions of Great Britain; but I want to make it clear here, as their delegate, that at no time during the war was there any hesitation or doubt on the part of the trades unionists of our country in their support of the Government and their desire to prosecute the war to a victory.

Having said that, I want to say at the same time that during the whole period of the war we never lost the sense of the importance of holding to those things that stood for liberty and for the old, precious traditions our country has built up, and always whenever we felt that the spirit of unity was being taken advantage of, was being exploited by those who were more concerned about profiteering than they were about winning the war, whenever we felt the spirit of patriotism was being used for selfish and personal ends, then immediately there was a flare-up of revolt on the part of the workers of the country.

When under the repression, as I say, of these Acts, the national executives were more or less put out of action, when our funds were threatened with confiscation, then it was that the shop stewards and the rank and file in the workshops stepped into the breach and defended the liberties of the people. The resourcefulness and the daring of people who were obscure, and suffering in defense of civil liberties is a thing that will go down in our records. They fought against industrial conscription, they built up the trade unions in the workshops and factories and mills, they made for the community and solidarity of labor through all these years of war. Over and over again, when reason and argument were treated by the Government with stony indifference, the unofficial strikes led by the shop stewards won their demands for the workers.

Let us take the classic case of a group of 10,000 women employed by a large armament firm in the north of England. They happened to be a group in my own trade union, so I know personally about the negotiations. These women were being paid the scandalous wage of from one penny-three farthings to tup-pence-ha'penny an hour, and they were being asked to work twelve-hour shifts—night and day shifts. Women were so overcome and exhausted they were dropping at their work. A demand went in that there should be an incerase in wages and payment for overtime and night work. That demand was played with, it was put on one side, and they waited for two months for any sort of recognition by the Government department concerned.

Then one day at 9 o'clock in the morning the whole of those 10,000 on the Tyneside stopped work simultaneously. They took out of their

pockets knitting and sewing and started knitting socks for soldiers. The management was in a fearful state. They said: "What is the matter with you?" The women said, "You go to the boss; he knows what is the matter with us." They went to the boss, and of course the boss knew exactly what was wrong. He telegraphed to the Minister of Munitions and they, in turn, telegraphed to us. We said, "We cannot interfere; we have been asking you for two months to give those girls justice and you have done nothing." The claim was put through in twenty-four hours and the girls' wages were raised from one penny-three farthings to tu-pence-ha'penny to five-pence, with overtime and night payment arranged for, as a result of the twenty-four-hour strike.

When you are told that agitators stirred up strife in our country don't you believe it: it was the Government that caused most of the strikes that happened during the war. There has been an immense growth of trades unionism during the last four years. Take, for instance, the National Union of Railway Men, which had 132,000 members in 1914, and at the end of 1918, 402,000, an increase of 270,000 in that one body. The General Laborers' Union had 82,000; this sprang up to 312,000, an increase of 220,000. The Postal Clerks were very poorly organized in 1913, only 11,000; they sprang up to 26,000, an increase of over 15,500. And so I could go on reading all through the list, so that at the end of 1918 the figures presented to the Congress showed enormous developments in certain clearly defined groups. The General Laborers at our last Congress made up a group of 902,570. The greatest single group is the miners, with 680,000. Although they were one of the most highly organized trades before the war they added 50,000 members during the war. This illustrates what I said when I spoke of unity and concentration of labor in the workshops, the factories, and the mills.

Most of you have heard about the very wonderful development of our trades union structure and the extent of grouping together of interests in industries. The miners, the railroad workers and the transportation workers have formed themselves into a defensive alliance, known as the Triple Alliance. It may be appropriate at this moment to refer to a development which created a great deal of interest on this side as well as on the other side. At the time when the Triple Alliance was negotiating with the Government there was a certain amount of apprehension in the country as to what was going to happen. The Prime Minister decided to call an industrial conference. Some people had the idea—and I am not going to say it is a true idea, it probably isn't true at all—that this industrial conference was called to stave off the demands made by the Triple Alliance.

When Employers and Workers Agreed.

We sat for a fortnight and produced this document, which is printed as a Government report. We had a most interesting time. We met in three main committees with the leading employers of the day. We hammered out the differences between us and arrived at a moderate program which was consented to by both sides. Both employers and workers agreed we were not willing to recommend this to our constituent bodies unless we had a guarantee from the Government that they meant business. If we recommended it we must have the guarantee from the Government that they would give us the legislation we asked for.

One clause in the report dealt with what we know as recognition. Both employers and working people were unanimous, and this represents some of the biggest employers in our country in the engineering trades, the textile trades, the sugar and confectionery trades, and so on. This clause is as follows:

"On the subject of methods of negotiation between employers and work people, the committee recognized the importance of establishing an understanding on the question of 'recognition.' Their opinion is as follows:

(a) The basis of negotiation between employers and work people should, as is presently the case in the chief industries of the country, be the full and frank acceptance of the employers' organizations on the one hand and trade unions on the other as the recognized organizations to speak and act on behalf of their members.

(b) The members should accept the jurisdiction of their respective organizations.

(c) The employers' organizations and the trade unions should enter into negotiations for the purpose of the establishment of machinery or revision, if necessary, of existing machinery, for the avoidance of disputes, and the machinery should provide, where in any question at issue there are more than one employers' organization or trade union representing the same class of employers or workpeople, a representative method of negotiation, so that settlements arrived at will cover all parties concerned."

Now, that means, in effect, that whereas miners and railroad workers had long ago received recognition, had long ago got such a position in our country that no Government would dare ignore the direct consultation of these representatives in any question affecting their trades; nevertheless, we have many miscellaneous and unorganized trades, and we have the petty little employer, who is a tyrant in his workshop. We still have the employer (in diminishing quantity), who refused to recognize the trade union official. This document, once and for all, lays it down that no employer in our country will be considered respectable if he refuses to meet the proper trade union official for the group representing his trade.

The moral effect of this report is infinitely greater than the immediate practical effect. As a matter of fact, there is no immediate practical effect, because when we met in a conference just before I left England, we were not satisfied with the reply received from the Government and they were negotiating for further legislative guarantees on the proposals we made. This report does contain the possibility of setting up what we are going to ask for, an Industrial Parliament. In our country there are employers who prepared to work wholeheartedly—and I am not saying that in any sense of humbug or camouflage—for a drastic change in the methods of production, distribution, and exchange. They are bringing their strength to bear on one side to bring about this better system of a co-operative commonwealth.

"Increasing the Output."

When we met in conference the employers' side was very concerned about increasing production, and we said: "Very well, go ahead. You write a memorandum about increasing production and show us how you want it done. Put that memorandum in as a memorandum from the employers. We, on our side, will submit a memorandum showing what we believe to be the causes of industrial unrest and the cure for that unrest. We won't ask you to agree to our memorandum, and you needn't ask us to agree to yours." Well, we came up to the scratch and put our memorandum in, but the employers could not agree among themselves as to how they were going to increase the output and what they wanted us to do in order to get it done, so they have put in no memorandum, while we have the splendid propaganda of our memorandum in a Government document.

The summing up of our memorandum is:

"The fundamental causes of labor unrest are to be found rather in the growing determination of labor to challenge the whole existing structure of capitalistic industry than in any of the more special and smaller grievances which come to the surface at any particular time.

"The root causes are twofold—the break-down of the existing capitalist system of industrial organization, in the sense that the mass of the working class is now firmly convinced that production for private profit is not an equitable basis on which to build, and that a vast extension of public ownership and democratic control of industry is urgently necessary. It is no longer possible for organized labor to be controlled by force or compulsion of any kind. It has grown too strong to remain within the bounds of the old industrial system and its unsatisfied demand for the reorganization of industry on democratic lines is not only the most important, but also a constantly growing cause of unrest.

"The second primary cause is closely linked with the first. It is that, desiring the creation of a new industrial system which shall gradually but speedily replace the old, the workers can see no indication that either the Government or the employers have realized the necessity for any fundamental change, or that they are prepared even to make a beginning of industrial reorganization on more democratic principles. The absence of any constructive policy on the part of the Government or the employers, taken in conjunction with the fact that labor, through the Trades Union Congress and the Labor Party, and through the various trade union organizations, has put forward a comprehensive economic and industrial program, has presented the workers with a sharp contrast from which they naturally draw their own deductions.

"It is clear that unless and until the Government is prepared to realize the need for comprehensive reconstruction on a democratic basis, and to formulate a constructive policy leading toward economic democracy, there can be at most no more than a temporary diminution of industrial unrest to be followed inevitably by further waves of constantly growing magnitude.

"Tinkering" Not a Satisfactory Remedy.

"The changes involved in this reconstruction must, of course, be gradual, but if unrest is to be prevented from assuming dangerous forms an adequate assurance must be given immediately to the workers that the whole problem is being taken courageously in hand. It is not enough merely to tinker with particular grievances or to endeavor to reconstruct the old system by slight adjustments to meet the new demands of labor. It is essential to question the whole basis upon which our industry has been conducted in the past and to endeavor to find, in substitution for the motive of private gain, some other motive which will serve better as the foundation of a democratic system. This motive can be no other than the motive of public service, which at present is seldom invoked save when the workers threaten to stop the process of production by a strike. The motive of public service should be the dominant motive throughout the whole industrial system, and the problem in industry at the present day is that of bringing home to every person engaged in industry the feeling that he is the servant, not of any particular class or person, but of the community as a whole. This cannot be done so long as industry continues to be conducted for private profit, and the widest possible extension of public ownership and democratic control of industry is therefore the first necessary condition of the removal of industrial unrest."

Of course, that document has been treated in various ways, according to the type of mind which reads it. That and other documents issued by trade union organizations have been met in some quarters of the capitalist press—not all. I am glad to say some have shown sense and sanity, and some have given constructive criticism, which we are glad to have and will make use of—but a section of the press seems to think they can destroy that sort of thing by virulent abuse of the most violent character. They overdid it and there is a reaction. The other day one of our weekly papers had a gross attack upon Robert Smillie, who is probably one of the best beloved leaders in our country. He was called a Bolshevist and all sorts of things like that. This is what happened:

I went down to a meeting in the East End and heard some of the very rough dock workers talking. One said: "I saw in the papers today that Bob Smillie is a Bolshevist and he is a follower of Lenine." "Oh," said the other, "if Lenine is anything like Bob Smillie he is a damned good sort."

The program on immediate reforms, of course, you probably know as much about as I can tell you. The movement for the shorter day is going on apace, and it is interesting to know that both the strongest organizations and the weakest section of the community are being helped. We have the great engineering and allied trades sweeping into their forty-seven-hour week by negotiation with the employers, and a very sweated trade like the women rope makers, many of whom are married and many of whom are elderly, have organized and are getting a minimum wage through the trade board method, and now have secured by negotiation a forty-seven-hour week.

I was very glad to see we are keeping neck and neck race with you in the classes of workers that are organized into the trade unions. We have our national organization of police officers. The psychological effect of that has been very immense, and in our processions and demonstrations, and in connection with our open-air meetings we find a brother and a comrade in the man in blue, always prepared to lend a helping hand when it does not interfere with his official duties.

A College Bed Makers' Union.

The latest recruits to trade unionism were the college bed makers in Cambridge and Oxford. These were women of sixty; they organized and demanded a living rate of wages from the Dons. We have also improved organization in the higher branches of the civil service employes, what I think you would call the Federal Employes. It is of immense help to us to get these men of ability and experience inside the trade union movement. Actors and actresses formed a strong trade union. They are protesting against certain very bad methods of employment. They have already secured great reforms, and they, too, are affiliated to the British Trades Unions Congress. We hope in the pageantry and the light and color of our conferences we shall have immense help from that branch.

We have a union of journalists. In our last Congress when we made a vote of thanks to the press for their courtesy during the week, we had the pleasure of having the reply made by a trade unionist. That national union has already proved its worth in protecting the integrity of the reporter. In our country we have the type of politician who, when he gets a little loose in his talk and says something a little indiscreet, throws it back on the shooulders of the press. The last time it was tried on the National Union of Journalists I took the matter up with vigor and demonstrated the integrity of the reporter, very much to the embarrassment of the politician.

Now I am coming to what I consider the most revolutionary structural change in our country. I rejoice in the great, splendid spirit of our trade union movement, I rejoice in the fact that the labor movement in our country has become economically and politically united, but I also rejoice that the trade unionist as a producer has not forgotten that he is a consumer, and so we have what we call the third wing of our movement, the great co-operative movement. In this third wing we have the union of forces between the Trades Union Congress and the great co-operative societies. The Trade Union Congress has entered into a very definite alliance with the co-operative movement. We realize that we must not only safeguard our interests in the House of Commons, but we must safeguard our interests in getting hold of the raw material and the processes of production.

We have in the co-operative societies 4,000,000 members; have a share and loan capital of $350,000,000; we have a trading turnover of $1,125,000,000; a net surplus of $90,000,000, and a wage bill of $60,000. We pay not only the highest trade union wages but in excess of trade

(Continued on Page 10.)

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Justice-Education is Best Bomb Remedy.

Justice and education is the best bomb remedy, summarizes American Federation of Labor Secretary Frank Morrison's comment on the attempt of a bomb thrower who was killed in an attempt to destroy the life and wreck the home of United States Attorney General Palmer, in Washington.

In reply to a local newspaper's request for a comment on this outrage Secretary Morrison said:

"This attempted destruction of life and property should cause calm reflection, rather than hysteria, on the part of every American.

"I can understand why the nihilist of Russia used bombs, but this method can have no place in American institutions. And when it is used it is our patriotic duty to inquire why.

"For years the trade union movement has urged the restriction of immigration, but the workers were opposed by steamship companies, the steel trust and other employers of labor who stimulated immigration at the rate of 1,000,000 persons a year.

"Many of these immigrants were herded in large cities or other industrial centers. They were encouraged to use their own language and to perpetuate traditions of their mother country. At election time, in innumerable instances, they were voted en bloc, and if they would organize a trade union, or suspend work to stop exploitation, they were enjoined, clubbed and jailed. This is an old story in West Virginia, Colorado, Pennsylvania and elsewhere.

"What can Americanism mean to those people? They do not even understand our language. To them Americanism means a petty boss and low wages. They know nothing of our theory of government.

"This country is now reaping the result of its immigration policy—or lack of policy—during all these years.

"Bomb throwing is always a challenge to organized society, and should be met in that spirit. But the question must be traced back to its root and treated accordingly. Americanism must be more than a shibboleth. It must mean education, opportunity and social justice for all. We must vitalize our declarations and our beliefs that injustice has no place on American soil.

"In this soil, bomb throwing will wither and die."

Economic Power Won.

The Textile Worker says: "The 48-hour work week in the textile industry is now an accomplished fact, with the exception of a few spots here and there, particularly in the Southern States where they have come down half way from 60 hours per week to 54 and 55 hours per week; and it is only a question of a short time when, through the economic power of the United Textile Workers of America, backed up by public opinion, the 48-hour work week for textile workers will be universal all over the country."

Immediately on having determined the fact that the shorter hour work-day had been secured, a demand for an increase of 15 per cent. in wages was issued by the United Textile Workers, and notices sent to all manufacturers in the New England States. Realizing that a determined fight would probably follow a refusal to grant the demand, the manufacturers posted notices, which were widely circulated by the daily press, that they had voluntarily granted an increase equalling that asked by the United Textile Workers.

People Not Eating Meat.

It has been found that American families have reduced their meat eating because of high prices and now the American Meat Packers' Association predicts a reduction in prices. "It is thought that the consumption of beef may be greatly increased," the statement says.

A few weeks ago the packers' association announced that the depletion of Europe's herds would necessitate continued high prices in this country, but the packers find that people in their own country can not afford meat, so we are told that "cheaper, grass-fed cattle" are coming into the market and that this will make lower prices possible—when the retailer lowers his present stock.

It must not be understood, however, that prices will take a very pronounced drop, as it is stated that present conditions will "hold meat prices above normal."

A. F. of L. Year Book Tells Labor's Story.

The American Federation of Labor Year Book, authorized by the Baltimore and Buffalo conventions has been placed on the market. It is over 500 pages and is a history of the American trade union movement and is also an encyclopedia and record, in condensed form, of every important action considered in the 38 conventions held since the organization of the American Federation of Labor in 1881.

The work was compiled by William C. Roberts, writer on economic questions, and member of the Chicago Typographical Union. In his foreword Mr. Roberts says:

"While each subject is briefly treated, the intention has been not to omit anything that would prevent a thorough understanding of every principle. When it is known that there are 8,000,000 words in the 38 proceedings that had to be reduced to about 400,000 it will be seen that the work has been difficult. The rule followed was to use the official language of the conventions. The belief was that it should be an American Federation of Labor book, not the work of any individual or group of individuals. The real authors are the delegates to conventions, extracts from whose resolutions and speeches are printed literally, but in condensed form."

Other features of the book include the reconstruction program of the American Federation of Labor, complete list of the American Federation of Labor officers and convention cities, history of American Federation of Labor departments, list of affiliated national and international unions and railroad brotherhoods and present and first

World's Workers

Work or fight has been adopted as a motto by the Hungarian Socialist government which has introduced legislation to make the living on annuities and other "unearned" incomes on the part of persons capable of work a legal offense.

That workers should have the right of combining in order to protect their own interests is the expressed opinion of the British Y. W. C. A. With the approval of the national executive committee, the social and legislative department of that organization has issued a statement in support of that position, especially as regards the working woman, and a special invitation to accredited respresentatives of trade unions to address meetings in the association's canteens, clubs and hotels with the same freedom as other speakers.

A conference was held recently at Milan, Italy, of the Socialists who left the official organization of the Italian Socialist party in order to support the intervention of Italy in the war. Resolutions were passed providing for an organization with the object of substituting "Mazzini's humanitarian and educative principles for Marx's egoistic conceptions." It was declared that the Italians of Spolato and Zara must not be abandoned, and that the Bolshevism of the official Socialist party must be defeated. It is suggested that the new party, which calls itself the "Trincerista," or "Comrades of the Trenches," may have some influence on the elections.

In a recent statement in the French Chamber of Deputies, M. Loucheur, Minister of Industrial Reconstruction, described the efforts of the Government to remedy unemployment and restore normal economic conditions. He called for the co-operation, industrial and financial, of all the manufacturers and tradesmen of France, and explained that the industrial enterprises which were being conducted by the state would not be allowed to result in any injurious competition with private enterprise. State-owned war factories were already, he announced, being converted into repair shops, locomotive works, factories for the production of telephone and telegraph appliances, etc.

To what lengths panicky governments will go in their fear of persons who because of their nationality, may be suspected of being Bolsheviks, appears from the following news story appearing in the London Call: "The treatment meted out by the British Government to the Russian refugees domiciled in this country constitutes a disgraceful episode in the degeneration of British policy which marked the whole of the special regulations made during the war. It would seem that our government class really tries its hardest not to live up to some of the best and fairest traditions of Englishmen in days gone by. The flagitious alliance with Tsarism is still in operation in the sense that though the war is over and all possibility of danger from a few helpless foreigners is removed, all civil rights are arbitrarily set aside by our authorities in its dealings with Russian workmen."

INFORMATION.

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City.

Charles L. Carlsen, No. 1834, who disappeared from the barge "Isaac Reed" at Eureka, California, on December 31, 1918, is inquired for by his wife, Mrs. C. L. Carlsen, 107 Courtland Ave., San Francisco, Cal.

I have been informed that a number of attorneys have requested members of the crew of the S. S. "Abangarez" to file claims for salvage services rendered to the bark "Ninfra." For the information of such seamen, it might be said that a settlement has been effected in the sum of $50,000 through an arrangement made by me as representative of a few of the crew, with the attorneys for the owners of the 'Abangarez." It is agreed that the crew shall receive one-fourth of the award, about $12,500. All the crew need to do to get their money is to apply to the owners. Members of the union applying here can get their funds without any charge whatsoever for services rendered by this office. S. B. AXTELL, 1 Broadway, New York, N. Y. 6-18-19

THRIFT IS POWER • • • SAVE AND SUCCEED
BUY W.S.S.

DO YOU KNOW

That War-Savings Stamps pay 4 per cent. compound interest?

That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?

That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?

That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?

That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S, Certificate, at any post office upon ten days' notice?

That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?

That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

Pacific Coast Marine.

Marine Engineers' Beneficial Association No. 35, on behalf of the entire Pacific Coast membership, has served notice on the local shipowners and operators that they had voted to terminate their working agreement on July 23.

Captain E. L. Whitney of Mobile, who has purchased more sailing ships here during the past year than any other individual or concern, has added the barkentine "S. G. Wilder" to his fleet. The vessel, which is now en route to Callao, was owned by George W. McNear.

Following the receipt of advices from Seattle that Skinner & Eddy had placed an order for 16,000 tons of steel which will be used in the construction of four new steamers for their own account, it is rumored that one or more of the local shipbuilding plants may take the same action.

A protest is being formulated by yachtsmen, launchmen and others plying craft in San Francisco Bay against the practice of ships cleaning out oil tanks in the bay. There is a regulation against this but the Harbor Board does not appear to try to enforce it, and shipping men are going to ask the Harbor Board why.

The hulk of the former Key System ferry steamer "San Jose" has been sold and will be rebuilt and converted into a ferry vessel to be operated between Rodeo and Vallejo. The craft will be towed to Vallejo, where the work will be done. The hull is badly burned, but with repairs will be stanch again. It is expected the original engines will be fixed up and used.

The China Mail Steamship Company has received advices that the liner Nanking, requisitioned by the government for the bringing of wounded Czecho-Slovak troops from Vladivostok to America, is en route to San Diego with 1140 passengers, all but sixty-two of whom are Czechs. It is understood that the wounded men will be given treatment in the South before being sent overland to an Atlantic port for the final sea trip to Czecho-Slovakia. After discharging at San Diego the Nanking will return to San Francisco and renew her regular run to the Orient.

An interesting race is being staged between four vessels now en route from Seattle for a port of Norway. The vessels concerned are the "Mount Hamilton" and "Mount Shasta," both of them auxiliary schooners, and the schooners "Mount Whitney" and "Mount Hood." The quartet of craft belongs to Norwegian parties and each carries 1,500,000 feet of lumber, loaded on the Sound. Each is 2400 tons deadweight. Although many believe that the sailing ships have little chance to win out, there are a number of mariners here who are of the opinion that with favorable wind the windjammers will come in for first money.

More than 200 fishing boats, including a small fleet of purse seine craft, are operating out of San Diego in the tuna catching trade. A large number of the boats hailed from San Pedro. Northern tuna canneries have established floating clearing houses in the harbor, where the daily catches are dumped, weighed and then taken to San Pedro and Long Beach by tenders. This permits the fishing boats to operate practically every hour that the tuna are running in large schools and eliminates the 100-mile run up the coast to the canneries. The boats each have been bringing in an average of half a ton a day. Fishermen are paid $125 a ton this season for albacore or tuna, delivered at the wharves or floating clearing houses.

Threatening an increase in fire insurance rates along the San Francisco water front, the Board of Fire Underwriters of the Pacific has sent a protest to the San Francisco Board of Supervisors against the discontinuance of the fireboats in the harbor. The annual expense of maintaining the fireboats is $50,000. This item has been cut from the budget owing to the fact, according to Supervisor Ralph McLeran, chairman of the Finance Committee, that in the last year the boats were called out for only a few hours and worked on the east side of the bay a great deal more than on the San Francisco side. Years ago, it was pointed out, the State made a gentleman's agreement with San Francisco to pay half the expense of the fireboats through the Harbor Board. This was never done, says McLeran. E. F. Mohrhardt, secretary of the Board of Underwriters, called attention to the fact that when fire insurance rates along the water front had been fixed proper recognition was given of the presence of the fireboats, and if they are to be discontinued, he says, a readiustment of insurance rates affecting all water front properties and shipping must ensue.

Stockton, Cal., has won a magnificent victory in its fight to secure deep water to the sea. The Rivers and Harbors Board of Army engineers has ordered the detailed survey for widening and deepening Stockton channel so as to give the city deep water to the sea. This is the information conveyed to Stockton in telegrams from Mayor A. C. Oullahan and Congressman Charles F. Curry. It is the biggest piece of news that Stockton has received in many a day. It means that one more important step has been taken along the road which must be traveled before large oceangoing ships can dock in "Port Stockton." The survey ordered by the Army engineers was recommended by Colonel L. H. Rand, in charge of rivers and harbors for the War Department on this Coast. When the recommendation came before the engineers at Washington, D. C., they turned it down. The Stockton Chamber of Commerce, which had charge of the fight, petitioned for a hearing. Congressman Charles F. Curry came to Stockton's aid and succeeded in gaining the consent of the Board of Engineers to give Stockton a hearing on the project.

A complete reorganization of San Francisco water front facilities for handling the men and supplies incidental to the proposed enlarged Navy fleet for the Pacific will be arranged by the State Harbor Commissioners. Instead of depending upon the private floats controlled by the launch concerns, the Navy proposes to have facilities for landing and embarking the thousands of men who will travel between ship and shore. Facilities for handling ship supplies will also be needed. That ample provision for the Navy will have to be made is apparent from the fact that when the proposed fleet assembles at San Francisco there will be about 100 vessels of all classes, including six superdreadnaughts and numerous battle-ships, cruisers, torpedo-boat destroyers, submarines, colliers and other craft. It is estimated that there will be about 25,000 men in the fleet, and a fair share of these will be enjoying shore leave. Navy officials propose to have their own system for handling the men. Landing quarters and space assigned must be central and as near Market street as possible. To meet this demand it will be necessary to shift some of the commercial assignments to points farther from the Ferry building. The plans of the Harbor Board will be submitted to Admiral Jayne for approval before being announced.

The Division of Operations of the United States Shipping Board is preparing to place upon the market the radio apparatus which it had installed on 200 requisitioned ships. Some of these vessels have already been returned to the owners from whom they had been requisitioned upon our entrance into the war, and others soon will be turned back. The plants had been purchased from the Marconi Company and are no longer needed by the Division of Operations, as new apparatus is on hand and ready for installation on vessels that are being built for the Shipping Board. The Navy Department has strongly recommended ownership of radio plants by shipping companies, rather than the rental of the plants from radio companies. Concurring in this view the Shipping Board holds there is no logical reason why the radio plant should not be considered as much a part of the ship as the engine, dynamo, or any other part of equipment. It is therefore following the example of the Navy in owning the radio plants installed on its ships. A large number of representative shipowners have taken the same view and are offering to buy the plants which they had formerly rented from the radio company. The Shipping Board has recommended to Congress that all vessels under the American flag be required to carry adequate radio equipment.

Shipping men and representatives of the various California Growers' associations will request the United States Shipping Board to allocate a fleet of refrigerator steamers for service on the Pacific between this port and China. Data to accompany the request will show that the use of refrigerator ships in the transpacific service will make California more prosperous, because the Orient is waiting to consume immense quantities of the State's fruits. In return, China and Manchuria will send back in the refrigerator ships frozen beef, eggs, poultry and other products that are at this time adding to the high cost of living here. Members of the Foreign Trade Club, importers, exporters and others who are active in securing these vessels, have proceeded to interest the producers of the State after investigating consular reports received here during the past year. Among the organizations whose support has been promised are the California Prune Growers' Association, California Citrus Growers' Association, California Associated Raisin Association, California Peach Growers' Association and others. If necessary, special representatives will be sent to Washington to confer with the heads of the Shipping Board. According to the consular reports received during the past year millions of pounds of the best quality beef produced in the province of Shantung could not find a market although the world has been crying for meat, and it is affirmed that enough poultry and eggs could be imported from Manchuria and China to bring the price down to a reasonable basis.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

WEDNESDAY, JULY 2, 1919.

PEACE AT LAST!

On Saturday, June 28, the world war, which lasted just thirty-seven days less than five years, was formally declared ended. Germany and the allied and associated powers signed the peace terms in the same magnificent hall where the Germans humbled the French so ignominiously forty-eight years ago.

By the terms of the treaty, which the German delegates were so reluctant to accept, Germany will restore to France, to Denmark, to Poland, and to Belgium those territories which represent various successes of Prussian armies in wars of aggression extending from the time of Frederick the Great to the hour of William II. By these changes Germany will lose upwards of 30,000 square miles, with seven millions of people. She will become in area smaller than Spain; and in addition East Prussia will be divided from the bulk of German territory by the famous Polish "corridor" to the Baltic.

In addition to territories directly returned to the nations from which they were taken by force, France will receive a fifteen-year mandate for the Saar coal region which may become her permanent possession if the inhabitants of the district so elect fifteen years hence—and Danzig becomes a free city within the Polish custom area. A plebiscite will also determine the ultimate disposition of portions of East and West Prussia, and the transfer of Schleswig to Denmark will be conditional upon a similar vote.

As a whole, Germany loses an area five or six times as large as France lost in 1870, with a population approximating that of Belgium when war broke out.

On the military side, Germany is required to reduce her armies to 100,000 with 4000 officers; to abolish conscription and to surrender all but an insignificant portion of her fleet. A sentence of death is thus passed upon Prussian militarism, limited only by the capacity and willingness of the Allies to enforce these decisions. For fifteen years Allied armies will occupy portions of German territory between the Rhine and the French and Belgian borders, all evacuation to be conditioned on performance by Germany of the terms of the treaty.

But it is the economic aspect of these terms of peace which strikes the hardest. Actually Germany loses her whole mercantile fleet. Then we compel her to build ships for an indefinite period of time to transfer to her conquerors. We take from her all of her iron, much of her coal, and a considerable percentage of her phosphates, in restoring lost provinces to Poland and to France. We take from her many hundred thousand head of cattle, together with some of her richest agricultural districts. We provide that she shall in principle pay for all destruction she has done to property and lives of civilians in the war, and we fix twenty-five billions of dollars in three instalments as the first payment on account, with responsibility to pay more in future. There are many other details, intricate but all converging upon the same point. Actually for fifteen years, at least, Germany will work for the nations she attacked, while their armies will occupy the portion from whence she drew materials which made possible her great economic development in the last half-century.

The foregoing is necessarily but a mere summary of the price Germany will have to pay. Of course, the question uppermost in the minds of common folks everywhere is: Will this treaty of peace and the accompanying covenant of the League of Nations really end wars?

Two of America's most distinguished men in public life, each with a splendid record for service to labor and to humanity generally, take directly opposite views upon this issue.

President Wilson in a formal statement urging the American people to accept the treaty "without change," says:

> The treaty of peace has been signed. If it is ratified and acted upon in full and sincere execution of its terms, it will furnish the charter for a new order of affairs in the world. . . . It liberates great peoples who have never before been able to find the way to liberty. It ends, once for all, an old and intolerable order under which small groups of selfish men could use the peoples of great empires to serve their ambition for power and domination. It associates the free governments of the world in a permanent league in which they are pledged to use their united power to maintain peace by maintaining right and justice.
>
> It makes international law a reality supported by imperative sanctions. It does away with the right of conquest and rejects the policy of annexation and substitutes a new order under which backward nations—populations which have not yet come to political consciousness and peoples who are ready for independence, but not yet quite prepared to dispense with protection and guidance—shall no more be subjected to the domination and exploitation of a stronger nation, but shall be put under the friendly direction and afforded the helpful assistance of governments which undertake to be responsible for the opinion of mankind in the execution of their task by accepting the direction of the League of Nations. It recognizes the inalienable rights of nationality; the rights of minorities and the sanctity of religious belief and practice.
>
> It lays the basis for conventions which shall free the commercial intercourse of the world from unjust and vexatious restrictions and for every sort of international co-operation that will serve to cleanse the life of the world and facilitate its common action in beneficent service of every kind. It furnishes guarantees such as were never given or even contemplated for the fair treatment of all who labor at the daily tasks of the world.

Senator Hiram W. Johnson, former Governor of California, in an address just delivered at New York, is equally positive in his assertion that the peace treaty does not give us "a league of nations to prevent war."

To the contrary, Senator Johnson says:

> The proposed League of Nations is a league of armed nations in a gigantic war trust. In its very creation it had been stripped of every idealistic purpose it ever had. It contains within itself the germs of many wars, and, worse than that, it rivets, as in the Shantung decision, the chains of tyranny upon millions of people and cements for all time unjust and wicked annexations. It is a trust of existing present power. It will never prevent war; it will sanctify power in a new, a terrible and a sinister sense. . . .
>
> In a word, this league means that American boys shall police the world; that all the tottering nations of the earth shall be upheld by our blood and our bone; that Europe, Asia and Africa may draw upon us in their every dispute and quarrel; that our Nation will be at the mercy of Europe and Japanese diplomats who never had and never will have any sympathy with our aspirations or our ideals; that we, with our glorious past, shall guarantee the territorial integrity of every country on earth and the bondage of every suffering people in anguish begging for freedom; that we destroy our Monroe Doctrine and submit controversies on the American continent to determination by foreign powers.

Truly, Senator Johnson paints a gloomy picture of "peace."

Between the optimistic utterances of President Wilson and the pessimistic predictions of Senator Johnson there is indeed a gulf so wide as to be almost unbridgeable.

In the meantime the American Federation of Labor Convention, although not in possession of the final treaty draft, has by a practically unanimous vote approved the proposed covenant of the League of Nations. Yet, so far as officials at Washington know, the peace treaty will not even now be made public although it has been signed. The State Department has no instructions to publish it and does not intend to do so unless President Wilson directs.

It is believed that the President's first act probably will be to send the document to the Senate and it would be counter to custom if the Senate itself published the treaty before it acted upon it. The movement, however, to conduct the Senate debate in open, instead of executive sessions, may bring about early publication.

But whatever may be the ultimate fate of the League, the greatest, bloodiest, most devastating and costly conflict in human history is formally at an end.

America entered the war in response to the repeated defy of Prussian militarism. American labor supported America's entry in the war because that which stands for militarism has been the curse of Labor throughout all ages. Militarism has never been to Labor's interest. And always, in the final analysis, Labor's interest has been the interest of the common people of all nations, who for centuries have been the poor, betrayed pawns of the rulers and the ruling classes. League, or no League, when the power of Labor is sufficiently established wars of aggression will automatically cease, because there will be no more soldiers to fight in them.

It is to the interest of Labor—and, again, to the interest of civilization—that the working men of all nations shall recognize one another as brothers, and shall peaceably join in the common task of advancing the welfare of all working people everywhere.

For such reasons as these, by the very charter principles, Labor is the strongest single force now making for peace. It realizes the value to humanity of the mag-

nificent idealism as expressed by President Wilson's fourteen points, and it stands ready, with all its strength, and with all its devotion, with all its passion for universal brotherhood, to help to carry those ideals into final fulfilment.

A "DEMOCRATIC" SCHOOLSHIP?

Captain Irving M. Evans, chief of the sea service bureau of the United States Shipping Board has been visiting along the Pacific Coast.

In an interview on the proposed California State Training School for Seamen Captain Evans is quoted as saying, among other things, that a State schoolship could not be a democratic affair and that the needs of the country's merchant marine would be best served if there is no duplication of efforts by the State and National governments.

John H. McCallum, president of the San Francisco Harbor Board, who is associated with Governor William D. Stephens and E. B. Clarke in the management of the proposed training school, takes issue with Captain Evans and says:

We certainly mean to be democratic and not make this a California affair exclusively. We intend to accept boys from all of the Western States.

We have held a meeting at which there were representatives from the University of California, the City Board of Education, both branches of the Shipping Board, the Pacific American Steamship Association, and all agreed that we are doing the right thing to start this training of raw material to become officers of the deck and engine room departments of the merchant marine.

It is true that the $50,000 that will be at our disposal for two years will not suffice, but we believe that this will be supplemented by private subscriptions. California took the matter up on the direct suggestion of Congress and Washington. The government is certainly in favor of the project and believes that we can assist materially in providing the right kind of men for the merchant marine.

The JOURNAL is not particularly concerned in the quarrel between Captain Evans and Mr. McCallum. It does seem, however, that a gentle admonition for Mr. McCallum is quite in order. If we are to have a semblance of democracy in the management of the State schoolship would it not be eminently appropriate to call into his council one or two representatives of the organized seamen? Everybody interested, including the shipowners, seems to have been invited; everybody except the seamen, i. e., the men who know most about the essentials of sea training.

It is of course possible but highly improbable, that an exclusive dry land committee will make a success of a salt water affair. But for appearances sake, if for no other reason, one or two plain, practical men with real seafaring experience ought to be added to the list of advisors.

On the very day when the American Federation of Labor convention was resoluting against the injunction judges, one of that species, Federal Judge Killits of Toledo, Ohio, calmly ordered the confiscatin of an entire issue of a labor publication, known as the New Voice. Later, when the editor announced in court that he "stood pat" on whatever appeared in the paper "his honor" declared his intention to sentence this rebel to the penitentiary. Under the system in vogue this is the established procedure. An American injunction judge is the accuser, the jury and the executioner, all rolled into one august being.

THE SEAMEN'S ACT.

The "New Republic" of New York Calls Attention to Fact That Furuseth's Prophecy Is Being Fulfilled.

Some statistics which the Shipping Board has just published make it possible to test out a bold and striking theory which the framers of the Seamen's law put on our statute books four years ago. The statistics are contained in a report of the Marine and Dock Industrial Relations Division of the Shipping Board, a division which, under the capable direction of former Governor Bass of New Hampshire, has been able to combine to a notable degree the rapid judgment and prompt action essential in labor administration during war, with a far-sighted thoroughness which will count for much in the coming times of peace. The statistics are carefully and conservatively presented, without a suspicion of bias. They tend strongly to prove that the theory embodied in the Seamen's law is sound and that in this respect the law has been an aid rather than a detriment to American shipping.

Andrew Furuseth, President of the International Seamen's Union of America, and the man who persuaded Congress to pass the Seamen's act, had for twenty years been preaching the theory of the international equalization of seamen's wages. The theory is a simple one. Unless in some manner restrained, a seaman will normally leave a ship which pays low wages whenever it puts into a port in which higher wages prevail. To keep him, the ship with the cheap crew will need to raise its scale of wages to the level prevailing in the port. Hence the natural tendency of seamen's wages is toward equalization, regardless of flag or trade. But countries accustomed to a lower standard of life have interfered with this normal tendency by making it a penal offense for a seaman to leave his ship in a foreign port, and the United States has aided and abetted these countries by entering into treaties which bind the American authorities to arrest deserters from foreign ships and compel them by force to serve out their terms at the low wages of the foreign flag. This policy has made it possible for ships of European flags to shield their inferior standard of living from the higher standard in American ports, and by cheapenss of operation to underbid the American shipowner and drive him off the seas. Mr. Furuseth's remedy was to repeal the laws and abrogate the treaties which penalize desertion in American ports, and to finance the deserter's search for a new job by giving every seaman in port a right to demand one-half the wages then earned. As a result, every foreign ship touching an American port would face the alternative of raising its wages or losing its crew, and the American standard of life would in time dominate the commerce of the world.

Furuseth's prophecy has in fact come true. In 1911, the last year for which official statistics were available, British wages for seamen and firemen ranged from $20 to $25 a month, while American wages ranged from $30 to $50 for the same employment. Wages of other European maritime nations were even lower than the British. By the end of 1918, the American rate had risen to $75 a month for both seamen and firemen. To compare this rate with wages of foreign ships in the same trade, Governor Bass's assistants examined the shipping articles of a large number of foreign ships clearing from New York in the month of December, 1918. England is of course our most important competitor. Of the twenty-one British ships whose shipping articles were analyzed, seven had hired all or a part of their crews in New York, and of these seven all but one were paying the American rate of $75 a month. The other fourteen had hired their crews in England, and were paying the British rate, namely $57.50 for seamen, and $60 for firemen plus a bonus in each case of $15 a month—a total wage of $72.50 for seamen and $75 for firemen.

Norway is the next most important competitor. On each of the eight Norwegian ships clearing in December both seamen and firemen were paid the American scale in dollars. Of the six Danish vessels four paid the American rate in dollars. Of the four Swedish ships analyzed, three paid the American rate in dollars; the two Danish and one Swedish vessels which paid wages in kroner paid a wage which, at par of exchange, would equal about $21, plus a bonus ranging from 120 to 140 per cent.

Two conclusions may be drawn from these figures. Great Britain, our principal competitor, has been forced to raise her wage scale virtually to the American level. The Scandinavian countries, which have not yet raised their wage scale to the American level, have in fifteen out of eighteen cases analyzed, been compelled either to ship American crews at American wages, or to re-ship their own crews at American wages. The American wage scale does, in fact, appear to dominate the commerce of the world.

The result has been to place American seamen and American shipowners in a better position than any they have occupied since the Civil War. Wages have increased, not only abso

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., June 30, 1919.
Regular weekly meeting came to order at 7 p. m., William Miller presiding. Secretary reported shipping good.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., June 23, 1919.
General conditions unchanged. (See Vancouver report.)

J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., June 23, 1919.
Situation unchanged. General sympathetic strike still on. Please stay away from British Columbia.

W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, June 23, 1919.
Shipping fair; few members ashore.

H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, June 23, 1919.
Shipping fair.

P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, June 23, 1919.
Shipping good; men scarce.

ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, June 23, 1919.
Shipping good; prospects good.

JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, June 23, 1919.
Shipping fair; men scarce.

HARRY OHLSEN, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, June 16, 1919.
Shipping dull; prospects poor.

JACK EDWARDSON, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., June 26, 1919.
The regular weekly meeting was called to order at 7 p. m., Eugene Burke in the chair. Secretary reported shipping fair.

EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, June 19, 1919.
No meeting. Shipping fair.

LEONARD NORKGAUER, Agent.
Grand Trunk Dock, Rooms 203, P. O. Box 214. Phone 2233.

San Pedro Agency, June 18, 1919.
No meeting. Shipping good. Few members ashore.

JOE MACK, Agent.
No. 613 Beacon Street. Phone Sunset 336. P. O. Box 54.

One of the most promising signs of the times is the wonderful progress of the movement for the organization of the teachers in the public schools. For the past two months a charter for a union has been issued every other day and the agitation has only begun. That teachers should have an intelligent understanding of the trade union movement and be in sympathy with it means much for the future.

A chemical for preserving art objects in good condition has been devised by Dr. Chickashige, professor of the Kyoto University. It has proved very effective in protecting wall pictures and other fine arts.

OUR CONVENTION LETTER.

(By Laurence Todd.)

In its second week, this Thirty-ninth Annual Convention of the American Federation of Labor has:—

Voted almost unanimously to accept the labor clauses of the League of Nations covenant.

Upheld the Plumb plan for public ownership and democratic control of the railroads.

Demanded, unanimously, the dismissal of Postmaster General Burleson from office.

Called for a new and fair trial for Mooney and Billings.

Insisted that the Espionage Act and similar laws limiting free expression be repealed as soon as the peace treaty is signed.

Asked that troops be brought out of Russia, but refused approval of any existing Russian Government.

Adopted a broad program of reconstruction measures proposed by the Executive Council.

Pledged resistance to injunctions issued in violation of constitutional rights of the workers, and demanded impeachment of all judges who may usurp power to nullify legislation or dictate to citizens in violation of law.

Bitterly denounced Congress for its neglect and refusal to enact laws beneficial to the workers, and for its apparent desire to serve only the holders of wealth.

Demanded that farms be provided for returned soldiers and displaced war workers under the life-lease plan developed by the Department of Labor; opposed the giving away of speculative title to public lands henceforth.

Ratified its previous political policy, without debate.

Called upon Congress to appropriate as much money for the Department of Labor, which serves the workers, as for the other governmental departments which serve business.

Demanded immediate reognition of the "existing Republic of Ireland."

Voted for exclusion of all immigration from Europe and Mexico for a period of several years.

Repeated its demand of last year for the removal of Governor Yager of Porto Rico.

Gave the Mule Spinners and Lace Operatives until September 1 to amalgamate with the United Textile Workers.

Called conference of Mining and Building Trades departments with the Steam Shovel and Dredgemen, the Steam and Operating Engineers and the Longshoremen, to carry out amalgamation of Steam Shovel and Dredgemen with Steam and Operating Engineers.

Instructed Executive Council to make further efforts to settle jurisdictional trouble between the United Hatters and the United Cloth Hat and Cap Makers.

Same action with reference to the Flint Glass Workers and the Machinists.

Ordered Jewelry Workers to give up die-makers to the Machinists and metal polishers to the Metal Polishers and Buffers.

Rejected all proposed changes in form or method of organization, or for making agreements expire on the same day each year, or for making May 1 the date of Labor Day.

These are only some of the chief points touched upon in five days crowded with every variety of business which may come before a labor convention. As these lines are being written the delegates, wearied with yesterday's long struggle over the League of Nations issue, are gathering again for the election of officers and the selection of a convention city for 1920. A large number of resolutions have still to be acted upon — the most important being that which deals with the campaign to organize the iron and steel workers—but these will be disposed of rapidly when the election is out of the way.

Monday's session opened with the report of the special committee which had seen Postmaster General Burleson in Washington and had secured his unconditional recognition of the right of the telephone employes to collective bargaining. Flaherty and Gainor of the Postal Employes and the Letter Carriers expressed deep distrust of the "surrender." The committee pointed out that it had not been instructed to deal with the strike of the telegraphers or the disputes involving the postal workers. Later the convention adopted resolutions demanding the dismissal of Burleson and calling for wage increases, better conditions and the abolition of speeding-up schemes for the postal service men.

"In the report of the committee," said Flaherty, on the dismissal resolution, "I see the early termination of the régime of this administrative misfit. By the mere recitation of the long list of his offenses against labor the Postmaster General stands revealed before the people in all his smallness, in all his meanness, in all his bigotry, a man unfit to hold public office."

On the League of Nations issue the debate was largely a contest between Andrew Furuseth of the Seamen on the one hand and President Gompers and Delegates Green and Walker of the United Mine Workers on the other. Furuseth argued that the labor section provides an industrial code which does not improve the conditions of American labor, and because America will be in the minority in the international labor commission the result will be to hold back the further improvement of the conditions of labor in this country. He showed that American proposals forbidding slavery and involuntary servitude, and providing that sailors leaving their vessels in a safe harbor should not be punished for so doing, were voted down in the labor commission in Paris.

President Gompers, in turn, showed that while the American proposals were defeated in almost every case, he had refused to sign the draft of the labor plan until it was modified to meet his view of what was at least safe for American labor. He read cablegrams from President Wilson approving the labor section as finally approved by the peace conference. He agreed with Furuseth that Premier Borden of Canada had weakened the draft by inserting the word "merely," in the first of the nine principles for labor, so that the language reads "Labor is not merely a commodity or article of commerce." But he appealed to the delegates to realize that this labor section of the League covenant was a vast improvement over anything that had ever before existed; and that organized labor could use it to steadily improve labor's condition in every country. This view was endorsed by Green and Walker, and the delegates answered the call of the roll by approving the League of Nations covenant by about 28,000 to 400.

Delegate McNulty of the Electrical Workers, leader of the Irish independence advocates in the convention, secured the adoption of an amendment which provided that "Nothing in the League of Nations as endorsed by this convention can be construed as denying the right of self-determination and freedom to Ireland." Previously, when the committee had reported in favor of self-determination for Ireland but had failed to call for recognition of the Irish Republic, Delegate Mahon of the Street Railway Employes had amended the report by demanding a hearing from De Valera, Griffiths and Plunkett before the peace conference, and McNulty had aroused the delegates to a storm of applause by offering a further amendment demanding that Congress recognize at once the existing Republic of Ireland.

Action upon the Mooney case was taken only after a full discussion during which W. B. Patterson of the International Workers' Defense League was given permission to talk. The committee recommended "that the Executive Council be instructed to give their early attention to the devising of such practical ways and means as will aid in securing a new trial to Thomas J. Mooney, and also the presentation before the court of the testimony and evidence presented since the trial, the character of which has created the belief that a most grave miscarriage of justice and perjured testimony were responsible for the conviction and sentence."

It also recommended that the convention censure the Defense League for attempting to poll the membership of the internationals, without their consent, on a sympathetic strike, and it declared its belief that "an attempted general strike would seriously injure the effort to secure a new trial to Thomas J. Mooney and accomplish much harm to his interests."

Delegates Deutelbaum of Detroit, Grow of the Machinists, O'Donnell of Boston, Strickland of Portland, Duncan of Seattle and Sullivan of Salt Lake City urged vigorous action or opposed the committee's criticism of the Defense League. Secretary Frey of the committee and Delegate Murphy of San Francisco answered. Patterson declared that the Defense League had no apologies to make to anyone for taking a strike vote which the internationals had failed or refused to take. Deutelbaum and Duncan of Seattle stated that their cities had voted to strike on July 4 in Mooney's behalf.

On the railroad question the convention instructed the Executive Council to cooperate with the organizations representing the railway employes in carrying out the so-called Plumb plan, which provides for Government ownership and democratic control, in which the wage-workers in the industry will hold one-third of the power.

Resolutions demanding legislation from Congress and from the State Legislatures that will abolish profiteering in the necessaries of life, and resolutions calling for the breaking of the meat packers' monopoly of the nation's food supply, were adopted. Organized labor voiced its demand for a voice in the policy of all school boards,

library boards and other bodies controlling the policies of education, in order that the viewpoint of the workers toward economic issues may be fairly presented in a field where thus far its opponents have been almost exclusively represented. A large number of resolutions dealing with conditions of labor or individual disputes were disposed of in the same spirit—a determination that the rights of the workers in the United States and Canada must be conceded and respected with less of delay and objection than was the rule before the war.

A proposal from Seattle that all internationals be asked to amend their laws so that a referendum or initiative vote might be taken on any given proposition by their membership simultaneously, was defeated. The committee held that while the labor movement in America is the home of the initiative and referendum, this weapon is dangerous to the life of the movement, "because it permits action before consideration," and because local appeals may stampede large numbers of workers into action which they will regret later. The minority led by Grow, Deutelbaum, Sullivan of Salt Lake and Duncan of Seattle, defended the resolution in vain.

On the issue of a Labor Party the report of the Executive Council was upheld. This endorsed the statement of President Gompers that "a great mistake may be made, a great injury inflicted upon our fellows," by the creation of such a political organization. Illinois delegates stated privately that this action would have no effect upon the Labor Party of Illinois, and they quoted the committee's report which says: "While local and central bodies and State federations may enter into the political field, either independently or otherwise, it is not within their province to form or become part of a national political party."

The demand for repeal, at the conclusion of peace, of all laws restricting freedom of speech, of the press, and of assembly, was voted without any opposition. However, the convention upheld the committee in refusing to ask for a general political amnesty. It held that while some of the men convicted under the espionage law, or for industrial crimes, deserve pardons or commutations of sentence, many others deserve the sentences imposed.

In general, this convention held to the established lines of the American Federation of Labor. It demanded more for the workers—in economic and political and social freedom—than ever before. It offered to the nation more of responsibility for the maintenance of our institutions of government. It welcomed the new era in which labor of all the nations will have a voice in determining the policy of all nations toward not merely the workers but all classes and all mankind.

SEA FOOD AND GEOGRAPHY.

The ocean literally teems with food. The man who declared that humanity is a race of herring catchers might have overstated the case, but that the sea abounds in food fishes and fishes fit for food is well known. As soon as we begin to study the subject of ocean fisheries, however, we come up short against the fact that what we really know about the inhabitants of the sea is startlingly limited. It was not so long ago that the fishermen of the North sea believed that whales brought the herring in toward shallow water—a conclusion they reached from the observation that schools of herring are frequently found in the vicinity of spouting whales. In 1906 there was a failure of the herring fisheries, and the fishermen blamed the situation on the Norwegian whaling vessels operating in that region. Likewise, it is still a moot question whether or not modern fishing methods tend to deplete the supply and whether artificial propagation of sea fishes is a sufficient counter-measure. A few years ago a British commission measured the intensity of fishing operations in the North sea. Trailing bottles were set adrift, and it was found that more than half of them were recaptured. In certain localities they were captured at a rate that indicated 90 per cent. retaken each season. Marked fish yielded largely similar results, and the conclusion was that food fish of adult size had at least three to one odds against its getting through the year uncaught. And yet there is so little race suicide in the ocean that even such intensive fishing probably has no effect upon the available adult supply. For instance, the female turbot lays 8,500,000 eggs a year, and the cod has 4,500,000 to her credit. The female flounder lays 1,400,000, the sole 570,000, the haddock 450,000 and the plaice 300,000. The poor herring must be content with a meager 31,000. Much remains to be learned about the migration habits of the world's food fishes. Where do the salmon go after they leave the rivers? Why does the eel, as discovered some time since by the Danes, go far out to sea, far to the south and west of the Irish coast, to spawn, and how do the countless hordes of delicate elvers find their way around the British Isles and into the continental rivers? Innumerable are the questions like these that the future will reveal to the oceanographers of a new day. The problem of life in the ocean is one full of interest and pregnant with valuable lessons for mankind. Even at the bottom of the deepest trench in the abysmal region of the sea's bottom, where no ray of the sun ever penetrated, where Stygian night is perpetual, where freezing temperatures never cease and where inconceivable pressures prevail, the miracle of life goes on.—National Geographic Society Bulletin.

RUNNING OUR EASTING DOWN.

Among the 8500 agents of the Fireman's Fund Insurance Company, we would probably be widely overshooting the mark if we took 5 per cent. of that number as being among those who have any direct, intimate interest in ships and sails and storms at sea. For, as Shylock says in the "Merchant of Venice," "Ships be but boards, sailors but men," and barring special circumstances and cases, it is not boards and men that make any particular appeal to the imagination. However, continuing the quotation: "There be land rats and water rats, water thieves and land thieves (I mean pirates), and then there is the peril of waters, winds and rocks." Out of the reality of these sea perils has grown the great, world-embracing business of marine insurance.

A busy day of marine underwriting makes one a traveler on every kind of vessel, from the busy, coughing gas boat to the great, rushing, castellated liner; from the seasick sloven of the ports, the scow, to the graceful, fine-lined, full-rigged ship with tall spars, white sails and whistling rigging. It makes of one a merchandiser of silks and teas and feathers from the Orient; steel plate, canned fruits, motor cars and colored shirts from the United States; nitrate and cottonseed cake from the West Coast of South America; salmon from the icy waters of Alaska, and on through the whole list of common or garden things we ordinarily connect with the busy shops of the city or the more peaceful stores of the country, with their friendly gossip and neighborly stories of an evening retailed as easily as the goods on their shelves. It would make one a visitor to Bombay with the "hills behind the city"—to Rangoon and Nagasaki, Pago Pago and Hilo, to New York and San Francisco and Key West, to Bermuda and London. It would open a romance beyond the dreams of Jules Verne and yet all the time one would be busy with the strain of quick decisions, of correct underwriting and profits at the end to be rendered, like the things that are Caesar's, where they are due.—Fireman's Fund Record.

Business men would do well to remember that the logical remedy for any disadvantage in competition suffered by them through the employment of organized labor is not less trade unionism in their own business, but more trade unionism in the business of their competitors.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

officials, history of Pan-American Federation of Labor, model constitution for a co-operative movement, with suggestions on how a co-operative company should operate, recommendations of inter-allied labor conference, list of remedial legislation in the various States, federal court decisions on labor cases, list of war boards and commissions, labor missions to and from Europe, a set of model apprentice rules, short record of financial transactions with per capita taxes and assessments by American Federation of Labor, voting strength of delegates to American Federation of Labor, and a number of statistical tables.

The price of the book is $2.

Favor Re-Education for Injured Workers.

After a four-years' investigation of serious permanent injuries to 700 workers, the California State Industrial Accident Commission has issued a report showing the necessity for the re-education of workers who suffer these injuries.

The report says the typical "general average" of these workers is 37.8 years of age. He has had the equivalent of four and one-half years of common school education. He is intelligent, ambitious and capable of learning. He has two dependents, besides himself, who look to him for support. He has a permanent disability rating of 34¾ per cent., or 139 compensation weeks, during which he draws a compensation of $23.55 a week under the State compensation laws. He has lost one year from employment. His present wage is $16.60 a week, against $22, previous to the injury. He feels that his position is uncertain and that the hazard of employment for him increases daily. He owns an equity of $184 in a house. The period of his compensation will soon expire. He will then be dependent for support upon a wage of about 65 per cent. of that enjoyed by his fellow workers who have no injuries, and he will be burdened with increasing hazard of employment as the years go by.

"The mills of our industries," continues the report, "have ground off his arms, or hands, or legs, or feet, or put out his eyes. The solution is not a pension. He does not ask that. The offer of a pension would be a moral crime. He asks simply a new industrial chance through industrial re-education. To this he is entitled by his industrial necessity. To this he is entitled by our industrial prosperity, achieved, in part, at his expense. To this he is entitled by the very humanity of the age."

Railroad Valuation is Knotty Problem.

If the ordinary citizen were asked on what basis should the private owners of railroads be paid if the Government takes control, he would reply: "Get a valuation of the roads and pay what the property is worth."

It is agreed that a valuation is the first move before anything tangible can be done, but when the method of valuation is inquired into controversy immediately starts. This is shown by Glenn E. Plumb, attorney for the railroad brotherhoods, in an article published in the bulletin of the A. F. of L. railway employes' department.

The brotherhoods insist that railroad value can be determined only by ascertaining the amount of money the various roads have actually invested at the present time. Against this seemingly fair theory is the plan urged before the Interstate Commerce Commission by the Kansas City Southern Railway. This plan, which is also urged by other large corporations, ignores the amount of money invested but is based on the earning power of the corporation. The Kansas City Southern holds that since it earns 6 per cent. on $75,000,000, that sum represents the present value of the property. Under this theory profits over a fixed interest charge are capitalized and becomes a charge against the property.

The Texas Midland Railway has another theory of valuation. It contends that the value of its property must be measured by the cost of reproduction, at present cost of land, labor and material. This theory ignores earning power, prudence of investment, rates, the amount of traffic and actual net earnings.

Another valuation system is the "property investment accounts," which is urged by railroad executives and security holders, who demand that a 6 and a 6½ per cent. minimum be guaranteed all securities.

The "property investment accounts" of the railroads do not represent money contributed by the security holders to the corporation. It is merely a bookkeeping account, says Mr. Plumb.

"This demand for value is intended to give a solid financial earning basis for all securities now outstanding," he says, "without any regard whatsoever to the consideration paid therefor, or the services to the public which such securities actually represent."

Great War Has Upset Economic Straw Man.

Because of European war labor costs, the theory that American industry "must be protected against the pauper labor of Europe" has been upset, says the Washington Evening Star.

"With the possible exception of Japan, and with China a possible exception of the future, the days of cheap labor are gone among the great competing nations, at least so far as this generation is concerned," says this paper.

"Aroused as all the people of Europe are to a determination to better their condition, there appears no prospect that there will be anything like a reversion to the wage scales and the standard of living of the wage-workers that existed before the war. The high-price level resulting from the war is being stabilized rapidly the world over."

The Evening Star indicates that American workers "can hold their own" in the markets of the world. Within the last few weeks, it is stated, Birmingham, which is the center of the British steel industry, advertised for steel rails for its municipal traction lines. An American mill underbid British mills.

In competition with British mills Americans secured a recent French contract for 750,000 tons of steel rails. It is stated that the British operators cut production costs to the limit, but they were underbid 30 shillings ($7.50) a ton.

It is stated that the latest thing in international economics is a demand in England that British industry be protected against the product of "cheap American labor."

NEW CONCEPTIONS OF JUSTICE.

(Continued from Page 2)

union wages. The employes number over 162,000.

In the old days there was between the mass of producers and the mass of the consumers a whole wilderness of private trade desolated by competition, and we have now decided that we are no longer content that every wage advance shall be swallowed up by an increase in the cost of living.

Thanks to our co-operative movement we have nothing to learn from the employers as to how to manage great industrial concerns. When the Government was in a hole about how it was going to feed the troops, how it was going to get commodities distributed and check profiteering, they turned to the laboring people, organized in their co-operative societies, and they got our help. And how did they repay us? The first food controller put into office was a man connected with the private interest of the grocery trade, and he diverted the raw material and supplies from the co-operatives. Oh, we have learned our lesson! We believe in self-reliance. We believe in the united independence of labor; we believe that we have got to look after our own business.

We have our own banking, our own insurance, our own factories, mills, bakeries, ships, carriage-building works, tobacco factories, clothing, tea plantations, and mines. We have got international trade relations. We believe by these three movements we are going to develop a working class of brain workers and hand workers on these lines; as producers through our trade union organizations, as consumers through the check we have on production and distribution through our great trading concerns, and as citizens through our control of government, both legislative and administrative.

We are full of the community spirit, we are recognizing that we have responsibility, not merely to myself as a shop assistant, not merely to John Jones as a carpenter, but we recognize the responsibility that rests upon us towards the whole community, those that are just coming into the world as well as those that are going out of it. We want to develop the broad, tolerant spirit that will look everywhere for ideas and assimilate those ideas; to secure justice for the great masses of the people and to do injustice to none.

I bring you the most cordial greetings from our trade union movement as a whole, and I wish you God-speed in building up, on this side of the Atlantic the bulwark for labor that we are trying to build on our side.

THE SEAMEN'S ACT.

(Continued from Page 7.)

lutely, but in relation to purchasing power—for seamen in the transatlantic trade the increase in wages since 1914 has been 164 per cent., and for firemen 89 per cent. This means, according to Governor Bass's report, an increase in purchasing power (after allowing for the increased cost of living) of 38 per cent. for seamen and 5.4 per cent for firemen. Wages are high enough now to attract the best type of American labor. Yet as compared with foreign vessels, the cost of operating American ships is relatively cheaper than before the war. These facts should be remembered when the agitation for the repeal of the Seamen's law begins again, at the next session of Congress.

SHIPPING VIA ICELAND.

The desire that centuries ago made men look to the north for closer connection between the eastern and western hemispheres may soon be realized by the shipment of Canadian grain from Port Nelson, in Hudson Bay, to Rekjavic, Iceland, there to be stored in warehouses for trans-shipment to Europe. The ancient Icelandic capital, dating back to the coming of the Northmen in the Ninth Century, will thus become an important link in the international commerce. Hudson Bay is unfrozen during about five months, and the grain, once stored at Rekjavic, where navigation is practically always open with Europe, can be forwarded as needed. The plan shortens the railway haul of grain moving from the new to the old world by about a thousand miles; and the grain ships crossing the bay will travel a Twentieth Century version of the new route for commerce which the old navigator Henry Hudson, was seeking in the early Seventeenth.

CAN THE WORKERS PAY?

Largely as a result of the war, England's national debt is somewhere in the vicinity of £8,000,000,000; so we are told. How is the interest on this enormous sum to be paid; or is it going to be paid?

At 4 per cent. the annual interest would be £320,000,000. Just prior to the conflict, England's National Debt was about £800,000,000, and much of this was incurred on reproductive undertakings. With the present liability, ten times as great, what have we to show for it? Nothing but thousands of crippled wage-earners, of widows to whom pensions must be paid, and about a million of our best wealth producers killed.

Over seven thousand millions of money blown away in smoke! Only the reek of gunpowder and a depleted army of workers have we purchased with this deadly loss of lives and money.

Before the war, however, there were ten millions of the working class of England on the verge of starvation. With the wage of a pound a week or less, they fought a losing battle, trying to keep body and soul together.

All the surplus value they produced was scraped from their hides to the last ounce by the class that lives on rent, interest and profit. They were skinned to the bone. It was impossible to skin them any further, or most certainly it would have been done.

The lot of these people was as bad if not worse than any cannibal savage in Africa. They were simmering with revolt. But when the war broke out, they were led by the employing class politicians to believe that, once the battle was won, they would be better treated. There would be no more starvation; they would be better fed, housed and clothed.

The scanty news from the Old Country that filters through the channels of the cable service would seem to show that the workers of Britain are demanding the fulfilment of those promises. How is that demand received? Why, with exhortations to trust to constitutional methods.

The classes that grow fat on rent, interest and profits by the mouth of their politicians are giving them this advice. What does it mean? It means that they should have faith in a Parliament elected by the classes that have always been their enemies—the middle and moneyed classes!

The Shylocks of the world are certainly determined to make the workers pay for the war. For the wage-earners to do so would mean longer hours, shorter pay, or harder work, or all of these combined.

But why should the workers pay the war debt? They had no say in the making of the war. They had only a small proportion of votes in the making of the Parliament that decided on war. Without being consulted, amid the Jingo cheers of the middle and wealthy classes, they were forced to face the guns of the Germans. If they refused there were British guns and British jails waiting for them.

And now the Government wants them to pay, voicing the interests of the privileged classes who stayed at home money-making. The Government wants the soldiers to settle down, and pay the interest on the debt.

After their awful experience, after going through hell, it wants them to work harder than ever to provide interest for those who stayed at home exploiting the nation. When the war was being waged, and the Empire was in danger, those who owned the most property had the most to lose. Therefore, they should, and must, be compelled to pay the greatest part of the money cost of the war, as it was entered upon to protect their title deeds and their property.

It is impossible for Britain to pay, out of the workers' increased efforts, the huge sum necessary in interest on her war debt. That is my opinion. The gigantic figure mentioned has gone beyond the productive capacity of the country. Debts of this kind can only be met by increasing the productivity of the nation, and, as every nation is staggering under a huge burden of debt, each will seek to increase its production in order to pay interest upon it.

Now the increasend bulk of products must be sold in the world's markets. These markets are growing fewer as time goes on, and the struggle for these remaining markets will be keener and keener.

During the last few years America and Japan have shown this. They were once the dumping ground for the manufactured articles of Europe. During the last few years they have developed into highly-skilled manufacturing countries, and are themselves now looking for markets for their surplus products. They are competitors for the remaining markets.

Let us consider the magnitude of the debt, the cripples England must keep, the increased pension list, the greater competition for the markets, and the decreasing number of markets; and ask yourselves, can England pay?—P. Brookfield in the Australian Worker.

RELATIVE VALUES.

"If there is one lesson which has been gained from the war, it is that the value of labor was always under-estimated, and the value of capital always over-estimated. In the first week of the war, the whole banking system of this country would have crashed into ruin, only for the fact that the Government supported the money market with the national credit. And that credit, it has been clearly shown, lay not so much in banks and capitalists, as had been supposed, as in the power of the people to use their energy and their skill to do the work that was required if we were to win the war.

"Labor has got, through the war, a new status. It has been clearly demonstrated that only those who work, whether with hand or brain, count; the rest matter little or nothing. And that fact having been demonstrated, it is likely to be made the center of the economic discussions of the future.

"We in this country have shown that, despite the fact that 6,000,000 men have been taken from industry, and millions more men and women have been diverted into making things that kill instead of things that give life, the workers have been on the whole better fed, and better off generally, than before. When those millions of men and women are again established in the arts of peace, are they all going back to the same old stage as before we learnt the great lesson? We think not."—Reynold's Newspaper, London.

Labor News

Congressman Blanton of Texas continued his fight on the $272,000 appropriation for the United States employment service, when the House was considering the deficiency appropriations bill. Through his attacks on President Gompers and this appropriation, the Texas Congressman is receiving publicity that some newspapers accord a real statesman.

After nearly a week's tie-up of the Detroit (Mich.) street car system organized motormen and conductors have received what is declared to be the highest street-car rate in this country. Old rates were 43, 46 and 48 cents an hour. These have been advanced to 50 cents for the first three months of service, 55 cents for the next nine months and 60 cents thereafter.

The Order of Railroad Conductors, which has just completed its convention at St. Louis, Missouri, voted to make an application for admission into the American Federation of Labor. Such a step had been under advisement for some time past, but had been deferred until the present convention. A. B. Garretson, chief executive of the conductors since 1906, has retired from that position.

The American Federation of Labor convention condemned the Postoffice Department's policy of conducting speed and efficiency tests among employes. The Executive Council was directed to make every effort to have abolished all speed tests, time-measuring devices and "other unreasonable standards of personal efficiency." It was declared that these systems are detrimental to the health and welfare of postoffice employes.

The national board of farm organizations, representing over 3,000,000 farmers in every State in the Union, has asked Congress to continue the United States employment service, which failed to secure the necessary appropriation at the last session of Congress. The National Grange, numbering 1,000,000 farmers, has made a similar request. The farmers say that it is necessary that they have some agency of national scope through which they can obtain workers when needed, and that the seasonal problem promises to be serious, particularly in the big wheat belt extending from Texas to the Canadian border, wherein is grown three-fourths of the nation's wheat crop.

There are 28,860 employed women in the city of Seattle alone, says a bulletin sent out by the Seattle Business Women's Civic Club. Of this number 75 per cent are between the ages of sixteen and eighteen years. Approximately 18,000 live away from home, entirely self-supporting. Of this number of employed women, 61 per cent have others dependent upon them for support. The average wage for women in the State is the minimum wage of $13.20 a week. The latest survey on the cost of living for the employed woman in Seattle is $70 a month. This includes only the necessities of life. It does not include drug, dentist, doctor or optician bills, dress accessories, gifts, church, club or union donations, etc. At $13.20 a week the average wage is $57.20 a month or $12.80 under the estimated bare living cost.

INFORMATION WANTED.

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardmore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

The widow of Otto Kivi, who fell overboard on the S. S. "Carlos" between San Francisco and Aberdeen, May 30, 1919, wants to know the names of the crew on the ship. Kindly assist his widow by giving this information to S. T. Hogevoll, attorney for the widow, 627 Pacific Building, San Francisco. 6-11-19

When making purchases from our advertisers, always mention The Seamen's Journal.

INFORMATION WANTED.

Will any of the crew of the barkentine "Thos. P. Emigh" who were on her at the time Jacob Olsen was hurt by being thrown over the wheel on or about October 27, 1918, please call on or communicate with F. R. Wall, 324 Merchants' Exchange Bldg., San Francisco, Calif. Telephone, Sutter 5807. 6-18-19

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

CARRY ON!

Uncle Sam is releasing from his service the men who went "over there" to free the world from autocracy. Thousands of soldiers are daily receiving their honorable discharges; they pocket their pay, bid farewell to their comrades, and sally forth—civilians.

There is one army, however, which must not be demobilized. That is the army of War-Savings Stamp buyers. More recruits are needed to carry on the campaign of readjustment which follows the signing of the armistice.

The army of fighters has achieved its purpose.
The army of savers must remain in "action."
"Carry on" to a lasting peace under the banner of W. S. S.!

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal.
11-6-18

Carl Hansen, a native of Soon, Norway, age 35, formerly a member of the Lake Seamen's Union, is inquired for by his mother, Marn Hansen, 778 Sixth Ave., Milwaukee Wis.
8-17-18

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City.
1-1-19

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City.

Frank J. Phillips, a member of the Marine Firemen's, Oilers' and Watertenders' Union of the Atlantic and Gulf, last heard of in San Francisco, Cal., April, 1916. Anyone knowing his whereabouts will please notify Mrs. Frank J. Phillips, P. O. Box 521, San Pedro, Cal.
2-19-19

Home News

The Denver Post has announced the purchase of an airplane for distributing papers to suburban towns.

American dressed meat production, including lard, amounted in 1918 to 20,129,800,000 pounds — a quantity never before approached in magnitude by the live stock industry of this or any other country. The amount for 1917 was 16,317,300,000 pounds.

Steps toward a Congressional investigation of lynching with a view to the Federal Government's taking action to stamp out mob murder have been announced. Facts and figures and all available testimony and information concerning mob murder in the United States are being assembled to be laid before Congress.

It is announced that out of the funds to be raised by the Salvation Army drive some $200,000 are to be devoted to the erection of a building in South Philadelphia, "exclusively for colored people." So even the Salvation Army, remarks the New York Age, broad as is its humanity, has got to fence off the colored brethren.

Miss Lizzie Wooster, superintendent of public instructon in Kansas and the first woman to be elected to a State office, has sent notices to all the teachers of Kansas that she will not tolerate the use of tobacco by teachers. Miss Wooster will ask that the certificates of teachers who are found to be addicted to the tobacco habit be revoked.

Definite announcement of the plans for the establishment of the Pan-American University in Riverside, California, is expected soon. It is said that ample funds are assured and that a site is to be selected on the eastern slopes of Mt. Rubidoux. More than 1700 students annually come to American universities from Mexico, Central America, and South American republics.

The Japanese Association of America under the direction of Dr. S. Kurihara, has adopted an Americanization program for the assimilation of the Japanese in this country into an understanding of American life and ways. This association, with an office at San Francisco, Cal., is headquarters of about forty Japanese organizations in the States of California, Nevada, Utah, and Colorado.

The Federal Farm Loan system is now doing about 15 per cent. of all agricultural land loan business in the United States. A report of the Farm Loan Board at the conclusion of the second year of operation shows that loans closed in the last twelve months amounted to $120,238,000. The aggregate of farm loans made by all agencies, public and private, is estimated at about $800,000,000 annually.

According to the records of the State auditor, the sixteenth legislative assembly of North Dakota, in session last winter, cost the State $87,299.91, or just $20,027.22 less than the previous session, when the Legislature was only partly controlled by the Nonpartisan League farmers. Four years ago, when the old guard was in full control, the Legislature's expenses were $144,735.19, or $57,435.28 more than the farmers' assembly.

Domestic and Naval

The schooner "Eugenia," 66 tons register, built at Gloucester, Mass., in 1908, has been sold to the Peninsular Export Company, New York, for about $12,000.

The British steamer "Sarpen," 1804 tons gross, 1100 net, built at Fredrikstad in 1912 and owned by the British Shipping Controller, has been sold to the Kellner-Partington Paper Pulp Co., of Norway.

The British steamer "Dakar," 3987 tons gross, 2518 net, carries about 4976 tons deadweight, built at Middlesbrough in 1899 and owned by the British Colonial Office, has been sold by auction in London to foreign buyers for £23,000.

The British steamer "War Ruler," 5175 tons gross, 3148 net, built at Barrow in 1918 and owned by the British Shipping Controller, has been sold to the Lloyd Royal Belge (Great Britain), Limited, London, and renamed "Gasconier."

The British steamer "War Burman," 5200 tons gross, 3280 net, built at Greenock in 1918 and owned by the British Shipping Controller, has been sold to the Lloyd Royal Belge (Great Britain), Limited, London, and renamed "Burgondier."

The British steamer "War Scot," 5100 tons gross, carries about 7800 tons deadweight, built at Glasgow in 1918 and owned by the British Shipping Controller, has been sold to the Lloyd Royal Belge (Great Britain), Limited, London, for about £200,000 and renamed "Chilier."

The British steamer "Royal," 3833 tons gross, 2497 net, carries about 6295 tons deadweight, built at Newcastle in 1902, which was detained at Hamburg during the war, has been sold by auction in London on behalf of the war risk underwirters to O. A. T. Skjelbred, of Norway, for £135,000.

It was stated recently by Brig. General Hines, Director General of Transportation, United States Army, before the House Committee on Military Affairs, that Great Britain originally asked $150 for transporting each American soldier to France, but the cost was finally reduced to $81.75. The witness was asked whether he did not think the charge was excessive, but replied that he believed the cost of transporting troops in American ships would turn out to be higher.

Norwegian owners of twenty-seven vessels ordered from American shipyards and requisitioned when the United States entered the war have effected a compromise settlement with the Shipping Board on the basis of $225 per ton deadweight and interest at 6 per cent. The aggregate deadweight tonnage involved in the transaction is 182,575. Only the interests represented by Emil Stray participate in the settlement, the Hannevig group being still negotiating. It is said on behalf of the Norwegian owners that the sum paid by the United States Government, although a large one, $34,500,000, will involve the ultimate owners of the contracts affected in a loss. These contracts were originally placed with American shipyards on an average basis of $118.20 per ton deadweight and as much as $280 was paid for these contracts by the ultimate holders. Payment of the claims will be made through the Norwegian legation at Washington.

News from Abroad

In Great Britain forty-six women hold seats on county councils. Prior to the recent elections only twelve held such positions.

A conference held at Paris by the French Colonial Union and the British Association of West African Merchants has resulted in the formation of a joint Franco-British committee on African affairs. The primary object of the Committee is to secure uniform legislation in France and in Great Britain upon questions affecting the development of colonial territories in Africa. This undertaking is regarded as the first step in an important movement toward Franco-British colonial co-operation.

Authoritative reports are at hand of the increasing activity of Dutch shipbuilding firms. The purchase by Wilton's Slipway and Engineering Company, Limited, Rotterdam, of a large floating dock at Hamburg, is another evidence of this activity. The dock was originally constructed for Austrian account, and will take vessels up to 30,000 tons deadweight. It will be stationed at the company's new works near Vlaardingen, and will be the largest dry dock at any Dutch port. As an addition to the repairing facilities in Holland the purchase is significant.

Five brothers Christensen, of Sandefjord, have started a new steamship line, "Den Norske Chile-linje," with a capital of six million kroner, of which four millions is paid up, and the rest secured. The new line will undertake traffic between Scandinavia and the west coast of South America, via Panama Canal. Besides Scandinavian ports, the ships will also call at Hamburg and Antwerp. Three steamers are now being built at English yards for delivery in 1920. Until that time the line will work with chartered ships, plying between New York and Chile.

Nakhichevan is the very latest! A principality at the foot of Mt. Ararat, it has asked the United States to be its mandatory. The plea which is addressed to "the imperial representative, the supreme President of the United States," gives thanks to his "supreme highness" for the money, clothing, and grain received from American relief workers, applauds "the advance and increase of glory of the American Republic," and then proffers the great request. The comment of one writer on the subject is perhaps as good as any that could be made, "Well, Nakhichevan, we'll see."

For the first time in the history of Japan a man without a title is at the head of the government. Mr. Kei Hara, the present Premier, is a commoner, born in northern Japan, and educated in Tokio on a scholarship founded by the feudal lord of his clan. He studied law as a profession, but entered journalism, serving on the immediate journalistic ancestor of the now well-known Hochi Shimbun. From journalism he entered diplomacy under the Marquess Inouye, then Foreign Minister, and was sent as consul to France. Returning to Japan he became director of the Commercial Bureau of the Foreign Office under Count Mutsu; and then in turn Minister in Korea, and Vice-Minister of Foreign Affairs in Japan.

With the Wits

"Why do you refer to Easymark as 'the human banana'?"

"Because he is so easily skinned."—New York Globe.

Taylor's Nautical Academy

Established 1858

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 44. SAN FRANCISCO, WEDNESDAY, JULY 9, 1919. Whole No. 2546.

THE CRIMPING SYSTEM

How Seamen Are Secured in the Port of New York

The crimp—a person who procures seamen by foul or fair means, and always for a fee—was formerly found in almost every seaport of the world.

The crimping business is as old as the hills or, at least, as old as the sea.

Prior to the day when the seamen of America organized their union, and before they took full advantage of organized self-help, the salt water ports of America had their full share of that species. In those days the crimp used to decoy his victim with a bottle of whisky and the promise of a good job ashore.

The crimp of today works along more refined lines. Herewith is an article by Mr. Arthur E. Albrecht, who personally investigated things in New York Harbor.

It has long been the custom for crews of ocean and coastwise vessels to be discharged after the completion of a round trip. In the past it was the general practice to re-hire only those men actually needed to care for the vessel while it was in port. The rest of the crew was not re-hired, but had to be replaced a few days before the vessel was ready to leave port. As the men who left the vessel had no home, they secured board and lodging at seamen's boarding houses.

The steamship companies soon found that crews could be secured by turning to the boarding housekeepers. These men soon became known as "crimps," for they not only charged the steamship companies for the men supplied, but they also exploited the seamen. While the seamen had ready money, the crimp was in no hurry to ship the men. However, when the men had spent all their wages and were indebted to the crimp for board and often for clothes, a job was secured for them. Mr. Andrew Furuseth, president of the International Seamen's Union of America, says: "The power of the crimp was in the necessity of the seaman. The seaman was without means to live, the crimp furnished the means and in return determined the seaman's wages, what vessel he was to ship on and the advance that was to be paid." *

The seaman paid the money due to the crimp by signing an allotment note, known as an advance, which was collected by the crimp at the company's office, a few hours after the ship had left port. As a result of this iniquitous system many a man toiled the greater part of the voyage not for himself, but for the crimp.

Under Section 24 of the Seamen's Act of December 21, 1898, allotment notes could be issued to relatives and to original creditors in liquidation of any just debt for board or clothing which the seaman may have incurred prior to engagement.

In accordance with Section 11 of the Seamen's Act of March 4, 1915, a prohibition against allotments to creditors on American vessels was put into effect on November 4, 1915, and was applied to seamen on foreign vessels after March 4, 1916, except in such cases where it was held that the prohibition conflicted with certain articles in treaties or consular conventions. In these cases the provision applied after July 1, 1916. In consequence of the prohibition against allotments issued in favor of creditors, the power of the crimp has been greatly reduced. Allotments are, however, still permitted to relatives.

According to figures compiled from the Annual Report of 1917 of the Commissioner of Navigation, there were made in the United States in 1905, 2514 allotments to creditors, 304 allotments to relatives; in 1915, 995 to creditors, 682 to relatives; in 1916, 403 to creditors, 1174 to relatives; in 1917, none to creditors, and 1650 to relatives.

The power of the crimp was further reduced by Section 10a of the Seamen's Act of 1915, which provides: "If any person shall demand or receive, either directly or indirectly, from any seaman or other person seeking employment, as seaman, or from any person on his behalf, any remuneration whatever for providing him with employment, he shall for every such offense be deemed guilty of a misdemeanor, and shall be imprisoned not more than six months, or fined not more than $500."

The provision prohibiting the advances and the provision against accepting remuneration for securing employment have been the chief factors in dealing a death blow to the power of the crimps. Their influence has been still further weakened by the seamen's homes and missions, which lodge seamen and thus keep them away from the objectionable boarding houses. Moreover, the organization of the men into powerful unions, the abnormal demand for men during the war, and the higher wages now being paid, have all had their influence in causing the power of the crimps to wane.

In spite of the fact that the crimp as he existed before the passage of the Seamen's Act of 1915 is no longer preying on seamen, a study of the employment systems of the companies securing their crews in New York revealed the remains of a once vigorous crimping system.

The most conspicuous remains of the crimping system were found to exist in the employment of the deck and fireroom crews. To recruit men for these departments, most of the companies make use of a shipping agency. This agency is usually either an individual (known as a shipping master) or a seamen's mission.

The greater number of steamship companies use the services of a shipping master. Whenever a vessel needs men to complete its complement, the shipping master is notified. He then sets out to secure the men and sees that the vessel is fully manned.

Some of the shipping masters maintain an office to which men may come to apply for work. One of the shipping masters who maintains such an office stated that in normal times enough men came to the office to make resort to boarding houses, unions, and missions unnecessary. During the war, however, his runners were compelled to visit the unions, the missions and the various boarding houses, and to comb the streets for men.

Another steamship company makes use of a shipping master, who maintains an office to which men may come for positions. His chief source of men, however, is through a Spanish boarding housekeeper who has supplied him with men for about five years. When positions are scarce it is said that all men must come through the boarding housekeeper.

It was found that a number of steamship companies make use of shipping masters who are also boarding housekeepers. These men do not charge for their services, but are reimbursed for the expenses incurred in supplying the men. One of the officials of a steamship company was of the opinion that the boarding housekeepers charged enough board money to make it unnecessary for them to charge the companies for their services. In all instances it was found that these agents supplied men of their own race. Spanish, Greek, Chinese and Japanese boarding houses predominate.

In order to protect the seamen from undue exploitation by boarding housekeepers, the State of New York has created a Board of Commissioners with the powers of licensing, inspecting and revoking licenses, of sailors' hotels and boarding houses in the City of New York. When a license is issued, the hotel or boarding house is inspected by an inspector temporarily appointed by the board to make periodic inspections. The further inspection of a newly-licensed house is referred to the fire, police, health, tenement house and building departments of the City of New York. Should the proprietor not comply with the recommendations of these departments, his license is revokable.

The board tries to have each place inspected three times a year. Complaints from boarders and lodgers in licensed hotels and boarding houses are heard, reviewed and acted upon. However, it was admitted by members of the board that numerous hotels and boarding houses for sailors were unlicensed. It is suspected that a number of sailors' boarding houses are licensed as immigrant boarding houses by the New York State Department of Labor. One of the motives to secure an immigrant house license is the fact that an immigrant boarding house license has a maximum fee of twenty-five dollars (most of the licenses can be secured for less), whereas the fee for a sailors' house is twenty-five dollars for each year.

One of the members of the board stated that the board is handicapped by having no appropriation for the purpose of carrying out the law. The members of the board serve without pay. The entire expenses of the board incidental to all its functions must be paid out of the license fees.

The Missions as Shipping Agencies.

A number of companies made use of the various missions in order to secure men. The Sea-

* American Sea Power and the Seamen's Act, p. 17.

men's Church Institute, the Seamen's Christian Association, and a number of Norwegian missions in Brooklyn are most frequently used. There are a number of missions which are homes only and do not serve as employment agencies.

The Seamen's Church Institute, which was organized in 1843, is located at 25 South street and is the largest mission in New York. The institute maintains a reading room, chapel, and general hotel accommodations for about 530 seamen. According to figures compiled from "The Lookout," the monthly publication of the institute, 3111 seamen were shipped through the employment agency during the year ending April 30, 1918.

"Christian" Shipping Agencies.

The International Mercantile Marine, an association of a number of American and English steamship lines, secures its men through the Seamen's Christian Association, 399 West street. The 1917 annual report of the association informs the reader: "This active, economically managed organization is supported wholly by voluntary contributions, and is free from debt."

In addition to the contributions from people who are interested primarily in the welfare of seamen, the association receives substantial contributions from steamship interests. Among these latter contributors for 1917 were the American Line, Atlantic Transport Line, P. A. S. Franklin of the International Mercantile Marine, Panama Pacific Line, Red "D" Line, Sanderson and Son, White Star Line, and the Donald Steamship Company.

The association has no sleeping rooms, but furnishes needy seamen with board and lodging at near-by places. A reading and game room, gospel services, floating libraries, and other spiritual and physical aids are provided. Although the mission provides all these welfare features, its very life seems to depend on its making good as a shipping agency for the International Mercantile Marine.

A paragraph on page five of the annual report of the mission for 1917 summarizes this phase of the work: "It is a great satisfaction to feel assured of the confidence and support of the officials of the many companies whose ships are keeping open the Atlantic highway. All their requirements have been met satisfactorily by our superintendent and his staff, who have given their untiring efforts and strength to this important field of endeavor. As heretofore, this has been one of the most useful features of our work, for from this bureau more than 18,000 men have been shipped, showing an increase over last year."

The Bethel Ship Mission of Brooklyn, which acts as a shipping agent, was founded as a mission in a ship many years ago. The mission was established in its present place in Sullivan street, Brooklyn, about five years ago during a period of acute unemployment. At first men were given lodging and food, but because the hard times continued, the mission saw fit to establish an employment bureau.

The mission is self-supporting, receives no large contributions and does not supply men for any particular steamship line, although an effort is made to supply crews for Norwegian ships. The mission usually charges steamship companies three dollars for each man supplied.

The Scandinavian Sailors' Temperance Home in Brooklyn was founded about thirty years ago for the "promotion of the welfare and morals of the seamen of Norwegian, Swedish or Danish nationality." The home consists of an up-to-date double four-story house.

A shipping office was started in the home in 1916. During the year ending September 30, 1917, employment was secured for 3018 men. A fee of three dollars is charged the companies for each man supplied.

The United States Shipping Board has a large number of ships for which crews must be supplied. It is imperative that the crews be readily available. To meet this situation the Shipping Board maintains a department for the recruiting of its crews, to which men seeking a position may come in order to apply for a position. An experienced man can walk into the waiting room, state his qualifications and secure a job in a few minutes.

Army Transport's Shipping Method.

During the war the Army Transport Service maintained a large office to which men came for positions. Three departments for securing crews were maintained: a deck department, fireroom department, and steward's department. All the men needed were secured by men coming to the office and applying for work.

The employment system of the Southern Pacific Railroad (Morgan Line) is the most highly thought of system in use by private lines. This company maintains a large waiting room at the entrance to its piers where a man can apply directly for work. When jobs were scarce and men were plentiful; the room was crowded from early morning until closing time. During the war few men came to the pier. In order to supply the necessary men, the unions were called upon to help furnish them. The Stewards' Union and the Sailors' Union were always able to supply the deficiencies. The Firemen's Union did not function quite as well as the other two unions, although it supplied quite a number of men.

A number of lines have an employment system that is similar to that of the Southern Pacific. The companies employ a shipping master who is in direct charge of the deck and fireroom departments. An office is maintained on the premises of the company where men may apply for work.

The shipping master, however, secures most of his men through runners who are also in the employ of the company. These runners visit the union halls, the missions, and other shipping agencies. In Brooklyn a number of storekeepers who cater to the trade of Scandinavian seamen act as shipping agents and supply anyone who is in need of men. Runners are able to pick up a large number of men through these storekeepers, who place notices for men in their windows.

Some of the companies that have no regular shipping agent, have either a superintendent of the company or the captain of the ship see to the recruiting of the crews. It was found that those companies that had no shipping master generally had agreements with the unions to supply them with the necessary men. The Ocean Steamship Company of Savannah has an agreement with all the unions, which supply that line with all the necessary men. Other lines have agreements only with one or two of the unions.

The unions are an important factor in the recruiting of seamen and there seems to be a tendency for them to increase in importance as a clearing house for labor.

The Eastern and Gulf Sailors' Association, which is affiliated with the International Seamen's Union of America and with the American Federation of Labor, takes in those men that belong to the deck crew. A large meeting room is maintained to which members may come to read or talk. When a call for men comes to the office, an announcement of the number and kind of men wanted is made in the meeting room. Those that come forward are given an employment slip on which is written the name of the man applying for the position, the name of the steamship, and the date; the slip is signed by an agent or delegate of the union. No record of jobs secured or of men sent to companies is kept.

When no men in the meeting room apply, the announcement is written on a black-board, so that men who are not in the room at the time of the announcement may have an opportunity of answering the call.

According to the agents of this union, it is not desired that the union should act as an employment agency. The agents desire that "jobs be open and free," so that any man in need of work may be able to apply at a steamship pier without having to resort to a shipping agency of any kind.

Marine Firemen's Shipping Policy.

The Marine Firemen, Oilers and Watertenders' Union of the Atlantic and Gulf, which is affiliated with the International Seamen's Union of America and with the American Federation of Labor, has offices in Manhattan and in Brooklyn. The union places its men in the same way as the Sailors' Union. The agents of the Firemen's Union were also of the opinion that jobs should be free and open to all, and that it should not be the function of the union to act as an employment agency.

Many lines employ Spanish firemen whom they are compelled to get through boarding housekeepers when the union is unable to supply enough firemen. It was the general opinion among shipping men that the Spaniards were unorganized, but clannish.

In spite of the fact that the Spaniards were thought to be unorganized, it was found that they nevertheless demanded the wages generally paid in the port. The Spaniards, however, have formed themselves into a branch of that organization whose preamble reads: "The working class and the employing class have nothing in common. Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system." In short, the Spanish firemen have a charter from the Industrial Workers of the World. The New York Branch has about 5000 members of whom 3000 are in good standing. It was formerly affiliated with the American Federation of Labor, but dissatisfaction with the methods of that body led to the formation of an industrial union in 1913, and it is now known as the Marine Transport Workers' Union, Local 100 of the I. W. W. Although the branch takes in all marine transportation workers, the majority of the members are marine firemen. No hiring is done through the organization by any of the steamship lines. The organization does not take part in any of the agreements between organized labor and the steamship companies, because of a direct prohibition contained in their constitution.

Members of the stewards' department are for the most part hired in a way entirely different from the hiring of the deck and fireroom crews.

It was found that most of the steamship companies have a port steward, who among other duties has general charge of the employing of the cooks and stewards. Two companies were found to hire their cooks and stewards exclusively through the Seaman's Church Institute.

The greater number of cooks and stewards for the International Mercantile Marine are hired by the Port Steward, to whom men in need of work can apply directly. The Seamen's Christian Association, which supplies men for all the other departments of the International Mercantile Marine, sends cooks and stewards to the Port Steward when there are not enough direct applications.

Among the steamship companies is one which employs almost exclusively Oriental cooks and stewards. This company encourages its chief stewards to find their own men, which they secure in Oriental boarding houses. Cooks and stewards, however, do not as a class live in boarding houses and missions, and for this reason the port stewards are compelled to seek their men elsewhere. The Marine Cooks and Stewards' Association, which is affiliated with the Seamen's Union of America and with the American Federation of Labor, claims ninety per cent. of the marine cooks and stewards of the port of New York and is a powerful factor in the placing of its men. The union was organized in 1901 and has been an active organization since 1904. In 1916 the union succeeded in organizing several non-union lines.

Marine Cooks' Agreement.

An agreement between the union and the Ocean Steamship Company of Savannah, dated April 15, 1916, reads in part as follows:

"First: That during the term of this agreement, it will employ no member of the crew or employee of the stewards' department who is not a member in good standing of the Marine Cooks and Stewards' Association of the Atlantic & Gulf, and that they will employ members of the Marine Cooks and Stewards' Association at the rates of wages hereinafter specifically set forth.

"Second: It is further agreed that should the Association be unable to procure all the help required, the Company, party of the first part, has the privilege of filling in such vacancies for one voyage or until the Association is able to fill the vacancies with competent men who are members of said Association.

"Third: It is furthermore agreed, that members of the stewards' department shall ship for one voyage only, and that they shall be paid all wages due them at the expiration of each voyage. That the port in which the crew signs articles for a voyage, shall be deemed for the York, New York shall be the terminal port; that for the trade between Savannah and New York, New York shall be the terminal port; that between Boston and Savannah, Boston shall be the terminal port.

"Fourth: It is further agreed by the Company that there shall be no cooking required in the terminal port by the regular kitchen staff."

On July 16, 1917, an agreement was entered into between the union and Eastern Steamship Lines, Inc. Part of this agreement reads:

"It is agreed between the above mentioned parties that the Stewards' Department on all ships owned, operated, and controlled by the Eastern Steamship Lines, Inc., operating in and out of the ports of Boston and New York, shall be manned exclusively by members of the Marine Cooks and Stewards' Association."

During the course of the year, several agreements were made with other steamship lines. As a result of its numerous verbal and written agreements, the union has practically closed shop conditions on the vessels sailing regularly from New York Harbor.

Union Held in High Repute.

The union is held in high repute by the employers, and when in need of men, the port stewards invariably turn to the union in order to recruit their crews for the stewards' department. The port stewards of two lines keep a list of applicants which they use when in need of men. When, however, they find themselves unable to secure enough men from their lists, they turn to the union for men.

When a call comes in from a company, an announcement to that effect is made in the union's meeting room, and the notice is written on the black-board. Properly qualified men are sent to the port steward who has asked the union for men. Each man is given a slip on which is printed the name and address of the union, and other information. Upon the slip is written the date, the name of the bearer, the position applied for, and the name of the company. The slips are taken up by the port steward, whether the man is employed or not. When the man is employed, the date of employment, his position and his wage rate are written on the card. On his return, the quality of his services is recorded. By thus keeping a record of the man sent by the union, the companies are able to keep a check on the kind of men the union sends. Consequently, the union is forced to live up to its statement, "We have the best in the business."

Officials of this union agree that the union should be the chief factor in supplying men.

The protection of the seamen from the crimps secured by the Seamen's Act of 1915, the growing power of the unions, and the scarcity of seamen have all been important factors in reducing the waning power of the crimps. Altogether, there is every reason to believe that the seamen will soon be freed forever from exploitation by the crimp.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Turmoil in Germany Follows War Defeat.

The social and industrial life of Germany has collapsed since the armistice was declared, can be said to be a summary of a report to Herbert Hoover, director general of the American relief administration, by Alonzo E. Taylor and Vernon L. Kellogg.

Regarding the food situation, these investigators declare that "from every point of view of a normal diet the food is revolting," and that the entire industrial population is much below weight. Other factors in the collapse are a lack of raw material, breakdown of railway transportation, scarcity of coal and a refusal to work by returned soldiers. Regarding the latter condition the investigators say this is the natural result of the German military discipline and four years of destruction which makes it impossible for men to immediately change their viewpoint when demobilized.

Office holders, politicians and diplomats, it is stated, "believe that the Germans will bob up serenely on their feet after being fed," but the investigators state that the more the question is analyzed the less hopeful the solution appears, because politicians are capitalizing bolshevism, playing with it in words, both for inside and outside boundaries.

Crime is rampant in Germany, offenses against the person as well as against property. The Government, it is stated, possesses neither military nor police power, as the police service was practically disbanded after the revolution. Since many inmates of jails have been released professional crime flourishes.

The investigators recommend that food and raw materials be shipped to Germany under a rationing system.

"The sooner the nation is put to the test the more directly will the response correspond to the actual condition in the German working classes. Delay is injurious to the Germans and to the Allies. It is the old problem of penology upon a national scale: shall an offender expiate by solitary confinement on bread and water or work off a fine on the stone pile? Involved are both morals and utilities."

Strong Trade Unions Enforce 8-Hour Law.

Numerous strikes are waged in France because employes ignore the national eight-hour law, recently passed by Parliament. The law provides that the various industries shall work out the details of the act, but in no case shall wages, be they piece or time, be reduced. This implied mandate that employers confer with their workers has not been accepted in all cases, and in the unorganized or poorly organized trades, where the workers have no economic power, the eight-hour day is yet a theory.

In Paris sugar refinery workers are striking for eight hours and to secure reinstatement of two victimized members of their union. Most of the strikers are women and girls.

The military trade, which employs thousands of girls, also ignores the law, and nine and one-half hours is the rule.

By suspending work, threadmakers at Milhouse, Alsace Lorraine, forced employers to grant eight hours and increase wages 65 to 80 per cent.

Disease Costs Billions.

Economic loss in this country from preventable diseases is estimated by American Medicine at $2,500,000,000 a year. This conclusion is based on an elaborate study of the subject by the Illinois Health News, which shows that in 1918 in Illinois alone illness and death from such diseases entailed a loss of $24.67 for each man, woman and child in the State. Although the general death rate in Illinois was at the low figure of 14.2 per 1000 of population, the loss from the principal preventable diseases amounted to $15,881,685, or 6.01 per cent. of the total property value of the State.

"If this ratio of per capita cost," American Medicine says, "were to apply for the entire United States the loss during 1918 would amount to more than $2,500,000,000. The Illinois figures, however, merely considered the cost of the following communicable diseases: Typhoid malaria, smallpox, measles, scarlet fever, whooping cough, diphtheria, meningitis, poliomyelitis, tuberculosis and pneumonia."

Advice to Judge.

In issuing an injunction against several thousand employes of the Overland automobile plant, Toledo, Ohio, Federal Judge Killets ruled that the number of pickets would be limited and that these should be Americans.

Editor Keating of the Union Leader, says: "It is to be hoped that the judge will apply this rule to the imported strikebreakers."

The employes were locked out when they refused to accept a 48-hour week. For over three years the rule has been 45 hours. One of the company's selling agents in the South asked Judge Killets to order the plant to be reopened as its shipments were interfered with. The court appointed an agent to "operate" the plant, whose officials threaten to move the works elsewhere. Bankers, merchants and newspapers are terrified at the threat and have swung behind the company. The locked-out employes, however, recall that this statement has been made many times before in other disputes.

Unionists Must "Book Up."

A knowledge of trade and business relations must be acquired by trade unionists if industrial democracy is to be a fact, declared President Matthew Woll of the International Photo Engravers' Union, in the call for the coming convention of that organization, to be held in St. Louis, the third week in August.

"If," said the trade unionist, "we are to exercise an impelling voice in industry—if we are to experience a true industrial democracy in our craft—if we are sincere in our profession that we want to rule the industry jointly with our employers, then it

Amalgamated Society of South African Seafaring Men and Fishermen, 355 Point Road, Durban, Natal.

World's Workers

The English Co-operative Wholesale Society has, in some respects, reversed its former labor policy by deciding, after conferring with the trade unions concerned, that all their employes engaged in productive employments—some 30,000—must be members of unions.

To understand the social and economic situation in Germany one should keep in mind the vast increase in the number of female industrial workers during the war. According to a recent report of the Metal Workers' Trade Union, the organized women members of that trade alone have increased from 13,000 in 1914—6.6 per cent. of the total number of employes—to 625,000—nearly one-third! Women in that industry have more than doubled in the one year 1917.

By a majority of 11 votes in a conference of 169 delegates the annual conference of the Victorian branch of the Australian Labor party rejected the motion submitted by the one big union advocate, in which the "O. B. U." preamble which it is proposed to substitute the "O. B. U." preamble (which is practically the same as the I. W. W. preamble) for the old objective of the party, and to exclude all employers from the Labor party.

A declaration by the New South Wales Board of Trade as to the "living wage" to be paid to adult females in the metropolitan area of Sydney was pronounced on December 17, 1918, and supplements the declaration as to the "living wage" payable to male adults in the same area. The amount of the "living wage" to be paid to adult females in the area referred to is declared to be 7½d. an hour, or 5s. a day, or 30s. a week. The wage thus defined is stated in the declaration to be "the minimum wage which should be provided to cover the cost of living of the adult female worker of the poorest class maintaining herself, but having no other responsibility, and living away from home in lodgings."

The Federation of Engineering and Shipbuilding Trade Unions of Great Britain has refused to take over the national Shipyards at Chepstow and Beachley, which the Government, after trying for several months to sell to various private firms as well as to the Co-operative Wholesale Society, offered to the unions. The Admiralty took control of the yards in 1917, nominally with the purpose of expediting shipbuilding, and embarked upon an extravagant plan of expansion. In spite of an enormous outlay, the Government has not succeeded in making the yards pay, partly because the plan of Sir Eric Geddes, to work them with the labor of soldiers and prisoners of war, was defeated by the trade unions on the ground that it might be a menace to other shipbuilding centers. The reason upon which the Federation based its refusal of the Government's offer was that such a venture was contrary to its policy, which favors the development of national resources under Government ownership. The Federation demanded that the yards remain the property of the nation, and be carried on in the national interest.

INFORMATION WANTED.

I am representing most of the crew of the S. S. "J. E. O'Neil," in the matter of their claim for salvage services rendered to the steamship "Oregon" on or about January 19, 1918, about 300 miles off Honolulu. The following awards were made to the vessels which assisted in the salvage operations: Steamship "Lurline," her master, officers and crew, $18,000; steamship "President," her master, officers and crew, $1750; steamship "J. E. O'Neil," her master, officers and crew, $6872. One-quarter of the $6872 was allowed to the master, officers and crew of the "J. E. O'Neil." All those members of the crew who have not yet filed their claims should do so at once in order that the claims of the entire crew will be presented at the same time. Silas B. Axtell, One Broadway, New York. 7-9-19

Anyone knowing the whereabouts of Calvin Pickett, last heard of in Port Arthur, Texas, February, 1918, will please notify G. Schroeder, Agent, Eastern and Gulf Sailors' Association, Port Arthur, Texas. 7-9-19

Members of the crew of the S. S. "Argonaut," who assisted in the salvage services to the S. S. "Jason," at the time she was in distress off the coast of Florida, on or about January 1st, 1918, will kindly call or communicate with the undersigned who is representing most of the officers and crew of the S. S. "Argonaut." Silas B. Axtell, One Broadway, New York City.

Charles L. Carlsen, No. 1834, who disappeared from the barge "Isaac Reed" at Eureka, California, on December 31, 1918, is inquired for by his wife, Mrs. C. L. Carlsen, 107 Courtland Ave., San Francisco, Cal.

I have been informed that a number of attorneys have requested members of the crew of the S. S "Abangarez" to file claims for salvage services rendered to the bark "Ninfra." For the information of such seamen, it might be said that a settlement has been effected in the sum of $50,000 through an arrangement made by me as representative of a few of the crew, with the attorneys for the owners of the 'Abangarez." It is agreed that the crew shall receive one-fourth of the award, about $12,500. All the crew need to do to get their money is to apply to the owners. Members of the union applying here can get their funds without any charge whatsoever for services rendered by this office. S. B. AXTELL, 1 Broadway, New York, N. Y. 6-18-19

DO YOU KNOW

That War-Savings Stamps pay 4 per cent. compound interest?
That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?
That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?
That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?
That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?
That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?
That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

Pacific Coast Marine.

Libel against the Dutch steamship "Billiton" has been filed in the United States District Court by W. R. Grace & Co. Damages amounting to $1624 on 100 barrels of lumbang oil transported from Manila and alleged to have been delivered in bad condition is demanded.

The report for the fiscal years of United States Tea Examiner L. G. Fenton of Tacoma shows that the district leads all examining ports in the United States. For the year 46,080,625 pounds of tea were examined, an increase of more than 500,000 pounds over last year.

A series of important conferences on Seattle's free port project and Alaskan development have taken place between United States Senator Wesley L. Jones and members of the foreign trade and Alaska bureaus of the Seattle Chamber of Commerce.

Complete in every detail, the wooden steamship "Albert Metin" has been formally accepted at Seattle by the French High Commission and started outfitting for her maiden voyage. The vessel will be made ready for sea by the Thorndyle Trenholme Company, Incorporated, Pacific Coast agents for the French High Commission.

Members of the crew of the French warship "Kersaint," which was wrecked some months ago in Tahiti waters, arrived at San Francisco during the week on the steamship "Moana." They are on the way to France. The officers of the vessel passed through here a month ago on the way back to Paris.

It is expected that the Todd yard at Tacoma will have two launchings this month. Plans are now under way to put two vessels in the water. These vessels are of 7500 tons each. It is believed that under the arrangements being made with the Shipping Board, all contracts awarded this company by the board will be completed. Twelve vessels were suspended last winter.

The barkentine "Benicia," in San Diego since June 6 undergoing repairs to hull and deck, has finally sailed for Beria, Portuguese South Africa, More than 300,000 feet of lumber, comprising the deckload of the craft, had to be removed in order to assure the underwriters that the vessel was seaworthy. The "Benicia" encountered rough seas while en route down the coast from Coos Bay.

The 7500-ton concrete tanker "Clyamaca," under construction at the plant of the Pacific Marine and Construction Company at San Diego will be launched October 1, it was announced by officials of the concern. The "San Pasqual," a sister ship, will be launched from the local yards a month later. Fittings for both ships have been received. When commissioned the ships are to be operated in the Tampico oil carrying trade.

On a cruise of Alaska waters, the steam yacht "Aquilla," owned by H. F. Alexander, president of the Pacific Steamship Company, and D. C. Jackling, millionaire copper mine owner, will sail from Seattle July 10, in accordance with arrangements just completed. Jackling and a party of friends will be aboard the vessel. Alexander was not able to make the cruise because of important business engagements in San Francisco.

The West Kada, 8800-ton steel ship, was launched at 5:25 o'clock in the afternoon of July 2 at the Schaw-Batcher Shipyards in South San Francisco. The "West Kada" was sponsored by Mrs. John H. Rosseter, wife of the director of operations of the United States Shipping Board. It slipped from the ways broadside. The "West Kada" was the eleventh ship launched at these yards. Two more are on the ways and will be launched soon.

Joseph J. Tynan, of San Francisco, has received a telegram from Harrison S. Robinson, secretary of the California Committee on Shipbuilding that went to Washington to confer with Chairman Hurley, stating that Congress has agreed the Shipping Board shall spend $704,000,000 this year on new ships, of which sum Congress has voted $356,000,000. The difference is to be made up in various ways. The telegram states that Congressman John I. Nolan of San Francisco led the fight for the shipbuilding program.

The 9400-ton steamship "Naugus" was launched on July 2 from the ways of the Moore Shipbuilding Company at Oakland, Cal. Miss Norta Hansen, Victory Loan worker, sponsored the craft, which is the thirty-second to be sent into the water from the Moore yards. A bottle of sparkling California wine saved for the occasion, gave what will probably prove to be one of the last "wet" christenings to an American ship. A banquet at the Hotel Oakland followed the launching. On Admission Day, September 3, six ships will be launched in the Moore yards as part of the celebration planned by the city.

As soon as the whaling trawlers, "Port Saunders" and "Hawk," which have arrived at San Francisco from Newfoundland after a voyage of fifty-two days, can be placed in commission by the California Sea Products Company, their purchaser, the tug "Hercules," which has been experiencing a profitable whaling season in Monterey Bay, will be turned over to Walter S. Scammell & Co. Scammell purchased the "Hercules" some time ago, but the tug was retained by the California Sea Products Company for use until the arrival of the British whalers.

The hospital ship "Comfort," which arrived at San Francisco during the week from Charleston, S. C., is at Mare Island to undergo repairs to fit her for full service on the arrival of the big fleet from the Atlantic next month. The "Comfort" will be stationed here as a part of the Pacific fleet. The mercy ship brought fifty-five convalescent sailors and marines from the Atlantic. Most of them are California men. The "Comfort" was in service on the Atlantic during the war. The vessel was painted white, with a broad green stripe above the water line and red crosses on her stacks to identify her as a hospital ship.

The three-masted schooner "Gardiner F. Williams," Captain Elliott, which sailed from San Francisco January 24 for Cape Town, has arrived at the African port. According to advices received by the marine department of the Chamber of Commerce, the "Williams" arrived June 29. This makes a voyage of 165 days and is considered a long one. In fact, local circles were filled with rumors recently that all was not well with Elliott's ship. It is considered that 100 days is a fair voyage at this season and the experts are wondering what could have happened to make the trip so slow. The message said that all was well.

The Shipping Board has received advices from Washington that the Emergency Fleet Corporation has taken over the American rights to manufacture a standard European Diesel engine and will do so on a great scale. A contract for construction of these engines has been let in Pennsylvania and it is said that a completed Diesel engine, after three months, can be delivered every day. Before the end of the year it is proposed to increase production to two engines a day. In determining on motorship construction the Shipping Board has followed the lead of Scandinavian countries and Great Britain.

That San Francisco can build the best ships in the world is the declaration of John H. Rosseter, director of operations of the Shipping Board, now in San Francisco. Before returning to Washington, Rosseter said, he will call a conference of local shipping men to get a statement of their needs. Ships can be built here and in other Pacific Coast shipyards more cheaply than anywhere else in the country, Rosseter asserted. Rosseter has evolved a new type of steamship which is named for him. He strongly favors motorships and declares that if the United States will build the ships there is no reason why this country should not become the greatest maritime power of the world.

There were many sore hearts among salt-water navigators in San Francisco when it was announced that Captain J. M. Healey, for many years master of the United States Army transport "Sheridan," had been appointed bar pilot. Healey was a "dark" horse among the 300 candidates, more or less. The appointment was made by the State Pilot Comissioners at the suggestion of Governor Stephens. While the losers for the prize were consoling one another, the best they could, the hundreds of friends of Captain Healey were congratulating him on his appointment. Captain Healey succeeds as a pilot the late Captain Fred Mathieson. There are twenty bar pilots, whose duty it is to take the ships in and out of the Golden Gate.

Several British airplanes will start across the Pacific on August 15, from San Diego, Cal., bound for Australia, according to a statement made by Captain William McDonald of Melbourne, formerly in the Canadian flying service, who is on his way to Southern California, via Seattle. He stated that while full details of the trip have not been decided upon, the date of the start has been set and that the trip would be made with stops at Honolulu, Gutta Percha, a small British island near Guam, and Nagasaki. He said he will pilot one of the planes himself. Aviation officers at San Diego received with surprise the statement of Captain William McDonald that several British airplanes would be brought to San Diego for the start of a flight across the Pacific. The statement by Captain McDonald, it was said, is the first intimation they have received of any such plan and until more details are received they stated that they could not talk for publication.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, JULY 9, 1919.

THE STRIKE IN CANADA.

Ever since members of the Sailors' Union of the Pacific at Vancouver and Victoria, B. C., became involved in the general sympathetic strike arising from the Winnipeg situation, the JOURNAL has been anxious to present its readers with concrete facts upon the strike. This, however, has been virtually impossible because available information has been meager and always contradictory.

Now the general strike has been called off where it originated and the strikers are going back to their old jobs. Official notice of the ending of the strike in Winnipeg which began May 15 was sent to Premier Norris of Manitoba by Alderman Ernest Robinson, secretary of the strike committee at Winnipeg. It is said that the basis of the settlement finally came when the strike committee put forward a proposition that if the government would appoint a commission to investigate the strike and settle all disputes, they would call off the strike. Accordingly, it is understood that the government will appoint Judge Robson as a one-man commission for the fullest investigation into the causes of the strike and to make recommendations to the provincial government.

It should be distinctly understood in this connection that in joining the general strike the Vancouver Trades and Labor Council prepared its own ambitious bill of grievances and outlined a "strike policy" for the workers in Canada. These demands are herewith reprinted from the British Columbia Federationist:

1. The re-instatement of the postal workers who struck in Winnipeg.
2. The immediate settlement of the postal workers' grievances.
3. The right of collective bargaining through any organization that the workers deem most suited to their needs.
4. Pensions for soldiers and their dependents on the basis laid down by the soldiers' organizations.
5. The minimum recompense for service overseas by the granting of the sum of $2,000 gratuity.
6. The nationalization of all cold storage plants, abattoirs and elevators, with a view to removing the evil of hoarding of foodstuffs.
7. The enactment of legislation to provide for the six-hour day in all industries where unemployment is prevalent.

Failing the granting of these demands by the Dominion Government, the workers continue the strike until the present government resigns and places these matters before the electorate.

Just how the termination of the strike at Winnipeg will affect the workers in British Columbia, who walked out in sympathy with those who have now returned to their jobs, is difficult to understand. According to the very latest reports the strike has been officially called off by the British Columbia unions, the membership returning to work under protest.

However this may be, the foregoing, in brief, are the salient features of the Canadian strike situation. Absolute reliability of this review is not claimed for, as already indicated, every statement and every claim made by either side has been promptly challenged by the other. It is quite certain that the Canadian authorities went the limit in intimidation. For examlpe, under a law passed and enacted in one hour, authorities in Winnipeg arrested ten strikers, alleged to be aliens, and a trial was given them behind closed doors. What actually took place at the hearing can only be surmised. The authorities announced soon after the arrests and before the trials began that those arrested would be deported by the end of the week, which indicates that they were convicted before being arrested.

It is equally certain that serious blunders were made by the strikers. In Vancouver, printers, enjoying union conditions, refused to set type for alleged "unfair" articles attacking the strikers. Yet the workers have always bitterly resented similar tactics of suppression by the other side. Trade-unionists, and particularly those who claim to be radical, can ill afford to act as press censors.

As for the net results of the Canadian strike we must perforce wait and see. At this stage it would be presumptuous to arrive at conclusions or indulge in carping criticism.

HIS "SOCIAL POSITION."

The telephone girls at San Francisco and elsewhere are on strike for a pitifully small increase in their starvation wages.

The telephone company—backed by that arrogant misfit, Postmaster-General Burleson, late "thought controller" of the American people—refuses to grant the increase and declines to submit the question to arbitration. Some bluff at giving service has been made by the company but California girls do not go scabbing; hence prospects for the strikers are good, despite Mr. Burleson.

An effective picketing system has been introduced by the striking girls whose enthusiasm easily makes up for lack of experience in this particular work. As usual, in such cases, a few extraordinary justifications have been offered by strike-breakers. Here is one, not only extraordinary but decidedly original. This is what a lady (?) strike-breaker said when approached by the pickets:

> Personally, I would join the union, but my brother is attending the University of California, and if I went on strike it would injure his social position in Berkeley.

Surely, this is worthy of note.

In the days gone by the University of California could always be depended upon to furnish a quota of strike-breakers when workers quit their jobs to enforce demands for better conditions. Protests never obtained any results because those who serve on the Board of Regents, which is the managing committee of California's State-owned University have always been carefully selected from the "upper strata." No workingman and no representative of the workers has ever had a chance to break into those august circles. Thus, we have a State University, maintained by taxes levied upon all the people but managed and controlled by a numerically insignificant class—the financial group.

This fact, and its perfectly natural sequence, has produced an atmosphere at the people's (?) university which encourages strike-breaking and has doubtless put into the deluded mind of the "lady" strike-breaker the notion that participation in a fight for industrial justice "would injure her brother's social position" at the University.

Truly, this should be enough to make all real men sit up and take notice of ways, means and methods in vogue at our so-called higher schools of learning.

WATCH NORTH DAKOTA!

The right of a State to engage in a private business with the aid of State funds and moneys raised by direct taxation has been sustained by Federal Judge C. F. Amidon of the United States District Court at Fargo, North Dakota, in a sweeping decision in which he dismissed the suit of certain State taxpayers who sought an injunction to prevent the use of State funds in establishing State banks, mills, elevators and packing houses.

The suit was an attempt to forestall the State industrial program endorsed by the Non-Partisan League and passed by both Houses of the Legislature last winter. It is the program that a majority of the residents of North Dakota have favored for many years and have just again upheld in a State-wide Referendum vote.

The peaceful social revolution of North Dakota commenced years ago. The beginning was an effort to emancipate the farmer and give him control of his own business, by eliminating the middleman. In the election of 1914, eighty-three per cent. of the vote was cast in support of a proposition for the establishment of State-owned terminal elevators; but the old line standpat Legislature rejected the proposal. Then the farmers organized. In the June primary of 1916 the League polled more votes than all the other parties put together; and in the fall it elected all but one of the State officers, a large majority of the House, and eighteen out of twenty-five members of the Senate. Half of the Senators held over, however, and the Senate was able to defeat the plans of the League. At the next election, in November, 1918, the League swept the State.

Meantime the program of reform had widened. Something more than State-owned grain elevators, it was perceived, was needed in order to eliminate the middleman; and the elimination of the middleman, even if that were accomplished, was only one of the steps in the large process of emancipation. The specific demands on which members of the League were elected last November and which have since been enacted provide for State-owned terminal elevators, flour mills, and cold storage plants, with an industrial commission to supervise their operation; a State bank with a capital of $2,000,000, in which all State funds will be deposited, and which, besides doing the usual banking business, will make first-mortgage farm loans at a low rate; a State building association empowered to erect dwellings for farmers and

industrial workers, payment to be made on an amortization plan; State hail insurance, a matter of peculiar importance in the prairie States; workmen's compensation, an improved initiative and referendum, and an attack upon speculative landholding through the exemption of improvements from taxation.

Reactionary appeals to the courts having failed, the League is now about to carry out the full program outlined above. It is an experiment worth watching for, to date, the much maligned Non-Partisan League has stood up bravely under every test and has furnished perhaps the most potential proof that a form of government may be radically changed without bloodshed.

JUSTICE FOR MOONEY.

In rejecting the proposal for a general strike as a means for securing a new and fair trial for Mooney and Billings, the American Federation of Labor Convention did not reverse its previous sympathetic attitude toward those two imprisoned men. It is true, deliberate efforts have been made to create such an impression but the fact is that the convention did adopt the following clear-cut report of the committee which had considered the Mooney case:

Your committee is firmly and unanimously of the opinion that a new trial of the accused has become an imperative necessity in order that the evidence presented by the prosecutor's office may be reviewed by another court and jury; and, furthermore, that there may also be presented in court the testimony and evidence, which has been circulated in this and other countries, which has aroused the widespread impression that motives and methods of a most sinister character, and evidence of a perjured nature were responsible for T. J. Mooney's conviction.

Your committee, therefore, recommends that the executive council be, and is hereby instructed to give their early attention to the devising of such practical ways and means as will aid in securing a new trial for Thomas J. Mooney and also the presentation before the court of the testimony and evidence presented since the trial, the character of which has created the belief that a most grave miscarriage of justice and perjured testimony were responsible for the conviction and sentence.

This should leave no one in doubt as to the position of the American Federation of Labor. If language can mean anything, it means that the Federation will "formally and officially" devise such practical ways and means as will aid in securing a new trial for Thomas J. Mooney.

Oscar Keller, Independent Labor and Non-Partisan candidate, has been elected to Congress from Minnesota to fill the vacancy created by the death of C. C. Van Dyke. Mr. Keller was a City Councilman in St. Paul at the time the Non-Partisan League convention met in that city. When the Governor and the Mayor refused to welcome the convention, but stationed troops around the meeting hall of the farmers, Mr. Keller stepped forward and delivered the address of welcome. At the local election following this incident he received more votes than any candidate ever got in that city. His promotion to Congress seems to indicate that the cry of "sedition," so often raised during the war by the interests and their lackeys, is no longer effective for any practical purpose.

In the sentimental view the exclusion of Asiatics is regarded as a denial of the Brotherhood of Man; practically, however, it is but an application of the principle of self-preservation, which recognizes no question of lineage.

DELEGATE'S REPORT.

Washington State Federation of Labor In Annual Conclave; Synopsis of Proceedings.

To the Sailors' Union of the Pacific; Comrades:

The Washington State Federation of Labor met in its eighteenth annual conclave at Bellingham, Washington, June 16th and continued in session to June 21st inclusive. There were 722 delegates present, representing 270 unions. The report of the secretary-treasurer for the fiscal year ending March 31, 1919, shows 263 unions affiliated with a membership of 52,000. The balance on hand April 1, 1918, was $6974.64, total receipts during the year were $24,548.94, total disbursements $25,473.24, leaving a balance on April 1, 1919, of $6,050.34.

The report of the president and of the executive council showed a number of bad measures, introduced by enemies of organized labor at the State Legislature, defeated through the efforts of the Federation's representatives. The report also recorded that many measures for the benefit of labor were passed and that the State of Washington still retains the lead among the States of the Union for the enactment and enforcement of progressive labor legislation.

The proceedings of the convention from start to finish were marked with great enthusiasm, great noise and many near riots. Six brawny sergeants-at-arms at times could barely manage to have the chairman's orders respected. Also from start to finish of the convention there was a spirited contest between the progressive trades unionists in control of the administration of the Federation and the ultra-radicals allied with the Socialists who sought their defeat. The radicals won in the main on the resolution field. The administration forces, by retaining the president and six vice-presidents, the radicals securing only the offices of secretary-treasurer and one vice-president, continue in control of the policy of the Federation which, governed by the constitution strictly in line with the constitution of the American Federation of Labor, cannot be materially affected by the passage of resolutions directly in opposition to the constitution.

Harry Wright, delegate from the Longshoremen's Union of Tacoma, who stated the Pacific Coast locals of longshoremen were now voting to withdraw from their international, introduced the One Big Union resolution. It was carried, through clever camouflaging of its secession meaning, by declaration of loyalty to the internationals and the A. F. of L., stating it only called for a referendum vote of the membership of the unions of the State. The opposition to the O. B. U. plainly stated this called for secession from the internationals and was merely a clever move of the I. W. W. to resurrect its principles and policy under the guise of the O. B. U. The opposition further contended that unions voting on such a resolution violated the fundamental laws of their internationals and laid themselves open to loss of their charter.

This resolution minus several whereases, reads:

"Resolved, That the State Federation of Labor in convention assembled, recommend that each local affiliated union vote upon the advisability of forming one big union along industrial lines, and that should the majority of numerical vote of the rank and file vote in favor of the industrial unionism that the State Federation of Labor issue a call for a special conference to be held in the city of Seattle not less than 60 days after the final count of the votes to outline the form of organization."

The Duncan plan of re-organization of the A. F. of L. was, over the protest of its proponents, referred to this conference. It is very likely that many unions of the State will not vote on the O. B. U. resolution, just as many unions throughout the country did not vote on the Mooney strike resolution submitted by the Mooney Defense League. In that event a few of the unions of Seattle and Tacoma, the seat of radicalism, with their large membership, will numerically carry this secession conference plan. The interested internationals will then have to use their disciplinary powers to kill off this secession move in its infancy.

The convention passed the following resolutions in reference to the Seamen's Law:

"Whereas, the Seamen's Law of 1915 has given the seamen of the United States and all seamen coming to United States ports the right to quit their vessels in a safe harbor and otherwise improve their conditions and increase the safety of life at sea; and

"Whereas, Under this charter of freedom, substituting the old status of practical serfdom of seamen, the wages and general working conditions of American seamen have been so improved that the calling of a seaman is attracting in ever increasing numbers the American boy, thus supplying the demand for seamen to man the steadily growing American merchant marine; therefore, be it

"Resolved, By the Washington State Federation of Labor, that we pledge our fullest sup-

88½ Third Street. Tel. Main 6013.

San Pedro Agency, June 30, 1919.
Shipping fair; men scarce.

HARRY OHLSEN, Agent.

128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, June 23, 1919.
Shipping dull; prospects poor.

JACK EDWARDSON, Agent.

P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., July 3, 1919.
No meeting; no quorum. Shipping fair.

EUGENE STEIDLE, Secretary.

42 Market Street. Phone Kearny 5955.

Seattle Agency, June 25, 1919.
No meeting. Shipping medium.

LEONARD NORKGAUER, Agent.

Grand Trunk Dock Rooms 203, P. O. Box 214. Phone Main 2233.

San Pedro Agency, June 27, 1919.
No meeting. Shipping fair on steam-schooners; scarcity of galley- and cabinmen.

JOE MACK, Agent.

No. 613 Beacon Street. Phone Sunset 336. P. O. Box 54.

DIED.

Ernst W. Ekelin, No. 738, a native of Sweden, age 35. Died at sea, November 8, 1918.

Frank Joranson, No. 84, a native of Finland, age 54. Died at San Francisco, Cal., July 3, 1919.

Bernt Onensen, No. 367, a native of Norway, age 52. Died at San Francisco, Cal., February 26, 1917.

Peter Paulsen, No. 648, a native of Norway, age 48. Died at San Francisco, Cal., July 3, 1919.

In the current number of the Record, published by the home office of the Fireman's Fund Insurance Co., there appears a reproduction of the San Francisco directory's cover for 1863-4, to show that the company which was organized in the year 1863, began its career with display advertising. That there is value in advertising is shown by the fact that there was unusual insurance activity at that period, but most of the companies listed in the directory have long been forgotten.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

In the last two days before adjournment at Atlantic City the American Federation of Labor went on record in favor of the 44-hour work week, with double pay for all overtime; welcomed the half million members of the railway brotherhoods who are seeking admission to the American Federation of Labor; extended recognition to the Irish Republic, endorsed the strike of the commercial telegraphers, and demanded the creation of standards of employment in the Government service, with special reference to the overworked railway mail clerks.

The convention failed to satisfy either the radicals or the reactionaries. It followed a distinctly middle of the road course. The internationalists present were bitterly disappointed because the convention did not follow the working class example in England, France and Italy, with respect to expressing sympathy for the Soviet governments of Russia and Hungary. Reactionaries throughout the country believe the advocacy of a 44-hour week is revolutionary beyond anything the social structure of the United States can endure. And the further declaration of the convention that it will support movements to compel a still shorter work-week leaves the conservatives without words to express their dismay.

Observers in Washington believe the American Federation of Labor will not have to go abroad for things to fight about during the next twelve months. Its announced determination to organize the steel workers constitutes a challenge to the big corporations that control industry, recalling the bloody days of Homestead and the autocratic decades since then, during which town and county officials throughout the steel district have obeyed the command of the corporations and forbidden labor organizers to voice their "seditious" doctrines within city or borough limits.

When the armistice with Germany was signed last November there were 3,000,000 men employed at making steel in the United States. The number to-day is 1,900,000. The others have been discharged. They are idle. Their pay has stopped. Unemployment is spreading fast in the steel country. And the cost of living continues to soar. This is only one industry. Other industries have turned out their hundreds of thousands since the Government began to cancel its war contracts.

The American Federation of Labor proposes to meet this lay-off of one third of the steel workers by reducing the work day by one-third—by cutting it from 12 hours to 8 hours. And they would follow the same shortening practice in other industries, believing that to do so is sound both economically and socially: economically in that it would give employment to the present labor surplus, including the returned soldier; and socially because it would give the worker that period of daily leisure which is necessary if he is ever to share in the cultural blessings of existence.

Your correspondent recently discussed these matters with Basil Manly, joint-chairman of the War Labor Board. Mr. Manly is not very optimistic. He thinks we are heading into a lot of trouble during the coming winter.

"The world's stock of both food and manufactured products is very low," he said, "and the United States is the only place where a surplus of either may be said to exist. Europe needs both food and fabricated articles, but it must have food first. During the next year Europe will buy our food in large quantities, offering any price that must be paid, because the issue is one of life and death.

"That means that the price of food in the United States will keep on going up. This will be good for the American farmer, but what about the American town and city worker? For the latter the situation will be entirely reversed.

"Europe is not buying the products of our mills and factories to any considerable extent; and she will not buy them to amount to anything for a good while to come. She hasn't the money. And, since Uncle Sam has cancelled his war orders, our industries find themselves cut off to a large extent from both domestic and foreign markets. The wheels are slowing down. And the more our own people have to pay for food the less they will have to invest in manufactured products, aside from bare necessities. As prices go up, jobs become scarcer. We are facing a critical issue."

Chairman Manly believes that both educational and constructive measures should be applied immediately to meet the coming situation. "The education is needed chiefly among employers and members of the leisure class," he says. "The worker is better informed than any other type of citizen respecting the fundamentals of this matter. It is the others who must be taught to meet the worker half way in bringing about the necessary readjustment. The world war has reduced the world's larder, and trouble will follow if the men and women who work for wages are asked to go on short rations while the others enjoy the same they have always had. The deficit must be justly distributed."

Mr. Manly wants the President to summon a congress of employers and labor men to prepare for the future by facing the facts and making ready for the new era of industrial democracy which he believes must shortly be inaugurated. Senator Poindexter has presented a resolution which directs the President to call such a congress, but his resolution does not cover Manly's idea except in general principles.

"The delegates to this industrial congress should not be named by the President," he explains. "They should be selected by the bodies they are supposed to represent. Democracy requires that, and democracy should be the chief aim of the congress and of all who attend it.

"The British employer realizes that the war has swept away the whole foundation of industry as it used to be conducted," Manly adds. "He knows that both management and profits must be shared with the workers, and he is willing at present to meet with the workers to arrange the details of this joint-partnership and division. We can do no better than follow the British example here. America could not escape being involved in the world war, and we cannot escape sharing in its consequences. We were slow to prepare for hostilities, but we should make all haste to prepare for what has come in the wake of the war.

"The work of the War Labor Board has shown that far-reaching agreements between workers and employers can be attained if the two groups can be brought together to consider the facts. The industrial congress which I propose would constitute such a getting together. It would not legislate. It would promote voluntary agreements, which are much better than legislation in many cases."

* * *

With such states as Pennsylvania and Massachusetts tumbling over themselves to endorse the Anthony amendment to the Constitution, the chances are excellent that all the women in the United States will help select the next President, if they want to. Governor Goodrich of Massachusetts recently sent out requests to 30 State governors asking them to call special sessions of their legislatures to pass on the suffrage amendment. Twenty-five of these governors have agreed to do so.

The suffragists are pushing their campaign in every quarter. Legislators are being urged to petition governors to call extra sessions. In this connection a very interesting letter was received the other day by Governor Sproul, of Pennsylvania, from Mrs. Charlotte L. Pierce, of Philadelphia. Mrs. Pierce knew Susan B. Anthony at Seneca Falls, in 1848. Her letter reads:

"Will you please accept the congratulations of an old woman, who has been a life-long worker for Equal Suffrage, upon your privilege of being in office at a time which witnesses the completion of this movement in Pennsylvania. As a girl of 18 I attended the early meeting held at Seneca Falls, N. Y., in 1848, and it is a great satisfaction to see the day when this bill comes before you and the great end is attained."

Liberals are recalling the time when Susan B. Anthony insisted upon voting in New York State, many decades ago, and was placed under arrest as an enemy of society. The judge before whom she was arraigned employed that ancient form of denunciation which never grows stale in the mouths of reactionaries, saying: "Madam, if this country is not good enough for you as it is, why don't you leave it and go somewhere else?" It seems to be a fortunate thing for human freedom that some agitators insist on staying where they are not wanted.

* * *

Conservative betting on the League of Nations is now about three to one in its favor. The country is still in favor of peace so strongly that it is willing to pay a heavy price for it. Senatorial opponents of the league have said enough to indicate that America becomes pretty deeply involved in foreign affairs by this step, but the mental retort to critics is that the absence of a league did not keep us out of the world war. The big financiers, also, are now united in defense of the league, so Republican opposition will soon die out.

* * *

Postmaster-General Burleson gave a sharp rebuff to the Committee named by the American Federation of Labor convention to see him in behalf of the striking telegraph operators. Ten days earlier Burleson had warded off a strike of the electrical workers union by conceding their right to collective bargaining. The later delegation went to ask him why he would not grant the same right to the telegraph operators. In his reply to the delegation Burleson chose to ignore his policy toward the electrical workers and to make the pompous assertion that "established governmental policies shall not be abandoned,

nor governmental powers surrendered to employes because of threatened or attempted strikes." In the case of the electrical workers Burleson discovered that what he calls "established governmental policies" were nothing more than the personal rulings of Burleson, which could very conveniently and properly be altered in face of a threatened strike.

* * *

The plan of world financiers to create an international consolidation is severely criticised by George P. Hampton, director of the Farmers' National Council, with headquarters at Washington.

"This plan of the financial interests of America is directly opposed to the plan of the farmers of America," says Mr. Hampton. "The farmers' program states that among the instrumentalities to make the League of Nations really effective is an International Investment Board. It states that foreign investments have been a prolific source of misunderstandings between nations, and, if unregulated, will in future lead to conditions that may make war unavoidable. Because of this fact the farmers so insistently advocated an International Investment Board to prevent the investment of money by one nation in another unless justified by conditions agreeable to the nation in which the investment is made, and to prevent the use of force by any nation to protect or to promote the investments of its nationals."

Referring to the great debts piled up by all belligerent governments during the war, Mr. Hampton says: "It is necessary that this indebtedness be liquidated, and that pending such liquidation governments should be in complete control of international investments. The plan of the financiers is dangerous to the working people, and opposed to the very principles for which America entered the war."

THE AWAKENING.

(By Henry A. McAnarney.)

In the heyday of the Czars of Russia education was the exclusive privilege of the upper classes.

The education of the peasantry was forbidden by decree; violation was a felony, punished more or less severely, at one time by banishment to Siberia.

The power of autocracy was sustained first in ignorance; then in force. Its mastery over the people could not have been held for so long by force alone had the people been trained to think, had they had access to the source of thought—education.

Russian autocracy was always blind. Its very dominance filled it with a sense of security. National progress was embraced only within its own small circle. Docile beasts, the peasant and the horse were linked together. Only the ruling class was privileged to think.

But the peasant broke the thongs that bound him to the horse.

And then—vengeance. Blind vengeance, blood-mad.

The great object-lesson taught by Russian autocracy and the ruthless slaughter of the autocrats is honest education—education that will inspire right-thinking by teaching right doctrines; education that regards the human element as important.

Each human unit has a place to fill in the work which lies ahead of the world. That work demands that we separate the peasant from the horse. Even though the scope of his vision is small, this man knows there is a world about him, a world in which a man is superior to a horse. Society has realized this man has the power to think, and society must guide that power into proper channels. That is a primary obligation to the man. The duty of the man is to obey.

Society has not fulfilled its obligation to civilization merely by building schoolhouses, employing teachers, furnishing free books.

It must search out the illiterate man and place within his reach the means of education. He must be given the light.

Illiteracy must cease. The power of man to think must be turned to the advantage of the people.

The illiterate man is not fit to take up his share of the world's work. The load that he should carry is borne by another.

That is wrong; unjust to the man, unjust to the people.

Besides the right of every man to an education, we must give regard to the right of society to the services of every man. Now more than at any time in the world's history, civilization needs this service.

Education is a mutual social benefit and at the same time a mutual social obligation.

Reports of the activities of citizenship committees to the Bureau of Naturalization indicate intense interest in the extension of public school facilities to make effective this vital principle thorough. Factories in large numbers having established free schools for teaching their employes; churches having transformed their reception halls into schoolrooms to welcome the illiterate; while public-spirited men have offered their services to teach; and volunteers have come forward to carry the message of knowledge into the home of the illiterate.

There is an awakening.

Peace, order and the welfare of the people require that illiteracy be overcome by public education, so that all men may know the country in which they live, its government and its Constitution.

BADLY WRITTEN LAWS.

Judges, lawyers, the courts, the rules, technicality, circumlocution, all these are blamed for "the law's delay." It is well to have a new phase of the problem presented, a neglected phase, and this Mr. Levy Mayer vigorously did before the Credit Men's Association, says the Chicago Tribune.

"From one end of the country," he said, "to the other the courts are burdened and overburdened with the labor of trying to find out the meaning of the law giver. And you complain of the increase in courts and their functions, of the increase in the number of the members of the bar, and doubtless complain of the increase in the expense necessarily incurred in running your well-fitted and well-constructed law departments."

The complaint is not only true but important. Language at best is likely to be ambiguous, but at worst it is certain to be so, and the language of many laws is language at its worst. The result is the overloading of the courts with an unnecessary burden of verbal interpretation.

This is not the fault of the courts but of the legislatures, which are made up of men of average education, which is to say they have not been strictly disciplined in the exact use of words. Moreover, many are lawyers, and lawyers usually write badly. The English of law text books, of judicial opinions, and of briefs is seldom good, is sometimes very bad. Legal English is likely to be involved, clumsy, and conventional. The average lawyer in the legislature, therefore, is not to be relied upon to give us lucid phraseology.

The plan urged by Mr. Mayer for a department of expert bill drafters is the only practical way to correct the present evils, but even then eleventh hour amendments will give the courts some nuts to crack.

TRUE GREATNESS.

A man's greatness lies not in wealth and station, as the vulgar believe, nor yet in his intellectual capacity, which is often associated with the meanest moral character, the most abject servility to those in high places, and arrogance to the poor and lowly; but a man's true greatness lies in the consciousness of an honest purpose in life, founded on a just estimate of himself and everything else, on frequent self-examination, and a steady obedience to the rule which he knows to be right, without troubling himself about what others may think or say, or whether they do or do not do that which he thinks and says and does. —George Long, "Thoughts of the Emperor M. Aurelius Antoninus."

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

is for us to determine the plans and procedure, and perfect them, by which this co-operative relation may be fully realized.

"We as photo engravers have reached a status in our craft where our interests relate not alone to wages and hours. The necessity of our time demands that we have full and complete knowledge of all trade and business relations. We need to know the cost of production—the selling price—the overhead charge—the division of the income jointly produced by our employers and ourselves."

High Wages Aid Farmers.

The future prosperity of the American farmer depends upon the success of organized labor in maintaining its present wage scale, said Secretary of Agriculture Agee of New Jersey in an address to 4,000 farmers at State College, Pa. The speaker said that a scarcity of farm labor and high wages is better for farm profitableness than cheap labor in abundance.

"It is a fact," said the speaker, "that farmers' periods of prosperity have only been when labor was scarce and high priced. Great agricultural depression has always followed periods of cheap labor. This is partly due to the fact that a considerable portion of the farmer's income is a labor income, so when labor is high priced, the farmer's own work brings him more money. Another reason is that well-paid labor affords the best market for high-grade products. Of course, it is a serious matter not to be able to obtain labor for the farm, but it is better to have a condition of small labor supply than one of small food prices."

Many Aliens Leave U. S.

Ethelbert Stewart of the Department of Labor estimates that 1,300,000 aliens in excess of the ordinary outgo of aliens are preparing to leave for their homes in Europe. Mr. Stewart is director of the investigation and inspection service of the department and he has been conducting a survey in the various steel centers. It is stated that of the 163,498 Poles covered by the investigation 24,590, or 15.04 per cent., will return to Poland. Of the Austro-Hungarians covered, 28.02 per cent. will return; Russians, 35.70 per cent; Croatians, 21.75 per cent; Lithuanians, 9.72 per cent; Roumanians, 64.29 per cent; Italians and Greeks, 11 per cent; Serbs, 36.90 per cent; Slovaks, 34.50 per cent.

In a recent speech on this exodus Mr. Stewart predicted that the first drive would be to fill the places of these aliens with negro labor from the south and that despite ordinances against recruiting labor or any other effort that would be made to check it, this would be largely successful.

Don't Fear Bolshevism.

It is possible that those editors who take the cue from big business will note that Judge Gary, chairman of the steel trust's board of directors, scoffs at the idea that American workingmen favor a bloody revolution.

The trust official addressed students of a Hartford, Conn., college. He said that those who claim that large numbers of workers in this country could be induced to participate in any attempt to over ride law and order misjudge the workers.

While Judge Gary did not name the steel trust, he eulogized the loyalty of 300,000 workers employed by "one large corporation and its subsidiaries," and who showed their loyalty to the government. The greater part of these workers are foreign born, and thousands and thousands of them are from central Europe, said Judge Gary.

The speaker was emphatic in calling for "right" relations between "capital" and labor, but he failed to state that his company maintains its anti-trade union position and at the present time steel trust employes in western Pennsylvania are denied the right of free speech and free assemblage.

Convention Elects Old Officers.

With the re-election of its entire Executive Council, the annual convention of the American Federation of Labor wound up its business.

Not a whisper of opposition appeared when President Gompers and his colleagues on the Executive Council came up for re-election. It has been freely predicted that the radicals, as in former years, would attempt to wrest the seat from the veteran president of the Federation, but no one put in an appearance.

Because of the resignation from the Executive Council of John R. Alpine, second vice-president, a vacancy remained to be filled. In his place there was elected Matthew Woll, president of the International Photo-Engravers' Union, and an assistant to Mr. Gompers in the editorship of the American Federationist as well as on the labor advisory committee of the Council of National Defense. Mr. Woll becomes eighth vice-president of the Federation, the other vice-presidents each moving up one.

The line-up of the Executive Council now stands as follows:

Samuel Gompers, President; James Duncan, First Vice-President; Joseph F. Valentine, Second Vice-President; Frank Duffy, Third Vice-President; William Green, Fourth Vice-President; William D. Mahon, Fifth Vice-President; Thomas A. Rickert, Sixth Vice-President; Jacob Fischer, Seventh Vice-President; Matthew Woll, Eighth Vice-President; Daniel J. Tobin, Treasurer; Frank Morrison, Secretary.

The only contest appeared in the case of Vice-President Thomas A. Rickert, when Thomas Sweeney, of the tailors, threw his hat in the ring. When votes were counted on roll-call there were found 28,229 for Rickert and 2,661 for Sweeney.

William L. Hutcheson, president of the United Brotherhood of Carpenters and Joiners, and John J. Hines, president of the Amalgamated Sheet Metal Workers' International Alliance, were elected fraternal delegates to the British Trades Union Congress.

Samuel Griggs, secretary-treasurer of the Granite Cutters' International Association of America, was selected delegate to the Canadian Trades and Labor Congress.

Samuel Gompers was appointed to represent the American Federation of Labor at the meeting of the Trades Union International Congress to be held at Amsterdam on July 25. Another delegate will be chosen later by the Executive Council.

DELEGATE'S REPORT.

(Continued from Page 7.)

port to the retention of this Seamen's Law and view with apprehension recent decisions of the United States Supreme Court which repeal, in direct violation of the plain intent and wording of this law, some of its protective and beneficial features; further

"Resolved, That copies of these resolutions be sent by the Secretary of the Federation to the President of the United States and our representatives in Congress."

A telegram to Mooney, Debs, Sadler, Wells and others in prison, extending greetings and assurances of the convention was proposed. An amendment to add "Haywood and associates" found resistance.

This opened up one of the big fights of the convention. The Haywood addition was defeated, 330 against 225. The original telegram was then ordered sent.

The following political triple alliance plan carried overwhelmingly over the protest of a few radicals who are opposed to all political action and of a few advocates of a Socialist Labor party:

"In pursuance to instructions of the Washington State Federation of Labor, be it remembered that a meeting was held at the Columbia hotel at Bellingham, Wash., June 18, 1919, of a joint committee consisting of representation from the farmers' organizations, State Federation of Labor and the Railwaymen's organizations, and adopted the following representative plan for the formation of a triple political alliance, and the following recommendations of the farmers' organization and the railwaymen's organization; and further, that such recommendation be submitted to Labor, now in session at Bellingham, for its consideration and adoption, to-wit:

"First—This organization shall be known as the Triple Alliance.

"Second—Believing in the principle that the office should seek the man, not the man the office, we declare the object of this organization to be to secure remedial legislation through political solidarity, and to select and elect men and women for public service loyal to the best interests of all the people of the state of Washington.

"Third—This organization shall be composed of the membership of the following organizations: (a) The Washington State Federation of Labor; (b) The farmers' organizations, and the railway labor organizations of the state and (c) Such others as can embrace the principles of this alliance.

"Fourth—We recommend that the detail of organization shall be assigned to a committee to consist of seven (7) representatives, to be selected by and from each group affiliated with the triple alliance, which adopted plan of organization shall be submitted by the representatives of each group to its constituency for approval.

"Fifth—A temporary state central committee shall be formed to consist of seven (7) members from each group affiliated with this triple alliance. That the State Federation of Labor select their members, one (1) from each district, following the ratification of these recommendations said members to hold office until such time as by referendum ballot each district shall have elected regular members of the state central committee. Other allied bodies to select their members as they see fit. Upon the selection of the state central committee they shall meet and organize.

"Sixth—This temporary State Ceneral Committee shall take such steps as they deem proper to organize the necessary temporary central committees in the various counties, and said county Central Committees to take such action as they deem necessary for the complete organization and the selection of temporary committeemen until such time as they can be selected as provided by law.

"Seventh—That each group affiliated with the alliance contribute to a temporary state fund for organization purposes until such time as the State Central Committee shall have devised ways and means for amply financing this triple alliance.

(Signed) "Joint Committee."

Many other resolutions, good, bad and indifferent, were either passed, defeated or for lack of time referred in bulk to the incoming Executive Council.

Respectfully submitted,
ED. ROSENBERG.

A groom was brought in at the dinner party to help the butler. The groom was willing enough, poor fellow. He asked a deaf old lady if she'd have any peas, and she put her big, bell-mouthed trumpet up to her ear to hear him. "Heavens!" said the groom to himself, "this is a new wrinkle to me, but if she wants 'em that way I'd better let her have 'em."

"JUNE 28TH" IN HISTORY.

Archduke Francis Ferdinand, the Austrian heir-apparent, was killed at Serajevo June 28, 1914. This furnished the excuse for starting the world's most costly and destructive war, now happily ended, exactly five years from the date of the assassination.

On July 28, 1914, one month after the death of Francis Ferdinand, Austria declared war on Serbia, marking the beginning of hostilities. On August 1 Germany declared war on Russia and invaded Luxemburg. Germany sent her ultimatum to Belgium August 2, and declared war on France August 3. The next day Great Britain declared war on Germany. The first American contingent disembarked in France on June 26, 1917.

June 28 also is the anniversary of the renewal of the triple alliance between Germany, Austria and Italy, which has been broken by the war.

On June 28, 1890, the German Reichstag adopted a bill creating a new German army, the organization of which is greatly diminished in power by the treaty signed on June 28, 1919.

In American history June 28 is the anniversary of the battle of Monmouth, N. J., where in 1778 Washington defeated a force under Sir Henry Clinton.

Last, but not least, June 28, 1919, was the day selected for the launching at the Hog Island Shipyard of the steamship "Afel," the name being the code word for the American Federation of Labor, in honor of which the vessel was christened.

This launching, by the way, was made the occasion for a fine public testimonial to the A. F. of L. Chairman Hurley and Secretary of Labor Wilson each sent telegrams to Samuel Gompers, president of the Federation, praising the spirit shown by Labor during the war.

"You and the officers of your great organization," Hurley said in his telegram, "have co-operated wholeheartedly with the Shipping Board in building ships to help win the war. To-day one of the ships, appropriately named 'Afel' in your honor, glides into the water. This vessel soon will be cruising to distant parts of the world, everywhere giving a practical and convincing demonstration of what Afel means."

Truly, June 28, 1914, and June 28, 1919, will long be remembered as black and bright days in history.

THE "SOVIET IDEA."

The Non-Partisan League of North Dakota is exclusively an organization of farmers. No one who is not a bona fide farmer can be a regular member of it. That is to say, it is a class organization, and the fact that some eighty-five per cent. of the people of North Dakota are farmers does not change its essential class character. By securing the acceptance of its programme by the organized labor forces of the State, it has united in common political action two occupational groups, but without interfering with the party cleavages which existed in each group. It stands ready to co-operate with any other group of workers—bankers, lawyers, teachers, tradesmen—that may choose to organize for political action and that is willing to accept the League's program. What North Dakota has, in other words, is the beginnings of a Soviet government, in which bona fide representatives of the "toiling masses" unite in the direction of affairs, but without abandoning their party differences. The fact that the Soviet idea is here applied to a commonwealth rather than to a municipality does not alter the general nature of the scheme. There has been no copying of a Russian model, of course, for the League is older than the Russian revolution; what has happened is that the farmers of the State, turning away from parties which did not serve them, have united to further the interests of their class, and, being numerically predominant, the organization controls the State.—William MacDonald in The Nation.

GOLD ON THE LOWER YUKON.

Placer mining on Wilson and Willow creeks, in the Marshall district, on the lower Yukon, yielded gold amounting to about $700,000 in 1916 and 1917, and claims have been staked on the lodes from which some of the gold may have been derived. An examination of the region along the Yukon between Anvik and Andreafski rivers, comprising about 2,000 square miles and including the Marshall district, has been made by George L. Harrington, of the United States Geological Survey, and its results are given in a report just published. The report describes the geography and geology of the region and contains topographic and geologic maps. It includes descriptions of the animal and vegetable life, the settlements, the gold placers, the coal beds on Anvik River, and some notes on a group of mineral springs near Marshall.

The report is published as Bulletin 683 of the United States Geological Survey, Department of the Interior, and can be obtained without charge from the Director of the Survey at Washington.

ILLITERACY IN THE SOUTH.

Harmonious relations between whites and negroes in the South can readily be cultivated, according to one of the investigators on negro migration in 1916-17, the report on which has just been issued through the United States Department of Labor. The report cites particularly, among the experiences of a number of communities, the case of Adams County, of which Natchez, Mississippi, is the county seat. The harmony existing there, he believes, is due to the close contact of the leaders of the two races.

"It is significant that in the older counties which line the eastern banks of the Mississippi from Tennessee to the Louisiana line, where relations between the races are fairly good, white adult male illiteracy is by counties from one-half to one-fifth what it is in the state as a whole; and that in two counties notorious for whitecapping and expelling negroes, white adult male illiteracy is 50 per cent. more than for the State as a whole," the investigator writes.

Relations are most cordial, it is asserted, where white illiteracy is lowest, where communities have existed for generations and whites and blacks have long been in contact; where the soil is fertile; where right of trial in court is maintained for negroes and where negroes are encouraged to own property.

Labor News

Officers of the International Union of Mine, Mill and Smelter Workers report that since January 12 twenty-nine charters have been issued.

Power is the first essential in an attempt to improve social conditions, says a writer in the American Teacher, official magazine of the American Federation of Teachers. "If noble men and women are to be attracted to the teaching profession, if the respect of the community is to be won, the teacher must possess power, and power can only come through unionization," he says. "With power will come courage, and with courage an aggressiveness that will win the respect of even business boards of education."

Protest against social injustice was recorded by the general assembly of the Presbyterian church at Hamilton, Canada, which declared that the present unrest was a sign of the nation's effort to adjust itself to new and changing conditions. Among the injustices mentioned are the alienation of natural resources, the tying up of land for the unearned increment in value, profiteering especially during the war and the public indifference to social conditions and wrongs.

Coal operators in Arkansas say it is impossible to comply with the miners' washhouse act, which provides that ninety days after its passage washhouses shall be installed. At a conference between miners and operators, a committee was appointed to call upon the judge and attorney general of each mining district and ask for leniency is the enforcement of the law because of the delay in securing material. Some of the operators say their washhouses will be constructed on time, but other operators are not so fortunately situated.

The Lakeland (Florida) Star is not a labor paper, but this does not deter Editor Bloom from supporting striking phosphate miners in the Mulberry district. The Star has published a letter from one of the mine managers, and undoubtedly this is, says the Star, "a plan adopted by all mines to write to lumber companies and labor employers generally, requesting them not to employ men from the mines, and also to reduce the wages of common labor." The writer of the letter states that if all employers of common labor would get together and reduce wages to $2 a day this would have "a very telling effect on the negro."

Assistant Secretary of the Navy Roosevelt has ordered the establishment of boards to recommend wage adjustments for classified civil service navy employes. The workers will be represented on these boards. The order is the result of negotiations between Navy officials and the National Federation of Federal Employes, affiliated with the American Federation of Labor. More than 15,000 employes with an everage wage of $1.52 a day, will be affected by the order. These employes compare this average with rates paid by the Navy to its employes in the mechanical departments. Since the clerical workers have organized wage increases are now probable.

INFORMATION WANTED.

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardnore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

The widow of Otto Kivi, who fell overboard on the S. S. "Carlos" between San Francisco and Aberdeen, May 30, 1919, wants to know the names of the crew on the ship. Kindly assist his widow by giving this information to S. T. Hogevoll, attorney for the widow, 627 Pacific Building, San Francisco. 6-11-19

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.

You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:

Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted

La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

Ellis R. Nelson, last heard from at New Orleans, La., Nov., 1916, when on board U. S. C. G. S. S. "Davy," is inquired for by his mother. Anyone knowing his whereabouts will kindly communicate with R. J. Nelson, 59 Clay St., San Francisco, Cal. 11-6-18

Frank J. Phillips, a member of the Marine Firemen's, Oilers' and Watertenders' Union of the Atlantic and Gulf, last heard of in San Francisco, Cal., April, 1916. Anyone knowing his whereabouts will please notify Mrs. Frank J. Phillips, P. O. Box 521, San Pedro, Cal. 2-19-19

When making purchases from our advertisers, always mention The Seamen's Journal.

INFORMATION WANTED.

For the benefit of the widow of John Karus, lost at sea, October 17, 1918, at 2:15 a. m., according to the report in the official log of the barkentine "Aurora," will all members of the crew of that vessel who know anything about the ship, the condition of her rigging, before and after the accident, or anything that will tend to explain his disappearance, communicate with the undersigned attorney for the widow?—Silas Blake Axtell, No. 1 Broadway, New York City. 1-1-19

The following men: August Rosso, oiler; Robert Anser, oiler, and V. Florio, wiper, who were employed on the S. S. "Comet," on or about November 22nd, 1917, when John Olsen was injured through the leaking of a gland which caused his hand to get tangled up in the motor, whereby he sustained severe and permanent injuries, will please communicate with me without delay. They may furnish valuable evidence to assist Olsen in his suit against the Standard Transportation Company. His injuries are very serious. S. B. Axtell, 1 Broadway, New York City.

Members of the crew of the SS. "Munrio" who were on board said vessel at the time she salved the SS. "Curytibia" in the month of January, 1918, and who have not yet received their full share of the salvage award, will kindly communicate with or call on Silas B. Axtell, 1 Broadway, New York City. 10-23-18

Home News

War time economy—and high prices—has decreased meat consumption and the packers state that they are producing every month 1,000,000 more pounds than the people will buy. The packers assure the people that it is not necessary to forego the use of meat to aid Europe.

Testifying in New York before the Mayor's Committee on Rent Profiteering and the Aldermanic General Welfare Committee at the first joint session, Samuel Untermyer charged that manufacturers of building materials and dealers in them are engaged in a criminal conspiracy to raise prices beyond all reason, thereby making the building of homes and apartments well-nigh impossible.

The closing of the market for barley in the brewing industry in the near future, as well as the present high price of corn, is resulting in many inquiries concerning barley as a dairy feed, says C. H. Eckles, new chief of the dairy husbandry division at University Farm, St. Paul. The reason barley has not been used more for feeding purposes is that the brewers wanted it and were willing to pay enough for it to keep it out of the feed trough.

The army draft, our first national health survey, showed an unexpectedly large amount of tuberculosis, said Surgeon Lloyd of the United States Public Health Service in an address to the National Tuberculosis Association. "The anti-tuberculosis movement," he said, "has shown how important is the prevention of sickness. Very little can be done after the disease is developed." The speaker said that it is the duty of doctors to prevent sickness as well as cure it.

A million dollars has been bequeathed by the late Thomas Skelton Harrison, at one time American minister to Egypt, for a trust fund to be used in improving governmental conditions in Philadelphia. The income from the fund is to be applied to procure honest and impartial enforcement of all contracts made by the city for furnishing labor, erection of buildings and other public improvements, cleaning of streets, removal of garbage, furnishing water, gas, electricity and transport facilities. A clause specifically states that no part of the fund must be used to procure the election of any candidate for public office or to favor any political party.

Director Manning of the Bureau of Mines in the Department of the Interior, in a recent report on mine fatalities, brings out the fact that inability to speak and read English apparently greatly aggravates risks of accidents. In the Pennsylvania anthracite mines, 43 per cent. of the employes are English speaking, and this number is charged with only 28.8 per cent. of the fatalities, while the 56 per cent. not English speaking sustained 71 per cent. of the fatalities. In the bituminous mines and in West Virginia the ratio is equally marked. The excessive number of fatalities among miners who do not speak English as compared with those who do, in the three groups together, amounts to 716 and that of very serious injuries to 900.

Domestic and Naval

The "Susan N. Pickering" (three-masted schooner), 319 tons register, built at Belfast, Me., in 1882 and owned by O. A. Gilbert, Boston, has been sold to C. A. Anostos for $20,000 and will proceed to Greece.

The British steamer "Agenoria," 2977 tons gross, 1931 net, carries about 5200 tons deadweight, built at Middlesbrough in 1902 and owned by the British Shipping Controller, has been sold by auction in London to Constastine de Zabala, Bilbao, for £54,000.

The British steamer "Glenearn," 4828 tons gross, 3032 net, carries about 8000 tons deadweight, built at Sunderland in 1914, which was detained at Hamburg during the war, has been sold by auction in London on behalf of the war risks underwriters to Sir Robert Thomas for £168,000.

A record for a trans-Atlantic round trip of 12 days, 1 hour and 35 minutes, was established by the steamship "Great Northern," which arrived at New York on July 6 from Brest. The vessel also held the former record of 13 days and 45 minutes. Before being pressed into transport service, the "Great Northern" plied between Honolulu, San Francisco and Portland, Or.

Responsibility for the Halifax explosion in December, 1917, rests equally upon the steamers "Mount Blanc" and "Imo," according to a decision handed down by the Supreme Court of Canada at Ottawa. The decision reverses one by Justice Drysdale, of Halifax, placing the blame on the "Mont Blanc." The owners of the "Imo" will appeal to the Privy Council in England.

The launching of the three 5500-ton deadweight steel steamers at Newark Bay, N. J., recently, gave the yard a record of just fifty-two launchings for the year. The yard has twenty-eight ways, hence the launchings show less than two ships per way, which cannot be accounted to be wonderful. In the matter of deliveries, this yard has lagged behind considerably, owing chiefly to delay in delivery of engines built outside.

The ex-German liner, "Imperator," which has been allocated to the United States Government for the repatriation of troops, has been fitted with standee bunks so that she can carry 1200 officers and 5500 enlisted men in addition to her crew. The "Imperator" is one of the largest vessels in the world, being 883 feet in length, 98 feet in breadth, and 57 feet in depth, there being no fewer than six decks, and having a tonnage of 52,117 gross and 23,881 net. She is propelled by four screws driven by steam turbines, and was credited with a speed of 23½ knots, having been built in the Vulcan yard at Hamburg in 1912. In size, however, she is surpassed by the "Bismarck" and the "Leviathan" (ex-"Vaterland"). The "Imperator" can hardly be considered a successful ship. She was found to be so "tender" in a seaway that drastic alterations had to be made to reduce her topheaviness. Thus, the funnels were shortened by about nine feet each, most of the heavy cabin fittings were removed, and a light fibrous plaster used in the corridors and stairways instead of the heavier linings originally employed.

News from Abroad

The initial project for the limitation of the armaments of the great naval and military powers will be ready to be presented at the first meeting of the League of Nations in Washington in October.

The Norwegian-American Line's report for 1918 shows a surplus of 4,370,000 kr., out of which a dividend of 20 per cent. is paid. During the year the company carried 7,047 passengers (only half of the total in 1917), and 83,731 tons of goods. The fleet totals 53,505 tons, and two vessels of 9500 tons each have been contracted for with British builders, Napier and Miller.

The treaty which the entente powers and the United States signed with Poland has been made public. Under it Poland agrees to protect the minorities against discrimination, assumes payment of such share of the Russian debt as shall be assigned to her by the interallied commission, and agrees to support important international postal, railway, telegraphic and miscellaneous conventions.

Mormon colonies in the Mexican State of Chihuahua were broken up in 1913 and the colonists migrated to the United States. Since February of the present year many of these colonists have returned to Mexico and re-established the colonies of Dublan and Juarez. They have taken with them improved American agricultural machinery and are expected to live up to their past reputation as remarkably successful ranchers.

Eighteen American soldiers were killed, one officer and seven men severely wounded and seventeen slightly wounded in an engagement with anti-Kolchak forces near Romanovka, Siberia, on June 25. Major General Graves, commanding the American expedition in Siberia, informed the War Department that the engagement followed an attack by the Bolsheviki on railroad guards.

The American peace delegation has accepted the resignation of Dr. S. E. Morrison, member of the section of Russian experts, who represented the United States on the Baltic Commission. Dr. Morrison resigned because he did not approve of the exchange of notes between the Allies and Admiral Kolchak, head of the All-Russian Government at Omsk, believing that Russia cannot be restored through allied co-operation with the Omsk government.

Many trawlers have latterly been built in India—six composite ones in the Royal Indian marine dockyards and three steel ones in the yard of Burn & Co., Limited, Calcutta. They are each 125 feet long, and are similar to the usual North Sea type. All the machinery was sent out from England and a great part of the equipment. Several steam tugs have also been built in Calcutta, and many motor launches, ranging from 25 feet up to 40 feet long, fitted with American engines. A number of teak wood sailing vessels, with steam or crude oil auxiliary machinery, have been designed, and 1000 tons deadweight steel cargo steamers for two shipbuilding firms on the Hooghly. A Rangoon firm, A. V. Joseph & Co., has constructed teak sailing ships of 1000 tons deadweight, and smaller vessels have been launched from various yards on the Indian coasts.

With the Wits

Dibbs—They claim to be connected with some of the best families.

Tibbs—By telephone?—Tit-Bits.

Nicker—Got a war garden this year?

Bocker—No, a league garden—I'm waiting for outside help.—New York Sun.

Wise—I hear a burglar got in your house while your wife was away.

Guise—Yes; I'm so glad. My wife won't know how much of the upset is me and how much is him.—Answers.

"Why did you use the expression 'as pale as a door-knob'?"

"Door-knobs are in doors so much, you know."—St. Louis Globe-Democrat.

Mrs. Exe—So you and your husband have separated because of a misunderstanding?

Mrs. Wye—Not at all, my dear. We parted because we understood each other only too well.—Boston Transcript.

Mother—Now, Bobby, was it you who picked all the white meat off this chicken?

Bobby—Well, mother, to make a clean breast of it, I did.—Tit-Bits.

"I'm worried about Willie Skiffens."

"He's so studious that he ought to get along."

"Yes; but he is trying to learn aviation from a correspondence school."—Washington Star.

Little Girl—My father says he has often seen you act.

Delighted Actress—What did he see me in, dear?

Little Girl—In the 'seventies.—Los Angeles Times.

"How is your marriage with that pretty shopgirl turning out?"

"Oh, pretty well, if I could only break her of the habit of calling 'cash' whenever she wants me."—New York Globe.

Patience—Did your parents caution you not to be careless with matches when you were young?

Patrice—Oh, yes.

Patience—I suppose it was after you became popular at the seashore summer resorts that you became so careless with them?—Yonkers Statesman.

ASSOCIATED SAVINGS BANKS OF SAN FRANCISCO.

HUMBOLDT SAVINGS BANK, 783 Market St., near Fourth.—For the half year ending June 30, 1919, a dividend has been declared at the rate of four (4) per cent. per annum on all savings deposits, payable on and after Wednesday, July 2, 1919. Dividends not called for are added to and bear the same rate of interest as the principal from July 1, 1919.

H. C. KLEVESAHL, Cashier.

Secure and Profitable

The wise man keeps part of his money in a reliable savings bank. If you are making money now, why not put aside something for a rainy day?

Savings and Commercial Depts.

HUMBOLDT SAVINGS BANK

783 MARKET STREET, Near Fourth
SAN FRANCISCO

Taylor's Nautical Academy

Established 1858

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

HORACE R. TAYLOR HENRY TAYLOR

PREFERENCE TO UNIONISTS

The Issues Involved in the Atlantic Coast Tie-Up of Shipping

The Ocean Marine Industrial Conference, held at Washington, D. C., on June 4 and 5, adjourned to meet again at New York, for the purpose of considering matters submitted by the Atlantic Marine Unions.

The New York Conference took place as per schedule but adjourned without getting anywhere.

Just why no progress was made by this conference may be gleaned by a careful perusal of the joint letter, sent to the Chairman of the United States Shipping Board by the Presidents of the three great marine labor organizations of the North American continent, and published herewith in full.

It should be noted that Chairman Hurley of the Shipping Board has since tendered his resignation and that same has been accepted by President Wilson.

New York. N. Y., July 2, 1919.

Honorable Edward N. Hurley, Chairman,
United States Shipping Board,
Washington, D. C.

Dear Sir:

During the latter part of April, or in the early part of May, the sailors, firemen, oilers and watertenders, and marine cooks and stewards, folowing suggestions made to them, forwarded to the labor department of your Board, certain petitions having reference to conditions of employment, working rules and wages on the Atlantic Coast.

The sailors petitioned for an equalization of the employment, and working rules, and overtime, in operation on the Pacific Coast.

The Marine Cooks and Stewards submitted substantially the same kind of petition.

The Marine Firemen, Oilers and Watertenders, submitted substantially the same petition with reference to employment, working rules, and overtime pay, but with the addition of a $15 increase in monthly wages.

The Shipping Board called a meeting on June 4th and invited to that meeting the Masters, Mates and Pilots' organization, and the Marine Engineers' Beneficial Association, neither of whom had submitted any petitions to the Board up to that time.

Several associations responded by sending representatives from the Pacific Coast, the Atlantic Coast and the Gulf Coast. The call did not deal with the question of employment, wages, or the hours of labor; it was an invitation to come to Washington for the purpose of considering the organization of a Marine Industrial Council. The call suggested that such council should be made up of three representatives from the Seamen (we presume that it meant three representatives from the rank-and-file, or non-licensed seamen, three representatives from the Masters, Mates and Pilots, and three representatives from the Marine Engineers, to act upon their separate interests), three representatives from the ship owners and managers, and a representative from the United States Shipping Board to act as chairman. The functions of this Marine Industrial Council as proposed, were "to promote sound industrial relations between the employers, employes, and the Government, in the pursuance of which object it shall make provisions for the establishment of suitable machinery for the joint consideration of the general labor policies, to govern work, employment, and the mutual relations of the interests involved." This, as we understood it, would delegate to such Marine Industrial Council, all the functions now exercised by our organizations, in so far as they have the power and influence so to do.

The call then goes on to say, "for the arbitration of issues pertaining to the compensation and working rules; for the adjustment of grievances; and for the establishment and enforcement of such general standards of sanitation and working conditions as will promote the health and efficiency of the employed on board of vessels of the American Merchant Marine. The Marine Industrial Council shall also make such joint recommendations as it may see fit, to Congress, Executive Departments of the Government, and to the League of Nations regarding matters which it believes may promote the welfare of the American Merchant Marine, or the Merchant Marine of the world."

As we understand this, it would delegate our rights as citizens, namely our right to petition Congress, make or forward petitions or recommendations to the Executive Departments, to this proposed Marine Industrial Council.

One of the most remarkable features of this proposition was that while we were invited as officers and representatives of organizations of labor, there to enter into arrangements which would not apply to our membership, except in so far as wages and working conditions were concerned, there was no proposition that the membership of the organizations which we represented should have any preference of employment. This, we understood to mean, that instead of having the preference, we were to agree to fill up the gaps whenever those who had the preference, for one reason or another, would fail to respond to the demands of those who employed them.

When we consider that a large number of vessels are giving the preference now, so far as sailors and firemen, cooks, and stewards are concerned, to aliens, not only in nationality, but in race, and that preference is given, so far as the licensed officers are concerned, to men who are not citizens of the United States, it became our duty, first of all, to ascertain if the United States Shipping Board (the biggest of all the ship owners) and the ship owners generally would give preference to the membership of the organization for whom we were supposed to act.

When this question was raised, the ship owners answered that they had not considered this question, that they had no authority to discuss it, and therefore could give no answer to that question.

The following resolution was then adopted:

Whereas, Certain agreements fixing compensation and conditions of labor on the Atlantic and Gulf Coasts have expired, and certain demands have been made by organizations affiliated with the International Seamen's Union and licensed officers' organizations; now therefore be it

Resolved, That these demands received on or before June 7th be submitted to the American Steamship Association and other shipowners in the Atlantic and Gulf districts for their consideration; and be it further

Resolved, That the conference recommends that various shipowners should appoint representatives to confer with representatives of the unions and of the Shipping Board, for the purpose of reaching an agreement, and that this committee shall meet on June 23, 1919, at New York, and be it further

Resolved, That the conference recommends that this committee should also consider and make recommendations as to the establishment of local grievance committees at Atlantic and Gulf ports, and also the establishment of a central appeal board.

The masters, mates and pilots, and the marine engineers were instructed to submit their petition for adjustment of grievance on or before the 7th, and their meeting, as arranged in the resolution above quoted, met in New York on June 23rd. Prior to the opening of the meeting, we had been informed that the shipowners had refused to grant our petition for preference of employment and that they had given as the reason for their declining, that to grant such petition was equivalent to discriminating against American citizens. Whereupon, we submitted that we would be willing that the American citizen should have the first preference of employment, the membership of the unions the second, and the non-union alien, so far as he was needed, the third. This resulted in a delay in the conference while the question was being submitted to the Shipping Board for its consideration. A committee of seven went to Washington for that purpose. That committee appeared before your honorable body and were informed after a hearing that the question would be taken on advisement, whereupon the committee returned to New York to make its report to the organizations, acting in unison.

We waited for a decision, and failing to get it in the time expected, the following telegram was forwarded to Washington:

(Copy of Western Union Telegram.)

New York City, June 26, 1919.

Rush! Rush! Rush! Government Business!
United States Shipping Board,
Washington, D. C.

The Masters, Mates and Pilots, Marine Engineers, and International Seamen's Union of

America were invited to meet the Shipping Board and Shipowners to consider rates and working rules, etc. The first question to arise was whether the membership are to have preference in being employed. This question was later so changed that the American citizen shall have the first preference. The membership of the unions the second. We feel that we are unable to continue in conference until this question is decided by the Shipping Board and shipowners and therefore respectfully request that the open conference be reconvened as soon as possible to the end that the question may be disposed of and the conference proceed. We have a large number of representatives here at great expense

JOHN H. PRUETT,
President Masters, Mates and Pilots.
WM. S. BROWN,
President National M. E. B. A.,
ANDREW FURUSETH,
President International Seamen's Union of America.

On Friday evening, the 27th, a committee met with the Honorable R. B. Stevens, who informed us that the Shipping Board had taken no official action but that it was willing to grant preference as suggested, with certain other important qualifications. That is to say, they were willing to grant it to the sailors, firemen, oilers and water tenders, marine cooks and stewards, but that they had not considered that question with reference to the licensed officers. They further informed us that they would give the first preference to the Americans, but with the addition "whether union or non-union." This would indicate that they would give preference to the Americans, even though they were members of organizations. We asked Mr. Stevens what the shipowners would do. He said, "I have consulted with their committee, they say that they, as a committee, are opposed, but that they will take the matter to their organization, the American Steamship Association." We received no official answer to our telegram, and therefore, on Saturday, we asked Mr. Stevens, through a committee, if he would call the full conference together, so that we could discuss that question and get an answer to our telegram of June 26th. His answer was that he could not act upon the matter at that time. He was just on the point of taking a train to his home in New England, and we said, "Don't miss your train by any means, we'll wait."

We waited until yesterday, July 1st, when Mr. Wm. S. Brown, President of the National Marine Engineers Beneficial Association, forwarded the following telegram:

(Copy of Western Union Telegram.)
New York City, July 1, 1919.

United States Shipping Board,
Interstate Building,
Washington, D. C.

The National Marine Engineers Beneficial Association request a definite reply as to what disposition the Shipping Board intend to take regarding subject matter contained in telegram under date of June 26th.

WM. S. BROWN,
President National Marine Engineers Beneficial Association.

Reply to 25 Park Place, New York City, N. Y.

Up to the present writing, we have received no answer to our telegram.

We can understand this in but one way, namely, that our petition for preference to Americans first, and members of the union second, has been denied by the shipowners.

The Americans cannot get to sea unless the shipowners are willing to employ them; the Americans who get to sea, cannot become seamen unless they are together with seamen who are capable and willing to teach them seamanship.

We find great difficulty in accounting for this position of the shipowner, except upon the hypothesis that their antipathy to any voluntary association of workmen is stronger than their patriotic desire to get the American to sea, to induce him to remain there, and thus to build up a dependable personnel for the future sea power of America. We cannot allow ourselves to assist such policy in any way whatsoever, and therefore we are now departing for our homes, there to appeal, if we may, to such individual shipowners as may be more willing to listen than the American Steamship Association. We have remained here at great expense. It seems to us that we have received a conclusive answer, and so cannot justify to our membership continuing our stay.

It is with profound regret that we are giving up the hope and expectation of finding, or of obtaining the co-operation of the shipowners and ship managers in our effort to build up a dependable personnel for the future sea power of America, but, regardless of what they may do or say, we are not going to give up the struggle. Our appeal now must be to the people of the United States, and such of the representatives of the people of the United States, as may be willing to listen to what we have to say in the promotion of the cause we advocate.

Most respectfully,

(Signed) JOHN H. PRUETT, President National Association of Masters, Mates and Pilots.

(Signed) WM. S. BROWN, President National Marine Engineers Beneficial Association.

(Signed) ANDREW FURUSETH, President International Seamen's Union of America.

P. S.—Since the above letter was written, the following telegram was received from the Shipping Board, signed by Mr. Gibson, in reply to telegram sent by President Brown of the National Marine Engineers Beneficial Association under date of July 1st:

(Copy of Western Union Telegram.)
Washington, D. C., July 2, 1919.

Wm. S. Brown,
National Marine Engineers Beneficial Association, 26 Park Place, New York.
No. 1086.

Commissioner Stevens now at Pennsylvania Hotel, New York. Commissioner Donald only Commissioner at Washington, and he prefers Commissioner Stevens to act on this matter.

Henry Howard leaving for New York with message on this matter from Commissioner Donald.

GIBSON,
Division of Operations.

In accordance with the suggestion contained in telegram we have met Mr. Stevens, who informed us that the American Steamship Association noticed him that there will be a meeting of their Association on Monday, July 7th. Mr. F. D. Mooney of the American Steamship Association states in the Journal of Commerce, dated July 3rd, that their Association will give preference of employment to Americans, but will give no preference to union men. This, in our opinion, closing out such men as are willing and capable of teaching seamanship to the American. If the American Steamship Association shall agree to give preference to Americans first and to the membership of the unions second, we hold ourselves in readiness to meet again.

(Signed) JOHN H. PRUETT, President National Association of Masters, Mates and Pilots.

(Signed) WM. S. BROWN, President National Marine Engineers Beneficial Association.

(Signed) ANDREW FURUSETH, President International Seamen's Union of America.

THE SEAMEN'S FRANCHISE.

EDITOR, SEAMEN'S JOURNAL:

At a meeting of the delegates of the Masters, Mates and Pilots' Association, Marine Engineers' Association, Seamen's Unions of the Atlantic, Gulf and Coast, Firemen's Union and Marine Cooks' and Stewards' for the United States, which took place at 26 Park Place in New York City, recently, after an address by S. B. Axtell on Seamen's Franchise, Seamen's Act and kindred topics, the following resolution, which was duly moved and seconded by Mr. Burt L. Todd, Business Manager of the Ocean Engineers' Benevolent Association No. 80, was duly passed:

RESOLVED that it is the sense of the members here present, that a national association for seamen's franchise should be formed by the members of these organizations, as soon as conveniently can be done, for the purpose of effecting a permanent organization to obtain legislative action which will permit the amendment of election laws in the various States of the United States, and of the Federal Government of the United States, so that seamen on American vessels can register their votes for elective officials representing the people of the United States in whatever capacity, when absent from their election districts; and said association shall be known as the National Seamen's Franchise Association.

The motion was duly seconded and passed after some debate, in which Mr. Furuseth, who was present, joined. He stated he was in favor of the principles and purpose of the motion, but was not prepared to spend any of the seamen's money unless he knew what it was for and how much would be spent. It was then unanimously passed.

This step, to my way of thinking, is a most important one. I am now drawing a proposed constitution and by-laws for an association to be known as the National Seamen's Franchise Association. This will be sent to all local organizations of firemen, seamen, cooks, masters and engineers. They will vote on it, and when that is done, officers and a board of governors will be elected. It is then proposed to collect about $1 a man from each member of each labor organization, which sum will be used under the direction of the officers and board of governors, for the purpose of printing literature on the subject and the like, which will put the issue clearly and squarely before the people of the United States and the members of the State legislatures of the various States and members of Congress.

In my address to the conference, I said: "Men in the United States without a vote are not represented. The mere existence of a right to vote is nothing without the creation of the machinery by which the votes may be registered, and only with the creation of this machinery will seamen be represented in Congress and the State legislatures. Then the seaman will be considered, and no political party will omit his interests when drafting its national platform. No President, or member of Congress, or United States Senator, or member of any of the State legislatures, will overlook the interests and welfare of the human beings aboard American vessels. The people of the United States to-day are in a receptive mood to this step. Woman's suffrage has just been granted. The crews of railroad trains desire absentee voting privileges. Traveling salesmen are clamoring, and have been for years, for it, and for sensible legislation that will permit them to register their votes. If democracy is to function for the seamen as well as these other classes; if representative government is to be representative in fact as well as in name, then the election machinery must be altered so as to provide for the proper and efficient registration of their votes."

Now is the time to act, and the formation of this association, I hope, marks the beginning of a new era in the lives of American seamen.

Very truly yours,
S. B. AXTELL.

New York, July 7, 1919.

It would be difficult to think of any question less important to the average man or woman than whether the earth is 1,000,000,000 years old or only 10,000,000. But many are none the less interested in it. Three ways there are, says Dr. William Harvey McNairn, of McMaster University, Toronto, by which an effort is made to answer the question, and the three answers afford to the average citizen a wide range of choice. By the oldest method, which reaches conclusions by estimating how long it is taking the sun to cool, the earth is between 10,000,000 and 30,000,000 years old. The geologists, however, studying the age of geological deposits, demand 100,000,000 years; and the latest method, which applies the results of the discovery of radium to estimating the age of some of the earth's minerals, declares the geologists too conservative and figures the age of the earth at anything up to 1,600,000,000 years.

The saying, "A dollar saved is a dollar earned," like most generalizations, is subject to modification. A dollar saved in the purchase of a cheap-labor product is a dollar lost to the cause of decent living conditions.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Injunction Judge "Runs" Auto Plant.

Federal Judge Killets has issued a permanent injunction against several thousand Overland automobile company employes who were locked out when they refused to lengthen their work week from 45 to 48 hours. The court issued the injunction on the plea of a southern selling company that claimed it could not secure Overland products. The injunction is one of those "fair" documents and applies to the company as well as the workers. The court has taken charge of the plant and has appointed an officer to start the wheels a-going, but somehow things are not panning out. Three hundred deputy police have been sworn in. Every reactionary force, which includes a lot of alleged "liberal minded" people, are lined up against the locked out employes, and the Toledo Union Leader, owned by the Central Labor Union, has been sued for damages on the ground that it libeled some of the leaders of the "free and independents."

A committee appointed by the American Federation of Labor failed to adjust the lock out. The committee consisted of John R. Voll, president of the Glass Bottle Blowers' association and Charles L. Baine, secretary-treasurer Boot and Shoe Workers' union. In announcing their failure the bottle blowers' executive said the Overland management "takes the position that there is nothing that they can or will arbitrate, feeling that a so-called benevolence, or profit-sharing, inaugurated by themselves, should satisfy their employes, regardless of their view as to the merits or demerits of the plan.

"I find in the city of Toledo a combination of employers banded together for the purpose of preventing organization of wage earners necessary for their protection in industry and this in view of the new thought in the world and the expression of our government through the War Labor Board and the Peace Conference at Paris.

"This reactionary spirit represents a position dangerous to the community and to the government, as the time has passed when wage earners will accept whatever is handed to them."

Unionism Benefits Far West Woodsmen.

Men who for years have been connected with the timber industry stare in amazement at the change that has taken place because of trade union methods, writes Secretary-Treasurer Norland of the International Union of Timber Workers.

"They see sanitary conditions in camps and mills greatly remedied; blankets and boards, formerly used as covering and mattresses, replaced with sheets and springs; they see general improvement on every hand."

The timber workers are being opposed in their trade union efforts by a company "union" called the loyal legion of loggers and lumbermen, which is referred to by Secretary Norland.

"It is amusing to hear some of these so-called patriots among the lumbermen who are lauding the 4L to the sky and hollering Americanism to the top of their voices and in the next breath hiring as many Japs as their plants will stand."

"Right now lumber and shingle prices are soaring skyward, and there is no telling where they are going to stop. Mills are overstocked with orders that will take months to fill, but has there been any attempt on the part of the operators to take care of the workers' share of this prosperity? Has their allied so-called labor organization done anything? No! It is up to the timber workers to take care of this matter."

Railroad Control Big Victory Factor.

The operation of this country's railroads under government control saved the war for America and the allies because a failure to meet the food situation of the allies in the first few months of last year would have been an irretrievable disaster.

This is one of the statements made by former Director General of Railroads McAdoo in a speech in New York City, which is now being circulated by the American Federation of Labor railway employes' department.

The former railroad chief stated that in February, 1918, the situation was extremely black for the allies. At that time he was invited by the ambassadors of Great Britain, France and Italy to attend a meeting in this city, where written reports on the desperate food situation were read.

"Grave as this message was," said Mr. McAdoo, "the situation as presented orally was much worse. It was stated that the rations of the Italian army had been reduced twice and the French army once; that if food was not immediately rushed to Europe, starvation would overtake the civil population; that the armies could not be adequately supported and that defeat would inevitably result.

"There was but one way," continued the ex-railroad official, "to get the necessary food supplies to the seaboard and that was to do one of the most drastic things ever done in the history of American railroading—send empty cars from the east to the west with all possible speed and regardless of cost and bring them back as swiftly as possible loaded with the necessary food supplies.

"The greatest heresy in railroad management is to haul a car empty when it can be loaded," said Mr. McAdoo. But the order was given for priority to box cars. Practically everything was sidetracked as the streams of empties started westward, in charge of the workers who stood at their posts throughout the storms and blizzards of that winter, "suffering," declared the speaker, "from exposure and overwork," that food might be rushed to the eastern seaboard.

Mr. McAdoo answered the claim that government control of railroads has created a deficit of $200,000,000 with this statement:

"The $200,000,000 deficit represents only three and one-third days' expenditures of

World's Workers

Officers of British engineering and shipbuilding unions have been instructed by their memberships to open negotiations with the engineering employers' federation for a 44-hour week without wage reductions.

Delegates to the recent annual meeting of the National Union of British Railwaymen were consistent eight-hour advocates. They voted to limit the convention's sittings to eight hours a day, including one hour for lunch.

By a vote of 267,650 to 6,347 British cotton operatives have declared for a 46½-hour week and a 30 per cent. wage increase. The minority favored the employers' offer of a 48-hour week and a 15 per cent. advance.

In an effort to reduce the number of higher-wage strikes the Paris (France) municipal council is considering the establishment of a department that will purchase the necessaries of life in large lots and distribute them at cost to the hundred or more municipal grocery and meat markets now owned and operated by the city government.

The tenth German Trades Union Congress was opened at Nuremberg on July 2 with an address by Carl Rudolph Legien, president of the German Federation of Trades Unions and one of the German commissioners who went to Versailles to receive the terms of peace from the Allies. There were present 664 delegates, representing 52 National unions.

Belgian workers are using the co-operative societies in conjunction with their trade unions, to reduce the cost of living. In 1915-1918 there were 639 co-operative societies formed. During the war the government used these societies as its agents for selling at cost the food stuffs supplied by the food administration.

The effort of large employers in Great Britain to dispense with war bonuses will be resisted by their organized employes. Officers of the Transport Workers' Federation, representing over 300,000 workers, have been instructed to take the necessary steps to make the war bonus a part of the permanent wage. The transport workers are associated with the miners and railway men in a triple alliance.

The executive committee of the General Federation of British Trade Unions has appointed a committee to relieve Secretary Appleton of a portion of the work which he has formerly undertaken. The trade unionist has been driven at too speed during the war and recently announced his resignation because of ill health, but his associates objected. Secretary Appleton was a member of one of the British labor commissions to America during the week.

At the annual meeting of the National (British) Union of Railwaymen, the presiding officer, in his opening address, said that the center of gravity was passing from the House of Commons to the headquarters of the great trade unions and it behooved these organizations to make themselves worthy of the responsibility. This union is associated with the miners and transport workers in a triple alliance that secured the eight-hour day last December after the stage had been set for a nation-wide strike.

DO YOU KNOW
That War-Savings Stamps pay 4 per cent. compound interest?
That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?
That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?
That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?
That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?
That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?
That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

INFORMATION WANTED.

Anyone knowing the whereabouts of Calvin Pickett, last heard of in Port Arthur, Texas, February, 1918, will please notify G. Schroeder, Agent, Eastern and Gulf Sailors' Association, Port Arthur, Texas. 7-9-19

Any one knowing the whereabouts of Victor Ratner, age 15, last heard of in New Orleans, La., May 17th, will please notify his father Leo Ratner, 17 East 97th St., New York, N. Y. 7-16-19

Pacific Coast Marine.

Chief Engineer Nicholson of the Seattle port commission has recommended West Point, just off South Cove to the west, for Seattle's free port zone in the event that this is made a free port.

W. G. Telfer, superintendent of hull construction in the Northwest Steel Company's Portland plant, now visiting Seattle, stated that the Portland yard will continue extensive ship construction after the completion of the Government program.

Technical experts representing the Australian commonwealth expressed themselves as satisfied with the performance of the new motorship "Benowa" at Seattle, declaring the vessel one of the best of her type yet turned out. The ship is equipped with full Diesel engines.

The Lillico Launch and Tugboat Company has purchased from the United States Government the ocean going tug "Peterson No. 20." The "Peterson" was used during the war by the spruce division towing logs from Coos bay to Portland. She is 65 feet long. Her purchaser intends operating her in the Puget Sound towing service.

Two motorships now on the ways of the Anderson Shipbuilding Corporation yards on Lake Washington will soon be launched and turned over to their Norwegian owners. They are of 3,250 tons capacity each. Each will load for the Atlantic and from there proceed to Norway. The vessels have not been named.

Purchase by the Canadian Robert Dollar Company of the British steamship "War Melody," 1,800 tons deadweight, built by Harland & Wolff, Belfast, was announced by the Vancouver head of the corporation. Ultimately the vessel, now on voyage from Portland, Me., for England, will be placed in the Pacific service out of Vancouver.

The bark "C. D. Bryant" has arrived in Guam, fifty-three days out. This is very good average time, and contrasts with the slow time being made by sailing vessels coming north. She carries Government supplies and will go thence to a copra port for a cargo back to San Francisco.

The 3,500-ton wooden steamer "Fort Wright" has been assigned by the division of operations of the United States Shipping Board to the railroad tie movement from the Sound to the Atlantic coast. She takes the place of the wooden steamer "Bottineau," which will not be completed for a week or two. The "Fort Wright" will load at the Stimson mill in Ballard. The "Bottineau" will be reassigned later.

The Poplar Island shipyard of the New Westminster (B. C.) Construction and Engineering Company has been closed down because of lack of orders, according to a statement made by H. M. Fullerton, secretary-treasurer of the company, who is of the opinion that a quietus has been put on the wooden shipbuilding industry so far as this district is concerned. The company is completing its fifth vessel for the French government.

Lloyd Swayne, Jr., superintendent of the Long Beach Shipbuilding Company's plant, was at San Francisco to make final inspection of the United States Shipping Board's steel freighter "West Cawthon" when the vessel left on her maiden voyage for Manila for the Pacific Mail Steamship Company. The "West Cawthon" was built at the San Pedro shipyard. Swayne was formerly port manager for Swayne & Hoyt in this city and is the son of Lloyd Swayne, Sr.

The auxiliary powered schooner "Mount Hamilton," product of the McAteer Shipbuilding Company, had her official trials on Puget Sound during the week, working out satisfactorily as to every contract requirement, and was delivered to her new owners, Mons Isaaksen and Cornelius Bull. The vessel maintained a speed of eight knots. The "Mount Hamilton" will proceed to Bellingham to load lumber for Queenstown

What is reported to be one of the largest floating drydocks on the Pacific Coast is being constructed at the Moore Shipbuilding Company's plant at Oakland. The dock will consist of five persons, each 90 feet long with a beam of 125 feet. The weight capacity of the drydock will be 18,000 tons. It will be able to dock vessels 500 feet long. More pontoons may be added later to increase its floating capacity.

Hawaiian sugar shipments are now 100,000 tons ahead of the corresponding period of last year, a total of 322,000 tons having been transported to Atlantic and Pacific refineries. The expectation is that the crop will be cleaned up by October 1 to 15. The Matson Company is believed to have in Honolulu the finest sugar loading equipment in the world. With the aid of traveling belts, seven men can load an average ship in that many hours.

The China Mail Steamship Company announced that the steamer "Nile," which has been in war service on the Atlantic, has been released by the Shipping Board and is on her way from Europe to Hongkong. The "Nile" was purchased by the China Mail Company in April, 1916, when the ships of the old Pacific Mail line were put on the market. It is expected the "Nile" will take her place among the vessels of the fleet plying between this port and the Orient.

The wreckage of the cruiser "Milwaukee," which went ashore off Eureka several years ago, is to be sold, it was announced by Commander Henry E. Parmenter, acting commandant of the Twelfth Naval District. Bids for the wreckage, which cost the Government several million dollars to build, will be received by the Bureau of Supplies and Accounts, Navy Department, in Washington. Attempts of the Government to salvage the "Milwaukee" proved futile.

No plans have as yet been made for resumption of regular sailings of the American-Hawaiian line between Atlantic and Pacific Coast ports via Honolulu and the Panama Canal. During the war the American-Hawaiian line lost the following steamers: "Columbian," 8673 gross tons, lost November 8, 1916, "Missourian," 7924 gross tons, lost April 4, 1917; "Kansan," 7708 gross tons, lost July 10, 1917, and the "Montanan," 6659 gross tons, lost August 15, 1917. Three of the company's freighters, "Oregonian," "Hawaiian" and "American," have been turned back to it. These are now in the South American trade. The line's other thirteen ships will probably be released by the Shipping Board in the late fall.
by the Luckenbach Steamship Company.

From present indications, commerce between Puget Sound and Siberia before the end of the present year will reach enormous proportions. A few days ago it was announced that 3,000 tons of general merchandise has been assembled in Seattle for Siberia, and today another cargo of 2,500 tons has been placed in Seattle warehouses awaiting shipment. The steamer "La Touche" has been chartered to carry a big shipment to Siberia for the Siberian Commercial Company. She will sail north August 1 for St. Lawrence Island, which is the distributing point for the company.

Rumors of pending ship sales are plentiful along California street these days. One of the most persistent has to do with the purchase by the Pacific Mail of the seven large steamers that remain of the great American-Hawaiian fleet of 26 steamers before the war. The American-Hawaiian was one of the largest American losers by the undersea boats. Torpedoes and sales have reduced the fleet from the original 26 to 7. The remaining seven are of the large and useful American-Hawaiian type and would, of course, be a great asset to the Pacific Mail in the present state of cargo congestion and reaching out for trade in the Orient. Another rumor, equally well denied, is that of the sale of the La Primera, a Standard Oil steamer, to Walter Scammell.

A libel suit against the owners of the American barkentine "Thrasher" has been filed in the United States District Court at San Francisco by C. Sundstrom, A. Carter and Frank Bradshaw, three seamen who recently completed a six months' cruise to New Zealand on the vessel. The seamen seek to recover $1280 for wages, damages, and the value of clothing lost when, according to their petition, they were arrested and imprisoned at New Plymouth, New Zealand, after they quit the vessel, contending it was unsafe and unseaworthy. According to their statement, Sundstrom and Bradshaw were imprisoned for thirty-two days, and Carter for six days; and following their release they were forcibly returned to the ship, which put to sea before they could recover their clothing.

More vessels passed through San Francisco last month than in June, 1918, and their tonnage was considerably greater, according to figures compiled by the marine department of the Chamber of Commerce. In the month just closed a total of 372 vessels arrived at that port, against 309 arrivals in June, 1918, while 398 departed, compared with 375 in June, last year. The total tonnage of the vessels arriving last month was 395,594 steel and 53,575 sail. In June, 1918, the steamships arriving represented a tonnage of 335,018 and sail a tonnage of 89,144. Departures last month showed a total tonnage of 453,354 of steamships and 57,153 tons of sailing ships. The departures for June, 1918, represented a total tonnage of 343,153 of steam vessels and 99,196 tons of sail. The significant feature of this report is that it demonstrates that with the close of the war there are more steamships in operation and less business for the windjammers. Many of the latter that were hauled off the mudflats to do a war turn are already being consigned to ships' graveyards again.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, JULY 16, 1919.

TRAINING SEAMEN.

One of the most significant actions of the recent American Federation of Labor convention was the adoption, by unanimous vote, of the following resolution introduced jointly by the delegates of the National Association of Masters, Mates and Pilots, National Marine Engineers' Beneficiary Association, and International Seamen's Union of America:

Whereas, The Recruiting and Training Service and the Sea Service Bureau of the United States Shipping Board are asking Congress for an appropriation under which those war institutions may continue during peace; and

Whereas, Both of those institutions are useless for any practical purpose, and, if we really mean to build up a personnel for a merchant marine, we should return to the system of training men on board ships actually engaged in the ocean and coastwise service and under the direction of the ship officers; therefore, be it

Resolved, That the convention hereby enter an emphatic protest against any further appropriation being made for the continuance of the above-mentioned institution; and, be it further

Resolved, That these resolutions be forwarded to the Appropriation Committee in Congress.

The resolution is self explanatory and right to the point.

As a war measure almost any expenditure of money could be justified. But to continue the deliberate squandering of public funds on an alleged Recruiting and Training Service, which neither recruits nor trains, would be little short of criminal waste.

Sooner or later American merchant vessels will be compelled to do what the ships of all other nations are doing, i. e., carry and train the young men who are to become the able seamen, officers and masters of the future.

Every other industry trains its future personnel where it ought to be trained—right in the workshops. No one has so far suggested that the Government establish national schools for printers, molders or machinists. Yet, it would be just as reasonable and logical to discontinue the good old apprenticeship methods in vogue among these crafts as it is for the Government to continue its present wasteful, inefficient and utterly impractical system of training merchant seamen.

American boys can and must be trained on the ships which are to become their working tools. Our great new merchant fleet is big enough to take care of all. But with few honorable exceptions American shipowners have failed to render the necessary co-operation in this respect. They have been perfectly willing to let "George" or the Government do it.

The first thing necessary to bring about a new state of affairs is to abolish those war-time training schools; the next is to compel each American merchant vessel in the offshore trade to provide suitable accommodations for boys and ordinary seamen; and the final step is to compel owners of vessels to carry a certain quota of such.

NEW BILLS IN CONGRESS.

Congressman Alexander has introduced a bill, providing for the establishment of load lines for certain vessels. Enforcement of the law devolves upon the Secretary of Commerce, who may appoint the American Bureau of Shipping or other corporation or association, qualified to perform the service. The bill (H. R. 3621) is an exact duplicate of the one which died with the last Congress. It has been referred to the Committee on Merchant Marine and Fisheries.

Congressman Montague and Senator Nelson have each introduced a bill relating to the right of action in the United States courts for death on the high seas and other navigable waters. The personal representative of the decedent may maintain a suit for the benefit of a decedent's wife, dependent relative, etc., against the vessel, person or corporation which would have been liable if death had not ensued. Recovery is to be "fair and just" compensation for pecuniary loss. Suit is to be begun within two years unless there has been no reasonable oportunity for securing jurisdiction of vessel, etc., in which event ninety days grace is given. These bills are not to be applicable to the Great Lakes or waters within territorial limits of any State nor are they to affect pending suits.

Mr. Montague's bill is known as H. R. 5282; and Senator Nelson's as S. 2058.

The introduction of these two bills constitute a sort of belated confession by at least two distinguished members of Congress that there is real need for the enactment of a Federal Seamen's Compensation bill. Such a measure is pending in Congress. It was introduced by Senator Johnson of California and has the unanimous endorsement of the three great American marine labor organizations.

Every civilized maritime nation on earth, except America, has a compensation law for its seamen.

Several of the great maritime countries, including Great Britain have load line regulations, but America has none.

Is it not high time to stop writing about alleged discrimination, by unfair laws, against American shipowners?

And instead, is it not nearly time to give American seamen at least as much protection as is already given to the seafarers of nearly all other competing countries?

Some persons can't help opposing trade unionism for much the same reason that some persons can't help jumping from a great height. Lightheadedness does it.

AMSTERDAM'S LABOR CONGRESS.

When the International Labor Congress opens at Amsterdam, on July 25, a session second only in importance to the recent Paris Peace Congress will be under way.

Chester M. Wright, in a news bulletin written on behalf of the American Alliance for Labor and Democracy, makes it clear that one big fact makes this coming Amsterdam congress stand in this class.

This is the fact:

The Amsterdam congress will discuss and act upon the attitude organized labor is to take toward the International Labor Congress which is a part of the League of Nations machinery.

If the International Labor Congress to be held at Amsterdam should decide to remain out of the International Labor Congress, which is to meet at Washington, D. C., in October, the latter congress could not be held for this reason:

The congress is made up of delegates chosen by organized labor, employers and government. Governments have one-half the delegates, employers one-fourth and labor one fourth. If labor were to refuse to send delegates there could be no such thing as a labor congress as the treaty intends it.

If the International Labor Congress is broken up because of labor's refusal to participate the machinery of the League of Nations will sustain a rupture that will at best be quite severe. Thus, the Amsterdam congress becomes of the utmost moment to the world in general, as well as to labor in particular.

The American Federation of Labor, as the result of action taken in the Atlantic City convention, is firmly committed to the support of the Peace Treaty, to the labor section of the treaty and to participation in the international labor congress to be held in Washington.

Daniel J. Tobin, president of the Teamsters' Union, has been selected by the American Federation of Labor executive council as co-delegate with Samuel Gompers to the Amsterdam congress. President Gompers and Mr. Tobin sailed on the "Mauretania" on July 11 from New York.

In addition to a discussion of the international labor attitude toward the labor congress to be held in Washington in October, the Amsterdam congress probably will decide the question of moving the international headquarters from Berlin, with a probability that the seat of the League of Nations will be selected as the new headquarters city.

Carl Legien, pre-war secretary of the trade union international, will undoubtedly be succeeded by some representative of an allied or neutral nation.

Guy Oyster, who accompanied the last two American labor missions abroad is again serving as secretary to this mission.

The organized workers may agree to the employer's proposal to deal with his employes "as individuals" as soon as the employer agrees to abandon the trust, corporation, company and copartnership, and go back to the primitive relations of master and man. And that will be plenty soon enough.

Frequently the wisdom of any proposed step may be judged at an inverse ratio to the amount of condemnation it receives. In this as in all other matters we consider the source.

TOLERANCE IN THE LABOR PRESS.

The average labor editor has a great deal of tolerance with the other fellow's views. It is perfectly natural that this should be so for progress among the working people would be impossible without broad tolerance. But there are exceptions to the rule and perhaps the most horrible example of the latter is James W. Mullen, editor of the San Francisco Labor Clarion.

Whosoever differs with Mullen and dares to say it does so at his peril, for he will surely get a personal lambasting in the columns of the Clarion. One would think that men with an almost unmatched record for service to humanity like Andrew Furuseth or Senator Hiram W. Johnson, would be immune from personal attack—but Mullen is merciless. Armed with his trusted pencil he will, like the famous Don Quixote, charge anything—anywhere.

To be sure, if the Labor Clarion were the personal property of this bellicose editor it would not matter very much for each man is entitled to his personal opinion about others. But the Clarion is an "official" paper owned and controlled by the San Francisco Labor Council. So when Editor Mullen tries to belittle Senator Johnson and Andrew Furuseth he does so "officially," in behalf of the thousands of men and women who constitute the great labor movement of San Francisco. Now, everyone knows what the verdict of San Francisco's trade-unionists would be if the issue were an appraisement of the life work of Furuseth and Johnson on the one hand and James W. Mullen on the other.

Yet, Mullen continues to wield his pen, "the pen, that mighty instrument of little men."

A bill has been introduced by Congressman Walsh, creating a Department of Marine and Fisheries. The bill places all marine branches of the Government under said Department, including the Coast Guard, Bureau of Fisheries, Lighthouses, Navigation, Steamboat Inspection, Shipping Board, and Waterways Commission. The Shipping Board will be designated the Bureau of Merchant Marine, and will carry with it the duties now prescribed by law. It will be composed of a Director General and four assistants until the expiration of terms of the present incumbents, whereupon the President is to appoint a Director General and an Assistant.

The labor movement, like every other movement that moves, is subject to a good deal of uncomplimentary remark from those who stand still and sneer. Probably the mule who looks over the fence and wobbles an ear at the lightning express has a rather small opinion of railroad speed.

The "international merger" business will not reach an ideal perfection until the workers of the world go into it.

The success of any civilization is to be measured by the comfort of its workers, not by the affluence of its drones.

The non-unionists are the comets of the social system. You can never tell at what moment they may collide with each other.

INDUSTRIAL ILLS DISSECTED.

Secretary Wilson in Masterly Address Raps Both I. W. W. and the Bolshevist Breeding Employer.

Following is the address, in full, of the Hon. William B. Wilson, Secretary of Labor, delivered at the convention of the American Federation of Labor, Atlantic City, N. J., June 13:

The wage workers of our country have reason to be proud of the part they have played in the great world war for freedom and democracy. You have reason to be proud not only of the part you have taken in the struggle but of the great part that has been played in the contest by your selected representative, the president of the American Federation of Labor. Upon him has devolved not only the direction of your forces and associated forces in the great struggle against the military autocracy of Germany, but there has also fallen upon his shoulders—and he has borne the burden manfully, he has directed the movement intelligently—the great burden of conducting the battle against the other insidious forces that would endeavor to utilize force for the destruction of democracy—the powers of Bolshevism as expressed in some of the countries of eastern Europe.

The part played by labor has been due in great measure to the appreciation by labor of the development that has taken place in the progress of human democracies. I have a theory—and time alone will demonstrate whether the theory is sound—that every individual and every group of individuals become influential in the affairs of the government just in so far as the individual or the group of individuals are necessary for the defense of the State.

I know my British friends will pardon me if I refer to what in my mind was the great starting point in the development of modern democracy. I do not look upon the Battle of Bannockburn as being purely the heritage of those of Scotland. I look upon it as being the heritage of the masses of the people of all the world. Those of you who are familiar with the history of that struggle realize that up until that time the only people who were permitted to participate in the affairs of government were the monarchs and the nobility, the nobility comprising the flower of knighthood. And the nobility were permitted to participate because the man on horseback and in armor was the man who at that time was necessary for the defense of the State. Nearly all of the nobility of Scotland had been brought up at the court of England and when the Battle of Bannockburn took place very few of the men in armor were on the side of the Scottish monarch. He had to depend for his support in the conflict upon the yeomanry of his country. The British monarch was there forced to sue for terms and the European military chiefs were compelled also to change their tactics. From that moment dated the fall of knighthood and the beginning of manhood.

Slowly the masses of the people represented in the yeomanry began to realize their importance, and before the reign of Bruce had passed they had compelled him to yield concessions to the yeomanry of that country; and this was true also of Edward and over on the Continent. The individual, the man in the mass, the man of society began to see the dawn of a new day.

Workers' Importance in War.

Modern warfare has still more thoroughly accentuated that thought. In the battles of ancient times it was frequently possible for large armies to support themselves through the country in which they were operating, receiving but a small portion of their supplies from home. From the days when Joshua overcame the enemies of Israel until Sherman made his famous march to the sea, great armies supported themselves upon the country in which they were fighting.

That is no longer possible, and it has been variously estimated that it takes anywhere from six to ten workers in the rear to maintain one soldier in the trenches. Consequently the workers of all the world have become more important factors in the defense of their respective countries, and they are insisting and will continue to insist that in the consideration of the problems of reconstruction the laws shall be so constituted and social affairs so conducted that every individual in the community shall have the greatest possible opportunity for self-determination.

Employers Helped I. W. W.

I recall conditions we met with in the Middle West when the President's Commission on mediation was sent to investigate conditions brought about by the Industrial Workers of the World some two years ago. The Industrial Workers of the World had almost gone out of existence prior to that time.

Suddenly there was a renewal of activities. Industries that were essential for the success of the war were being tied up, there seemed to be no way of keeping them in operation, and the President appointed his commission, of which I had the honor of being chairman. We went out to investigate; we found some oddities,

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., July 14, 1919.
Regular weekly meeting came to order at 7 p. m. Secretary reported shipping good; more members ashore. Donated $250 to the Telephone girls on strike. Committee interviewing the shipowners for increase of overtime reported progress; speedy settlement anticipated.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., July 7, 1919.
Strike called off; men have gone back to work.

No. 613 Beacon Street. Phone Sunset 336. P. O. Box 54.

DIED.

Karl G. M. Eisner, No. 852, a native of Germany, age 29. Died at Fort Bragg, Cal., January, 1919.

John L. Huovi, No. 2441, a native of Finland, age 26. Died at Sydney, Australia, February 8, 1919.

Until further notice all shipments of wheat flour from the United States to destinations in the Western Hemisphere may be exported under the general license known as HS-250, without the exporters having to make individual application and receive a license for each shipment, according to an order received at San Francisco by the United States Grain Corporation from Julius H. Barnes, Federal wheat director. The order is viewed as a considerable advantage to the business of American exporters and millers. The customs authorities have been advised of the order.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Activity being shown by railroad workers in closing up their organized ranks is smptomatic of the approaching crisis in the transportation world. The private railroad corporations are bankrupt. That is no longer a secret at Washington. To pull them out of the bog means either that they must be subsidized out of the public treasury or that the employes and traveling public must be fearfully exploited during the next generation.

The railroad workers are determined to resist exploitation. They will not tolerate a reduction in wages, at least while the cost of living remains at its present inflated level and there is no reasonable prospect that the price of necessities will come down soon. There is the deepest significance in the coming amalgamation of the brotherhoods with the American Federation of Labor. All intelligent men and women among the workers can see the storm coming and are making ready to meet it. A conservative United States Senator, whose name has long been associated with railroad legislation, sums up the outlook when he declares, in private conversation:

"The railroads are overloaded with water and waste. They must raise their traffic rates with ever-increasing frequency in order to pay their honest bills and their dishonest dividends. And when they increase their rates they boost the cost of living on the one hand and diminish their volume of trade on the other. Within a few months their finances are just where they were before, while the public has been driven farther along the road of discontent by the increased cost of living. I am despondent about the outlook; and even if we manage to save the railroads, all the other basic industries are almost as bad off. The coming year may find America in the same economic and industrial plight that already prevails in Europe."

Perhaps this Senator is unduly pessimistic; but it is hard to think so here in Washington, where the private conversation of men is so different from the general air of public confidence in our post-war conditions and outlook.

The railroad brotherhoods are not among the pessimists. They are too busy to be gloomy. They have a genuinely constructive plan for solving the transportation problem—the only constructive plan that has appeared. It need not be described again at length. The idea is that the Government shall first squeeze the water out of railroad valuation, purchase the lines by a bond issue, and then enter into contract with the organized workers to operate the roads. Glenn E. Plumb has worked out the legal details of the scheme and is busy pushing it from his headquarters in Washington.

Members of Congress who are still too timid to commit themselves on the question confess that the Plumb plan is the sanest that has been presented. It represents an effort by the workers to apply common sense to a situation which has been characterized for half a century by public neglect and private cupidity. It aims to roll a burden off the people's back and establish the railroads permanently on a basis of service. Every alternative plan entails either a direct increase in the cost of living, which the organized workers declare they will not tolerate; or a direct cut in wages, which they will resent even more. It is typical of the so-called "public" that it remains inert and voiceless even now when the crisis is upon the country.

This week witnessed a conference in Washington by the spokesmen of some fifteen smaller organizations of railroad workers, whose ambitious aim is to effect an amalgamation of all railroad employes within a single organization. This phase of the effort originated in May when the Order of Railway Station Agents met here and authorized their president, Earl H. Morton, to confer with the other bodies. The present meeting at the Continental Hotel was meant to be entirely private, and Mr. Morton expressed to your correspondent his regret that publicity had been given to the movement before any definite progress could be reported. President Morton is one of those who see that the whole railroad issue will either be adjusted along the lines indicated by organized labor or permitted to drift into a fatal muddle.

There is nothing to indicate that the big brotherhoods or the American Federation of Labor are immediately concerned in the "one big federation" dream of the station agents and their friends, but the effort must be recorded as a part of labor's campaign of preparedness for coming events.

* * *

Senator Kenyon and Representative Anderson have introduced twin measures for the control of the packing industry for which support is solicited from workers in that industry, particularly, and from the consuming public generally. The bills begin by requiring every dealer in live stock and butchered meats, and every dealer in dairy or poultry products, who does more than $500,000 worth of business a year, to take out a Federal license from the Commissioner of Foodstuffs, an official who will operate under the Department of Agriculture.

Holders of these licenses would be limited to the particular branch of the food industry to which their licenses applied. Every person or corporation would have to refrain from "the purchase, manufacture, storage or sale of foodstuffs or commodities other than those handled in the business for which the license is issued." This provision is aimed to destroy the great monopolies in "by-products" which have developed at the packing centers.

Under the proposed law every concern must permit the Commissioner of Foodstuffs to examine its records and pay a severe penalty for false statements, concealments or perversions of the truth. Of particular importance is the provision which empowers the Secretary of Agriculture to revoke the license of any dealer suspected of concealing the facts about his business. But the public would not be deprived of the foodstuffs handled by a concern which lost its license. The bill directs that the courts shall appoint a receiver to manage every such business, to act "in the interest of the public," pending such time as the proprietors may convince the courts that they are worthy to resume the control of the business.

More striking still is the clause which provides that when a concern has lost its license the burden shall rest with such concern to prove in court that the license should be restored. "When the evidence warrants" the Government may take away a license. To get it back the packer must expose all the secrets of his business and make them matters of public record. This provision is expected to make the packers very careful to avoid suspicion that they are cheating the consumers.

Most encouraging of all is that part of the proposed law which directs the Secretary of Agriculture to co-operate in developing private, semi-private or public rivals to the big meat packers. The Commissioner of Foodstuffs is directed to issue license for stockyards, slaughter houses and allied enterprises to "any public, quasi-public or other corporation or co-operative association or to any agency controlled or operated by a State."

The Department of Agriculture is further directed to assist all rivals to the big packers by supplying them with scientific data, such as standardized building plans, and to co-operate to procure for them sufficient transportation facilities. All railroads are required to furnish rolling stock as required by all holders of the Federal license, and the big packers are forbidden to use any refrigerator cars not so furnished by Government direction. Furthermore, "no licensee shall own, control or have any interest in" any stockyard, except during the first six months after the passage of the act.

Both as consumers and as wage-earners the workers have suffered from the monopoly enjoyed by the "Meat Trust." Friends of the Kenyon-Anderson bills invite organized labor to scrutinize them, advertise them and give them such support as they may appear to deserve.

* * *

Postmaster General Burleson continues to receive his daily drubbing from some hostile section of the public he is supposed to represent. Organized employes of the Potomac Railroad yards, Alexandria, Va., and telegrapher operators at that point "did their bit" in this respect the other day. They adopted a resolution calling upon President Wilson to oust Burleson with all possible speed, on the ground that "his incumbency is a detriment to the services of the Government of the United States," and because he "has shown himself incompetent and unable to discharge the duties of Postmaster General."

This denunciation of his rule comes just at a time when Mr. Burleson is congratulating himself upon his victory over the strike of the Commercial Telegraphers' Union. There is no denying Mr. Burleson's victory in this case. The strikers have been forced to drop their fight and to seek re-employment on such terms as the companies, under Burleson's direction, may care to grant. But it is important to know how the strikers were beaten. It is clear from a description given by the strikers' chief, S. J. Konenkamp, that Burleson is possessed of such autocratic and far-reaching governmental powers that no strike against him could ever succeed unless it were a general walkout of the

operating and clerical staffs of the telegraph, telephone and railroad lines. Konenkamp says in a statement to the returned strikers:

"You have sought a minimum of the things which the present Government administration says all workers should enjoy. You have not only been denied those rights, but Governmental agencies have been used to prevent your getting them by exercising your own economic strength. We find that sending telegrams from city to city in suit cases is allowed, a thing for which Western Union officials were arrested when they tried to do it without Mr. Burleson's consent. We find that telegrams are also being sent through the mails without restriction. The telegraph officials say the Government is footing the strike losses. Despite all his high-sounding words, Burleson has fought us at every turn, and his party must take the blame."

* * *

The housing shortage in the District of Columbia is typical of conditions existing in all centers of population. Building is almost at a standstill and rents keep going up. Perhaps the outlook would be more hopeful if the attitude of organized labor in Washington were typical of labor's attitude elsewhere. At a recent meeting of the Central Labor Council a resolution was passed demanding that "Congress enact legislation at once to raise the entire revenues of the District of Columbia by taxing the site value of land in the District, exempting all improvements, to the end that land speculation and land monopoly be done away with, and every encouragement be given to prospective home owners and builders to erect new dwelling places."

Uncle Sam acknowledges that his clerks here are receiving less than a living wage when he agrees to pay them a bonus of $250 to meet this year's increase in the cost of living. Another proof of it is the rapid growth of unionism among the public employes, some 30,000 of them, including scientists, now bear union cards in Washington alone. And the motto of the organizers is that very patriotic one: "In Union There Is Strength."

CAUSE OF SOCIAL UNREST.

A sane and logical discussion of social unrest appears in the editorial columns of that excellent daily, The Christian Science Monitor.

Those who have acquired the habit of shouting "Bolshevik" at everyone who suggests or proposes a change in the established order of things, would do well to read and digest the homely truth so ably presented by the Monitor, as follows:

"It is a law of the human mind that every great war is followed by a period of social unrest. It is not scientifically law, but it gets its apparent indorsement from the suggestive insistence of material reasoning. If you ask why this should be, the reply given is an exceedingly simple and apparently conclusive one. The dislocation of trade has caused prices to soar, the disbandment of armies has flooded the labor market, the temporary depletion of industries has produced a shortage of manufactures, and so ad infinitum. Of course this is only a very roundabout way of saying that the human mind itself has been in the wars, and in consequence is suffering from confusion bordering upon chaos. But the human mind always prefers groping its way through a maze to following the high road, and so it offers twenty material explanations of an obvious metaphysical fact.

"It is a curious fact, however, of which notice might be taken by the world, if the world were not too matter-sodden to be capable of so doing, that in spite of all the warnings of history no government ever really prepares for what has come to be called the period of reconstruction. It was just the same when the hundred years of war waged by Richelieu, by Mazarin, and by the grand Louis for the predominance of French ideals in Europe had been brought to a close by the peace of Utrecht. No one then but that sublime rascal Cartouche seemed to know how to take advantage of the conditions obtaining. A century later, after Waterloo, it was once more precisely the same. No comprehensive effort had been prepared to deal with the prophesied disorganization and distress, so that recourse was to the primitive methods of Peterloos. Another hundred years passes, and so it is again to-day. The press, the platform, and the soap box have showered warnings, advice, and even threats upon the governments of the world, with just about as much effect as if they had been talking to the Seven Sleepers or those eminent reactionaries Louis, Castlereagh, and Metternich.

"The passing of the centuries has not, however, made the policy of reaction either an advisable or a stable one. This may be seen in the temper of the masses. Bolshevism is a very different thing from the burning of hayricks, and Winnipegs bear no relation at all to Chartist riots. A great unrest is mastering the human mind. It may be observed in its altogether unrelated manifestations, in the Japanese boycott in China, the coal inquiry in London, or the I. W. W. activities in America. These, perhaps, are indications which might have been looked for. But side by side with them are totally unlooked for explosions of the conservative temper, such as the revolt of the actors, the formation of the middle class union, the strike of priests at Lorette. Nor is this by any manner of means all. Every one who understands history knows that the whole condition of the world is approximating to that which ushered in the Renaissance, but with one marked difference. The Renaissance was a European movement. The unrest of to-day is a world movement.

"A great effort is being made to show that this unrest is all the result of a specific mesmerism labeled bolshevism. But this is putting the cart before the horse. That bolshevism is mesmeric there seems no reason to doubt, but bolshevism is also an effect, and never cause. Bolshevism, in short, is the result of the unsettling of the human mind by Armageddon, acting on the essentially emotional and uneducated mentality of the Slav. It is exactly this that makes it mesmeric, for the emotional mentality, unused to scientific thinking, and so to protecting itself, is swept off its feet and hurried into excess in a way impossible with a mentality trained to hard reasoning. And this is where the intellectual is caught as easily as the uneducated. Of course, the anarchist everywhere has striven to adapt bolshevism to his purpose. He has been successful or unsuccessful in exact proportion to the ignorance and materiality of his medium, and the senile efforts made by his opponents to discredit every form of advanced thought, desirable or undesirable, by confusing it with the latest bugbear. The way to crush bolshevism is, obviously, to expose exactly what it is, not to drive it under the surface or, worse still, to induce people to human foolishness is the product of the fanatical and unbalanced mentality of Lenine.

"believe that some merely idiotic phase of

"The natural way out of the whole difficulty is to recognize the facts. The world does not stand where it did before Armageddon, and there is no use pretending that it does. No doubt the Roman Catholic Bishop of Norwich, lance in rest, riding down the rebellious peasants at North Walsham, regarded those starveling serfs very much as the Bolsheviki are regarded by the forces of reaction to-day. And he too had, in their murderous doings, his excuse. The madness of revenge always follows the madness of misgovernment. At the same time the unrest of to-day is no more caused by Lenine or Trotzky than the unrest of the fourteenth century was caused by Ball or Tyler, Langland or

(Continued on Page 11.)

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

the government, and yet I venture to say that the results obtained by the $200,00[illegible] expended on railroad operation produced greater results than any like amount of money expended by the government throughout the entire period of the war."

Women, Fish and Rabbits.

The Illinois Legislature has refused to pass a woman's eight-hour law, but the debate afforded fifth-rate politicians an opportunity to show their ignorance of the social significance of this question. One of the law makers said it should be called a "more jobs" bill.

One advocate of the bill, infuriated at the levity, declared that the question was treated as football, and that respect for the womanhood of the State was the last consideration of the opposition.

In an afternoon session of the assembly, a contrast was shown in the law-makers' treatment of the fish and game bill.

Then the "funny" solons dropped their levity and seriously considered whether it was more humane to trap a rabbit or kill it outright with a shotgun. The size at which fish should be caught was also discussed in the most sober manner by these law makers who are not opposed to long hours for working women.

War's Dead 7,450,000.

The War Department says that the best information obtainable places the total battle deaths for all belligerents in the great war at 7,450,000, divided as follows:

Russia, 1,700,000; Germany, 1,600,000; France, 1,385,000; Great Britain, 900,000; Austria, 800,000; Italy, 330,000; Turkey, 250,000; Serbia, 125,000; Belgium, 112,000; Roumania, 100,000; Bulgaria, 100,000; United States, 48,900; Greece, 7,000; Portugal, 2,000.

Total deaths in the United States army was 112,422, and the total number of wounded Americans, 230,089. Two of every three American soldiers who reached France took part in battle.

The Americans fought in 15 battles for 200 days. America's cost of war to April 30 of this year was $21,850,000,000. The total armed force, including army, navy and marine corps, was 4,800,000. The total number in the army was 4,000,000, and of these 2,086,000 went overseas. The number who fought in France was 1,390,000.

Social Changes Needed.

Special privilege and unfairness to working people must go, declared Chief Justice Winslow of the Wisconsin State Supreme Court at a joint meeting of Wisconsin and Minnesota lawyers.

"To deny that grave faults and abuses exist is to deny patent facts," said the speaker. "To assert that no changes are necessary is stupid, no less than dangerous. Labor is aware of its power and confident of its right to a greater share in the returns of industry, as well as to a share in the management and a more certain tenure of employment; there is a very widespread conviction also that wealth must in the future make far greater contributions to the public exchequer than it has done in normal times before and there are other claims of unjust privilege insistently made which deserve the most serious consideration."

Filipinos Are Literate.

Seventy per cent. of the inhabitants of the Philippines over 10 years old are literate, as shown by the 1918 census, according to a cable received by the War Department from Vice Governor Yeater at Manila.

The Philippine Mission, now in this country, states that this literacy is almost as high as that of some of the southern states in the United States, and is higher than Greece, Italy, Portugal, Roumania and Servia. In urging independence for the Philippines, the mission states that the last Philippine legislature voted 30,000,000 pesos ($22,500,000) to extend the educational system so that schools will be available to every child and youth in the Philippines.

INDUSTRIAL ILLS DISSECTED.

(Continued from Page 7.)

many credulities that the average man in the labor movement would not stand for. We found that people were coming in "on the rods" to the mining camps of the mountain regions of the west, coming in quite large numbers to establish a local of the Industrial Workers of the World, and then without submitting the question to the voice of the workers themselves, in organization or otherwise, declared strikes against the companies that were operating, declaring those strikes for a given wage and for a given number of hours, refusing to meet the employers in conference and insisting that it must be this rate which they published, and no other, and that illness itself would follow.

But that wasn't all. We found that wherever the legitimate, evolutionary aspirations of the workers were given an opportunity to develop, there the Industrial Workers of the World found no foothold, that it was only in the places where there was the iron hand of repression on the part of the employers used upon the workers themselves that this peculiarly revolutionary spirit found any expression whatsoever. It found expression in addition to the manner that I have stated in the philosophy that was being taught.

All Admit Justice.

They announced the philosophy as the basis of their movement that every man is entitled to the full social value of what his labor produces. Now that philosophy is purely of Socialist origin. It has its first enunciation through Marx, but it is also a philosophy that every individual can subscribe to with thoroughness and with complete acceptance of the principle—every man is entitled to the full social value of what his labor produces.

The great difficulty has been that human intelligence has not yet devised a method by which we can compute what the social value is of anyone's labor. No one can compute the value of your labor, no one can compute the value of my labor, no one can compute the value of the labor that has been performed by the president of this organization, or the labor performed by the man with a pick and shovel in the ditch.

Our intelligence has not yet as yet devised a method by which we can compute it, and so in the years gone by we have endeavored to meet the computation by one of three processes—by the process of the employer using his economic power to arbitrarily fix the compensation for the workers; the process of the worker using his collective power, arbitrarily fixing the compensation and imposing it upon the employer, and the process of negotiation.

The Poison of Sabotage.

The next position that they laid down as the second step in the philosophy they were building was that property is only valuable insofar as profits can be secured from the property, that if you eliminate the profits the property and becomes valueless, no one will want to retain it; and that, as far as it goes, is also sound. If there is nothing that can be produced from a piece of property that will be valuable to mankind, then no one wants to be bothered with possession of that property.

Then came what to me and to the minds of the great bulk of trade unionists of this country that I have come in contact with was the poison in their whole philosophy. They said that the way to destroy the value of property was to strike upon the job, that is, to "soldier," as we would say here in the East, to put sand upon the bearings, to break the machine, to destroy production, and to reduce the amount of returns from the labor to as small a point as possible enabling the worker to retain his job, and they were certain that when you had done that the profits would be eliminated, the owner would no longer desire to retain the property, and it could be taken over by the workers, operated collectively, and the workers secure the full social value of what their labor produced. Whatever there may be of value in the collective ownership and operation of property, there is at least no value whatever in that method of bringing it about.

Allied with Bolshevism.

The employers and employes have a mutual interest in securing the largest possible production with a given amount of labor, having due regard to the health, the safety, the opportunities for rest, recreation and improvement of the workers. These being safeguarded, the larger the amount that is produced the larger will be the amount that there is to divide. If there is nothing produced there will be nothing to divide.

Closely allied to the work of the Industrial Workers of the World during the past year, at least, there has been more or less Bolshevist agitation in the United States. It has not been to any great extent prevalent among the real workers of the country; it has existed principally amongst the parlor "coal diggers" of our greater cities. I have no fear of a political revolution in the United States. It may be possible that these "parlorites" may misguide a sufficient number of practical men of labor to cause local disturbances that will be annoying, but no one in the ranks of labor, whether he is classed as an extreme Radical or an extreme Conservative, or any of the elements between these two, will stand for Bolshevism for a minute when he knows what Bolshevism itself stands for.

Prods Parlor Proletarians.

They prate a great deal about the dictatorship of the proletariat. We who have been more or less familiar with the theories that have been promulgated by Marx and his assertion of the "dictatorship of the proletariat" had interpreted the term to mean that a majority of the workers of the land would determine the policy of it and impose it upon the balance of our people, and our workers were not willing to accept even that kind of a principle.

They realized the long centuries of struggle there had been to secure the franchise on the part of the workers, the claims that had been made that they had no property to be taxed, and having no property to be taxed they should have no voice in imposing the tax, and in addition to that, they had not developed enough, that they had not sufficient intelligence to be permitted to participate in the affairs of State.

Would Mean Abject Slavery.

From the time that Moses led the Israelites out of bondage in Egypt until Lincoln issued his Emancipation Proclamation, the struggle of the masses has been to get away from slavery, to get away from compulsory labor; and yet it is proposed by this new form of government to reintroduce obligatory labor for the workers of the world, imposed upon them by a small group of the "parlorites" of Russia.

The great distinction between slavery and freedom is that every man shall have the right to cease work for any reason that may be sufficient to himself. We have protested to the extent of sacrificing our blood and our treasure against the military autocracy of Germany, and yet the military autocracy of Germany was built upon exactly the same idea—that the Kaiser and his group of advisers knew better what the workers desired and what the workers needed, what was good for them, than the workers knew themselves. And this new group, setting itself up as the advance guard, take exactly the same position that they know better what is good for the workers than the workers know themselves.

The American working man wants nothing of that kind of dictatorship of the proletariat; the American working man wants nothing of that kind of obligatory labor; the American working man wants nothing of either the political, the social or the economic conditions that have existed and still exist in Russia. We have worked out our destiny far beyond that stage, and we are willing to continue to work it out to the achievement of higher ideals, not by the will of an advance guard, no matter how just or right their position may be, but by the will of the majority themselves.

Our Hard-Bought Freedom.

The use of force, as some of these people are advocating, for the overthrow of our institutions, we will not tolerate. Why, my friends, our institutions have been until recently the most completely democratic institutions in the world, and it is only recently that Great Britain has come up alongside to shoulder with us.

Our Declaration of Independence, while it declared, as I have stated, that "governments derive their just powers from the consent of the governed" did not give to all the people a voice in the affairs of State. The adoption of the Constitution did not give that right and that privilege. It was not until after sixty or seventy years of struggle that there came to the workers of our country practically universal manhood suffrage, and every element in our country had at least the right to express its voice in determining how the affairs of State should be conducted.

EXPENSES OF CONGRESS.

Members of Congress must play an awful sight of poker, according to a story printed in the June issue of the Searchlight, edited by Lynn Haines at Washington, D. C., in which cases are kept on Congress.

Odd expenditures for members of the House of Representatives, including safety razor blades, pocket knives, powder puffs and manicure sets are exposed in Haines' story. After an account of the secret caucus of the Republican Congressmen, the story proceeds as follows:

If these revelations of secrecy in high and low places make you discouraged and depressed, turn now to page 172 of the annual report of the Clerk of the House of Representatives for 1917. There, in the stationery account, paid out of the "contingent fund" of the House, you will find items as varied and entertaining as the best vaudeville.

I never go over these mute statistics of political finance without the feeling that many of the entries should be interjected with (laughter), as undelivered speeches often are. Certainly they are funny. As you help to pay the bills, you are entitled to laugh—and then swear.

For example, on page 183, these items appear:

12 dozen Angelback playing cards, R. and B., at $2	$24.00
6 dozen Movies playing cards, at $2	12.00
4 dozen Congress playing cards, at $4	16.00
3 dozen Boston playing cards, blue, at $2	6.00
2 dozen Canary playing cards, red and blue, at $2	4.00
3 dozen No. 550 Premier playing cards, at $2	6.00
2 dozen pinochle C—15 playing cards, at $1.20	2.40
2 dozen Pennant whist playing cards, at $1.35	2.70

During that year, in all 744 "decks" of playing cards were handled as "stationery." I never saw any poker being played in the House chamber while that body was in session, but the supply of cards would suggest that games of some sort might have been going on most of the time everywhere else. Perhaps members may have employed that method of deciding the disposition of pork in appropriation bills.

The House has only one lady member, but during that year, forty-eight manicure sets were handled in the "stationery" account. And a lot of similar "stationery" of the boudoir type figured in that account. One powder puff, a Parisian ivory box, a hair receiver, some sachets and one dozen assorted busts are recorded in various places.

Following some "lunch kits," on page 184, there is quite a bunching of toilet tools, as foldows:

2 manicure sets, No. 4712, at $2.70	$ 5.40
2 manicure sets, No. 873, at $9	18.00
2 manicure sets, No. 1874, at $5.55	11.10
2 manicure sets, No. 4925, at $2.80	5.60

Leather goods played a lively part in the Congressional "stationery" market. Bags, purses and brief cases totaled 298 for that year. There were about 16,000 greeting cards, a lot of birth announcements, some valentines, pink program pencils, at home cards and dinner cards. Pocket knives totaled 270, while the number of fountain pens reached only 167.

A certain municipality, somewhere in Michigan as I recall, once bought an Ingersoll watch from the proceeds of a twenty-year bond sale. There may be nothing analogous in this Congressional purchase, but "one Ingersoll Triumph watch" is included in the stationery account for 1917. Somebody, on page 188, had "one watch repaired."

Back in the boudoir budget I forgot to mention "one fan."

Page 178, where the "fan" figures, shows also: 50 dozen Gillette blades	$34.37
18 Thermos bottles (quarts)	49.50
18 Thermos bottles (pints)	34.65
5 Vacuum bottles	13.75

And, on page 225, sandwiched in between "one box midget fasteners" and some ribbons for the typewriter, is "one-half dozen egg crates."

SALT IN THE UNITED STATES.

The Delaware Indians made salt from brine springs in New York State and sold it to settlers as early as 1670, making probably the first commercial production of salt in this country. The manufacture of salt by white people in the United States was begun near Syracuse, N. Y., about 1788. Salt is the most commonly used mineral in the world, and no useful mineral except coal, perhaps, occurs in greater abundance or is more widely distributed in the United States.

The Federal and State Surveys and private establishments have published a great deal about the occurrence of salt in parts of the United States, but not until now has so much information on the salt deposits of the whole country been assembled in a single book. This book, which is entitled "Salt Deposits of the United States," has just been issued by the United States Geological Survey, Department of the Interior, as its Bulletin 669, an illustrated volume of 275 pages written by W. C. Phalen after he had visited many salt-producing localities from New York to California. In this volume the distribution and character of the salt deposits are described by States and a brief history of the industry is given, together with a record of the output since 1797. The report also contains a discussion of the origin and formation of saline deposits and many chemical analyses of brines and bitterns. This bulletin should be in the hands of everyone who is interested in the salt industry. It can be obtained free of charge on application to the Director, United States Geological Survey, Washington, D. C.

CAUSE OF SOCIAL UNREST.

(Continued from Page 9.)

Grindecobbe. The one like the other resulted from a sudden awakening of the human consciousness to a clearer sense of liberty, for which it was as unprepared in England when Richard was King as it was in Russia when Nicholas was Tzar.

"The day of sitting on the safety valve is past and done with. Society, as constituted in 1914, has played its part. The world of to-morrow is a world in which Capital and Labor will be partners, or else a world in which there will be trouble. The unrest from Vancouver to Peking is not coordinated by man nor is it the result of an intriguing bolshevism. It is Labor demanding the things it believes it is entitled to, and demanding them in the attitude and temper it has been bred to in its native countries. But, whatever the tone, the demand is insistent and universal, and in its very completeness carries its warning. In such conditions authority must move with wisdom and with justice. Those are the only two attributes which can work out a peaceable agreement. Authority which shuts its ears to concession will be met with disorder. That is the temper of the occasion, because in concession alone Labor can read what to it is justice. Let anybody talk with the representatives of Labor, anywhere in the world to-day, and then record his impressions. They will be found to tally, whether in London or New York, whether in Paris or in Winnipeg.

"The moral of all this is very simple. It is that effects are never cause. Consequently the unrest of to-day is not caused by bolshevism, or trades-union, or profiteering, or dislocation of trade or any of these things, all of which are effects. It is caused by the action of Principle rousing the dormant sense of truth in the human consciousness. In such circumstances the evil of the human mind rises to the surface as it did in the Renaissance, when all the lust of the flesh combined to fight against spiritual understanding."

Labor News

Recently-organized telephone girls at Galesburg, Illinois, won recognition of their union and increased wages after a three-days' strike. Good working conditions are guaranteed and the company agrees to employ only members of the union when such are available. All student operators shall join the union as soon as possible after going to work, and not later than six months after.

The corner stone of the new International Association of Machinists' building at Washington, D. C., has been laid by officers of that organization. All grand lodge officers located now in Washington, officers of lodges Nos. 174 and 193, business agent of district 44 and a large number of other members of the Machinists' union, were present at the ceremony.

Eight striking employes of the Michigan Malleable Company have been jailed for five days each for violating an injunction not to picket that plant. When asked if they would promise not to picket if sentence was suspended, the court was answered "No." Judge Marschner, who issued the injunction, refused to handle the case. The workers say he got "cold feet" when he realized the strikers would insist on their rights.

The Methodist Federation for Social Service has issue da synopsis of the social reconstructon program agreed to at a recent meeting of the board of bishops of the Methodist Episcopal church. The program includes these declarations: "We favor an equitable wage for laborers, which shall have the right of way over rent, interest and profits. We favor collective bargaining as an instrument for the attainment of industrial justice and for the training in democratic procedure."

President Gompers has resigned the chairmanship of the national committee for organizing iron and steel workers and John Fitzpatrick, president of the Chicago Federation of Labor, has been elected in his place. At a meeting of representatives of international unions and State bodies, held at Atlantic City, to perfect plans for an intensive organizing campaign in the steel industry, President Gompers declared his hearty sympathy with this movement, but he felt that as he is unable to devote the necessary time to the campaign he is not justified in retaining the chairmanship of the committee, and he does not want to be merely an honorary chairman.

Mayor Lysle of McKeesport, Pennsylvania, has finally agreed to issue permits to organized labor to hold meetings in that town upon the same terms as other organizations. Trade unionists were recently notified that they would be arrested if they attempted to talk in public. Instead of accepting this mandate they arranged at a conference in Atlantic City to fill the McKeesport jail if necessary to maintain their constitutional rights. The mayor had justified his position on the ground that he had been "informed by employes" that disorder would follow a trade union meeting, but when hizzoner heard of the Atlantic City deli he concluded that the "company employes" might be mistaken—or that they might be inspired by the bosses.

INFORMATION WANTED.

The salvage case of S. S. "Princeton" which salvaged the S. S. "Ardnore," both vessels owned by Standard Oil Company of New Jersey, has been tried and resulted in an award of $7,500 to the crew. This amount has been received, and members of the crew of S. S. "Princeton" are requested to call for same at the offices of Mr. Axtell, One Broadway, New York, N. Y.

The widow of Otto Kivi, who fell overboard on the S. S. "Carlos" between San Francisco and Aberdeen, May 30, 1919, wants to know the names of the crew on the ship. Kindly assist his widow by giving this information to S. T. Hogevoll, attorney for the widow, 627 Pacific Building, San Francisco. 6-11-19

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

CARRY ON!

Uncle Sam is releasing from his service the men who went "over there" to free the world from autocracy. Thousands of soldiers are daily receiving their honorable discharges; they pocket their pay, bid farewell to their comrades, and sally forth—civilians.

There is one army, however, which must not be demobilized. That is the army of War-Savings Stamp buyers. More recruits are needed to carry on the campaign of readjustment which follows the signing of the armistice.

The army of fighters has achieved its purpose.
The army of savers must remain in "action."
"Carry on" to a lasting peace under the banner of W. S. S.!

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

I am representing most of the crew of the S. S. "J. E. O'Neil," in the matter of their claim for salvage services rendered to the steamship "Oregon" on or about January 19, 1918, about 300 miles off Honolulu. The following awards were made to the vessels which assisted in the salvage operations: Steamship "Lurline," her master, officers and crew, $18,000; steamship "President," her master, officers and crew, $1750; steamship "J. E. O'Neil," her master, officers and crew, $6872. One-quarter of the $6872 was allowed to the master, officers and crew of the "J. E. O'Neil." All those members of the crew who have not yet filed their claims should do so at once in order that the claims of the entire crew will be presented at the same time. Silas B. Axtell, One Broadway, New York. 7-9-19

Members of the S. S. "J. O. Neil" will please call or write to the undersigned attorney relative to salvage services performed on the 18th day of January, 1919, to the S. S. "Oregon." Silas B. Axtell, 1 Broadway, New York, N. Y. 4-21-19

Home News

The United Retail Stores Corporation, recently formed by James B. Duke and other tobacco men, to establish distributing organizations, is arranging to absorb the United Cigar Stores Company, and thus to a large degree monopolize the retail trade of tobacco.

Last year's earnings of the American Car and Foundry Company were the largest in its history, according to the company's annual report. The surplus, after deducting charges, taxes and preferred dividends, was $9,671,813 or the equivalent of $32.23 a share on the $30,000,000 of common stock.

The United States Department of Agriculture reports that the supply of wheat in this country is 51,392,898 bushels, or nearly three times as much as last year. Wheat flour holdings show an increase of 121.8 per cent. over last year. Rye stocks have increased 346 per cent. over last year.

Uncle Sam is a good railroad builder, testified L. J. McPherson before the Senate Appropriations Committee. The witness is an engineer for the Alaskan engineering commission, a government body that is building a large railroad system in Alaska. The engineer said that the United States railroad, to cover 500 miles of track, is costing $73,000 a mile, and that is a lower cost than private companies incur. The road is to be completed in 1921.

Pre-war rates of postage went into effect on July 1, making it possible to send a letter anywhere in the United States for 2 cents and a postcard for 1 cent. During the thirty-one days of July printed 3-cent envelopes and 2-cent postal cards will be redeemed at the full purchase value. The redemption will be in stamps, printed envelopes or postal cards as may be demanded, but not in cash. The 3-cent stamp issued in the war period will not be redeemed.

Entire villages were wiped out in Alaska by the influenza epidemic, according to reports brought by the steamer "Senator," which has just returned from the first trip to Nome. On the Yukon delta the entire population of certain towns was wiped out, the disease killing the elders and leaving the children to starve. Starving dogs ravaged many of the bodies, he said. At Naknek, a village on Bristol Bay, every male adult native died during the winter. The epidemic is now abating, however.

Justice Benedict of the Brooklyn Supreme Court evidently does not believe in the more shallow forms of Americanization. The other day he denied sixty persons of a family named Kannofsky the right of calling themselves in future Kenyon. "I shall try, in so far as is possible," he said, "to prevent persons through a change of name from appearing to be of a different race, extraction or nativity from that indicated by the name which they bear. . . I am strongly opposed to the adoption of names which conceal the nativity or extraction of persons bearing foreign surnames. An opportunity of deception is thereby afforded, and it is manifestly unfair to the families whose surnames are thus appropriated that persons having no right to use such names should be allowed to do so."

Domestic and Naval

The British schooner "J. B. Kitchen," Halifax for Queenstown, abandoned on fire at sea, is of 302 tons, built in 1873, rebuilt in 1918 and owned by J. T. Moulton, Lunenburg, N. S.

The British steamer "War Myrtle," 5161 tons gross, 3147 net, built at Birkenhead in 1917 and owned by the British Shipping Controller, has been sold to the Lloyd Royal Belge (Great Britain), Limited, London, and renamed "Caledonier."

The British steamer "Ardgirvan," 1345 tons gross, 813 net, carries about 2150 tons deadweight, built at Campbeltown in 1918 and owned by Lang & Fulton, Greenock, has been sold to H. A. Brightman & Co., Newcastle, for about £90,000.

The British steamer "Marchioness of Butte," 4294 gross tons, 2794 tons net, carries about 7000 tons deadweight, built at West Hartlepool in 1906 and owned by Lewis Lougher & Co., Cardiff, has been sold to the Loyal Steamship Company, Cardiff, for about £114,000.

The British steamer "May Scott" (self-trimming), 1,465 tons gross, 884 net, carries about 2,220 tons deadweight on about 16 ft. 9½ in., built at Blyth in 1909, steams about 9 knots on about 11 tons, which was detained at Hamburg during the war, has been sold by auction in London to the Aldershot Steamship Co., Ltd., London, for £65,000.

It is said that the Shipping Board will give up the custom of expressing the tonnage of its ships in terms of tons deadweight carrying capacity and will instead use the gross register tonnage, which is followed by the Bureau of Navigation and foreign governments. Shipping people will regret this move, because the deadweight tonnage has a living meaning to them, whereas gross register tonnage really represents nothing from the commercial point of view, since there are such wide variations in the capacity of ships of equal register tonnage.

Several "A" type standard British steamers are reported to have been sold at £175,000 each, which compares with £165,000 paid at the end of April. They carry 8130 tons deadweight on 25 feet 1 inch, single deck, engines 27 inches, 44 inches and 73 inches, by 48-inch stroke, i. h. p. 2500 at sea, three boilers, 15 feet 6 inches by 11 feet 6 inches, 180 pounds w. p., forced draught, speed 11 knots loaded at sea, four hatches, four holds, 8 steam winches, 8 derricks, steam windlass and steam steering gear, displacement 11,420 tons, co-efficient .762, dimensions 400 feet by 52.03 by 31 feet.

About half a dozen of the "C" type standard British steamers are said to have been disposed of by the British Shipping Controller at prices ranging up to £125,000, which compares with £115,000 paid a short time ago. These boats carry 7025 tons deadweight on 21 feet 9 inches, single deck, engines 25 inches, 41 inches and 68 inches, by 45-inch stroke, i. h. p. 2200 at sea, three boilers, 14 feet by 11 feet 6 inches, 180 pounds w. p., forced draught, speed 11½ knots loaded at sea, four hatches, three holds, ten steam winches, ten derricks, steam windlass and steam steering gear, displacement 7265 tons, co-efficient .76, dimensions 331 by 46.6 by 25.6 feet.

News from Abroad

The American Council at Brest, France, reports that the first municipal restaurant opened by the municipality, to serve a thousand persons daily, has been such an unqualified success that a number of other restaurants are to be opened in other parts of the city.

Increased food production in the Federated Malay States is being effected by the Government setting aside lands suitable for the raising of rice and other foodstuffs, and compelling the owner to cultivate the portion set aside at least once each year. If the owner refuses, the Government may authorize some other person to do so on such terms as may be agreed upon.

Resignation of Viscount Kikuijiro Ishii as Japanese ambassador to the United States and his retirement from public life was officially announced by the Japanese Government. This was simultaneous with Ishii's arrival from the United States. "Ill health" was the sole reason ascribed in the announcement. The successor to Ishii has not been decided upon as yet.

One of the burning questions in Bohemia is that of the settlement of the land problem. The greater part of the land is in the hands of large land owners. One of the earliest acts of the new Government of Bohemia was the appointment of a special commission to draw up recommendations for land reform. This commission has now presented its report in favor of the compulsory expropriation of land owners. The report recommends that no land owners shall be allowed to retain possession of more than 250 hectares, and that all his land property over and above this limit shall be bought by the State at a price fixed by the Government.

The report of the Hongkong and Whampoa Dock Co., Ltd., for the year ended December 31, 1918, states that the gross profit for the year is $2,585,212.29 (silver). After paying interest $237,234.74, and depreciating plant, etc., by $605,334.67, and paying a bonus to staff of $80,000, there remains a net profit of $1,662,642.88, and adding amount brought forward as per last report, less interim dividend, there remains available a sum of $1,894,869.22, which the directors recommend to be appropriated as follows: To pay a final dividend at the rate of 5 per cent. per annum; to pay bonus to shareholders of $7 per share, $419,601; to transfer to reserve fund $600,000, and to carry forward to new account $725,410.72.

Two French civilians were killed and five American soldiers and sailors were injured severely and more than 100 wounded in riots at Brest, June 30. Two of the American soldiers are expected to die. The casualties occurred as a result of the exchange of shots between American military and naval police and French sailors. The trouble began, according to available accounts, when an American naval officer, who is said to have been drinking, tore down a French flag. A crowd of Frenchmen attacked the officer and, it is said, kicked and beat him until he was unconscious. Americans who passed by and who were not aware of the cause of the fight went to the aid of the naval officer. The fight then became general.

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE LEAGUE OF NATIONS

A. F. of L. Convention Approves Covenant by Overwhelming Vote

Opposition to the League of Nations covenant and the Labor Bill of Rights in the Peace Treaty was defeated in the recent American Federation of Labor convention by a vote of 29,909 to 420 (1,830 not voting).

The record of the debate in the daily convention proceedings is very brief but is reprinted herewith in full.

The address of Andrew Furuseth and part of the speech made by Samuel Gompers, both received from other sources than the official record, are also contained in this issue.

The subject matter under the caption "Peace Terms" was brought before the convention in a report by the Committee on International Labor Relations, as follows:

Peace Terms and Delegations Representing American Federation of Labor.

Your committee has given to the subject under these captions its serious attention. We note with satisfaction and approval that the Treaty of Peace formulated at Paris acknowledges:

"That the well being physically, morally, and intellectually of industrial wage earners is of supreme importance,"

and

"holding as they do that labor should not be regarded merely as an article of commerce they think that there are methods and principles of regulating labor conditions which all industrial communities should endeavor to apply so far as special circumstances will permit."

The labor clauses, among other things, specify the right of association for all lawful purposes by the employed: Of a wage adequate to maintain a reasonable standard of life as this is understood in their time and country; adoption of an eight-hour workday; a weekly rest of at least twenty-four hours; abolition of child labor and equal pay for equal work performed regardless of sex. This marks the first time in history that so definite a recognition of labor and its interests has ever been accepted.

The establishment of the draft convention, that is, an international organization with annual conventions of an international labor conference for the discussion and formulation of measures calculated to protect and promote the rights, interests and welfare of the workers of all the nations in the world is the first instance in history in which such a declaration has been written into a peace treaty or an international treaty of whatsoever kind.

Attention is called to the preamble of the draft convention adopted by the Commission on International Labor Legislation and approved by the Plenary Peace Commission and incorporated as part of the Peace Treaty. The preamble is as follows:

Commission on International Labor Legislation

A Draft Convention Creating a Permanent Organization for the Promotion of the International Regulation of Labor Conditions.

Preamble.

Whereas, The League of Nations has for its objects the establishment of universal peace, and such a peace can be established only if it is based upon social justice; and

Whereas, Conditions of labor exist involving such injustice, hardship and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperiled; and an improvement of those conditions is urgently required; as, for example, by the regulation of the hours of work, including the establishment of a maximum working day and week, the regulation of the labor supply, the prevention of unemployment, the provision of an adequate living wage, the protection of the worker against sickness, disease and injury arising out of his employment, the protection of children, young persons and women, provision for old age and injury, protection of the interests of workers when employed in countries other than their own, recognition of the principle of freedom of association, the organization of technical and vocational education and other measures;

Whereas, Also, the failure of any nation to adopt humane conditions of labor is an obstacle in the way of other nations which desire to improve the conditions in their own countries.

The High Contracting Parties, moved by sentiment of justice and humanity, as well as by the desire to secure the permanent peace of the world, agree to the following convention:

In connection with the term "convention" as used in the title of the labor draft convention as adopted by the Commission on International Labor Legislation, the term "convention" is understood to mean a covenant or agreement.

Your special attention is directed to the protocol of Article 19, page 28, first day's proceedings, which reads as follows:

"In no case shall any of the high contracting parties be asked or required as a result of the adoption of any recommendation or draft convention by the conference to diminish the protection afforded by its existing legislation to the workers concerned."

We agree with the Executive Council that the treaty embodying the covenant of the League of Nations is not a perfect document and that perfection is not claimed for it. Your committee agrees "that it marks the nearest approach to perfection that has ever been reached in the international affairs of mankind." It is calculated to and does "provide the best machinery of procedure yet devised for the prevention of war." It provides that international disputes between nations shall be settled in the calm light of reason and justice, rather than by the arbitrament of war, with its consequent slaughter of priceless human lives and destruction of untold wealth.

No human being in possession of his moral senses can deny the adoption of a measure that will tend to prevent the indescribable horrors of another world war. Civilization must turn to a point where international disputes will be settled in the calm light of reason, rather than by the repetition of the horrors we have just witnessed. While the covenant of the League of Nations with its labor provisions is not perfect, is not all that we desire, it is in the right direction, for the reason stated and a multiplicity of others and should be adopted in principle, and so we recommend.

We further recommend that the Executive Council be authorized and directed to aid in every way the holding of the International Labor Congress which under the treaty of peace will convene in Washington, D. C., in October, 1919.

It was moved and seconded that the report of the committee be concurred in.

Delegate Furuseth, Seamen, made a lengthy statement, in which he attacked certain provisions for the League of Nations, particularly of the clauses relating to labor, and characterized them as dangerous and inimical to the interests of the working men and women of America. (Furuseth's speech is printed in full at the conclusion of the official record.)

Secretary Woll defended the report of the committee and labor clauses contained in the League of Nations document.

During his statement Delegate McCarthy, Carpenters, asked the following question: Suppose this A. F. of L. convention to-day should decide on a seven- or a six-hour day, and suppose the Congress of the United States should also decide on that particular number of hours and suppose that is signed by the President of the United States. Could we, the working people of America, put that law into practice without going over to this so-called institution described a moment ago as the institution with which we would have to deal?

Secretary Woll: Absolutely so; in my best information and in my own conviction, the League of Nations, with its labor provisions, does not in any way hamper, restrict or interfere with the freedom of legislation of any nation to improve its legislation, to improve the conditions of its workers.

Delegate McNulty, Electrical Workers, submitted the following amendment to the report of the committee: that nothing in the League of Nations as endorsed by this convention can be construed as denying the right of self-determination and freedom to Ireland as recognized by the vote of this convention on Tuesday, June 17, 1919. (Amendment seconded.)

Delegate Furuseth: I rise to a point of order. The amendment is not germane to the question and is not in order.

President Gompers: The point of order is not well taken.

Delegate Brown, Machinists, requested that Fraternal Delegate Bondfield be asked to explain the position taken by the British Trade Union Congress on this matter.

President Gompers stated that neither the peace treaty nor the labor provision in it were

formulated at the time the British Trades Union Congress was in session.

It was suggested by the chair that if the question before the convention could be determined on before adjournment, it might be possible to conclude the work of the convention on Saturday. A motion that the convention remain in session until the committee's report was disposed of was then adopted.

The question was further discussed by Vice-President Duncan, Delegates James A. Duncan, Seattle Central Labor Council, Heller, Ladies' Garment Workers, John H. Walker, United Mine Workers, McCarthy, Carpenters, McCullough, Typographical Union, and President Gompers.

Vice-President Duncan in the chair during the time President Gompers addressed the convention. (Gompers's speech is printed, as far as available, at the conclusion of the official record, immediately following Furuseth's remarks.)

The amendment offered by Delegate McNulty was adopted.

On motion by Treasurer Tobin, the roll was called on the adoption of the report of the committee as amended. The vote resulted as stated in the introductory.

Address by Andrew Furuseth.

It is a most disagreeable task that I am endeavoring to perform. I have struggled with myself for two months, trying to convince myself that it was my duty to the labor movement, to my people, the seamen, and to myself to either keep quiet or to endorse any movement to have the labor provisions of the League of Nations endorsed by the American Federation of Labor.

Mr. Chairman, I lost in the fight. No matter what the consequences may be I cannot keep my peace now. This is the only place in which I can enter my protest, and whether that protest be heard or not, or whatever the result may be to me, there is something in me that ceaselessly, night and day, commands me to speak. Some of you may say that I am a Bolshevist. Those who know me know the opposite. The opinion of those who do not know me, is of no consequence to me.

It may be, it will be stated that I oppose here something that President Wilson desires and that my gratitude to him should close my mouth. I say to you that there is not a man on earth to-day for whom I would go further than for President Wilson; there is not on earth to-day a man to whom I feel more gratitude or for whose opinions, freely held, I would have more respect for, but my nature is such that I cannot follow blindly, no matter who it may be, and I cannot accept without protest the diluted labor proposition that, under pressure, the President of the United States felt himself compelled no doubt to accept. I fear the concentrated national wills of Great Britain, France and Italy breaking upon him, and with the prospects of the floodgates of hell let loose in Europe, he felt that he could take no other position. It is not in the nature of a human being to stand that kind of pressure, and so I think now that I am loyal to the Wilson that I knew, that we know, and that I at least, for one, love.

Having said that, I want to deal now with this labor charter. Under Section 20 of the original covenant Section 23 as it is in the present covenant, the League of Nations takes jurisdiction over the daily life of the working people throughout the entire world. It says that it deems it its duty and will endeavor to make labor conditions humane and just in nations members of the League and in the nations with which the League has commercial and industrial relations. That embraces every working man and woman throughout the entire world. If the League has the authority to say that the conditions of labor shall be humane and just, there is no possibility to deny that it has the sole right to prescribe what is humane and just. There can be no higher authority anywhere, so that whatever is adopted as humane and just by the League will necessarily have to stand as humane and just, regardless of any protest that the working men of any part of the world may feel inclined to lodge against such finding.

The constitution of the League as drafted is a grant of power. The League creates a super-legislature. It operates in two ways: through a draft convention that is a proposed treaty, or through recommendations. The recommendations will go through the regular channels. In this country they will go to the House of Representatives, and from there to the Senate, and then to the President for his signature, and this will be all done in the open light of day. But a draft convention comes to the President: it is transmitted from the President to the Senate, it is discussed behind closed doors and you know not what it is or what it means until it comes out. These labor provisions are a part of the peace treaty. Every peace treaty is made to last forever. Every other kind of a treaty contains a clause that provides for renunciation or amendment. The peace treaty has no such clause. This treaty when once adopted will become part of the supreme law of the United States, and in so far as it is applicable to any of our laws it will write itself into those laws, because an adopted treaty is the last expression of the legislative will.

Some may say that it has nothing to do with internal affairs. What are labor conditions in any country but internal affairs. The treatment of labor is put in the same category with the suppression of the opium traffic, etc. That the treatment of Labor is an internal affair is indisputable, but the League takes control of internal affairs, and if the American people agree to this charter, then it becomes the particular law of the United States that cannot be amended except by unanimous consent of the signers of the Treaty, or on the field of battle.

I called these things to the attention of our delegation at Paris. Mr. Robinson, sitting on the platform, will unquestionably agree that I did. My protest entered then and there was taken by a gentleman now in this convention to Colonel House, and it was agreed that my protest was sound and that the alternative suggested by me was proper. That alternative would make the League's recommendations voluntary and, as to labor, leave to each nation to determine for itself how far it should follow any recommendations made by the League affecting labor. I felt so good about it that my colleagues left Paris at once, but when I came back from having seen them to the railroad station the fat was in the fire. A professor — I don't know and can't remember his name — a professor of history, too, by the way, in the meantime had mixed into this question and upset our whole proposition, and the discussion began all over again.

I know how the American delegates felt in Paris. I know how anxious they were. I know that your President, Mr. Gompers, called the proposed constitution a Frankenstein; I know the fight that was made against it, and I know that it has been assumed that the danger was cured.

The constitution-making body felt it necessary to adopt the protocol to Section 19 that has been read from the platform. I call your attention to the fact that the protocol says "they shall not be asked or required." Now I call your attention to that it goes on to say "they shall not diminish the protection afforded by the existing legislation." And who is to determine what constitutes protection? Who is to determine whether what may be proposed is to diminish or to increase the protection of existing law? The conference on International Labor legislation makes the rules and the League itself is the final authority. When the protocol was adopted I felt so good over it that I went to the Hotel Grillon and asked that a telegram be sent to Hansen, Secretary-Treasurer of the Seamen's organization, and I said to him in that telegram, as I remember it: "The seamen are safe." In my report to the organization I quoted the telegram. I quoted what I had said, and then added: "I am not so sure of it; I am not at all sure of it." And the more I have been thinking about it, the more I have been brooding over it, the more I have been bringing back to my mind the scenes that I sat in the corner and watched in Paris the more it breaks against me, and I can't do other than I am doing now.

Now, let me call your attention to the labor charter. It is significant for what was adopted and still more significant for what was refused adoption. Who are the signatories of this thing, anyway? Let us see. I will read them to you. All those people will help to make the legislation that you are going to live under. They are the United States of America, Belgium, Bolivia, Brazil, British Empire, Canada, Australia, South Africa, New Zealand, India, Cuba, Czecho-Slovakia, Ecuador, France, Greece, Guatemala, Haiti, Hadjez (a slave state, a newly-created slave state which recognizes human slavery, on the coast of the Persian Gulf), Honduras, Italy, Japan, Liberia, Nicaragua, Panama, Poland, Portugal, Roumania, Servia, Siam and Uruguay.

Now, what did they adopt? Let us have a look at it for a little while. It is very interesting. When it came to writing the Bill of Rights, you know when the Constitution of the United States was adopted it was a grant of power and it could not be adopted by the States until they adopted the twelve amendments which became known as the Bill of Rights. Without these it could not possibly be adopted. I submit to you whether it would have been adopted at all or not if the men who consented to it had known that the Federal power was to increase to what it is to-day. Now let us see what the American labor movement brought to this convention in Paris for its adoption. The right of free association, free assembly, free speech, free press. You can't find any of these in the bill of rights adopted. It says that you shall have the right,—that employers and employes shall have the right to lawfully assemble, to lawful organization, to lawful combination. Who is to determine what is to be lawful in the case? Why, the International superlegislature, not you in the United States. Who is to sit on this wonder body? One man representing labor, the organization most representative of labor. In other words, the American Federation of Labor, and that would be absolutely certain as long as we have Woodrow Wilson for President, and if he would continue to be President I don't think I would oppose this thing. I don't know who is going to be President after him. Then there is one representative of the employers, taken from the organization most representative of employers, that is, one of the Employers' Associations here in the United States. And there are two representing the United States Government. That is three to one, as I read it. It might not be now, because Woodrow Wilson has the appointing power, but what will it be under his successor, do you think?

Now, then, there are four men for each nation, four men for each of those that I read. But mind you, the British Empire has 24, because it is represented over and over again, in Canada, in Australia, in South Africa, in New Zealand, in India. In other words, 24 or 28 representatives against your four. What chance have you? Have men all of a sudden become saints? Are men no longer controlled by their interests? I have found no evidence of such a change anywhere, and I cannot accept that philosophy.

Now what else did they fail to insert in this thing that was adopted? The representative of America brought to that convention the proposal—and mind you, this that I read to you is the first or second of the bill of rights as put into the Constitution of the United States—free speech, free press, etc. Now then, there is the fourteenth amendment to the Constitution of the United States. What did they do with that? It was introduced and fought for by your representatives in Paris. It was introduced and fought for by Mr. Gompers and the other representatives. What was done with it? They said, "there isn't such a thing as slavery in Europe." Mr. Barnes, the representative of England, ridiculed it in a quiet way, and the proposal to include this as a controlling thing for the protection of the working people was voted down in that constitutional convention. What may we expect of those who are to follow these men?

Then comes the question as to whether the thirteenth amendment to the Constitution of the United States was to be applied to Seamen, and the proposition was made that the seaman should have the same right to leave his vessel in safe harbor without being imprisoned. That was promptly voted down after the protocol had been adopted, and the protocol was only adopted after two days of fighting. I have called your attention to what it may probably mean. Then when all of us had left Paris, when there were no more Americans there, they changed the proposition that "Labor is not a commodity or an article of commerce"—you know that expression from the Clayton Act. And what does that constitution-making body do when it is called together again? Upon the motion of Mr. Borden, of Canada, they make that to read: "The labor power or a human being is not 'merely' a commodity or an article of commerce," changing an absolute negative to an equally absolute positive. In order that you may understand the absolute meaning of it, I will draw a parallel. Somebody says Andrew Furuseth is a scab; somebody else doesn't like that and proposes a resolution that he is not a scab. Somebody amends it to read that he is not "merely" a scab, and that is what you get and that is what you are asked to endorse.

There isn't a solitary thing here that leaves any of the American ideals in this document, and then legislation under it is to be enacted by men from all these places who could not understand even the question of involuntary servitude.

There is something here with reference to women; it is very nice and expressive—the principle that men and women should receive equal remuneration for work of equal value. What a rich time a lawyer would have in construing that! How can you tell whether it is of equal value or not? And when they wanted to put it so that it would be indisputable by stating, "equal pay for equal time." Mr. Barnes said: "Why, there are some men in England who believe in that, but they believe in it because they don't want the women in factories or in industry at all. That would shut them out of the factories." Well, perhaps it would, but that has been the position of the labor movement of America—equal pay for equal time to men or women.

Then there is the question of wage. Since when has the American Federation of Labor gone on record, or is it now willing to go on record and set a minimum wage for full-grown men, and have it set by someone else instead of having it set by themselves? This thing is foreign to everything that you have dreamed of, everything that you have struggled for, everything that your hopes and aspirations have gone out to. It makes me shudder.

I feel that I should say one more thing. A treaty—I want to recall to your mind that we have a treaty with Japan which gave to the Japanese in the United States the right of most favored nations. The California legislature undertook to pass a law that the Japanese should not, in the State of California, be permitted to own or lease land, and they should not be permitted to sit alongside the little American girls in school. Mr. Roosevelt, of

(Continued on Page 10.)

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Steel Autocracy Must Capitulate

The autocratic conduct of employers in the Steel Industry has long been one of the outstanding points of industrial injustice in America. When the great steel companies merged into the combine known as the steel trust, the employment policy, left by the trust agreement in the hands of the component corporations, became fixedly anti-union. Gradually this old-time policy of the several companies has become the fixed policy of the great trust, backed by all of the immense power of the combine. It has been the policy of the steel corporation to operate a shop closed to union men. This policy is a relic of the brutal past. It has no place in the scheme of things to-day.

During the convention of the American Federation of Labor in 1918, in St. Paul, by direction of the convention, a conference was held at which were present the officers of the international unions interested in the steel industry. This conference, presided over by President Gompers, formed the Committee for Organization of the Steel Industry. The meeting at St. Paul was followed by a year of hard work, the fruits of which were recounted at a similar but larger conference held during the Atlantic City convention, just closed. In this conference there were present the representatives of 24 national and international unions. Much progress was made during the year, but the brutal, archaic policy of the steel corporation persisted in opposition to the tide of human events and the tide of sentiment flowing so strongly in the direction of progress everywhere.

It was reported at this conference that in the Pittsburg district the right of free speech was being denied by authorities in some of the steel towns. Organizers were not permitted to speak openly in behalf of the work of organization. This denial of a fundamental right by the exercise of arbitrary authority on the part of those clothed with brief and passing power constitutes a most flagrant breach of deep-rooted American principles not to be tolerated, and the conference so regarded it. The result was that every international president in the conference arose and volunteered to go into the district to speak when called upon by the organizing committee, facing arrest and imprisonment if necessary in assertion of rights of American citizenship and in furtherance of the struggle to give the workers of the steel mills a measure of justice in the ordering of their lives.

This is notice to the autocrats of the steel industry that their autocracy must remove itself from the face of the earth, or be removed by the sweeping tide of progress that is to-day leading the people everywhere to better and higher concepts of life. No such industrial autocracy can continue to exist and function in this age of the world's development. As political autocracy has gone, so must industrial autocracy go. The roseate path of despots ended in the consuming fire of the war.

There has got to be freedom in the lives of all men and women. The right of a few to order and direct and control the lives of the many is to-day denied and abrogated. For the steel workers there can be no freedom and no democratic voice in the ordering of their lives until they are free to organize and deal collectively with their employers concerning the wages and conditions and hours of their work—until they are able thus to exercise a compelling voice in fixing the terms and conditions of their work. There is no democracy where only one voice speaks.

Steel in America must be democratized! —American Federationist.

"Stand for Eight Hours."

Stand for an eight-hour work day and reject any attempt to work overtime, is the call to members of the International Union of Timber Workers by President Covert.

The unionist says Russia, which formerly produced approximately 48 per cent. of the world's lumber products, will supply very little in the next three years, and that the market must be supplied by the United States, Canada and Sweden.

"I am afraid," he continues, "that many of our employers will attempt to increase production by running overtime. This should be fought with all the power we have, for it is a forerunner of the re-establishment of the 10-hour day. The employers will not hesitate to pay the time and one-half for the additional hours, because the price will certainly warrant it. We must not be decoyed by their bribe of extra pay. Stand pat on your eight hours and refuse to work overtime except in extreme emergency. Make them put on additional shifts if they want more production."

Strike Talk Enforces Law.

A threatened strike of mine workers in France that would paralyze this industry has resulted in parliament making it mandatory for mine operators to enforce the eight-hour law. The operators insisted that the eight hours should be "effective" work, that is, eight hours exclusive of the time taken for descent, lunch and ascent. The mine workers demanded that these be included in the eight hours and prepared for a general tie-up of the industry. Parliament then made these conditions mandatory.

For the first time in seven years the French mine workers are united. In 1912 a large number withdrew from the national federation because of a dispute over the miners' old age pension law, then under consideration. At the last convention of the federation the seceders applied for membership and they were again admitted. This unity was necessary because of the manner in which the operators juggled with the national eight-hour law.

Three Deadly Diseases.

In 1917 nearly one-third of the deaths in this country were due to one of these three diseases—heart disease, pneumonia or

World's Workers

At the annual conference of the National (British) Union of Clerks, the officers' proposal for a working week of 38 hours was accepted.

Serious labor troubles are again taking place in Japan. At a gold mine in Shizuoka prefecture, 100 miners went on strike recently, and, armed with pickaxes and shovels, raided the residences of the mine officials and destroyed or damaged the buildings and furniture. The local police force suppressed the rioters. The cause of the trouble is dissatisfaction over wages. Over 1000 women and girls employed in a big silk factory at Uyeda have gone on strike for higher wages. Similar occurrences are reported from various parts of the empire. One cause of the unrest is the soaring of rice, which is now higher than last summer when the country was involved in serious rice disturbances.

A British "Middle Class Union" was inaugurated at a meeting held at London. The presiding officer, Major Pretyman Newman, M. P., explained that the union was not "middle class" as the term applied to rank, but represented the "middle interest," the people who were between organized capital on the one hand and organized labor on the other. He declared that the Government was deferential to organized labor, and respectful to organized capital, but that the middle classes "could not cross the threshold of Downing Street." W. L. George, commening on the new union in the London Daily Herald, expressed a different view of the organization: " . . . When last year the Labor party wisely opened its ranks to all men and women, when a number of doctors, barristers, and artists entered the labor field, capitalism grew nervous. Thus the Middle Class Union, that modern reincarnation of our old enemy, the Property Defense League, came to birth."

The Danish paper Politiken states that during the winter and spring months of the present year collective agreements affecting most of the organized workers of the country came to an end. After prolonged negotiations between the Central Trade Union Federation and the Employers' Association a new basal agreement was reached which paved the way for the later negotiations between masters and men in the various specific trades. This agreement included a standard curtailment of hours, the addition of a cost of living bonus to fixed wage rates, and the principle of a further bonus. "The total result of the various negotiations," states the journal, "is very satisfactory. At the present moment an agreement for a year has been concluded with respect to 150,000 workpeople. Of these the most important groups are as follows: 30,000 agricultural workers, 28,000 metal workers, 8600 textile workers, 6000 carpenters, 5000 painters, 4600 boot and shoe hands, 4000 bricklayers in the provinces, 4000 slaughtermen, 3000 tailors, 2500 brick and cement workers, 2200 woodworkers, 1200 boiler and machine attendants, and 1200 female workers. Added to these are compositors, bookbinders, gardeners and some small groups.

DO YOU KNOW
That War-Savings Stamps pay 4 per cent. compound interest?
That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?
That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?
That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?
That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?
That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?
That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

INFORMATION WANTED.

Anyone knowing the whereabouts of Calvin Pickett, last heard of in Port Arthur, Texas, February, 1918, will please notify G. Schroeder, Agent, Eastern and Gulf Sailors' Association, Port Arthur, Texas. 7-9-19

Any one knowing the whereabouts of Victor Ratner, age 15, last heard of in New Orleans, La., May 17th, will please notify his father Leo Ratner, 17 East 97th St., New York, N. Y 7-16-19

Any one knowing the whereabouts of Patrick Jackson Timeny, a native of Glasgow, Scotland, will kindly notify his sister Helen Jackson Timeny, care of Mrs. Colchester, 34 The Buff, Yokohama, Japan. 7-16-19

Pacific Coast Marine.

A silken banner was presented to the Bethlehem Shipbuilding Company's band by the Chamber of Commerce and the city of Alameda because of the interest the band has taken in all the city's public events.

The former United States fisheries steamer "Roosevelt" has been sold at auction by the Government to Captain M. C. Tallaksen, a Puget Sound pilot and towboat operator. The bid was $28,000. Captain Tallaksen asserted he was not yet ready to announce the eventual use of the vessel.

The need of increased tonnage for the trade centering at the Golden Gate will be met partly by San Francisco owners of deep water craft bringing back vessels operated in the Atlantic during the war period. Among the ships to be returned here are Oliver Olson's vessels, the "Paraiso" and "Florence Olson."

The Pacific fleet will anchor four days, August 20 to 24, in San Francisco harbor when it arrives to take up its station off the west coast. The complete itinerary has been given out by Rear-Admiral J. L. Jayne, who received it from Admiral Hugh Rodman, commanding the Pacific's new naval forces.

The Norwegian wood auxiliary five-mast schooner "Hjeltenaes," 2,500 tons gross, built at Aberdeen, Wash., in 1917, Diesel machinery (1,000 s.h.p.) by Puget Sound Iron and Steel Works, Tacoma, and owned by Erickson & Anderson, of Norway, has been sold to French owners for about $625,000.

The Skinner & Eddy Corporation, Seattle, although still having 23 steamers on order, 10 of which are now on the ways, to deliver to the Shipping Board, has placed an order for 16,000 tons of steel to be used in the construction of four cargo carriers of 10,000 deadweight tone capacity each, for the concern's own account.

The tonnage situation, so far as the Pacific Coast is concerned, has hardly begun to readiust itself so marked is the demand for vessels on the Atlantic ocean to move supplies to the devastated regions and to take care of troops yet in service. This is the gist of the annual report of the Oregon State Board of Pilot Commissioners just filed with Governor Olcott.

According to advices received at the San Francisco customs house all existing bunker rules and regulations, requiring vessels to obtain fuel licenses, have been canceled. The issuance of such licenses will be discontinued. Vessels of all flags may now secure in the United States or its possessions all fuel or ships' stores desired.

To increase dockage space for vessels unloading lumber at the San Francisco waterfront the State Harbor Board has awarded a contract to the J. D. Hanna Contracting Company for the lengthening of Pier 43. Pile drivers are now at work on the improvement The extra space will make up for the loss of the storage facilities by the lumber companies owing to the erection of the structure at Pier 41, which when it is finished will be occupied

The Peruvian steamer "Santa Inez," from Talara Bay for Tacoma via San Pedro, reported to the Marine Department of the Chamber of Commerce that on June 10 in latiture 70 degrees 49 minutes south, longitude 80 degrees 12 minutes west a dismantled Peruvian bark flying the signal letters S. B. C. D. was sighted. The main mast was gone but the vessel was proceeding under a jury rig and the captain expected to make land without assistaance.. He asked to be reported to Lloyds.

The Interisland Steamship Company, doing business between the Hawaiian Islands, is spending $1,500.000 in new projects to meet the demands of future Pacific maritime trade. The projects include a completed coaling plant, two new concrete piers and slips and an addition to the drydock to enable it to accommodate vessels of 500 feet length and of 10,000 tons burden The company will then be able to bunker, drydock and repair the largest vessels afloat on the Pacific.

The "City of Alameda," a 10,100-ton oil tanker, was launched on July 16 at the Bethlehem Shipbuilding Company yards in Alameda. Alameda is the second city in the bay region to have a ship named after it by the Shipping Board for going over the top in the Victory loan campaign. The vessel was sponsored by Mrs. Frank Otis, wife of Mayor Otis. John U. Calkins, governor of the Twelfth Federal Reserve Bank of San Francisco, delivered a short address and Mayor Frank Otis spoke in behalf of the city.

The Standard Oil Company has sold the ships "John Ena" and "Dunsyre" to the Robert Dollar Company. Both the "Dunsyre" and the "John Ena" are steel vessels, 28 years old, and were built at Glasgow, Scotland. The Dollar Company is sending the "Dunsyre" to Australia with case oil for the Standard Oil Company at the reported rate of $1.17 a case, making a total of $58,500 for the voyage. The "John Ena" will take barley to Europe, getting $40 a ton for the charter.

The assignment of two additional steamers has been made to Williams, Dimond & Co. to be operated between this coast and Europe. The "Elebeck," an 8800 deadweight ton freighter, built at the Skinner & Eddy plant at Seattle, will load in the North late in August. W. C. Dawson & Co. will handle the vessel at Seattle as agent for Williams, Dimond & Co. and the California Pacific Shipping Company will have charge at Portland, where additional cargo will be loaded. Another vessel was designated by Assistant Director of Operation to be placed on the berth out of San Francisco and also at San Pedro, provided the latter port offers sufficient inducements. McCormick & McPherson will represent the managers at the southern city. This vessel will carry cargo direct to Havre and London.

Improved port facilities provided by the Board of State Habor Commissioners and lower costs of handling foreign freight, have resulted in a large increase in the import and export business of San Francisco. According to the annual statement of the Associated Terminals, prepared by H. S. Scott, general manager, his concern has nearly doubled its business in the last year. During the last twelve months fifty-five full cargoes have been handled by this concern. There were 260,481 tons of exports and imports. "It is now cheaper to receive and ship foreign freight at this port than at Puget Sound," Scott said, "and the result is that much business is being diverted from the North to San Francisco. This port will show a healthy trade increase constantly. All that is now needed is more ships to handle the increasing volume of business."

A 250-foot extension to the fitting-out wharf, bringing the total length up to 700 feet, is being installed at the plant of the Pacific Coast Shipbuilding Company on Suisun Bay. The extension was provided for in the plans when the yard was originally built, but its installation was deferred that full attention might be turned to war-time production of ships. The 233 acres of the plant, like the fitting-out wharf, have been laid out with the necessities of growth in mind. The launching of the "Sinasta," fifth of the ten 9400 deadweight ton cargo steamers being built at the yard, took place on July 15. The "Cansumet," the second to be launched, is scheduled to sail from San Francisco for England next month, having been allocated to Williams, Dimond & Co. Captain F. Ryer will be her commander. The "Diablo," built at the plant and named after the mountain, is now crossing the Pacific on her maiden voyage, flying the house flag of the Pacific Mail Steamship Company.

Captain Richard C. Brennan has been sent to Mare Island by President John H. McCallum of the State Harbor Board to make inventories and arrange for the taking over from the Navy by the State the cruiser "Annapolis," which will be the school ship of the California nautical training course for merchant marine officers. The "Annapolis" arrived at San Francisco from Norfolk via the Canal about a week ago. Captain Brennan, who has been in the merchant marine service for twenty-three years and was formerly in command of the "Harvard," when the vessel was operated on this Coast by the Pacific Steamship Company, is considered one of the most likely candidates for the position of commander of the "Annapolis.' He is a graduate of the Massachusetts State Nautical School and was but recently discharged from the Navy with the rank of lieutenant-commander.

Word was brought to San Francisco during the week of a remarkable voyage made by the little two-masted schooner "Luka," which has plied between the islands out of Honolulu for many years and recently was sent as far south as Suva. The "Luka" was caught by the outer edge of a cyclone four days after leaving Suva. Captain D. P. Wall headed north to run away from the center but had little wind and, just before the "Luka" was overtaken by the wind the main boom, tired of thrashing back and forth, broke, and the mainsail had to be snugged in. Then the wind struck and there was nothing to do but run before it under the fore staysail, and with that rag of muslin only the schooner made 168 miles in one day. After the wind had passed by, Captain Wall rigged a jury boom and made for Jaluit, where he stayed eight days for repairs. After that they had a hard time beating to windward and had to make much more than the usual northing before they could get a slant for Honolulu. The "Luka" arrived about two months after all hope for her had been given up.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

WEDNESDAY, JULY 23, 1919.

THE ATLANTIC COAST STRIKE.

From the latest available information the strike of seamen along the Atlantic and Gulf coasts seems to have settled down to an endurance contest.

The organized shipowners, banded together under the name, "American Steamship Association," have contemptuously rejected practically every effort of Seamen's officials to adjust grievances which have long existed, but have been held in abeyance on account of the war.

The first demand submitted by the Atlantic District Unions has been preference in employment to American citizens and then preference to union men.

The American Steamship Association, finding itself in an impossible position finally, but most reluctantly, agreed to the first demand but at the same time rejected the second preference—trade-unionists. This tricky offer was effectively exposed by submission of proof that the shipowners who are leading the fight against the Unions are employing, almost exclusively, men who cannot speak the English language. Spokesmen for the Seamen's Unions also point to the fact that where preference has been given to union men during the past few years, the percentage of Americans in the crews has steadily increased. Where, however, the unions were given no preference there were no Americans then and there are no Americans now.

Other long-pending grievances call for an eight-hour workday and three watches at sea for the deck crew. These conditions are now, and have been for some time past, in full force and effect along the Pacific. The Shipping Board has conceded an eight-hour workday "in port" but declines to consider the three-watch system for the deck crew "because this would tend to increase the size of the crew at a time of great shortage of sailors." That this contention is not a sound one is conclusively proven by the fact that on the Pacific crews have not been increased in size as a result of introducing the three watches at sea. The tendency of all vessels on the Pacific Coast has been to reduce rather than to increase the size of deck crews, notwithstanding the three-watch system.

Finally, there is the demand for an increase in wages, approximating twenty per cent., or from $75.00 per month to $90.00 per month. Surely, no one will call this an exorbitant wage for American wage-earners, considering the steady and unprecedented upward trend of the cost of living in all ports of America, and, in fact, throughout the world.

All in all, the principal issue of this strike is one of pure, unadulterated Americanism.

On the one hand it is the organized shipowners' cry for cheap alien labor.

On the other, is the demand of the Unions for preference to skilled American trade-unionists.

All other issues could probably be adjusted without great difficulty, but the right of the organized American seamen to first consideration in employment cannot and must not be compromised. And if no argument but a prolonged strike can establish this principle, then the strike must go on because, in the final analysis, this is a fight for America—for an American-manned Merchant Marine!

AN UNMATCHED RECORD.

Official returns of the United States Bureau of Navigation for the fiscal year ended June 20, 1919, show that the American merchant marine (on the above-named date) comprised approximately 27,300 vessels of 12,200,000 gross tons. Detailed returns of small craft from minor ports not yet received will not materially change these figures. To this total may properly be added fifty-six ocean steamships of 405,000 gross tons, temporarily employed as transports and troopships by the army and navy, such as the steamers "George Washington," "Leviathan" and other seized German ships, and several Ward Line and other American ships, which are essentially passenger ships of the merchant marine.

The increase in the American merchant fleet during April, May and June was slightly over 1,000,000 gross tons. The total on March 31, 1919, was 27,223 vessels of 11,797,052 gross tons, of which 4682 ships of 5,469,968 gross tons were registered for foreign trade, the remainder being engaged in the coasting trade and on the Great Lakes.

During the past three months the total American tonnage in foreign trade has steadily increased through new construction and through the return by the War Department of ships no longer required to transport troops and military supplies. At the present time half of the American merchant tonnage is registered for foreign trade, a situation without a parallel since 1856. Ships lost and abandoned during the first nine months of the fiscal year aggregated 267,485 gross tons, and for the whole year will only slightly exceed 300,000 gross tons, the reports for May and June not yet being complete. The transfer of ships from foreign flags to the American flag virtually ceased during the past fiscal year, American additions from foreign sources being almost exclusively Japanese tonnage bought by the United States Shipping Board. On the other hand, the transfer of ships from the American to foreign flags amounted to only 38,200 gross tons.

For purposes of foreign trade attention may be confined, generally speaking, to seagoing ships of 1000 gross tons or over, of which on June 30, 1919, our merchant fleet included 2058 of 7,300,022 gross tons out of a total as stated of 12,800,000 (not including 405,000 gross tons in military service). On July 30, 1914, just before the war, our fleet of seagoing merchant ships of 1000 gross tons or over numbered 755 or 2,128,731 gross tons out of a total fleet of 7,928,688 gross tons.

It is significant that the sail tonnage has increased inappreciably—less than 2 per cent.

The wooden seagoing steam tonnage of 1000 gross tons or over has increased from eight steamers of 10,595 gross tons on June 30, 1914, to 293 of 693,541 gross tons on June 30, 1919. The world's commerce is conducted mainly, of course, by steel seagoing steamers of 1000 gross tons or over, of which on June 30, 1919, our total documented was 1436 of 6,072,901 gross tons.

Ships built in the United States and officially numbered during the year ended June 30, 1919, were 2182 of 3,739,372, not including fifty-nine vessels of 121,112 gross tons built for foreign owners, making a grand total of 2241 vessels of 3,860,484 gross tons, or two-thirds of the world's output for the year. Still more startling seems our recent shipbuilding record when compared with 3,332,882 gross tons launched in 1913 throughout the world (including the United States), which, according to Lloyd's returns, was the world's largest annual output before the war.

Thus, it will be seen that the shipyards of the United States put into the water more oceangoing tonnage during the last fiscal year than all the shipyards of the world combined during the year 1913.

This surely is a record that will stand unmatched in the annals of the world's shipbuilding.

MISREPRESENTATION!

The grossly unfair attitude of the press and spokesmen for the American Steamship Association has already compelled Vice-Chairman Stevens of the United States Shipping Board to issue the following public statement:

The statement appearing in the public press that I had stated that the officers and men of the Navy would man the ships owned and controlled by the United States Shipping Board if the threats of union officials to force a general strike were carried out, is untrue. I have made no such statement. The Shipping Board has not considered what means it might take to move its ships in case it were faced with a prolonged tie-up. It announced its decision concerning wages and conditions of employment with the expectation that the terms would be accepted by the men, and it still hopes for a speedy settlement.

Furthermore, I desire to point out that the telegram sent me by Mr. Mooney, of the American Steamship Association, and given by him to the press, is inaccurate and misleading.

The implication from these statements in the telegram is that the Shipping Board by its action in announcing a wage increase has forced the American Steamship Association to agree to "substantial increases in the entire personnel of American ships" which the American Steamship Association would not have otherwise done. The Shipping Board has no apologies to make for the wages it has announced. It considered the decision fair, and is willing to assume the full responsibility. The facts are that the American Steamship Association had previously voted for a ten per cent. increase in the pay of officers, and had also voted for a ten per cent. increase in the wages of the men, without any "solicitation" from the Shipping Board. Consequently the only difference between the action of the Shipping Board and the action of the American Steamship Associa-

tion is the difference between a ten per cent. increase in the pay of the men and a ten dollar flat increase. The "substantial increases," therefore, which the Shipping Board has forced upon private steamship companies by its action amount to two dollars and a half per month for the men alone, and not, as the telegram indicated, ten dollars per month for the men and ten per cent. for the officers.

All of which is most enlightening and proves that the managers of the American Steamship Association are unwilling to cooperate either with the Shipping Board or with the Seamen's Unions.

It is the old pre-war story of organized wealth brazenly defying both the Government and the working people.

"INTERNATIONAL AGREEMENT."

Seamen are not included in the National eight-hour law, recently passed by the Parliament of France, and the French Seamen's Federation demands that the law apply to them.

As usual, in such cases, the French shipowners have raised the international competition bugaboo and want the law postponed until other countries adopt it, through international agreement.

The shipowners have been receiving enormous rates per ton for freight from French colonies to England, while English shipowners were carrying the same freight for about one-fifth of the French rate. In this case the French shipowners did not demand that the English tariff be applied to them either by international agreement or otherwise.

But, of course, in the case of a Seamen's eight-hour law it is different! Such utopian proposal should only be carried into effect through international agreement!

Can you beat it?

A charter has been issued by the International Seamen's Union of America to the Canadian Seamen of the Great Lakes. Steps are also being taken by the Executive Board of the International Union to render such assistance as may be required to give the new organization a proper start. It is certainly gratifying to note the fine, aggressive spirit of unionism which has developed among the seafarers of Canada during the current year. Some day, when all the seamen on the North American continent are thoroughly organized, and when the responsibilities as well as the advantages of organization are fully understood, there will be no more quibbling or haggling over "recognition of the union" or "the right to collective bargaining." The issues then to be discussed will be based upon the absolute and unqualified right of the human element to "chief" and "prime" consideration over all things which enter into the complex make-up of the marine transportation industry.

The refusal of Australian shipping companies, engaged in the coastwise trade, to insure their crews in respect to the risk attached to infection by pneumonic influenza has brought on a general strike of seamen in Australia. The influenza plague has levied a particularly heavy toll upon seamen in the Antipodes, and the request for protection seems so reasonable that it is very difficult to understand how it could be denied. But it seems that strikes are about the only means, the world over, whereby reasonable concessions can be obtained.

LOOT OF PUBLIC PLANNED.

Reasons Why American Financiers Are so Anxious to Be Allowed to Grab Peoples' Natural Resources.

President Wilson in one of his speeches stated that "we are fighting to secure for all peoples participation upon fair terms in the economic opportunities of the world." While that was one of our chief reasons for entering the war, unfortunately there are many members of Congress who were very keen for the war, but have proved themselves not fully loyal to America's purposes in entering the world conflict for democracy. It looks very much as though some "practical" men were getting ready to fry a lot of fat for both parties for the 1920 campaign. Several bills have been introduced in the present session of Congress to alienate the natural resources of the country, coal, phosphate, sodium, oil, oil shale and gas on public domain or to permit private exploitation of the water powers of the country in public ownership upon terms grossly unfair to the public. If enacted into law, these bills will rob the American people as Germany would not have dared to do, had she conquered this country. Nearly a dozen bills to despoil the American people of their natural resources have been introduced in the House and in the Senate. The House Committee on Public Lands reported within a year that the estimated tonnage of bituminous coal in public ownership in accessible areas is 10,000,000,000 tons; of semi-bituminous coal, 30,000,000,000 tons; and of lignite coal 50,000,000,000 tons—a total of 90,000,000,000 tons. This report estimates the value of phosphate in its natural state in public lands at $90,000,000,000. The value of the oil and gas on the nearly 607,000,000 acres of public land in the United States is incalculable and there is energy enough in the water power of the United States to keep the business of the world running for countless years.

Our natural resources still in public ownership are conservatively worth close to $500,000,000,000, which is equal to the total commercial and govermental indebtedness of the world. Much of these natural resources will be practically given away by the pending bills which have been introduced by both Republicans and Democrats.

The two most significant things about private development of natural resources have been the frightful wastefulness and the enormous profits in spite of the wastefulness. The late President Charles R. Van Hise, of the University of Wisconsin, stated a few years ago that the waste in mining as in the past "amounted to from 150 to 100 per cent. for anthracite, and to 50 per cent. for bituminous coal of the amount taken out." Up to 1908 nearly 7,350,000,000 tons of coal had been mined, and approximately 4,000,000,0000 tons of coal have been "wasted in mining," as Dr. Van Hise states, under the alleged efficiency of private development. No careful estimate has been made of the waste of the oil resources of the country although it has amounted to hundreds of millions of barrels. Dr. Van Hise estimates that the waste of natural gas, under the boastful efficiency of private development, amounts to 400,000,000,000 cubic feet a year.

Nearly every great fortune in the United States is based upon private ownership and development of some natural resource of the country. In five years after the dissolution of the Standard Oil Company, the companies included in the Standard Oil combination distributed in cash $407,401,626; in stock at par value, $207,200,000, and subscription rights at par to the value of $40,900,000—a total of $655,000,000, while the total capitalization of these companies on April 15, 1912, was only $276,916,754.

The Commissioner of Internal Revenue gives some interesting information as to the profits made by oil companies for the calendar year 1916, which are the last figures of the bureau available. This was before profiteering in the name of patriotism became quite the most profitable profession in America for a little group of undemocratic Americans. In that year, corporations developing oil, gas and salt wells had a net income of $236,795,209; during the same year corporations extracting coal had a net income of $121,082,830; those extracting copper had a net income of $271,087,120. During the same year, corporations extracting gold, silver and other precious metals had a net income of only $14,907,086.

The Commissioner of Internal Revenue also reports in 1916 the average net income of 2,554 mine owners and operators was $45,140. Eleven mine owners and operators had a net income in 1916 of over $1,000,000; ten had a net income of over $1,500,000, and several a net income of over $5,000,000. The total net income of corporations extracting minerals was in 1916 $798,883,349.

These figures show clearly why American

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., July 21, 1919.

Regular weekly meeting came to order at 7 p. m., E. A. Erickson presiding. Secretary reported shipping good; more members ashore. The committee interviewing the shipowners submitted a report stating that the new rate for overtime in steam-schooners had been agreed to and is to commence on August 1. Negotiations with other shipowners is progressing. The report was received and concurred in. The meeting also agreed to the following rules, which were ordered posted in the various forecastles:

"1. That Rule No. 3 of the established Working Rules, 'Any work for the safety of the vessel, her cargo, passengers and crew to be done at any time without extra compensation,' should be lived up to by the members of the Sailors' Union of the Pacific.

"2. That the owners are willing to carry a full complement of crew in all vessels, but if such complement is not obtainable, and only the number specified in the vessel's certificate can be procured, the winch-drivers shall stand watch with the men and take wheel and lookout.

"3. That the members of the Sailors' Union of the Pacific shall not quit vessel at any time or any place, but shall give the mate sufficient notice and time to hire men to take their places, so as not to cause loss and delay to the vessel. The owners shall also instruct their mates not to discharge men without sufficient reason."

Even death itself may shortly have to give way to the trust as the "great leveler."

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Labor has thrown its hat into the steel ring. The members and officers of 24 unions of workers in the "basic industry" have issued an ultimatum for that group of industrial captains headed by Judge Elbert H. Gary who have always punished as lese majeste or treason any effort by their employes to influence the terms of their employment.

In his capacity as President of the American Iron and Steel Institute, Judge Gary received some time ago a letter from President Gompers of the A. F. of L., asking him for a statement of the steel barons' attitude toward the campaign to organize the steel workers. Judge Gary had ignored that letter up to July 11. On the latter date the representatives of 24 unions affiliated in the steel industry met at Washington and decided to put up to their members the question of whether a strike should be called throughout the whole steel industry. Final preparations for the referendum will be made when the international presidents meet in Pittsburgh on July 20.

It should be kept in mind that the steel masters have used all their great economic and political power over courts and elected officials to crush every approach to unionism during the past fifteen years. A steady influx of immigrants from eastern Europe has also aided them in this tyrannous effort. Now there is no importation of cheap workers, and elected officials throughout the steel country are becoming conscious of the power and determination of the workers to defend themselves.

One-third of all the men employed in the steel industry when the war stopped have been discharged, partially in an effort to break the war-time wage scale and partially beacuse the war-time demand for steel products has diminished. Organized labor everywhere realizes that if the steel barons are allowed to work their will in this anarchistic method of "reconstruction," the workers elsewhere will be thrown on to the scrap heap until the big employers are prepared to take them back at a profit. Labor's challenge to the steel barons may easily grow into the most bitter and widespread conflict America has known for years.

Advocates of an American Labor Party have not suffered any loss of enthusiasm by the failure of the American Federation of Labor to endorse their project. On the contrary, many of them have redoubled their propaganda, encouraged by the "negative endorsement" seen in the Atlantic City convention's failure to go on record in direct opposition to political action. There is much rejoicing among the Labor Party people over the action of the railway firemen in approving their plan. A wedding of the railway brotherhoods with the American Federation of Labor is booked for early consummation, and the attitude of the firemen may influence thousands in the ranks of organized labor to make their postponed decision.

Despite the enthusiasm of its principal backers, it is considered doubtful here that the Labor Party movement will attain formidable proportions during the present year. An attempt will be made between now and Christmas, however, to hold a national convention with delegates from all those local and State labor bodies that have formally entered on the field of working-class politics. The outcome of that convention will determine whether sentiment is ripe for the big experiment.

Meanwhile, this central truth must be kept in mind: the old political parties are very shaky and threatening to go to pieces. This applies alike to Republicans, Democrats and Socialists. The tariff is not an issue that votes can be made out of for next year. Europe is not threatening to flood America with goods made by "pauper labor" or by any other kind of labor. Industries are growing up in the South which crave protection quite as much as those of New England, which means that the Democratic Party is becoming half-and-half on the tariff issue. The big parties are also splitting on the peace treaty, the league of nations, the railroad problem and remedies for the high cost of living. The Socialists are throwing one another into and out of their party on issues which show that they will be unable to offer a united front to the common enemy next year. All this may not prove that the hour for an American Labor Party has come, but it is fair indication that fresh political line-ups will be in order for months or years to come.

The railroad brotherhoods are pushing their campaign for Government ownership and union operation of the transportation lines. Their headquarters at Washington radiates confidence that Congress will finally realize that private ownership has run its course—not at this session, perhaps, but within two or three years at most. It is rumored that the public may shortly be provided with sensational details of the manner in which the railroads have been "sabotaged" by the old executives during the past two years so as to pile up an enormous deficit for the Government and to discourage the people with any kind of public operation of the lines.

Associated with this is a rumor that Frank P. Walsh, champion of Ireland and former joint-chairman of the National War Labor Board, may take the stump in favor of the brotherhoods' plan for solving the railroad issue. Walsh has recently had occasion to witness the power and initiative of labor in Great Britain in handling the issue of industrial reconstruction, and is said to be enthusiastic over the plan to have American railroads purchased outright by the Government and operated by the brotherhoods.

It is pertinent to recall that Walsh is credited with having an eye on the leadership of an American Labor Party. Between Walsh and Samuel Gompers, it may as well be confessed, the most cordial feeling does not exist. But the A. F. of L. is half committed to the brotherhoods' scheme of railroad operation, and if that plan and the Labor Party idea should prosper during the next twelve months Frank Walsh intends to be identified with both of them. Walsh is a lawyer, to be sure, but his friends remind us that very few years have elapsed since the Kansas City Irishman was a horny-handed wage earner at the very bottom of the social ladder. They are willing to have him turn up his palms and compare callouses with President Gompers, whatever that would prove.

From his complete triumph at the Atlantic City convention, President Gompers turned to the Pan-American Federation of Labor, of which he is also president, and piloted it neatly through its second annual meeting in New York this week. His principal task in this conference was to explain to Mexican delegates why the A. F. of L. had gone on record in favor of excluding immigrant workers, including Mexicans, from the United States. Gompers stated that the policy of the big employers in this country had been to import large numbers of unorganized workers to compete with American wage earners, and that an exclusion law would scarcely affect the union workers of Mexico, who are not the class who ordinarily seek employment abroad. He did not contend that an exclusion law would work perfect justice, but that it was a measure of expediency. His personal view was that the immigration laws should be amended so as to admit none but members of labor unions, but, since that could not be done at present, the American worker must seek protection in a general exclusion act.

In this connection Mr. Gompers had a timely and valuable word to say about the effort which big business interests are making to involve the United States in war with Mexico. He said:

"To my mind it would be the gravest wrong inflicted upon the peoples of both countries if the jingo spirit now being manufactured should drive the United States and Mexico into war. I regard the situation between the two countries as pregnant with awful events. The President has negotiated a treaty of peace. In it is the covenant of the league of nations, an instrument with the highest power for the settlement of international disputes. But we cannot consistently advocate such principles with the nations of Europe and then rush into an armed conflict with Mexico.

"There is a rule of conduct between man and man and nation and nation that can be followed in all instances, but we cannot pursue one course with one nation and another course with another. The American people have had enough war. We entered it with the highest motives and altruistic purposes, to secure international peace and justice and to overthrow democracy. We made many sacrifices, and we are proud of them. But I am quite sure that we are not going to war with Mexico at the instance of any of the 'special interests.'"

The Pan-American Federation of Labor also adopted resolutions asking for the admission of Mexico and other Latin American nations into the League of Nations, and for the withdrawal of American troops from Nicaragua and Santo Domingo, where, it is alleged, they have suspended the right of the native population to pursue their political and personal liberties.

From this conference Mr. Gompers went aboard ship and sailed for Amsterdam, where he will seek to create a new international federation of trade unions—one that would be free from influences to which he is opposed. In general terms it

can be said that Mr. Gompers is opposed to a labor international that would go on strike to attain any political object. An issue and illustration is seen in the determination of French and Italian workmen to go on a one-day strike on July 21 to hasten demobilization, bring down the cost of living, and compel their Governments to keep hands off the Soviet Governments of Russia and Hungary. Labor in Great Britain will co-operate on the same day by holding mass meetings to advocate the same ends. Mr. Gompers will arrive in Europe on the eve of this portentous demonstration. The Amsterdam congress will contain delegates from the countries affected and it will be interesting to see whether they will pledge their constituents, who will be on strike at the moment, never to do such a thing again.

Who threw the bombs on June first or sent them through the mails on May first is a question still unanswered. Four men and one woman were arrested in Washington about the middle of June and released about a week later, without any charges having been preferred against them or hearings granted them. The case of one of them was brought to your correspondent's attention after he was freed. He is a veteran of the Civil War, 76 years old. He draws $40 a month pension from the Government, and his discharge papers show that he enlisted when the war broke out and re-enlisted on the field for the duration of the war. He has lived in his present house in this city since 1904. No charges were made against him and he received no hearing during his eight days in a cell. He complains of neglect and abuse during his imprisonment. His name is Robert Henkle and his case is now in the hands of Senator France, of Maryland, who intends to demand an explanation of why such a man should be disgraced and then released without an opportunity to defend himself.

And in the Washington Post of July 11 we read another of those arrested with Henkle has filed suit for $25,000 damages against William J. Flynn, chief of the investigating bureau of the Department of Justice, and Lawrence J. O'Dea and his staff for alleged false arrest and imprisonment. This complainant, Max Holder, charges that without probable cause or legal warrant he was taken into custody on June 13 and held without hearing or charges until June 20; that during his incarceration he was kept in a cell infested with vermin, was furnished no water for bathing, and given an iron cot on which to sleep; and that during this time he was not permitted to communicate with his friends nor to consult counsel. Ralston, Winfield and Willis are attorneys for the complainant.

THE PORT OF OSTEND.

Before the war this summer resort had a population of about 60,000, the larger part of whom depended upon the summer visitors for a living. A large number of the former population have returned to their homes and preparation is being made for the coming season. There is very little work for the population except in restoration, which is as yet proceeding slowly, and in fishing. The latter is proving a very lucrative work just at present owing to the high price of fish and the large catches. Fishermen with single boats (30 feet in length) have made a profit of 5,000 francs in one week.

The port of Ostend consists of two ports, the old port and the new port. The former includes the entrance channel, the fore harbor, the anchorage basin for fishing sloops, the three commercial basins, and the basin on the east bank of the channel, where Belgian Government packets are docked while undergoing repairs. The new port, connecting with the old, comprises the maritime extensions of the port of Ostend. It includes the landing quay of the Dover-Ostend packets, the new fore harbor, the turning basin, the wet dock, and the canal basin. The new fore harbor, with an average depth of 26 feet at low tide, is especially adapted to regular navigation. It is crossed by a drawbridge which divides it into two navigable passages 50 feet wide.

The wet dock for commercial ships of other than regular service is 2,000 feet long and 280 feet wide. The entrance to this dock is a lock 56 feet wide and 372 feet long, floor 14 feet below the level of low tide. With this are connected the canal basin and the turning basin, which are used especially for the importation of lumber from Russia and Scandinavia. Two anchorage basins on the east bank, one behind the channel, the second above the new fore harbor, prevent the port from silting up. Access to the port from the sea is assured by three navigable dredged passages, depth 19 feet at low tide.

Ostend is connected by navigable canals with the interior by means of the Bruges-Ostend Canal. Two important railroads at Ostend connect through Ghent and Brussels with Germany, and through Flanders with France. Three packet lines formerly connected Ostend with England, one to Dover, one to London, and one to Tilbury. The Dover line, which was the principal one, operated 11 fast packets and carried in 1911 over 181,000 passengers.

The destruction at the port consists largely of ruined bridges and sunken vessels. A half dozen of the largest bridges across the various canals of the basins have been entirely destroyed, as well as the principal bridges on railroad lines south from Ostend. In the harbor itself a number of sunken vessels—Belgian commercial steamers, dredges, barges, and sailing craft obstruct the channels. Through neglect the channel of the entrance into the harbor has become much shallower, owing to deposits of mud. English companies are now engaged in removing these obstructions and in dredging the channel entrance, since the only Belgian dredge at Ostend was sunk in the entrance to the harbor. It is now being raised by an English company.

The "Vindictive," which was sunk directly across the entrance to the harbor, has now been moved so that it lies alongside the western pier. The channel entrance is about 400 feet wide, and now permits easy access across to the inner harbor. There are three English dredges at work clearing away accumulations outside of the channel entrance.

In general, the cranes and harbor facilities at Ostend have not been systematically wrecked as at Zeebrugge. Ostend can resume commercial activity in a few weeks, though complete restoration will require months. The entire surroundings have been changed until they have the appearance of a vast fort. Batteries of guns were located at advantageous points for defense, miles of barbed wire have been stretched along the sea walls, and all land approaches to the harbor entrance were made inaccessible in some way.—Commerce Reports.

THE STRIKE.

By Covington Hall.

Say what ye will, ye owls of night,
The Strike upholds the cause of right;
The Strike compels the king to pause,
The stateman to remold the laws.

Say what ye will, yet, without ruth,
The Strike drives home the bitter truth;
The Strike tears off the mask of things;
To mass and class the issue brings.

Say what ye will, the Strike is good;
It clears things long misunderstood;
It jolts the social mind awake;
It forces men a stand to take.

Say what ye will, all else above,
The Strike is war for bread and love;
For raiment, shelter, freedom, all
The human race can justice call.

The day the Cubs began practicing at Pasadena, former manager Frank Chance met present manager Mitchell and in the course of conversation asked what he thought of his new material. "Well," laughed Mitchell, "I'm as optimistic about these new men as a friend of mine is about his backyard garden." "How's that?" demanded Chance. "He's always sure the seeds will grow to look just like the pictures on the packages."

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

tuberculosis—says the United States Census Bureau in a report on mortality statistics.

Deaths from heart disease numbered 115,337. Pneumonia was responsible for 112,821 deaths. This rate is higher than for any year during the period 1908-1916.

Tuberculosis in its various forms caused 110,285 deaths, of which 97,470 were due to tuberculosis of the lungs. Until 1912 more deaths were due to tuberculosis than to any other single cause, but in that year during the period of 1914-1917 the mortality was less than that from heart disease and in 1917 it fell below that from pneumonia also. Bright's disease and acute nephritis caused 80,912 deaths and apoplexy was the cause of 62,431 deaths.

Soldiers Replace Women.

Steady reduction in the number of women employed by the railroads is taking place as the result of demobilization and the return of men to their old jobs.

From the high mark of 101,785 women employes October 1, 1918, the number had decreased April 1, to 85,393.

The first women to be let go were those engaged in heavy work in roundhouses and shops. In the clerical occupations, such as ticket selling, where 72 per cent. of the women were used, small reduction has taken place, 68,129 still being employed.

Statistics compiled by the railroad administration show that 5,000 women were employed in shops and 1,000 in roundhouses in 1918, doing work as boilermakers, blacksmiths and machinists. There were 377 women employed as station agents, 50 as switch tenders, 931 pushing trucks and 518 assigned as watch women.

Co-Ops. To Buy Wholesale.

Chicago co-operators pledged $1,000 at their first meeting to raise $100,000 to start a co-operative wholesale branch. The meeting was held under the auspices of the National Co-operative Association, which was organized at the National Co-operative Convention, held in Springfield, this State, last September.

Only co-operative societies, organized on the Rochdale plan, are eligible for membership and to own stock in the co-op. wholesale.

The Rochdale plan of co-operation provides, in effect, that goods shall be sold at the prevailing market price, and that profits shall be divided among members on the basis of the amount of money spent by each member at the store. The amount of stock held by a member is not considered in computing these dividends.

HOSTILE NEWSPAPER COMMENT.

A Philadelphia paper says shipowners at that port will ask the Government to use its naval force to break the strike of seamen. Trade-unionists say this verifies their prediction made when they were attempting to avoid a strike—that the owners wanted a strike and would ask the Government to assist in destroying the unions.

The newspaper prints this untruth on the workers, which is usual in strike times:

"They (the strikers) demand a 'closed shop' policy and an agreement that the American merchant marine be controlled entirely by union rules."

THE LEAGUE OF NATIONS.

(Continued from Page 2)

sacred memory, told California that if it didn't get down from its high horse, that if it undertook to pass such legislation he would use the army and navy of the United States to enforce the treaty. When Woodrow Wilson was elected President, California tried the same thing again, and Mr. Bryan was sent out to plead with them, and he pleaded with them so successfully that the Japanese are taking charge of the land in California. No really effective legislation was enacted, because there was a treaty standing in the way.

Take the seamen's situation, and I will close. Perhaps because of the argument that was had upon it, the seamen might be more safeguarded than any other labor, but after all, I don't look upon it as being safe, and so I must mention it. In England to-day, or rather here in the United States, we are up against a fight in which we have spent between $60,000 and $70,000, to defend the Seamen's Act. We, the mud-sills, are doing that. What are we defending? The possibilities of the United States becoming a sea power, the possibility of the United States becoming equal to anybody else on the ocean. Who fights it? England. What industrial interests fight it? The British. And when I came back from France to England I was told that they were going to use the Supreme Court decision lately handed down to sign any man for a shilling a month who asked for the protection of the Seamen's Act when he arrived in the United States. The hatred of the Seamen's Act, the objection to it is simply cold and calculating. Let it once get into an international body of this description with any authority to deal with it, and the hope of the United States becoming a sea power, the hope of the United States for a merchant marine and a navy that can defend America, and the hope of seamen sufficiently trained to draw upon in time of war will vanish. Wars are not over, don't you forget it, and when the time comes if you haven't the seamen you will be helpless. You could see that in the last war.

And so from whatever side I look at it, from the labor question and from the seamen's question, I can't vote for this thing. I can't consistently do it, and I have got to do whatever I am doing, may the consequences be what they may to me and mine.

Address by Samuel Gompers.

(From a speech by Samuel Gompers at the convention of the American Federation of Labor, Atlantic City, June 20, 1919, as furnished by the press service of the American Alliance for Labor and Democracy.)

I can scarcely remember any convention of our Federation or any meeting of labor men of whatever shade of opinion that has met without condemning war, without commending an international peace, and I wonder how it can be obtained? Shall somebody in the United States act as a schoolmaster to the peoples and the governments of the various countries and say to them: "Now, you be good; don't you fight; don't you go to war." If international war is to be avoided, how can it be done except by agreement, how can it be done except that men representing the peoples and the governments of the countries affected sit down and write their thoughts and hopes into an agreement?

Call it a covenant, call it a treaty, call it what you will, but there must be some things written down in order to govern the rules under which war may be avoided.

I am not afraid of meeting the future. Come what may, when big propositions are met by big declarations of earnestness to prevent war, I am not going to turn my back upon them, because they come nearer than at any other time to the hopes of liberty-loving and peace-loving peoples of the world.

We have declared for reduction of armaments. How can that be done except by agreement? Delegate Green very ably and graphically called attention to the situation and said: "If this treaty, if this draft containing the covenant of the League of Nations is defeated, what then?" What have you got? What have you to stand as a barrier against international war? Defeat this treaty, defeat this covenant of the League of Nations, and then every naton will be required to arm itself, competing with each other for the large armies and large navies and great munition plants.

Yes, of course this treaty, with the covenant of the League of Nations, is not a perfect instrument. Who expects it? Who expects that a perfect document shall be drafted? Different peoples, different histories, different traditions and sometimes not only different, but conflicting, interests, and these representatives of the peoples and the nations have sat down and drafted a document, a covenant, an agreement, a treaty by which war shall be made more difficult and perhaps impossible.

Shall we turn that treaty back, shall we help in its rejection and leave the world in the position where the men, with their national prejudices, with their national hopes and aspirations, may try to be a law unto themselves and can only be checked by the arbitrament of war? I think not.

In spite of politicians who simply aim to control the administration of the affairs of our republic, despite men who may have interests, men who consider votes as the dominating factor for their conduct, I am not going to play into their hands, I am not going to give my consent, to support those who would leave the world in the position of being inflamed by the horrors of war at any time when any nation feels itself strong enough.

Only a few days ago, for the first time in the history of the world, men left the soil of America and within a day, or more definitely speaking, within sixteen hours, landed in Europe. What can be done in aeroplanes from America to Europe can be done from Europe to America. We are closer now to Europe than at any time in the history of the world.

We cannot now declare, in this age and time, that we shall be isolated and have no alliances with any other peoples. We are so close to them, they are so near to us, that it is essential for us to see to it that the best possible relations shall be established between the peoples and the governments of our country and all other countries, and to bring about the time by agreement when we shall live in peace.

I am confident that the covenant of the League of Nations, with the labor provisions in it, will give an impetus to the legislators of our country to ratify the peace treaty with these features in it. I don't want any man to believe that I am a blind follower of any man, I don't care who he is. I think that the President of the United States, Woodrow Wilson, is not only one of the brainiest and most brilliant men in the world, but possesses a conscience and a heart that seeks for the right. (Applause.)

"Good health and good sense are two of life's greatest blessings. Health is the vital principle of bliss, and exercise of health."

LOOT OF PUBLIC PLANNED.

(Continued from Page 7.)

financiers are so anxious to be allowed to grab the people's natural resources. They show equally clearly why Congress should refuse to turn over the people's resources for the enrichment of the few and the impoverishment of the many.

The Esch Water Power bill has been passed by the House. No hearings at this session of Congress were granted on this bill to alienate the country's natural resources in water power for a term of fifty years with rights of renewal. The chairmen of the Senate and House Committees on Public Lands have informed us that they do not propose to hold hearings on the bills to turn the people's natural resources in coal, phosphate, sodium, oil, oil shale, and gas owned by the United States over to would-be profiteers.

The Census Bureau reports the average value of anthracite coal at the mines in 1909 was $2.26, of bituminous coal $1.05. These values have increased only slightly within the last few years, while the Geological Survey reports that the public is paying four or five times the value of the coal at the mines. The enactment of the pending bills, on which no hearings are to be allowed by the Congressmen in charge, who were elected to serve the public interest, will increase the cost of living to every American citizen. Could any governmental agency be as wasteful and increase the high cost of living as much as it has been and will be increased by the turning over of our natural resources for exploitation by our un-American profiteers? Some years ago the Government was obliged to appoint a receiver for certain oil wells, and the late Mr. E. J. Justice, of the Attorney-General's office, reported: "He (the receiver) has also operated every well at a reduced cost as compared with the cost to the company that preceded him."

The pending legislation will increase the price of farm machinery, of transportation on railroads and of fares on city railways. It will add to the cost of practically everything we have to use or wear. In our opinion the legislation is designed to prevent government development of these natural resources, which all forward-looking farmers of America demand.

The American people should promptly write their United States Senators and Congressmen, urging them to defeat these measures which are in contempt of democracy and in defiance of the expressed will of the people of America, recorded when we entered the war.—By George P. Hampton, Managing Director, The Farmers' National Council, Washington, D. C.

BRITISH CONSUL'S METHODS.

Editor SEAMEN'S JOURNAL:

Nicholas Koulis came to my office recently to collect his wages due from the S. S. "Levenpool." He stated that he had been discharged from a hospital for an illness, from which he had been cured and fitted for duty. The vessel flies the British flag, and the British Consul refused to give him his wages unless he signed on another British ship for a foreign port, eventually to be discharged in the United Kingdom, where he had signed articles on the "Levenpool."

Under pressure, and believing that he could get his wages no other way, he signed articles on another British ship to be paid off in the United Kingdom, with the verbal promise that he was to receive his money due from the "Levenpool" on arrival in the port of Buenos Aires, Brazil. Perhaps, the British Consul thought that he would, upon receiving his money in Buenos Aires, desert his ship, and that there the British Consul would be compelled to get a substitute at the lower wages prevailing in South America. This shows how carefully agents of the British Government are protecting the interest of British shipping in foreign trade.

When I got in touch with the British Consul he told me on the telephone that the man had already signed on a British ship for South America, and had sailed; a day or two later my client walked into the office again. With the aid of an interpreter I found out that he had left the British ship and had come back determined to get his wages earned on the "Levenpool." I wrote a letter, a copy of which is enclosed, to the British Consul. Mr. Robbins, Vice-Consul, called me up on the telephone and informed me that this was a British ship, that he was the British Vice-Consul, and that the British knew how to run their own business without any assistance from attorneys, and did not know why I took the attitude I did. I said I took that attitude because I knew from past experience that British shipping offices would compel seamen to sign new articles under circumstances like this, and use the payment of the balance of his wages as their bludgeon over the seaman. He said that they did that because the yhad a right to do it with a British subject. I said "I dispute your right to do this with a British subject or any other human being in the territory of the United States. I give you fair warning that to compel seamen to join a ship under circumstances like these, by force, delay or otherwise, is pretty close to a violation of a local statute against shanghaiing."

The short of it was that the British Consul paid the seaman the amount of the wages due him.

Three or four years ago, when I. McPherson was Vice-Consul in this Port, it was necessary to report the whole of a certain matter to the Board of Trade at London in order to collect the seamen's wages.

British authorities apparently take the view that if a seaman signs on one British ship, to be paid off in home trade limits, he can be made to return to home trade limits on some other vessel, even though his physical condition renders it impossible for him to continue the voyage.

This case clearly demonstrates that the British Government officials involved in this matter at least, are acting solely in the interest of invested British capital, without regard to the rights of human beings, who have been unfortunate enough to be members of the crews of their ships.

Very truly yours,
SILAS BLAKE AXTELL.

New York, July 14, 1919.

SUEZ CANAL STATISTICS.

Total receipts of the Suez Canal Co. for 1918 were 92,969,910 francs, an increase of 20,950,883 over 1917. There is an increase on all receipts. The total expenses were 36,615,776 francs, a decrease of 2,533,039 on last year. This last saving is due to the present good condition of the canal, which permitted a reduction in upkeep expenses. The value of the canal's assets is 98,162,242 francs. The statutory reserve fund is 40,518,797 francs. The ships passing through the canal in 1918 totaled 2,522, a tonnage of 9,251,601. On the 1917 figures this shows an increase of 169 ships and 882,683 tons. But as compared with the last normal year (1913) it shows a decrease of 2,563 ships and 10,782,283 tons, almost 54 per cent. decrease on the prewar traffic. In 1913, 25,775,000 tons of cargo passed through the canal. In 1917 only 6,775,000 tons passed. But 1918 saw the start of the improvement, with a total of 7,833,000 tons. In 1918, 28 per cent. of the traffic was in ballast; and the cancellation of the reduction of 2.50 francs per ton on ships in ballast brought an extra income to the canal of 6,456,765 francs. The average time for passing through the canal was 16 hours 19 minutes in 1913, and 18 hours 10 minutes in 1917. It has risen to 23 hours 6 minutes in 1918, but this was entirely due to delays caused by military requirements.

UNIQUE SALVAGE VESSELS.

Six special salvage vessels are to be built for the British Admiralty. The first one has just been completed at Southwick, on the South Coast of England. According to the Daily Mail (London), the ships will be used to raise torpedoed vessels. They look like segmented towers with broad shipshaped bases. They rise tier on tier like a wedding-cake, each tier diminishing in size to the top one, which is over 100 feet above the base. Each tier is made of numerous blocks of concrete honeycombed to withstand external pressure, but otherwise hollow. There are watertight doors by which the blocks can be filled with water and pumps by which the water can be replaced by air. No motive power is on board. These concrete tower ships are to be towed in pairs to the neighborhood of sunk merchantmen. On a calm day the hollow concrete blocks will be flooded and the tower ships will be sunk on each side of the wreck. Divers will lash them to the wreck, the water will be pumped out of the blocks, and if all goes well the tower ships will rise, bringing the wreck to the surface.

Strange, is it not, that newspapers which parade the prurient episodes of murder, divorce and abortion in heavy type on the first page, should modestly refuse to call syphilis and gonorrhea by name! Such hypocritical mock modesty is a tremendous handicap in public health education.

Labor News

Miners' wages are going to remain at the present high level until April, 1920, in the Scranton (Pa.) district, it is announced, and the special convention provided for by the international executive board to consider a new agreement has been called off.

The appropriation allowed the Department of Commerce of the United States of America was the neat sum of $25,533,205, while the Department of Labor only got $4,171,210, and out of this nearly $3,000,000 goes to enforce the immigration and naturalization law. Why this difference?

While metal workers and other employes are favoring—and establishing—a 44-hour week, along comes the National Industrial Conference Board with a report that a 50-hour week cannot be maintained in metal manufacturing industries "without some loss in production." The conference board consists of a score of employers' associations.

It is expected the building will be finished in the late fall. It will be a beautiful seven-story granite and pressed brick structure and will be a credit not only to the International Association of Machinists but to the entire trade union movement. The building is located across the street from the American Federation of Labor building.

Governor Sproul of Pennsylvania has signed the new compensation act which increases benefits to injured workmen from 50 per cent. of their wages to 60 per cent. Dependents' compensation is increased from 40 to 60 per cent. Medical service is increased from two weeks to 30 days and fees allowed physicians in compensation cases are increased from $25 to $100. All distinctions between minor and major operations are removed. A new feature is in the addition of hospital service for 30 days with a maximum charge of $100.

The North Dakota State Federation of Labor Convention has voted to join hands on the political field with North Dakota farmers. The resolution includes the right to organize, eight-hour day and minimum wage, equal rights of men and women, democratization of education by free text books and better administration, State insurance for all workers, payment of war debts by heavy taxation, especially on incomes and inheritances, public ownership of all public utilities, reaffirmation of the right of free speech and free assemblage, labor representation in government and labor representation in international conferences.

The preferential union system in the cloak and suit industry in New York has practically disappeared before 100 per cent. unionism, says President Schlesinger of the International Ladies' Garment Workers' Union. The preferential union system was established several years ago and was widely proclaimed by those elements who would compromise their opposition to the union shop. The system provides that trade unionists shall be given the preference in employment. "It has been in vogue," says President Schlesinger, "in this city for a number of years, but partly through our recent trade union agreement and partly through the general growth of strong union sentiment it has been practically done away with."

INFORMATION WANTED.

Will any of the crew of the barkentine "Thos. P. Emigh" who were on her at the time Jacob Olsen was hurt by being thrown over the wheel on or about October 27, 1918, please call on or communicate with F. R. Wall, 324 Merchants' Exchange Bldg., San Francisco, Calif. Telephone, Sutter 5807. 6-18-19

The widow of Otto Kivi, who fell overboard on the S. S. "Carlos" between San Francisco and Aberdeen, May 30, 1919, wants to know the names of the crew on the ship. Kindly assist his widow by giving this information to S. T. Hogevoll, attorney for the widow, 627 Pacific Building, San Francisco. 6-11-19

When making purchases from our advertisers, always mention The Seamen's Journal.

INFORMATION WANTED.

Members of the crew of the "John A. Kirby," who have not already filed their claims, should communicate with the undersigned. I have made arrangements to file claims for families of seamen and officers who were lost by submarine activities during the war; also for seamen who were injured by torpedoes, etc., or who were taken into Germany as prisoners. Such persons should communicate with me at earliest convenience in order to have their claims filed with the State Department. Silas B. Axtell, One Broadway, New York. 7-23-19

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

CARRY ON!

Uncle Sam is releasing from his service the men who went "over there" to free the world from autocracy. Thousands of soldiers are daily receiving their honorable discharges; they pocket their pay, bid farewell to their comrades, and sally forth—civilians.

There is one army, however, which must not be demobilized. That is the army of War-Savings Stamp buyers. More recruits are needed to carry on the campaign of readjustment which follows the signing of the armistice.

The army of fighters has achieved its purpose.

The army of savers must remain in "action."

"Carry on" to a lasting peace under the banner of W. S. S.!

INFORMATION WANTED.

I am representing most of the crew of the S. S. "J. E. O'Neil," in the matter of their claim for salvage services rendered to the steamship "Oregon" on or about January 19, 1918, about 300 miles off Honolulu. The following awards were made to the vessels which assisted in the salvage operations: Steamship "Lurline," her master, officers and crew, $18,000; steamship "President," her master, officers and crew, $1750; steamship "J. E. O'Neil," her master, officers and crew, $6872. One-quarter of the $6872 was allowed to the master, officers and crew of the "J. E. O'Neil." All those members of the crew who have not yet filed their claims should do so at once in order that the claims of the entire crew will be presented at the same time. Silas B. Axtell, One Broadway, New York. 7-9-19

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City.

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

Home News

Arthur Brisbane, editor of the New York Evening Journal and the Washington Times, has arranged to purchase an interest in the Newark Morning Ledger and the Newark Evening Ledger.

The Bureau of Naturalization announces that over one hundred and seventy-five thousand alien soldiers in the United States army have applied for citizenship under the Soldiers' Naturalization Act of May 9, 1918.

There are 17,549,324 Catholics in the forty-eight States of the Union, according to the 1919 edition of "The Official Catholic Directory." This shows a net increase of 133,021 in the number of Catholics over the preceding year. Only nine dioceses show decreases.

John Hartfield, a negro of Ellisville, Miss., having confessed assault on a young woman, was hanged to a tree and burned to ashes in the presence of the young woman who identified him. The authorities of the place described the lynching as "orderly."

A report by the Commissioner of Conservation of Canada states that the available supply of lignite and coal in Canada amounts to 781,158,000,000 metric tons. At the present rate of consumption this is sufficient to supply the world for several centuries.

The Georgia Senate has refused to ratify the Federal Woman Suffrage Amendment. This is the first State failing to ratify. To date the following States have favored the amendment: Illinois, Wisconsin, Michigan, Kansas, New York, Ohio, Pennsylvania, Massachusetts, Texas, Iowa and Missouri.

Henry Ford has asked Secretary Glass to send an expert to examine the books of the Ford Motor Company to determine the amount of Mr. Ford's share of the profits on war contracts which he desires to return to the Government. Commissioner Roper instructed the Detroit branch of the Internal Revenue Bureau to supply Mr. Ford with expert assistance.

"For wanton degeneracy, depravity and viciousness, the Sissonville road prison camp, located 11 miles from the capitol building of the State of West Virginia and the Kanawha county courthouse, is the most horrible example that ever disgraced a civilized country," writes Frank W. Snyder, editor of the West Virginia Federationist. These prisoners are working out fines and jail sentences for minor offenses against the peace and dignity of the State.

Sales of surplus war material by the War Department during one week of June amounted to $11,535,490.25. The sales ranged from fifty cents for a remnant of canvas to $8,364,811 realized from stocks of wool sold at public auction in Boston. From January 1 to June 13 sales of surplus war stocks netted $300,157,563.68, which was 84 per cent. of the original cost of the material to the Government.

The War Department is offering for sale 17,000,000 yards of cartridge cloth, which can be processed and used as silk fabrics, suitable for dress goods, suitings, tapestries and other uses requiring a silk texture of heavy warp. The ordnance program, based on the needs of the army overseas, called for six million yards of silk per month. There was a three months' supply on hand at the signing of the armistice.

Domestic and Naval

The schooner "Singleton Palmer," Port Natal, for La Plata, towed to Montevideo leaking, is owned by the France & Canada S. S. Corp., New York. She is of 2,357 tons and was built in 1904.

The schooner "Gabriella," reported lost at sea on a voyage from Mobile to Oporto, was laden with staves and timber; she was of 420 tons and was built at Biloxi, Miss., in 1919.

The British Steamer "Francia," 1,166 tons gross, 688 net, carries about 1,650 tons deadweight, built at Sunderland in 1915, and owned by Mr. C. Dorsea, London, has been sold to the Monroe Shipping Co., Ltd. (Messrs. Monroe Bros.), Cardiff, for about £61,000.

The British steamer "Trojan," ex "Inchborva," 4,917 tons gross, 2,573 net, carries about 6,860 tons deadweight, built at Sunderland in 1905, S. S. No. 3 in 1917, and owned by the S. S. "Trojan" Co., Ltd., (Mr. E. C. Thin), Liverpool, is reported sold to Cardiff owners for about £115,000.

The Cunard Steamship Company, Limited, Liverpool, have acquired the following steamers owned by Messrs. Gow, Harrison & Co., Limited, Glasgow: "Virgilia," 5597 tons gross, 3619 net, built at Port Glasgow in 1918; "Verdun," 5691 tons gross, 3613 net, built at Port Glasgow in 1917; and "Valverda," 5680 tons gross, 3613 net, built at Port Glasgow in 1918.

Cornelius Vanderbilt, Jr., formerly Private Vanderbilt of the Twenty-seventh division, will take his place this summer beside other yachtsmen who will take up yacht racing where it dropped when the United States entered the war. Before he entered the army with his father, Brigadier General Vanderbilt, he was a leader among the younger yachtsmen in Newport harbor. This year he will sail his sloop, the "Comet," which has not been in commission since 1916. He will race her at the American Yacht Club at Rye, N. Y.; at New Rochelle, at the Larchmont Club and at the Indian Harbor Yacht Club's regatta. He himself will command her, having only one man on board to assist him.

The Emergency Fleet Corporation is now building several sectional wooden dry docks of 10,000 tons lifting capacity. Some of hese docks will be allocated to the ports of Boston, New York and Philadelphia, and if suitable propositions are received from parties now engaged in or who contemplate engaging in the business of ship repairing. The policy is to sell these docks to responsible parties who can give assurances of ability to provide adequate working capital for completed ship repair plan operation of dry dock. The dry docks will be sold at cost, which will not exceed $850,000, for location at sites to be approved by the Shipyard Plants Division, upon installments to be paid semi-annually, with interest at the rate of 6 per cent. per annum, covering a period of not to exceed 10 years. The sale contemplates that the purchaser have a side accessible to vessels requiring the use of $10,000-ton dry dock with sufficient water area to provide piers, berthing space for vessels and a dry dock site, together with a sufficient amount of upland to provide storage and an adequate repair plant.

News from Abroad

An exhibition has been arranged at the Zoological Gardens in London to illustrate the damage done by rats and the best methods of destroying them.

La Francaise tells of the substitution in the occupied districts of France of mayoresses for mayors led away to captivity in Germany. The justice, judgment and courage of these women have received frequent commendation. Many were clerks or secretaries in the mayor's office before the war and so started with a knowledge of the work.

The Japan peace delegation today issued a categorical denial of a statement appearing in a newspaper printed in English and French to the effect that Japan and Germany had arranged a secret alliance, aimed eventually to include Russia, and that only the overthrow of the Hohenzollerns and the arrival of the armistice prevented its signature. The delegation says the story was of German origin, revamped for the moment of the signing of peace to discredit Japan and poison the public mind against her.

Under the Bolshevist nationalization of Russian insurance the highest amount for which a policy may be issued is R. 20,000, and not more than one policy may be issued in regard to one cargo, article or property. For example, a cargo of timber valued at R. 1,000,000 may not be insured for more than R. 20,000. The nationalization scheme has been carried through, and the "Rossia" and "Petrograd" companies have now become the Government insurance offices. The companies have refused to recognize the nationalization but have no effective means of opposition. Reinsurance with English and Scandinavian companies is permitted.

The German Shipbuilding Company, Joh. C. Tecklenborg A. G. Schiffswerft u. Maschinen fabrik, Geestemunde, pays a dividend of 10 per cent for 1918 (compared with 12½ per cent. in 1917). In addition, a special bonus is declared of 500 marks in 5 per cent. war loan, for each two shares. The yard delivered during the year 34 mine sweepers ranging from 525 to 700 tons and from 1,600 to 700 h. p., as well as a number of U-boats and conversions. The report claims that the motor-auxiliary "Seeadler" (converted from a three-master) broke the blockade and reached the Pacific, and that the famous "Moewe" was built in the Tecklenborg yard as the "Pungo" for F. Laeiscz (Hamburg).

Accompanying the estimates submitted to the House of Commons on account of the British Ministry of Shipping, is a report stating that just before the war the British tonnage for ships over 500 tons was 18,500,000. On January 1, 1917, it was 17,250,000. At the time of the Armistice it was just over 15,000,000. The greatest strain on the Ministry came during the German offensive in March, 1918, when it was necessary to dispatch all possible reinforcements to France. In 1918, France had the equivalent of over 1,000,000 tons of British shipping in her service and 43 per cent. of the total imports into France were carried in British bottoms. Italy had the equivalent of 750,000 tons of British shipping, and 49 percent. of her total imports were carried in British ships.

With the Wits

"How do you like your new minister?" "Very well. But then I hardly know him well enough as yet to find fault with him.—Detroit Free Press.

"Jack may escape after all. The young widow says he is clever, but impossible."

"If the young widow has found him impossible he must be clever."—Boston Transcript.

"Hey, wotcher doing? Stealing a ride?"

"Ain't the railroads being run by the Government?" demanded the tramp.

"Yes."

"Then stealing a ride is merely a political crime, and political crimes don't go in this kentry."—Kansas City Journal.

"I should hate to have a husband who argued. I shall try to marry a lawyer."

"Why, yawyers are the very men who argue."

"But not without a fee."—Dallas News.

Mrs. Newbride—When you found that you couldn't accept the invitation to our wedding why didn't you send your regrets?

Miss Ryval—Oh, I thought you'd have enough of your own pretty soon, dear.—Kansas City Star.

"Is the professor in?" she asked, entering the door of a courtroom by mistake.

"What professor?" asked the gruff attendant.

"The professor of music, of course. I've come to have my voice tried."

"Well, you'd better not have it tried here, ma'am. This is a court of justice."—Yonkers Statesman.

"Versatile?" said the genius friend, musingly.

"Yes, on the whole I think I should call Jones versatile. He's the sort of man who, if he were a piece of furniture, would be one of those bookcases that turn into a folding bed at night."—New York Globe.

"The duchess says she doesn't know much about America."

"That's natural. She was born and raised in New York."—Louisville Courier-Journal.

Taylor's Nautical Academy

Established 1858

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 47. SAN FRANCISCO, WEDNESDAY, JULY 30, 1919. Whole No. 2549.

SEAMEN'S LANGUAGE TEXT

Text and Definition of the New Regulation Just Issued

The stipulation in Section 13 of the Seamen's Act that no vessel over 100 tons gross may leave a port of the United States unless 75 per cent. of her crew in all departments are able to understand any order given by the officers is one of the most important contained in the Act. Its plain intent is, of course, to safeguard the lives of those on board. The imperative necessity for some such law to apply to crews of passenger ships can not very well be over-emphasized.

Unfortunately the Department of Commerce has in the past construed the language of the provision in question in such a way as to leave it open to various and widely differing interpretations. The Journal is much gratified, therefore, to be able to publish herewith a new ruling on the subject by the Department that removes much of the obscurity in which it has hitherto been shrouded.

The text and definition of the Department's new regulation follows:

The Department of Commerce has issued a new regulation on the subject of the language test of the Seamen's Act. Department Circular No. 265, second edition, reads as follows:

"Section 13 of the Seamen's Act of March 4, 1915, in part, provides as follows:

"No vessel of one hundred tons gross and upward, except those navigating rivers exclusively and the smaller inland lakes and except as provided in section one of this Act, shall be permitted to depart from any port of the United States unless she has on board a crew not less than seventy-five per centum of which, in each department thereof, are able to understand any order given by the officers of such vessel, * * *

"The collector of customs may, upon his own motion, and shall, upon the sworn information of any reputable citizen of the United States setting forth that this section is not being complied with, cause a muster of the crew of any vessel to be made to determine the fact; and no clearance shall be given to any vessel failing to comply with the provisions of this section: * * *

"This section will take effect as to vessels of the United States on November 4, 1915, and as to all foreign vessels on March 4, 1916.

"The Department construes the words 'able to understand any order given by the officers of such vessel' to mean any orders that may be given to members of the crew in each department when directing the performance of their duties.

"The Department does not construe the above section as requiring the use of any particular language on the part of the officers and crew of any vessel. Any language which is understood by both the officers and the proper proportion of the crew will comply with the law. It must clearly be understood, therefore, that the section can not be construed as requiring an English-speaking crew. For example, on a French vessel the French language, if spoken by the officers and if understood by the proper proportion of the crew, would suffice. The same would be true of Spanish on a Spanish vessel, of German on a German vessel. Therefore, no specific language is required but only that whatever language is used it shall be understood as the law requires.

"The Department also construes the section as meaning only such orders as may be given to members of the crew in each department of the vessel in the course of the performance of their several duties. Among these duties, however, should be included lifeboat work or emergency work. The Department would not consider it a proper construction of the section to require, for example, that a waiter should understand orders normal to the engine-room force or that a stoker should understand orders which related solely to the work of a deck hand or seaman. In the cases, however, of a waiter, a stoker, a seaman, or other employee on the vessel who was assigned to do emergency or lifeboat work it would be a proper construction of the section to require him to understand orders for such emergency or lifeboat service.

"The Department construes the section to mean that a demonstration in the presence of the customs collector or his deputy by the proper proportion of the crew in executing the actual orders of an officer would be a sufficient proof of compliance with the law. The orders should be given by the officers, but the customs collector or his authorized official representative, though not empowered by the law to personally issue the orders, may very properly direct the officers to give such orders as he may deem necessary to determine the ability of a proper percentage of the crew to understand the orders given.

"The muster of the crew for which the law provides shall take place at such reasonable times and occasions as will determine the facts sufficiently in advance of the time fixed for the sailing of the vessel to permit the engaging of such new members of the crew as may be necessary in time for the vessel to sail without delay. As the law requires the application for muster to be made at least six hours before the vessel departs or is scheduled to depart, thus indicating an intent not unduly to delay the sailing of vessels, the muster must be conducted with such promptness and expedition as to constitute full compliance with this manifest purpose of the law. Whenever the language test applied at the muster results in the rejection of any member of the crew and the substitution of another seaman in his place at such time as to render it impracticable for a second muster to be requested in the manner specified in this section, then and in that case it shall be the duty of the customs collector to see that any seaman signed on the articles of the ship to take the place of the rejected man is capable of passing such test. The Department understands the law to require the safeguarding of the vessel through the language test by such means at such times and in such a manner as shall be helpful and not hurtful to our maritime commerce and that it is in no sense intended to be used to create embarrassment or to cause unnecessary expense or delay."

The changes contained in the foregoing consist chiefly in the phraseology, but are nevertheless important and make clear some points which were left in doubt under the former regulation, issued shortly before the Seamen's Act became effective.

Originally the words "able to understand any order given by the officers of such vessel" were construed to mean the "necessary" orders given to the crew "in the course of" their employment. The new regulation, by defining the words "able to understand," etc., to mean "any" orders given to th crew "when directing" the performance of their duties, broadens the scope of the regulation and makes its meaning clearer.

In the next paragraph the words "in sufficient measure" are omitted from the sentence which begins: "Any language which is understood," etc., thus removing the ground of dispute as to what constitutes "sufficient measure."

In the next paragraph two changes of a similar character are made in the first sentence, and the provision that the ability to understand orders given in the performance of emergency work should be limited to "such members of the crew as may be called upon to perform those classes of work" is stricken out. The effect of this change is to make the requirement of the language test applicable to every member of the crew up to the limit of seventy-five per cent. That is to say, every member of the crew within the prescribed limit must be able to understand the orders given in the course of lifeboat and emergency work.

Two new provisions are contained in the last two paragraphs of the Circular. Briefly, these provisions require that the Collector of Customs may himself direct the ship's officers to give such orders as he may deem necessary to determine the ability of the crew to understand the language of the officers. This feature is designed to prevent "coaching" and "cramming" of the crew by the officers in order to make a showing of ability to understand orders.

The other new feature provides that where a seaman is rejected for inability to pass the language test and another man is shipped in his place, the Collector of Customs shall himself subject the latter to the language test in order to avoid delay in holding a second muster of the crew.

These changes are in line with the objections made by the seamen to the manner in which the language test was applied under the original regulation. If observed in good faith by the officials entrusted with responsibility for the enforcement of the law they will go far to make the language test a really effective measure for safeguarding life and property at sea.

PARTNERSHIP IN PRODUCTION.

(By Walter Macarthur.)

The present discontent in the labor world is a direct outgrowth of the war. It is based upon the fear that the conditions of labor may revert to the pre-war status and possibly reach an even lower level. The working men and women of the world are determined that, having contributed a full share to the war effort, they shall now receive a full share of the benefits to be expected from the great victory.

In the common expression, the world has been "made safe for democracy." By that expression we mean not only the democracy of the political world, but democracy in every sphere of activity. It still remains to make the world safe for democracy in the workshops of the nation. This idea has been formulated in the expression "partnership in production." In the past the nearest approach to the democratic control of industry has taken the form of collective bargaining. Much has been accomplished by that method. But after all, the collective bargain rested upon the idea of sole ownership of the material means of production by the so-called capitalist class. The idea of "partnership in production" rests upon a conception of joint interest in the business—not necessarily, nor even preferably, joint ownership in the ordinary sense, but a joining of the interests of labor and capital upon a basis of equality that will work out to the mutual advantage without reference to the question of ownership.

Nowadays the question that concerns us most is, not how or by whom a given piece of property or machinery is owned, but how and by whom it shall be operated. To paraphrase an old saying, let us share equally in the profits of production and we care not who owns the land and tools of production.

The future is full of promise of better time for all when the period of readjustment shall have been safely passed, as no doubt it will be. There is one danger in the situation. The world has been born anew, but there still remain those who from interest or temperament are unable to reconcile themselves to the new order of things. There lies the danger, and the only danger. There is, of course, no possibility that these elements will be able to permanently stem the tide of progress and re-introduce the "good old times." But they may prove strong enough to obstruct the natural and inevitable course of events, to dam up the stream, and thereby cause an overflow that may be destructive for the time being.

The reactionary tendency in certain quarters is more to be feared than any amount of radical agitation. In the present state of affairs the man who would, if he could, turn back to conditions existing before the war is the most dangerous agitator. Compared to him the Bolshevist is a harmless dreamer.

Organization, both among employees and employers, is the indispensable condition of industrial peace. Only by this means can the interests of both elements of the industrial world be assured of a fair share in the products of industry. Only upon such assurance can peace be secured and maintained.

Those who would deny to labor the right to organize and deal with its employers in a collective capacity, and those who, while conceding the right to organize "as a theory," still deny that right in practice, are the worst and most dangerous enemies of society in the present era. They are the real Bolshevists, the real anarchists.

Fortunately these elements are few in number and daily becoming beautifully less. Organization in the labor world is Truth. Truth is mighty, and must prevail. Organized labor is the stabilizing force, without which there can be neither order nor peace in the workaday world. Imagine a world in which labor is wholly unorganized and capital wholly organized and you have a world ruled by the law of the jungle.

But such imaginings are vain. As Order is nature's first law so Organization is man's first instinct. The future of society is secure so long, and only so long, as it shall rest upon the basis of well-ordered relations between labor and capital, which relations in turn rest upon the basis of organization upon both hands, not as a matter of theory, but as a matter of absolute right, of imperative necessity, and of universal application.

THE LION'S SHARE.

(By Arthur Ponsonby, Ex-M. P., British Parliament.)

Some months will yet elapse before the new frontiers are fixed and before the final division of the spoils of war is made. But we can see sufficiently clearly now that the British Empire is not going to come out a loser. . . .

. . . Let us make the sum in addition so far as we are concerned:

	Area in Square Miles
Egypt, formerly under Turkish suzerainty, becomes part of the British Empire	350,000
Cyprus, ditto	3,584
German S. W. Africa, mandate to be held by the Union of South Africa	322,450
German East Africa, mandate to be held by Great Britain	384,180
Togoland and Cameroons, to be divided between Great Britain and France. Total area 224,-830 (say half)	112,515
Samoa, mandate to be held by Australia	1,050
German New Guinea and Island South of Equator, mandate to be held by Australia	90,000
Syria and Palestine, yet to be decided	11,000
Mesopotamia, yet to be decided	143,250
Grand Total	1,417,929

To come out of a war which we entered for the disinterested motive of defending small nationalities with a net addition to our Empire of a million and a half square miles is not so bad. And we do it so quietly, so innocently, and so modestly. We do not not take the territory; it falls to us.—From Common Sense, London, May 24, 1919.

Oyster shells are being used extensively in the manufacture of Portland cement along the coast of the Gulf of Mexico.

LABOR IN CANADA.

The Eighth Annual Report on Labor Organization in Canada, containing statistics, etc., for the calendar year 1918, has been issued by the Department of Labor. The report indicates that there has been much activity in almost every line of operation, and that trade union membership in the Dominion has reached the highest point recorded since the Department commenced the publication of these annual reports in 1911, the total reported membership for all classes of labor bodies in Canada at the close of the year 1918 being 248,887. In all there are 2,274 local branch unions in the Dominion, 1,897 comprising 201,432 members, being affiliated with international organizations; 332 with 37,928 are connected with what are termed non-international bodies, and 45 having 9,527 are independent units. There was an increase of 195 international local branches during the year, and a membership gain of 36,536; the non-international organizations had an increase of 88 branches and 5,585 members, and the independent units had an addition of 17 with a gain in membership of 2,136. These figures show an increase of 300 in local branches and a total gain in membership of 44,257.

Of the 2,274 local trade union branches in Canada, 1,328 are located in 31 cities, and 961 reported a membership of 142,022, representing approximately 57 per cent. of the entire trade union membership of the Dominion. Montreal leads the cities with 149 local branches, 106 of which report 32,422 members; Toronto stands in second place with 128 branches, of which 82 reported 18,834 members; Winnipeg occupies third position with 91 branches, 56 of which reported a membership of 12,050; Vancouver is fourth, with 87 branches, of which 65 reported 15,459 members.

The majority of the international labor organizations operating in Canada provide for the payment of benefits to members on a varying scale. A table is published showing the expenditure on this account made in Canada, the United States and elsewhere, the disbursements for 1918 being $16,802,092, an increase of $3,626,713, as compared with the payments made in 1917.

The report follows closely along the lines of earlier reports on Labor Organization in Canada, the various phases of the scheme of organization which have been developed being given due consideration.

A chapter contains a record of proceedings of conventions of labor bodies at which peace proposals and other matters were discussed. The conviction of the Industrial Workers of the World on the charge of interfering with the war activities of the Government of the United States is recorded, and a chapter deals with the extent of organization in Canada of municipal employes.

The report serves as a directory of trade unions for the Dominion for 1919, including as it does particulars not only of every known local trade union in Canada, but also a list of all international and non-international central organizing bodies, together with the names and addresses of the chief executive officers.

Even death itself may shortly have to give way to the trust as the "great leveler."

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Oppose English Language.

Santiago Iglesias, trade unionist and member of the Porto Rico Senate, led a successful fight against an educational bill that would eliminate the teaching of English in the Porto Rico public schools up to the sixth grade and after that would make it an elective study.

The trade unionist charged Commissioner of Education Miller with inspiring this bill, which was supported by advocates of the old Spanish regime and other reactionary elements. The effect of such an un-American law, said Iglesias, would be to deny to the great mass of children a knowledge of the English tongue. The bill was debated for several hours, but its advocates failed to secure the necessary votes.

Should Unionists Support Labor Press?

"Should Trade Unionists support the Labor Press?" is unwittingly answered by the North American in an editorial discussion of the A. F. of L. convention at Atlantic City:

"Newspaper discussion of labor problems and controversies, if not actually taboo, is usually undertaken with timorous caution.

"Because of the antagonism that still exists between capital and labor, most publishers consider candid treatment of such matters dangerous, as likely to have unfavorable effect upon circulation and advertising revenue.

"It is, in our judgment, unfortunate for labor, for capital, and especially for the public, that the proceedings of such gatherings as that at Atlantic City are not adequately reported and fully discussed by newspapers representing every shade of opinion.

"During the last two years organized labor has been the chief factor in the overthrow of mighty empires."

To Settle Railroad Issue.

The Plumb Plan League has established headquarters in Washington and is preparing plans for a campaign to secure public ownership and democracy in the operation of this country's railroads.

The League bears the name of Glenn E. Plumb, general counsel of the organized railroad employees, who originated what these workers declare will be a solution of the railroad question. This solution, in effect, provides for the operation of the railroads by a Commission consisting of an equal number of representatives of the employees, managers and the Government. Profits are to be divided equally between the Government and the operators. The Government's percentage shall be put into a fund to be used to take up the bonds of these properties, the Government thereby owning the roads. The operators' 50 percentage shall be divided on the basis of the wages and salaries received by the workers and managers.

President Gompers is honorary president of the League, and the honorary vice-president is A. B. Garretson, advisor and former president of the Order of Railway Conductors. Warren S. Stone, grand chief of the Brotherhood of Locomotive Engineers, is president of the League. The vice-presidents are the executives of the other railroad brotherhoods and the various international trade unions whose members are employed in the railroad service. All of these represent over 2,500,000 workers.

Try to Shift Blame.

Boston employers have failed to shift the blame for high prices of cigars on their striking cigar makers, who show that their request for an increased wage will amount to less than 1-3 of 1 cent on each cigar. They say that the employers' claim that 10-cent cigars would be increased to 15 cents is ridiculous, and show that the increased cost on a 5-cent cigar would be less than one-fifth of 1 cent.

"In 1917," the strikers say, "Cigar Makers received $16 a thousand for making 10-cent cigars. The manufacturers' wholesale price was $60 a thousand. Cigar Makers received $10.50 a thousand for making 5-cent cigars. The manufacturers' wholesale price was $32 a thousand. At present we are receiving $19.80 a thousand for making 10-cent cigars. The manufacturers' wholesale price is $90 a thousand, an increase of $30 a thousand.

"We are receiving $12.65 a thousand for making 5-cent cigars, an increase of $2.15 a thousand. The manufacturers' wholesale price is $52 a thousand, an increase of $20 a thousand.

"Now we ask, who is responsible for the high cost of cigars?"

Burleson is Blamed.

The New York World continues its attack on Postmaster General Burleson and in a leading article this week on the "Incompetence of Burleson," says:

"His handling of the telegraph and telephone wires and ocean cables dealt a death blow to the campaign for Government ownership. Poorer service, higher rates and the sinister suggestion, with at least the appearance of fact, that he allowed himself to be used by one group of cynical manipulators to shuffle the cards to the disadvantage of a business rival, were the total of his accomplishments as director of electrical communication. His handling of the labor problems incident to these services brought about strikes and threat: of more extensive strikes."

The World prints a Washington dispatch that the postmaster general has no intention of resigning and he has been advised by his friends in Congress to "stick to his job and let his critics rave."

Mexican War Spirit Opposed by Workers.

Anti-Mexican jingoes in this country were denounced at the second annual convention of the Pan-American Federation of Labor, which includes the trade union movements of the North American continent.

The convention unanimously passed this resolution, introduced by President Morones of the Mexican Federation of Labor:

"Whereas, the campaign that for some

World's Workers

The municipal authorities of Paris, France, have met the six-day week demand of 1,700 clerks employed in the municipal grocery stores, which will hereafter close from Sunday noon to Monday noon.

Employees of one of the big department stores in Paris, France, have organized a section of the Retail Clerks' union. The section has its own officers. This organization of "store sections," or locals is a result of recent strikes and is relied upon to impart a greater interest in trade unionism.

The minimum rates of wages of agricultural laborers in England and Wales, fixed in 1918, have recently been revised by the Agricultural Wages Board by the addition of, usually, 6s. 6d. per week in the case of adult males. Minimum rates have also been fixed for most districts in Scotland and for the whole of Ireland.

Queensland, the third largest state of Australia, has conducted government ownership profitably on a more extensive scale probably than any other state in the world. Labor has political control of the state and has carried public ownership into fields including mines, insurance, fish shops, meat shops, iron and steel works, hotels, railway refreshment rooms, railways, pastoral stations, saw mills and tanneries. Profit on the railway refreshment rooms last year amounted to £123,000, and socialization of industry has materially reduced the cost of living for the workers.

The big cigar makers' strike, involving several thousand employees of the Porto Rico American Tobacco Company, has been compromised. The strike lasted six months. The cigar makers were paid benefits by the Cigar Makers' International Union of America, with headquarters in Chicago, Illinois, and the strippers and other workers were given financial aid by the American Federation of Labor. The strike was marked with much suffering and in many instances the strikers were clubbed by police and arrested when they attempted to hold meetings. The strike cost the government over $1,500,000 through a loss of revenue. A committee representing the Porto Rico legislature assisted in securing a satisfactory settlement, which includes wage increases.

No more interesting commission, nor one more significant of the place which women hold to-day in the Labor world, has been welcomed to England than that of the American War Work Council, dealing with industrial and labor questions, particularly as they affect women. The commission, which has come through France, is to visit Manchester and Birmingham as well as London, and meetings are to be arranged with the industrial societies and with government departments. In the United States it is generally recognized that there is much to learn from England with regard to Labor policy concerning women, and it is hoped that many British methods will be adopted. It is safe to say that nothing could give the old country greater satisfaction than to share the fruits of its initiative and experience with the new, and whatever England has to offer will be wholly at the disposal of these distinguished guests.

DO YOU KNOW
That War-Savings Stamps pay 4 per cent. compound interest?
That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?
That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?
That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?
That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?
That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?
That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

Pacific Coast Marine.

Representatives of Scandinavian shipping concerns, who are visiting the Pacific Coast, announce that the bids for construction here are too high to warrant the granting of new ship contracts. They say that vessels can still be built cheaper in the northern countries of Europe. Despite this statement it is reported that they have let contracts for at least a half dozen steamers in the north.

Captain Alex F. Ogilvie, master of the 7500-ton steamer "Quittacas" of the Shipping Board, ended his life at sea aboard the vessel July 22, according to a wireless message received at Seattle. The captain, it was said, has suffered from mental depression caused by shell shock received while he was master of the steamer "Westover," torpedoed and sunk by a German submarine on the Atlantic during the war.

Mayor Louis Bartlett of Berkeley has issued his first proclamation since becoming Mayor, designating July 31 as "Utah day." On that date a new ship at the Alameda plant of the Bethlehem Steel Corporation will be named Utacarbon by Governor Simon Ramberger of Utah and a delegation of Utah citizens, because of the record made by Carbon county, Utah, in the last Liberty loan campaign. Berkeleyans will join with Utah in a celebration of the event.

As the result of continued agitation on the part of the Seattle Chamber of Commerce for additional transpacific cable and wireless service, Senator Miles Poindexter is in receipt of a letter from Secretary of the Navy Josephus Daniels which has just been transmitted to Seattle. The letter admits the inadequacy of the service, but declares inability to act without the sanction of Congress and asserts that the Navy Department is now doing all in its power to overcome the handicap.

The Pacific Mail steamship "Peru," which sailed for France several months ago with sugar loaded at various points along the coast of Central America, has been sold, according to advices received by the officials here. It was known at the time of the "Peru's" departure that the company planned to dispose of her. The terms of sale are private. It is believed that many other vessels, especially the older craft, will be disposed of as soon as possible to make room for the new craft which will be installed.

The Marshfield Chamber of Commerce has petitioned the Oregon Federal Court to permit the main C. A. Smith mill, which has been closed down for several months, to resume under a lease to C. A. Smith, who has applied for permission to operate. The mill property is in the hands of receivers appointed on request of bondholders who hold the Smith securities. C. A. Smith returned recently from Sweden and Norway where he is reported to have obtained funds with which to operate the mill.

Captain T. P. H. Whitelaw, the veteran wrecking master, announced during the week that there have been fewer marine disasters on the Pacific Coast during the past two years than during any similar period for many years, though there have been the usual number of fogs and storms. The veteran's favorite expression, "Fools and foggy weather make work for the wrecker," has not proved true. Whitelaw said the present-day sailorman is becoming more efficient and, in addition, the aids to navigation are benefiting the mariner.

The first consignment of materials to be utilized in constructing the Government railroad in Alaska this season left Puget Sound on the steamer "La Touche" of the Alaska Steamship Company on July 28. The supply is being sent to the Alaska engineering commission. Twelve hundred tons comprise the first shipment, a part of which is T. N. T. The supplies to go forward the last of the month are to be used on the section of the Government railroad now being built from Nenana south in the direction of Seward.

Lady Young, wife of Lieutenant-Colonel Sir Popham Young, Commissioner to India, will participate in the ceremonies attending the launching of the U. S. destroyer "Marcus," named after her son, Lieutenant Arnold Marcus, killed in the explosion aboard the submarine "A-7" in Manila, July, 1917. Mrs. Helen Elizabeth Marcus, widow of Lieutenant Marcus, has been selected by Secretary Daniels to christen the destroyer at the ceremonies to be held at the Union plant of the Bethlehem Shipbuilding Corporation, August 22.

A reported shortage of pickles, peas, biscuit, tomatoes and fruit in the larder of the steamship "West Vaca" has resulted in the filing of a libel suit against the vessel by sixteen seamen, who appealed to the United States District Court for the extra compensation which an act of Congress allows seamen when they are forced to live on short rations. Each seaman asks for $90 extra compensation. According to the complaint, the men shipped on the vessel at this port last April for a round trip to China. They returned to this port July 7. They say that during the entire trip they were short of certain articles of food which Congress says each sailor is entitled to demand in specified quantities.

Owing to the demand for lumber for domestic purposes, it is probable that some of the Coast shipbuilding plants soon may engage in constructing new steam schooners. There is a shortage in tonnage to handle the Coast lumber used here and at other Pacific Coast ports. Recently there has been a revival of building operations and the stocks of lumber on hand have been heavily reduced. Many of the steam schooners operated here before the war have been sold and taken away or else lost by fire or in storms. Although no announcement has been made, it is expected that the McCormick plant at St. Helens will be one of the first to begin work on the coasters. It is believed that this yard will construct the combination type of vessel. Recently there has been a big demand for passenger transportation on the lumber carriers.

Following the announcement of the organization of the Rolph Mail Steamship Company and a plan to have the new organization operate an $8,000,000 fleet of vessels between San Francisco and the west coast of Mexico and Panama against the established business of the Gulf Mail Steamship Company, the latter concern has announced its intention to accept the gage of battle. Paul Hartman, president of the Gulf Mail, said that his company is now negotiating to take over a fleet that will give it control of one of the biggest tonnages on the Pacific Coast, and that in addition plans are being matured to extend the service to Panama and the entire west coast of South America as far as Valparaiso. The officials of the Gulf Mail admit that the Mexican and West Coast business is profitable and say that Rolph must have been influenced to enter the field of competition after he had chartered two of his ships to the Gulf Mail. Both vessels yielded a substantial profit and the announcement of the new steamship concern followed immediately.

A gradual reduction of the working force of the San Francisco bay district shipyards from 50,000 men employed May 1 to 35,000 at the end of last week can be expected to continue until the force is reduced to approximately 27,000, it was announced by local shipbuilders. This reduction is caused, it was said, by the withdrawal by the Government of expected contracts and the failure by the local yards to obtain new contracts for private account. There are forty ways in the yards of the bay district shipyards, and contracts are rapidly nearing completion. Employers are also taking the opportunity, it was said, of placing the yards on a basis of efficiency and eliminating the so-called "Joe Magees" who were used during the war to force production regardless of expense. A contract for a tanker of small tonnage for the Standard Oil Company is said to be the only contract that has been let to bay district shipyards since permission was given by the Government to accept contracts for private account. The lack of contracts, together with the necessity of placing the shipyards on a more efficient basis, is given as the reason for the reduction of the shipyard forces.

The Moore Shipbuilding Company at Oakland now boasts of the largest marine railway on the Pacific Coast. The equipment probably will care for larger vessels than any other similar railway in the United States. The former marine railway was torn out and rebuilt and is now big enough to carry out of the water any of the 10,000 deadweight ton vessels being built at the plant for the Shipping Board. Recently the 9,400-ton cargo freighter "Tuckanuck" was lifted out from the estuary in just seventeen minutes. This is a record. The advantage of the new equipment is that the hull of the vessel is lifted high and dry, where the winds blow the bottom dry and the work of cleaning and painting is performed better and the color sticks better. The construction of a marine railway of this size is distinctly an experiment and the company undertook the work because of the present lack of adequate facilities for handling ships in dry dock. Owing to the success attained it is probable that the Hanlon plant will have the old ways there rebuilt and increased in size. All of the old marine ways were built to handle the sailing ships of wooden construction, because the vessels of this type dried out better when raised above the water than in the graven dry dock.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, JULY 30, 1919.

"DAVY JONES" PEEVED.

A party signing himself as "Davy Jones" manned his trusty typewriter the other day and wrote to the editor of the San Francisco Chronicle, saying:

"Some time ago I had occasion to travel from Sacramento to San Francisco by boat. The steamer was the 'Isleton' of the California Navigation Company. In the state room was a notice directing one to look under the berth for life preservers. I looked, and found the life preservers to be made of the flimsiest cotton, the compartments of which were filled with short lengths of reeds, instead of cork, as provided by law. Where are the men who are supposed to inspect these boats and see that the law is obeyed?"

The Chronicle editor nonchalantly disposed of "Davy Jones's" growl by heading it "Not Anxious to Visit His Locker," and letting it go at that.

Well, we had just about concluded to sit down and write to the Chronicle with the object of setting "Davy Jones" straight in the matter of those life preservers, when along comes Captain H. F. Strother, of San Francisco, and does it ever so much better than we could possibly hope to do that we gladly quote from his communication.

After setting forth the requirements of the Government in regard to the make and supporting capacity of life preservers adjustable to the body of an adult person, Captain Strother goes on to say:

"The tule life preserver is entirely a California product, and has been approved by the Board of Supervising Steamboat Inspectors in Washington. I did not have much faith in the tule life preserver until I saw one tested. The first year that I was master of a vessel an inspector attached twenty-five pounds of iron to a standard block cork life preserver and threw it in the water. By the stamp it was six years old. It promptly sank. He attached the same weight to a tule life preserver ten years old and it floated easily. The tule is designed by nature to withstand the action of water or dampness, and resists deterioration longer than any other material suitable for making life preservers. In 1904, after the disaster to the 'General Slocum' in New York harbor, in which over 1000 lives were lost, President Roosevelt appointed a retired rear-admiral to inspect the steamers operating in and out of this port. During an inspection of my steamer he told me that he had a tule life preserver in the water with twenty-five pounds deadweight attached to it, and it was then afloat after being in the water 85 days."

As pertinent to the subject under discussion it should be stated here that a standard life preserver, to come up to the specifications of the Government, "must be capable of sustaining for a continuous period of twenty-four hours an attached weight so arranged that whether the said weight be submerged or not, there shall be a direct downward pull upon the life preserver of at least twenty pounds." This, by the way, is more than the downward pull of a heavy person in the water.

We have set forth these particulars in the hope that the information sought to be conveyed will be of some benefit to the traveling public, among whom, no doubt, there are many whose knowledge of life preservers is just as hazy as, apparently, is that of "Davy Jones."

WHAT AILS AMERICANS?

Are Americans deteriorating? Is the physical fiber of the race weakening? Is America inviting the doom which overtook imperialistic Rome because of the decay of her men?

These may seem startling questions, but are we not warranted in asking them after reading the following news item which has lately been going the rounds of the press?

Abraham Bowers, Immigration Secretary of the Y. M. C. A., in the course of an address before the Illinois State Americanization Committee in Chicago predicted immigration of 2,000,000 foreigners, mostly Chinese and Japanese, every year for the next fifty years. "Before the war," he said, "we assimilated about 1,000,000 immigrants a year. They were mostly used in common labor. As our country grows, the need for labor increases in ratio. There is only one place for it to come from now, China and Japan. Therefore, they are bound to come, and I believe that they will intermarry with our people as other immigrants are doing. Japanese and Chinese students now marry our university girls. They will override racial prejudice, literacy tests, and every other obstacle."

The plain inference to be drawn from Mr. Bowers' statement is, of course, that native Americans will not or can not do the hard, disagreeable, manual labor needed to carry on our civilization; labor which has mostly been performed by European immigrants. Did he stand alone in taking that position his contentions might be dismissed as the atrabilious imaginings of a chronic pessimist. But he has, by implication, laid bare a weak joint in our national armor which has long been a source of anxiety to observant lovers of America. That weak joint is the unwillingness of the average young American to do any work involving severe physical effort. From everywhere comes the seemingly well-founded complaint that Americans can no longer be found in sufficient numbers to do the hard, grimy, manual labor which must be done by some one if we are to endure as a nation. Their chief ambition seems to be to get a "white collar job," even though the pay is so small that it compels them to adopt a "coffee and" diet. As a local contemporary, discussing the subject, truly says: "Americans who apparently would starve rather than hoe corn or cotton, cut asparagus, or block, thin or top sugar beets, tumble over each other in eagerness to get work in occupations which they think more genteel."

To make use of a hackneyed but still expressive phrase, the situation would be funny were it not so serious. And it is serious because, to again quote from the aforementioned contemporary, "a race or a people which cannot from its own ranks supply those who will carry on all its necessary occupations will in the end find itself hard pressed to compete successfully with a race or a people which can do its own work. Those who will do the work on the land are likely in the end to own it."

To sum it all up, there is something radically wrong with a race whose ablebodiedness is not equal to its own needs, and he would be a benefactor of his kind indeed who could point out and apply the remedy.

A JOLT FOR MR. BLANTON.

"The aspersions cast upon the loyalty of American labor during the war by Congressman 'Bleating' Blanton, of Texas, are disposed of by the inspiring facts set forth by Grosvenor Clarkson, director of the Council of National Defense, in a recent report on the activities of the organization of which he is the efficient head," says an editorial in the New York Evening Mail.

The quotation from Mr. Clarkson's report on which the Evening Mail bases its comment is this:

But here at home there have been armies, too. And they have performed a mighty task. They were created without mandates; they were welded into cohesive form by suggestion rather than by order; they were galvanized from beginning to end by the mighty force of voluntary co-operation, and they went into the home stretch with a power which nothing could have stopped. These were the armies of production—production not alone of guns and steel plates and soldiers' shoes, not alone even of visible things, but production of energy, of thought that made the sword a flaming thing; of optimism, to offset the stupid pessimism of people who criticized but had nothing tangible to contribute; of the immortal spirit of "carry on," of, above all, unification. For it has only been within the past year that this nation has completely realized that after all it is properly introduced to itself, but a partnership of 100,000,000 persons. Out of all this has grown one of the great lessons of the war to America; the interdependency of social effort, the effort which in the last equation must keep a nation wholesome in peace and which must furnish the continuing tireless force behind the cutting edge in time of war.

Mr. Clarkson is right. He knows more about the spirit of the average American than Blanton could ever hope to know. Mr. Clarkson understands what it means to live in a democracy; he knows what the fruits of democracy have been. Blanton's idea is, "Do what I tell you to do when I tell you to do it."

Blanton will not be able to understand what the Evening Mail means by its comment nor what it sees when it concludes with the following expression:

In the long period of peace now in happy prospect, the problems to be solved will be no less important, no less pregnant with results, than those we accomplished so well during the period of armed struggle.

For the solution of those problems we must perpetuate and strengthen that effective partnership of 100,000,000 persons. In seeking to promote that partnership, the American Federation of Labor during its recent convention in Atlantic City performed a valuable service to America.

America is great in spite of the Blantons, free in defiance of them and strong because of the numbers of them that she has overcome.

It may be interesting to recall the fact that in all American history there is not one name revered and honored by him who bore it that was not made honorable in the struggle forward and upward toward greater freedom. Only men and women who contribute to the progress of humanity, who

help to make better the lot of all men, who help to defeat oppression, are honored and remembered in gratitude and glory under the Stars and Stripes.

"GENTLE" CRITICISM!

The editor of the San Francisco Labor Clarion has evidently been pierced by the truth. The JOURNAL took him to task a couple of weeks ago for his personal attack upon Senator Hiram W. Johnson and others. Somewhat subdued, Editor Mullen comes back and intimates that he really loves the Senator.

Yet, this is what he said editorially about the man he loves:

Senator Johnson's Carnegie Hall speech in New York against the League of Nations indicates that an Eastern summer is too much for him. He must have been suffering from sunstroke. In no other way can his tangled and illogical interpretation of Article X be accounted for. He gave it a meaning directly in conflict with the plain language of the paragraph, and a man in his right mind would not attempt to so persuade an audience of intelligent Americans, and we presume his audience was made up to some extent of Americans, though it is a certainty that every anti-American in New York who could reach the meeting hall was there, because the position Johnson has assumed is in harmony with the minds of those who, while living here and enjoying the conditions and opportunities our country affords them, think more of some other country than they do of the United States. It is the group of votes that many politicians are playing for and which any real American would be ashamed to possess.

More contemptible innuendo about California's distinguished junior Senator has not appeared anywhere, not even in the Los Angeles Times.

But this is "Brother" Mullen's favorite style. This is how he gets after his "friends" when they disagree with him. Too bad, there is neither forbearance nor tolerance in the Labor Clarion. For both are essential requisites to the growth and development of the American labor movement.

Roger W. Babson, head of Babson's Statistical Organization, U. S. A., which furnishes reports to merchants, bankers and investors, recently sent out a "Barometer Letter" in which the lessons of the war are discussed. This letter raises the question, "Shall we all voluntarily give up something, or shall we all run the risk of losing everything?" The answer, Babson tells his business clientele, "depends upon whether or not we are willing to profit by the real lesson of the war. If we are willing to let the bulk of manual workers of this country peaceably retain the prestige and privileges which the war has given them—if we are willing to run the country in the interest of the producers of property rather than the inheritors of property, then we can head off disaster. If, however, the financial and business interests of the United States and Allied nations attempt to return to pre-war economic conditions, then there surely will follow an explosion."

The strike of the seamen on the Atlantic Coast was called off on Saturday. At the hour of going to press the news to hand seem to indicate that the strikers secured substantial concessions from the shipowners and the Shipping Board. As soon as full particulars are forthcoming they will be published in the JOURNAL.

The man who opposes Chinese exclusion is interesting chiefly as the exception that proves the rule.

LABOR IN GERMANY.

Overthrow of Imperial Government Brings New Power and Influence to Trade Unions.

Within a week after the overthrow of the imperial German government, according to an article in the Monthly Labor Review (U. S. Department of Labor) the influence of the trade unions in political and economic life have considerably increased, says the Review. "The relations between large industrial members of the labor movement have assumed an entirely new aspect." "As the result," it continues, "of negotiations carried on at Berlin, twenty-one of the German employers' associations representing nearly every important industry group and the seven trade-union and salaried employees' federations, entered into a joint declaration of principles to govern future industrial relations." This agreement has been termed the Magna Charta of German Labor. The Review publishes it in full as it was taken from the Reichsarbeitsblatt for December, 1918. It follows as taken from the Review:

"1. The trade-unions shall be recognized as the legitimate representatives of labor.

"2. Restriction of the freedom of combination and association of male and female workers shall not be permitted.

"3. Henceforth employers and employers' associations shall not concern themselves with the workmen's societies (so-called nonmilitant or 'yellow' trade-unions) and shall not support or subsidize them, either directly or indirectly.

"4. All workmen returning from military service, on reporting for work, shall be entitled to immediate reinstatement into the situation occupied by them before the war. The employers' and workers' federations affected shall use all possible efforts to provide raw materials and orders so that the above obligation may be complied with.

"5. Joint regulation and equipartisan administration of employment offices.

"6. The working conditions of all male and female workers are to be determined in accordance with conditions in the trade in question through collective agreements with the workers' trade organizations. Negotiations relating thereto shall be immediately initiated and be concluded as soon as possible.

"7. In each establishment employing at least 50 workers a workmen's committee shall be appointed which shall represent the workers, and, in co-operation with the employer, shall see to it that the working conditions are regulated in accordance with the collective agreement.

"8. The collective agreements shall provide for the establishment of conciliation and arbitration boards, composed of an equal number of employers' and workers' representatives.

"9. The maximum regular daily hours of work shall be fixed for all establishments at eight hours. Reductions of wages owing to a shortening of the hours of work shall not take place.

"10. For the enforcement of this agreement as well as for the regulation of further measures necessary during demobilization to maintain economic life, and to guarantee the very existence of the working people, especially those seriously disabled in the war, the interested employers' and workmen's organizations shall establish a joint central committee on an equipartisan basis and representing the various trades.

"11. This central committee shall also decide all fundamental problems in so far as such arise in the collective regulation of wage and working conditions and shall mediate disputes in which several occupational groups are simultaneously interested.

"12. Its decisions shall be binding upon both employers and workers unless they are contested within one week by one of the trade organizations affected.

"13. This agreement comes into force on the date of its signature and shall without prejudice to other legal regulation remain in force indefinitely, with the mutual right of its abrogation on three months' notice. This agreement in its intent shall be alike applicable to the relations between employers and salaried employees' organizations."

The agreement is signed with a long list of signatures of the largest German employers' associations and by the Free (Social-Democratic), Hirsch-Duncker, and Christian trade-unions, several salaried employees' organizations, and the personal signatures of the leading manufacturers and labor leaders as published in the Reichsanzeiger, the official organ of the government. The agreement also bears signatures of officials of the German provisional government and managers of national, state and municipal establishments have been instructed by these officials to observe the provisions thereof.

The Council of People's Commissioners (Germany) on December 23, 1918, promulgated a decree giving such collective agreements legally binding force. As published in the Monthly

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., July 28, 1919.
Regular weekly meeting came to order at 7 p. m., Ed. Andersen presiding. Secretary reported shipping good; more members ashore. John H. Tennison and E. A. Erickson were elected to serve on the committee negotiating with the shipowners at Seattle, Washington, on the subject of new wage scale and increase of overtime. Same committee interviewing the shipowners at San Francisco reported progress; early settlement expected.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

DIED.

Ferdinand B. Petersen, No. 1426, a native of Norway, age 33. Died at sea, January 26, 1919.
Erick A. Westerberg, No. 1067, a native of Finland, age 40. Died at San Pedro, Cal., July 23, 1919.

The Shipping Board announces that it has accepted the bids of the Universal Shipping and Trading Company of Seattle for the purchase of four barge type and two steamer type Ferris hulls, now in Lake Union. The consideration was not given.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

"We have come upon times when people are not submissive to injustice or to unnecessary privation and suffering."

What voice is this so burdened with impious reversal of the old belief that all good people were "content in the sphere where it had pleased God to place them"? First we should conclude the thought, however:

"The people are deeply and justly in earnest. If those who are the actual industrial, political and social leaders of the nation will not act upon the principle that the greatest shall be the servant of all, then the people themselves, with indignation and bitterness, are sure to take their destiny and that of the world into their own hands."

Thus speaketh the Federal Council of the Churches of Christ in America, a union of thirty leading Protestant church groups, in a statement just issued which outlines the attitude of those churches toward economic and social readjustment in the United States. This document follows closely the pattern supplied by the Roman Catholic leaders some months ago, when they advocated long steps toward the time when both ownership and management of industry would rest in the hands of the actual workers. Virtually all the religious bodies of the United States are thus brought to a point where they not only concede but preach that the laborer is worthy of his hire and competent to say whether its terms are just and wholesome.

The Protestant churches ask, concretely, for a living wage (based upon its power to purchase necessities); a nation-wide employment service; a policy of public works to reduce unemployment; a generous scheme of land settlement; social insurance to cover sickness, unemployment, accidents and old age; vocational training; equal pay for men and women workers; community centers and churches open seven days a week to replace the saloon as the workers' "clubhouse."

More important than these familiar proposals is the spirit in which they are advanced by the Federal Council of Churches, which says:

"Class consciousness and the use of violence are not confined to the revolutionary groups. The possession of wealth and education tend to the formation of classes and industrial ownership and management to a class conscious ruling group. We observe the dangerous tendency of many State and municipal officials to deny fair hearings to radical offenders and to use unnecessary and provocative brutality during strikes. Legislatures, judges and officials should act firmly but justly, without bluster and unnecessary violence. Workingmen believe that they do not get an equal chance before the law, and it is highly important that whatever real basis there is for this conviction should be removed.

"A deep cause of unrest in industry is the denial to labor of a share in industrial management. Laborers must be recognized as being entitled to as much consideration as employers, and their rights must be equally safeguarded. This may be accomplished by assuring the workers as rapidly as it can be done a fair share in control; by opportunity for ownership, with corresponding representation, or by a combination of ownership and control in co-operative production.

"The living wage should be made the first charge upon industry, before dividends are considered. The resistance of labor to general wage reductions, even when accompanied by reduced hours of work, should receive moral support from the community, except where the demand is clearly unreasonable. Wage levels must be high enough to maintain a standard of living worthy of responsible free citizenship in a democracy.

"Actual wages—that is, wages reckoned in power to purchase commodities—have been decreasing for several years in spite of wage increases. There is urgent need of provision by industry, under guidance of the Government, for some regular methods of adjustment of wages and salaries to the purchasing power of money. High wages are desirable as a genral principle."

Since the Federal Council believes that the churches "are, or should be, vitally concerned with civic, economic and social interests," it is doubtless informing itself with respect to the many important labor strikes now in progress or threatened, notably the great strike of seamen on coastwise and transatantic ships of American registry (excepting those operated by the United States Shipping Board).

The feature of the walkout, which has tied up no less than 400 vessels in Atlantic ports, is the spontaneous support given their American fellow seamen by foreign sailors now in our ports. Half a dozen Dutch and Scandinavian vessels and one British have been abandoned in New York harbor, by crews who say they will not sign on again unless they receive the same terms demanded by the Americans. These terms are recognition of the union, the eight-hour day and an increase of $15 a month in some occupations.

Fifty thousand sailors are out between Maine and Texas. Andrew Furuseth, President of the International Seamen's Union, has telegraphed to Vice-Chairman Stevens, of the Shipping Board, saying: "Your attitude is checking the strong current which has been driving young Americans into the American merchant marine. The seamen are striking for no more than what day laborers get with little question on land."

Furuseth has always contended that there would be no trouble in manning an American merchant marine of any size if the conditions of work aboard ship were made tolerable to self-respecting men. In proof of this he is able to show that since the La Follette Seamen's Law was passed the number of American sailors on the Pacific Coast has increased from less than one per cent. to more than ten per cent., and on the Atlantic Coast from ten per cent. to 25 per cent.

Shipowners have tried to persuade the nation that the Seamen's Law would place our merchant marine at a hopeless disadvantage with foreign competitors. Furuseth has replied that the provision permitting foreign sailors to sign off in our ports would remove every disadvantage since the foreigners would then refuse to sign on again except at the American rate. Data furnished by foreign consular agents in New York and elsewhere confirms Furuseth's argument, and it is clinched by the enthusiasm with which the sailors from overseas are joining in the American strike. It is believed by many observers that the caution and resistance of the union leaders are all that prevents the present strike from spreading more or less around the globe in a tremendous demonstration of solidarity among the seafearing workers.

At Norfolk cattle enough to fill six ships are awaiting transportation to France. The Shipping Board complains to the striking seamen that this country's honor will be tarnished and the people of France will suffer unless the cattle are shipped directly. It does not occur to the Shipping Board that this country's honor is also tarnished when it helps keep the sailor in peonage, or that the present menace to the people of France can be overcome in an hour if the private shipowners will consent to share a small portion of their profits with the men who do the real work of ocean transportation.

The Nolan bill to establish a minimum wage of $3 a day for all workers in the Federal and District of Columbia governments will surely pass. Test votes taken in the House this week demonstrated that the measure could not be beaten. One of these tests came on the issue to preserve or knock out the Good amendment to rob the public service workers of the $250 bonus to be awarded in consequence of the jumping cost of living. The amendment was killed.

A minimum wage of $16.50 a week will be paid to all employees of private mercantile establishments in the District, according to a decision reached by local business men this week. It is admitted that a person cannot be supported properly on less. This is a far cry from the howl that went up from employers a few years ago when Lieutenant-Governor O'Hara suggested that shop girls in Chicago ought to receive at least $8 a week to remove them from the "temptations" of immorality. Sixteen dollars will not buy very much more today than eight dollars would buy in 1910, but we have at least the admission that the "commodity" of labor possesses certain human attributes.

Political leaders still betray a modest silence when asked how they propose to meet the crushing national deficit, solve the railroad problem, lower the cost of living or stop the growth of unemployment; but that does not mean they are without tanglefoot to catch fly voters. By no means. The Republican National Committee this week informs the country that the Democrats who made peace at Paris ran up a bill of five million francs at the Hotel de Crillon, that they "lived in fine state with their retinue of families, clerks, servants, experts, flunkies and staffs," and that "if these bills are ever scrutinized by a responsible committee of Congress there will be some interesting revelations."

But "sauce for the propagander is sauce for the propagoose." The Democratic National Committee comes right back the same week with the charge that the Republicans have celebrated their capture of Congress with a wild and wasteful expenditure of public money for semi-personal satisfaction. We read that "one of the first things the Republicans did was to reopen the baths in the Senate office (which the Democrats had closed) at a cost that will exceed $20,000 a year"; that floor leader of the House, Mondell, has

thrown out the sturdy oak furniture that was in his office and refitted it in a manner more befitting "the directors' room of a great bank than the quarters of a plain representative from Wyoming." His rich rugs and fine mahogany "will cost the United States $2500." And Senator Lodge is charged with going on a similar spree by refitting the Foreign Relations chairman's office with a "new drugget and new table that alone will cost about $2000."

Meanwhile, Robert W. Woolley, of the Interstate Commerce Commission, has a word to say about something real. He finds that the private railroad managers will, by their own indications, jump the traffic charges by from 15 to 30 per cent. if the lines are put back in their hands, and that "this advance would be reflected about four-fold in the final cost—this is regarded as the usual ratio in the finished product." Conceding that the railroads have emerged from decades of mismanagement and the war in a condition where they cannot pay their own way, Mr. Woolley says he fully expects to see the Railroad Administration at least $400,000,000 behind at the end of this fiscal year, because the business of the roads has decreased and will probably continue to fall for some months.

"But what if the Railroad Administration is behind?" he asks. "Is not paying that sum, in addition to the present deficit, better than turning the roads back to private control and granting a further increase in rates, a further indirect tax, the extent of which we know not, but which we do know is bound to be more burdensome than the present arrangement? Isn't it far sounder to take care of any deficit from carrier operations, out of the national treasury, whose coffers are replenished through taxes levied where they can best be borne, than to make higher and higher than ever the high cost of living? We would at least know the amount we were paying, and that we were paying it only once."

This belief that an increase in freight rates is multiplied several times before it comes out of the common man's pocket is taking root in many minds. Wouldn't it be a cruel joke on the private executive sabotagers if Uncle Sam should decide to keep the lines and pay the deficit—just once, out of taxes on great fortunes!

The first World Labor Conference, provided for in the Paris Peace Treaty, will convene in Washington in October. It will consist of four delegates from each country that shall have become a member of the League of Nations. Two of these delegates will represent the respective Government, one shall speak for labor and one for capital. Seventy-five per cent. of the membership of the first World Labor Conference, therefore, will owe no allegiance to labor, organized or unorganized, and will not be responsible to any set of wage earners.

All this has been arranged by the Organizing Committee of the Conference, which has been busy at London, according to Dr. James T. Shotwell, who has been acting as the American representative. The program agreed to provides for a discussion of the eight-hour workday; means to prevent unemployment; the care of women in industry before and after child birth, and limiting their employment at night; the question of employing children less than fourteen years old.

The World Labor Conference will have no power to legislate nor to make any country adopt its recommendations. It will prepare sample bills, based upon available data and the discussions of the conference. Dr. Shotwell thinks it probable that this first conference will be composed exclusively of delegates from the countries lately allied against the Central Empires, and from ones that were neutral in the war.

SWAT THE INJUNCTION!

(By W. B. Rubin.)

The American Federation of Labor, at its Atlantic City Convention, took a home run rap at injunctions, and their judges.

Hooray! Bully! Go to it again!

Labor's greatest enemy, the nation's biggest curse, the weapon of unscrupulous employers, the shield of grafters and profiteers, the dividing wall that keeps Capital from understanding Labor, and the two from serving in harmony the Advance Thought of Life! Service, not dividends, is the sustaining force of a people.

Our boys, in fighting for democracy "over there," encountered all the shrapnel and gas, the Zeppelins and U-Boats, all the devilishly conceived contrivances of fighting mad Huns, but it is authoritatively stated that the toll by them exacted is not to be compared with the roll call of those who have "gone west" because of the infesting cootie.

Tiny vermin though they are, they attack the human body, and in numerous ways, carry disease; and many were the boys who never even had a chance to fire a shot because the cootie had enjoined them from health.

Imagine an army about to enter an engagement, fully equipped in material and spirit for conquest and glory, finding itself annoyed and harassed, infected and quarantined through vermin, which, like the locust, delight in ravaging and laying waste.

Some were fortunate enough to hold the troublesome insects in contempt. Others, in direct violation of vermin jurisdiction, delivered themselves from the pest.

Now, comparisons are often odious, and similes and metaphores sometimes misapplied, but the above facts furnish a text which mankind would do well to ponder,—that Labor, all powerful, all united in its effort toward a higher and better life for all those who toil, is ever halted in its forward march by the pest injunctions. Many are the organizations which have been laid low by this means, and the members who have suffered jail in the trail of the injunction's contempt, are legion.

It is fortunate for humanity that there are many brave enough in spirit to disregard the injunction and go on fighting for progress, building for posterity.

The fight "over there," is over. The fight for democracy is here, begun anew. Labor fought and worked for victory, and no profiteer shall be permitted to bask in luxury while Labor is obliged to sweat for its right to existence, its permission to live.

The injunction is a natural menace—the insect that infests and disrupts the whole industrial scheme of justice and happiness.

Away with it!

Monarchs and despots, tyrants and anarchists, all have been banished from European soil. Our shores form a haven for refugees, but not for those who would implant their despotism here.

The injunction is a judicial usurpation. The judge who, either through precedent or his own initiative, urged by expediency or his own desire, grants the same, practices usurpation.

The injunction must go; swat it!

The injunction judge must go; swat him!

There is an organized way of doing this. Proceed by impeachment against every injunction judge; defeat him at elections if you can.

Have Congress and the Legislatures take away the writ of injunction in labor cases.

Don't forget,—the surest way, the best way, the only way, is to

Capture the Courts!

It is a dangerous thing, when you have let slip an unfortunate remark, to try to cover up the blunder. Mrs. G. was talking with the wife of Judge H. about her son's choice of a profession. "I don't want him to be a lawyer," she said. "Why not?" asked the judge's wife. "I think there is nothing much finer than the legal profession for a bright boy." "Well," said Mrs. G. bluntly, "a lawyer has to tell so many lies." Then it dawned on her that she was talking to the wife of a lawyer, so she hastily added: "That is—er—to be a good lawyer."

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

time has been carried on by certain elements to provoke an armed conflict between the United States and Mexico has reached alarming proportions;

"Resolved, that this congress is against such campaign being continued, and that the officers of the Pan-American Federation of Labor be instructed to make their best efforts and use all the powers at their command to have the differences between the United States and Mexico settled in a peaceful way, as the working people in Mexico will co-operate to that end."

President Gompers presided at the sessions of the convention, and was unanimously re-elected president.

In a newspaper interview prior to his departure for Amsterdam to attend a meeting of international trade unionists, he said:

"To my mind it would be the gravest wrong which could be inflicted on the people of the United States, as well as the people of Mexico, if the jingo spirit which is now in the course of manufacture would drive us into anything like armed conflict with Mexico.

"The President and his associates have negotiated a treaty of peace and in it established the covenant of the League of Nations, one of whose highest purposes is the settlement of international disputes by peaceful means and for the prevention of war. We cannot consistently advocate such high principles in our dealings with the European nations as provided in the covenant and then rush into armed conflict with Mexico."

"One Big Union" is German Ideal.

The Edmonton, Alberta, Canada, Free Press asks one big union advocates if they believe their constitution will be swallowed by so-called "pure and simple" trade unionists.

The Free Press is the official newspaper of the Edmonton Trades and Labor Council. It shows that the o. b. u.'s favor the building of a machine unequaled by the tightest trade union machine evolved from the wildest fancy of o. b. u. orators.

Under the one big union constitution conventions will be held every six months despite the criticism that trade unionists hold too many conventions.

"Think of delegates," says the Free Press, "attending conventions every six months for the purpose of electing officers. It is a joke. Such intelligence is offered 'pure and simple minded' trade unionists."

The constitution provides that the general executive board shall fill vacancies occurring on said board by choosing representatives from the same industrial division.

"This," says the Free Press, "is a beauty. It is complete autocracy. It would work thusly: Johnson, who is not prepared to turn loose all he holds and ignore the dictates of his own conscience, is removed by the machine in the district or central council. The executive board appoints their friend Jones.

"It is claimed that there is a complete recall system. The local unit may withdraw credentials of any officer, and, should the recall instituted by the local unit be warranted, the credentials shall be revoked and a request made that the executive board immediately fill the vacancy. The placing and keeping of this power in the hands of the select five is made complete."

The constitution further provides that if a union fails to secure the sanction of the general executive board and orders a strike, it does so on its own responsibility. The Free Press says:

"Well, seeing there are no strike funds to meet such emergencies, whose responsibility could it be?"

Despite the mass of generalities about "democracy," the o. b. u. constitution gives officials power that no trade unionist would dare advocate. This is shown in strikes where the central labor council or district board may refer same to the general executive board if it is "considered of sufficient importance to the workers." If the strikers' plea for aid is denied they may ask the general executive board to act, and then, if this board considers the matter of "sufficient importance" it shall call on the subordinate boards to again consider the matter, and if said boards then favor a strike "the general executive board shall be empowered to call a strike of all affiliated bodies."

Nowhere in the constitution is it provided that the rank and file shall have a direct vote in the calling of strikes—they must listen to speeches about the future while their officials decide whether wage and other movements of these workers is of "sufficient importance" to attract their attention.

The constitution is a perfect illustration of rulership from the top with this cheap attempt at autocracy camouflaged by attacks on the bona fide trade union movement.

Labor Turnover Large.

Employers who insist on efficiency in production might apply this theory after reading "Labor Turnover Among Employes of a Copper Smelting Company," by Paul F. Brissenden, and published in the current Monthly Bulletin of the United States Bureau of Labor Statistics.

It is shown that for every 1,000 full-time workers, 3,129 were hired and 3,633 left during the year reported. In another case 3,575 per 1,000 were hired and 5,101 per 1,000 left during the year.

"The remedy for this costly changing of labor," says the writer, "would seem to be a general and thorough improvement in working conditions as to safety, sanitation, etc., surrounding the employment of mine workers and smelter men.

"Quite apart from any humanitarian point of view, if the mining and smelting job is to be made more stable, it would seem that mining and smelting wages should be increased, hours reduced and working conditions improved to a point where the mining and smelting jobs become attractive enough, in comparison with other jobs, to keep the incumbent in it.

"It is an axiom that labor instability is caused primarily by labor discontent This discontent can never be completely allayed until and unless the workers are recognized as investors in the industry and therefore as entitled to a share in the determination of the conditions governing their work and in the management of the plant in which they have invested their strength and skill."

LABOR IN GERMANY.

(Continued from Page 7.)

Labor Review part one of this decree is as follows:

"Article 1. If the conditions for the conclusion of labor contracts between workers' organizations and individual employers or organizations of employers have been regulated through an agreement in writing (collective agreement), labor contracts between the interested parties shall be ineffective in so far as they do not conform to such regulations. Nonconforming contracts shall, however, be effective in so far as the collective agreement permits their conclusion or as they contain a change of working conditions more favorable to the worker and not explicitly excluded in the collective agreement. Ineffective provisions are to be replaced by the corresponding provisions of the collective agreement.

"Interested parties within the meaning of paragraph 1, are employers and workers who are parties to the collective agreement or members of the signatory organizations, or on the conclusion of the labor contract have been members of these organizations, or who have concluded a labor contract which refers to the collective agreement.

"Article 2. Collective agreements that have become of predominant importance in the development of working conditions in an occupation within the territory covered by the agreement may be declared generally binding by the Federal Labor Department (Reichsarbeitsamt). In such a case they shall, within the territory in which they are binding, also be binding, within the meaning of article 1, where the employer or worker or both of them are not interested parties in the collective agreement.

"In case of a dispute when a labor contract comes within several generally binding collective agreements, and without prejudice to a nonconforming decision of the Federal Labor Department, that collective agreement shall be considered as the governing one which contains provisions regulating the largest number of labor contracts in force in the establishment.

"Article 3. A declaration of the Federal Labor Department in pursuance of Article 2 shall be made only on request. Each signatory party to the collective agreement, as well as organizations of employers or workers who would be affected by the declaration of the Federal Labor Department, is entitled to make such a request.

"The signatory parties to the agreement must append to their request the original or an officially attested copy of the collective agreement. If the request is made by other organizations, the Federal Labor Department must obtain the original or a copy of the agreement from the signatory parties, who are bound to deliver it.

"Article 4. Any such request must be published by the Federal Labor Department in the Deutscher Reichsanzeiger. The publication must state the time limit within which protests may be lodged. The organizations which are signatory parties to the collective agreement shall, moreover, be requested to express their opinion.

"After the expiration of the time limit for protests the Federal Labor Department shall, after consideration of any protests that may be made, decide on the request, which decision shall be final. If it grants the request it shall simultaneously determine at what time the collective agreement becomes generally binding.

"Article 5. Generally binding collective agreements, with designation of the territory in which they are binding and of the date on which they become generally binding, shall be entered in a special register, which shall be kept by the Federal Labor Department or by an authority designated by that department in accordance with detailed regulations to be issued by it. The originals or officially attested copies of the collective agreements shall be preserved as appendices to the register.

"Inspection of the register of collective agreements or its appendices shall be free to anybody during regular office hours. Employers and workers for whom a collective agreement has been made binding by declaration of the Federal Labor Department may, moreover, demand from the signatory parties a reprint of the agreement, on payment of the costs.

"Entries in the register of collective agreements are to be published in the Deutscher Reichsanzeiger, and in such publication the provisions of Article 2 shall be pointed out.

"Article 6. If a collective agreement has been declared generally binding the provisions of Articles 2 to 5 shall also be correspondingly applicable in case of amendment of the agreement."

The laboring poor produce the means of life by their labor. . . . The idea is now gradually entering the poor men's minds that they may as well keep in their own hands the right of distributing the means of life they produce.—Ruskin.

WHALING OFF THE FALKLANDS.

Whale oil was formerly one of the principal oils used for illuminating purposes, but a good deal of its importance in this respect has been lost, owing to the competition of mineral oils. The increased demand in recent years for oils of all kinds for soap making and for use in the manufacture of margarine and other edible fats has led to a renewed demand for whale oil and a remarkable development in the whaling industry. Whaling has also been rendered more profitable than it was in former years through the employment of improved methods of dealing with the catch whereby practically the whole of the carcass is utilized.

In the North Atlantic and Arctic seas the principal localities where whaling is carried on are in the neighborhood of the Faroes, Iceland, the coast of Norway, and the Newfoundland coast. In the North Pacific the whaling industry is pursued off the coast of British Columbia and the islands of Alaska. Whaling enterprises are conducted in the southern hemisphere off the coast of Chile, from Durban, Natal, from Portuguese East Africa, and from the Seychelles; some of these, however, have been interrupted or have temporarily ceased during the war. But it is in the British colony of the Falkland Islands and its dependencies of South Georgia, the South Shetlands, Graham Land, and the South Orkneys that the greatest developments have taken place. The whaling waters of these seas are the most lucrative ever exploited.

Operations may be said to have begun in 1906, when a whaling and sealing company was formed in Buenos Aires, under the title of the Compania Argentina de Pesca, with an initial capital of $200,000. The enterprise started well, and 51 whales were caught in less than a month. The company made its working headquarters at Cumberland Bay in South Georgia, and the Falkland Islands Government issued a lease of the station. From this time the growth of the whaling industry at South Georgia was rapid, and leases have been granted to eight companies, three of which are British. All the companies but one have land factories, two companies sharing one factory; there are thus six land factories in South Georgia.

The leases are for a period of 21 years at an annual rental of $1,250, this sum giving the company, except in the case of the Compania Argentina de Pesca, the right to use two catchers in connection with the factory. For the further sum of $500 a license may be issued granting the use of a third catcher. Before the war only three companies were using third catchers. At present the situation is abnormal, and extra catchers have been authorized in accordance with the necessities of actual conditions. The Compania Argentina de Pesca, the oldest company, is in a slightly different position. In addition to its lease at Grytviken for $1,250 it leases Jason Harbor, near by, for $500 and is allowed to use in all four catchers.

The success of the early operations of the South Georgia companies led to an almost immediate establishment of similar whaling companies in other dependencies of the Falkland Islands and in the colony itself. In 1914-15, 10 companies were licensed in the South Shetlands and Graham's Land, with 13 floating factories, 1 land factory, and 32 catchers. Four companies were working in the South Orkneys with 3 floating factories and 7 catchers, and one company working 4 catchers had a land factory in the Falkland Islands.

With the growth of the whaling industry ordinances have been passed in the colony and regulations made with a view to controlling the operations of the whaling companies in the interests of the industry as a whole. These regulations have in view not only the laying down of the numbers of factories which may be licensed, the number of catchers they may employ, and the fees to be paid, but also the prevention of waste, by exacting that pressure boilers capable of utilizing the whole carcass be employed, and the conservation of the whales by forbidding the capture of any whale calf or any female whale accompanied by a calf. The employes of all the companies are almost without exception Norwegians.

IN URUGUAY.

While concentration of power in a few hands is proceeding apace in most European and American countries, those who believe with Thomas Jefferson that "that government is best which governs least" may see in the new constitution of Uruguay what is perhaps the beginning of a tendency in the opposite direction. For the first time in ninety years this South American republic has amended its organic law—or, rather, rewritten it—in the direction of a less centralized democracy. Under the new provisions the executive power is divided between the President and an administrative commission. The latter will have charge of public works, finance, instruction, labor, industries, charity and health. This combines the matters which, in the United States, are referred to our departments of the Interior, Treasury and Labor, with several subordinate bureaus. In Uruguay, the Administrative Commission, which will have supervision of such affairs, will be responsible only to the General Assembly, which corresponds to our Congress. The nine members of this body are to be elected, not appointed, for six years, one-third going out of office every two years as their successors are chosen. The indirect election of the President by the General Assembly is abolished, and the chief executive hereafter will be chosen by popular vote. He will retain the power to appoint and dismiss the Ministers of Foreign Affairs, War, Navy and Interior, and will present an annual budget to the Administrative Commission. Executive power is "delegated" to the President for certain definite purposes He remains commander-in-chief of the army and navy, but cannot exercise his command in person except with the consent of a two-thirds vote of the General Assembly. He is also prohibited from leaving the national territory for more than forty-eight hours without the permission of the legislative body. Students of political systems will watch with interest the development of these new experiments in statecraft.—New York Herald.

One man in every sixty in England is partially or wholly color blind, so at least the tests for the English mercantile marine seem to show. A noted professor maintains that the proportion is even larger.

Labor News

The strike of the cotton mills workers in Lancashire has been settled, the workers obtaining a 48-hour week and a 30 per cent. increase in wages.

The Chicago Federation of Labor voted down a resolution presented by representatives of the Cook County Labor party calling for an international conference of workers to which representatives of the Russian Bolsheviki, de Valera, the leader of the Irish Republic, and other radicals were to be invited.

The State of Wisconsin Industrial Commission is enforcing the State and Federal child labor laws. During the past year 130 cases involving accidents to children employed in violation of the child labor law were reported to the commission. In all of the cases the employers violating the law paid treble compensation to the injured minors.

The seventh biennial convention of the National Women's Trade Union League was recently held in Philadelphia. There were about 125 delegates in the voting body of the convention, representing localities from Salt Lake City to Boston. The League adopted the principle of proportional representation for its own elections and put the plan into immediate effect.

Many Austrian miners in West Virginia are leaving the country, and a labor shortage is imminent in many of the mines of that State. Other foreigners are preparing to return to their native lands when ocean transportation is opened up to the world. In Franklin County, Illinois, buttons bearing the legend "Stay in America," are being distributed to foreign-born miners.

Recently twenty-five colored washerwomen met in Madison, N. J., and formed a union. The women do not do washing at their homes, but visit the homes of wealthy residents on one day every week. The chief object of the union, which is headed by Mrs. Eliza Hill, is to secure a wage of $2.50 for a six-hour day. Formerly the washerwomen got $2 for a day of no specified length.

The Women's Democratic Political League of New York adopted resolutions requesting the district attorney of New York County to appoint a woman lawyer "familiar with the trial of similar cases and the practice in the criminal court on his staff, and thereby earn the gratitude of the many earnest women interested in their sex." The resolution was based on the fact that many crimes are committed by women in a city of the size of New York, and hence the women felt "that the women should have one in the office of the public prosecutor in whom they may repose their confidence."

The strike of telephone operators in Pacific Coast cities has been settled on the following principal points: (1) Recognition of the telephone operators' union. (2) Establishment of adjustment boards composed of equal representation from the union and the company to pass on all grievances. This board is established to prevent any discrimination on account of union affiliation. (3) Provision for a twelve-month agreement for both electrical workers and telephone operators. (4) Increased wage scales for both operators and electrical workers. (5) Assurance of the payment of retroactive wages from January 1.

INFORMATION WANTED.

Members of the crew of the "John A. Kirby," who have not already filed their claims, should communicate with the undersigned. I have made arrangements to file claims for families of seamen and officers who were lost by submarine activities during the war; also for seamen who were injured by torpedoes, etc., or who were taken into Germany as prisoners. Such persons should communicate with me at earliest convenience in order to have their claims filed with the State Department. Silas B. Axtell, One Broadway, New York. 7-23-19

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

CARRY ON!

Uncle Sam is releasing from his service the men who went "over there" to free the world from autocracy. Thousands of soldiers are daily receiving their honorable discharges; they pocket their pay, bid farewell to their comrades, and sally forth—civilians.

There is one army, however, which must not be demobilized. That is the army of War-Savings Stamp buyers. More recruits are needed to carry on the campaign of readjustment which follows the signing of the armistice.

The army of fighters has achieved its purpose.
The army of savers must remain in "action."
"Carry on" to a lasting peace under the banner of W. S. S.!

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

I am representing most of the crew of the S. S. "J. E. O'Neil," in the matter of their claim for salvage services rendered to the steamship "Oregon" on or about January 19, 1918, about 300 miles off Honolulu. The following awards were made to the vessels which assisted in the salvage operations: Steamship "Lurline," her master, officers and crew, $18,000; steamship "President," her master, officers and crew, $1750; steamship "J. E. O'Neil," her master, officers and crew, $6872. One-quarter of the $6872 was allowed to the master, officers and crew of the "J. E. O'Neil." All those members of the crew who have not yet filed their claims should do so at once in order that the claims of the entire crew will be presented at the same time. Silas B. Axtell, One Broadway, New York. 7-9-19

Members of the crew of the SS. "Gulf of Mexico" may obtain money due them for salvage services rendered to the bark "Portugal" by communicating with Silas B. Axtell, Attorney for Seamen's Unions, 1 Broadway, Room J, New York City.

Home News

The War Department announces that a market is to be found in the United States for food supplies still held by it. These include 250,000,000 pounds of canned meats and 100,000,000 cans of vegetables.

The bill granting permission for the construction of a vehicular tunnel under the Hudson River between New York and Jersey City was passed by the lower house of the New York Legislature without a record vote. The measure has already passed the Senate.

J. Walter Widmeyer, a Western Maryland railroad conductor, who sued the United States railroad administration for $75,000 damages for a broken neck, has been awarded $65,000 in the Federal court. The plaintiff suffered the injury while he was making up a train.

Two additional airplane patrols for national forests have been established during June. They are operated from Mather Field, near Sacramento, Calif., operating over the Sierras. A trial patrol recently undertaken was successful in detecting fires in heavy timbers at elevations of from six to ten thousand feet.

In urging Federal regulation of the meat packing industry, Clarence Ousley, acting secretary of the Department of Agriculture, pointed to the difference now being paid by the packers for livestock and the very high prices demanded of the consuming public for beef products. The Federal official shifts the blame for present conditions to the retailer.

A New Brunswick, N. J., local auto tire company will give free life insurance to every person in its employ as a recognition, it is stated, of the employees' loyalty to the company during the war. Under the terms of this "generous" gift the dependents of a deceased employee will receive $1200—if the said employee has worked "uninterruptedly" for 10 years or over. Unionists suggest that the best recognition of employees' loyalty is wage increases that would permit them to cope with high living costs instead of waiting till they die.

Without debate the Texas Senate has adopted a concurrent resolution calling the attention of the President and Congress to the "guerilla warfare that has prevailed along the Texas-Mexican border since 1875," and asking the Federal Government, if it cannot protect the border, to "accord to Texas that liberty of action" in protecting its citizens that the republic of Texas enjoyed prior to the time that it "in good faith became a State of the Union." The object to be attained through such "liberty of action," according to the resolution, is "that Texas may take such steps as may be necessary for the protection of its border."

During the nineteen months that the United States was actually at war, the postal savings deposits in this country forged ahead $34,000,000, according to a statement made public recently by the Postoffice Department. On March 31, 1917, a week before war was declared, deposits in the United States postal banks totaled $125,424,686. On October 31, 1918, eleven days prior to the signing of the armistice, they had increased to $159,670,830. It is pointed out that these savings were made in the face of four intensive Liberty Loan campaigns, and an almost continuous drive for the sale of thrift stamps and war savings certificates.

Domestic and Naval

The Job Shipping Company of New York has purchased the entire stock of the Machias Ship Construction Co., Machias, Me., and taken charge of the property. The plant builds wooden schooners.

The Bureau of Navigation, Department of Commerce, reports 265 sailing, steam, gas, and unrigged vessels of 405,591 gross tons built in the United States and officially numbered during the month of June, 1919.

The British steamer "Rio Preto," ex "Birmingham," 4,026 tons gross, 2,564 net, carries about 6,820 tons deadweight, built at W. Hartlepool in 1901 and owned by the London-American Maritime Trading Co., London, has been sold to the British Linen Bank for about £100,000.

The U. S. Steamboat Inspection Service has rescinded all previous rulings on acetylene, which may now be transported on steamers carrying passengers when contained in cylinders that meet in all respects the requirements of the Interstate Commerce Commission with regard to the transportation of this commodity.

The accounts of the British shipping firm, Elder, Dempter & Co., for the calendar year 1918 show profits of £408,529 18s., plus £83,630 15s., brought forward from 1917. The total dividend on ordinary shares is at the rate of 10 per cent., and after transferring £50,000 to general reserve, there remains a balance of £119,785 4s. to carry forward. The company's capital amounts to £3,135,000, of which £1,200,000 is in preference shares. Debentures outstanding amount to £2,000,000, and shipping investments to £6,201,691. The dividend for last year compares with 10 per cent. for 1917 and 1916, 9 per cent. for 1915, and 8 per cent. for 1914.

Demobilization of the navy is progressing satisfactorily, according to a Navy Department announcement. A total of 316,554 enlisted men have been discharged since the armistice was signed, of which 94,306 were enlisted men in the regular service and 222,248 were members of the reserve force who were released to inactive duty, subject to call. More than 22,500 reserve officers have been returned to civil life and 7124 still are on duty. There still are 70,000 enlisted men on the reserve force on duty, most of them aboard transports. It is expected all of the reserve officers and men remaining in the service will be released within two months.

Financial control of the Cramp Shipbuilding Co., Philadelphia, is said to have passed to the banking firms of Chandler Bros. & Co. and Hayden, Stone & Co. It is rumored that the new dominant factors will seek to retire the voting trust by payment of the 5 per cent. serial notes in advance of maturity. There is less than half a million dollars of these which are callable at 102½. Of the capital stock of $6,098,000, $5,756,000 is held in the voting trust. It is planned to merge the Cramp Co. in another company to be known as the American Trade & Shipping Corporation. The new company would have a capital of $46,000,000 and would absorb the Cramp stock on the basis of five $46 shares for one, or $230 a share for Cramp's. The Kerr Navigation Co. is spoken of as a member of the merger.

News from Abroad

The annual report of the Liverpool municipal street railways shows a net profit of $824,005 for the year 1918; $681,310 was distributed to the public fund.

It has been reported from London that opposition on the part of the conservatives to the nationalizing of the British mines is growing, and there may be a Unionist split if the Government accepts the report of the Sankey Commission recommending that step.

The Government of New Zealand has established an extensive hydro-electric plant at Lake Coleridge, from which the city of Christ Church gets full lighting for the city streets at 1¼c. per unit. The city supplies current to private parties for lighting at 7c. per unit, and for industrial purposes at 1½c. per unit.

Four reports of the Coal Commission, which has been considering nationalizing the British mines, have been published. The main report is signed by Justice Sir John Sankey. It alone recommends immediate legislation for acquisition of mines, royalties for the state, and for owners to receive just compensation.

At its recent conference the Manchester (England) Liberal Federation urged that the House of Commons be elected by proportional representation for a term not exceeding five years, an earlier dissolution being dependent upon a special resolution after notice carried by a majority of the whole membership of the House.

The Government of New Zealand is appropriating very large sums for the construction of government railroads and highways. In addition 65 millions are to be expended on a government development of water power. Construction is to be extended over both islands. The entire scheme provides for a total length of 1,112 miles of main transmission lines and 309 miles of branch mains to supply disconnected main sub-stations.

An extensive scheme for the improvement of the telephone system, which was acquired by the Government just before the war, is about to be put into effect by the British Government. Inside of less than three years, it is estimated, all telephone lines will be underground. Connecting lines are being built to unify what were previously disconnected private systems and new lines are being extended to territory which has hitherto been without service.

The farm school of the American Army university established at Beaune, France, for members of the A. E. F. has an enrollment of more than four thousand soldiers. In one week of April, twenty specialists from agricultural colleges at home lectured or gave short-course talks to more than 25,000 of the soldiers. In most of the military units reached by these speakers, farmers' clubs were organized. In one regiment the enrollment was more than 1300.

Under the new law for the management of Post Telegrams and Telephones which are operated as one system by the Government of Uruguay, 80 per cent. of the profits are used for extension and improvement and 20 per cent. in bonuses and institutions for welfare of employes. Three members of the governing council of five are named directly by the Government. Two are chosen from a list of ten employes drawn up by the executive council of the Postal administration.

With the Wits

"Does it take much pull to get a berth under the government?"

"Some. Do you want a sleeping car reservation or a job?"—Louisville Courier-Journal.

"How the Blanks could afford to give such a grand dinner I don't understand," said Mrs. Blunderby to her guest. "It was really a most presumptuous repast."—Cleveland Press.

"What do you think of the league of nations?" "It's something like the new house we have been building. We are confident that if we can ever get it finished it will be worth all the trouble and expense."—Washington Star.

Gramercy—You promised to cut down on your expensive finery, but your bills are worse than ever.

Mrs. Gramercy—Be reasonable, my dear. No woman could ever stop wearing things when they put a luxury tax on them.—New York Globe.

Park Orator—An' I tell yer that all them millionaires' money is tainted—all on it!

Unconvinced Person—'Ow d'ye mean, "tainted"?

Park Orator—Well, 'taint yours an' 'taint mine, is it?—London Sketch.

"How long should a man keep his arm around a girl, do you think?" asked the sweet young thing. "Until he hears his wrist watch strike," replied the young man in khaki. "Why, wrist watches don't strike, do they?" "Of course not."—Yonkers Statesman.

Ex-President Taft relates an amusing experience that befell him while he was touring the country in the interests of the league of nations. He had just finished a speech and it was necessary that he make the last train out of town in order to keep his next day's engagements. "Cabby," he cried, "I'll give you five dollars if you get to the station in time for me to make that train." "Jump in boss," yelled the cabby, with visions of the princely fee daneing before his eyes. "I'll get you there in time or break your neck."

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

FACTS ABOUT STRUGGLING RUSSIA

Who is Responsible for the World-Wide Campaign of Misrepresentation?

The organized workers in the allied countries of Europe have repeatedly called upon the respective governments to withdraw their military forces from Russia.

In America Senator Hiram W. Johnson has persistently and fearlessly voiced a demand to the same effect. The recent American Federation of Labor Convention also expressed the conviction that the United States should withdraw all its troops from Russia "at the earliest possible moment."

In view of these demands the article on this page is most timely. It is written by Mr. Jerome Davis, who was secretary of the International Committee of the Y. M. C. A. in Russia for two and a half years, and had charge of all the Government relations for the Y. M. C. A. up to October, 1918.

The campaign of misrepresentation about Russia shifts from month to month. First, America was offered the Bolshevik-German Agent theory, which was boomed by the publication of the Sisson documents. This charge was effectually silenced by Colonel Raymond Robins. Lenine even offered to refuse to ratify the Brest-Litovsk peace if he could be assured of Allied help. Next came the story of wholesale killings like the St. Bartholomew massacre. The facts were that an amnesty instead of a massacre was proclaimed, and some of us who were on the ground believe that more were killed by the White Guard forces than by the Bolsheviki.

Tiring of this charge the press treated us to the scandalous "Nationalization" myth; but today William Allen White says, "No one now pretends that the story about the nationalization of women in Russia has any basis in fact." The press is now weltering in tales of starvation and suffering in Bolshevist Russia. No doubt many of these are true, but the papers fail to mention that the Allied blockade and the cordon of hostile bayonets around Soviet Russia are helping to cause this very condition.

The fact is that the last Y. M. C. A. Secretary to leave Moscow in December, 1918, says: "A woman is safer on the streets of Moscow at midnight than she is on the streets of London or New York." This testimony is further corroborated by Esther White of the Friends' Unit, who left Petrograd on February 8th. She has been so disgusted by press reports that she says, "The English-speaking press simply doesn't want to hear the truth." She testifies that soldiers and workmen receive one and one-half pounds of bread daily, children and office holders one pound, and every one else one-half pound.

Isaac Don Levine, cabling from Moscow, May 19th, is reported as saying, "Never in the history of modern Russia has any government had more real authority than the present Soviet system." "Since Admiral Kolchak's recent successes the masses have arisen to uphold the Soviet Government. The Allies' blockade of the Baltic has embittered all classes and augmented the Government's support. Even the blind observer here quickly sees that a formidable majority of the nation favors the Soviet Government." The sooner the American people realize the truth that the Soviet Government is the only real Russian power, and that our present blockade policy is strengthening the Bolsheviki, the better.

According to the French Foreign Minister, on March 26, 1919, there were 369,000 Allied troops in Russia. The Bolsheviki were being attacked by British, French, Japanese, Germans, Czecho-Slovaks, Rumanians, Italians, Greeks, Chinese, Turcomans, Punjabis, and Senegalese. In Northern Russia, embracing Archangel and Murmansk, Allied and American soldiers are fighting amid the snow and the ice. A recent letter from a social worker serving at the front describes a retreat of our soldier boys, resembling a panic, in which they lost everything they had to the Bolsheviki. He says the statement by the official censor at Archangel that no supplies had been lost was a "lie."

In Siberia General Graves has appealed to the troops to be neutral toward all the factions in Russia. An editorial in the New York Times thereupon asked why our soldiers were there. Evidently General Graves is having no easy time. A dispatch says: "Deserters and mutineers of the Semenoff and Horvath forces have appealed to General Graves for protection, while those remaining loyal to these two generals also have asked for assistance. General Graves has intervened only to save unarmed men from slaughter without provocation." The big advances supposed to have been made by Kolchak are shown in their true light when we read in a dispatch from Paris, dated May 26th, that Kolchak forces were thrown heavily back near Samara toward Ufa. Yet Samara is over 200 miles farther away from Moscow than the Siberian forces were a year ago. Frederick Moore, late Captain of Intelligence of the A. E. F. in Siberia, says, "Ninety-five per cent. of the people in Siberia are Bolshevik."

In Turkestan, one of the largest cotton producing areas in the world, and in the Caucasus, a huge petroleum bed, the Provisional Governments are largely creations of the British Army, it is said. They depend for their maintenance on Allied bayonets.

In the Ukraine the Bolsheviki were gaining little headway until the French occupied the country. Now the French have suffered disaster and have had to evacuate even Odessa. The native population evidently preferred the Bolsheviki to the French. In the district toward Poland the Bolsheviki are reported to threaten Vilna.

If you will trace the situation described above on the map you will see that all around Soviet Russia there is a cordon of steel bayonets being financed and helped by the Allies. Yet to-day the Bolsheviki have nearly double the territory that they had last September and seem stronger than ever.

A policy now seriously suggested is that of supplying arms and ammunition to every force opposing the Bolsheviki and the recognition of Kolchak. This means that we would help any General, no matter how bad, like Mannerheim, for example, who fought with the Germans in Finland. What does this involve? Turn to Leslie's Weekly for February 8, and read that the Russians who fought the Bolsheviki shot immediately all Russian and Red Guard leaders when they took the city of Helsingfors, "and nearly 2,000 persons were said to have been executed." The Y. M. C. A. secretary, who is opposed to the Bolsheviki, on duty in Kazan when it was taken by hostile forces, said that the killing and cruelty practiced was far worse than anything he had ever seen under the Bolsheviki. When, after two months the city was retaken by the Bolsheviki this same secretary saw no retaliation, and the order was issued, "Any soldier who searches a house without a permit will be shot."

Would not the policy of giving arms and ammunition to all who oppose the Bolsheviki mean the killing of thousands of ignorant peasants and soldiers? Yet, after all the slaughter was over, how do we know there would be any better government than before? Perhaps it would be worse.

Kolchak in Siberia has imprisoned and exiled the elected members of the Constitutional Assembly.

Kerensky is now strongly opposed to helping him in any way. He permits the sale of the awful vodka liquor, the taxes of which alone in one month ran into the millions. The Bolsheviki have rigidly enforced absolute prohibition. An able American social worker just returned from Siberia reports, "The dissatisfaction with the Kolchak regime is on a rapid increase." His interpreter says, "The Social Revolutionists are rapidly going over into the Bolshevik camp rather than support Kolchak." Allied men who saw the actions of the Russian leaders in Harbin said they would almost have become Bolsheviki themselves had they been Russians. One has only to read the "Death Train" in the American Red Cross Magazine for April to know of horrors in Siberia far worse than anything I saw or heard in Bolshevik Russia. F. F. Moore, late Captain of Intelligence, A. E. F. Siberia, describes the treatment of some railroad workers in Siberia. "Exasperated by delays, his Cossack officers would lead out batches of horn blowers and flog them with iron rods until they were inert masses of human flesh, bloody and unconscious on the tracks."

Why not adopt the only other possible policy which has not been tried, namely, lifting

the blockade and letting trade go into Russia? This will place the responsibility on Lenine and Trotzky. If they are not able to organize industry and provide food for the people, then the blame will be theirs. To-day, as Alexander Berkenheim, Vice-President of the All-Russian Central Union of Consumers' Societies, says, the blame is shifted to the Allies because of the blockade. Yet Mr. Berkenheim was four times arrested by the Bolsheviki, so he cannot be prejudiced in their favor. The experience of every Allied relief organization in Soviet Russia proves that it is possible to help the Russian people under the Bolsheviki. Besides lifting the blockade the Allies should permit the Y. M. C. A., the Red Cross, and the Friends' Unit to return to Russia at once.

A WORD ABOUT SUCCESS.

Health, wealth, and prosperity—they sound fine, and we've got into the habit of wishing them to each other at Christmas time as though they were the transcendent trinity of this world's blessings. But, really, there's only one of them worth anything. The other two are crude and commonplace.

Wealth and prosperity, the opportunity to grow corpulent and complacent; the privilege of decking your body in expensive clothes and ordering other people about—they're poor wishes, and there isn't an ounce of poetry in them.

Success—it's our big ideal. The religious trick it out in a harp and a halo, and point out one road. The materialists make a fetish of a dyspeptic millionaire, and point out another. We compromise and keep an eye on both, but the materialists are in a mighty majority.

Like most of our big ideals, it's an empty eggshell. If you juggle it gingerly you will never find out that there was nothing inside. But, after all, those who do find out are the wise. They have learned the big truism—that values are purely relative.

Success is the paralysis of greatness, a cancer eating at the vitals of genius. Its insidious rotting at the root was the ruin of old empires, the downfall of man and nation and creed.

While ever the jack-o'-lanterns of fame and fortune flutter before us over the marshlands we are safe, but let us attain them, let us stand for a moment satisfied and self-assured, and there follows the dry-rot of inertia, and stagnation of self-complacency.

Affluence, dignity, wealth—they're sonorous nouns, but they signify little. They make a breeding ground for snobbery and vicious indulgence.

Youth is too rich a thing to spend in grubbing and pandering, so that when you are old you may ride roughshod. It's only our conceit and cussedness that make us want to outdo the other fellow. It's gratifying, perhaps, to be fawned upon and feted, and your statue put up in a park when you are dead.

It's great to bowl along the highroad on rubber tires, and to leave millions to jackal relatives and asylums for derelicts.

But it's even better to have lived twenty-four hours a day, to have shaken hands with circumstance, to know a little of how the other half lives.

It's better to have found for yourself the truth of the old platitude that life's too short for anything but happiness, and happiness is made of understanding and sunny-mindedness.—Ernestine Hemmings in the Australian.

Demand the union label.

IMMIGRATION AND WAGES.

For the present, if not for some time to come, high wages will help to maintain demands for goods, and this demand will maintain industrial earnings and large industrial earnings will support the stock market. So points out Moody's Investment Service, which adds that, in spite of these facts, "corporations generally want to see lower wages because they can not continue to pay the present scale without soon losing most of their margins of profit." The labor-supply has been badly cut down by suspension of immigration due to the war, but now, however, "we seem to be on the turning point," according to this authority, "and it is probable that not long after the treaty of peace is signed we shall witness a substantial increase in the labor-supply here, brought about by heavy immigration." There is an expectation in some quarters, however, that instead there will be "a heavy emigration; and this notion is supported by the relatively large emigration which is now going on." But the writer believes this movement will be temporary "and probably represents nothing more than the return of refugees, such as occurred after the end of the Napoleonic wars and in other similar cases." Immigration, on the other hand, "seems bound to become large and remain so because the industrial position of the nations of the world is such as to cause a heavy flow in this direction." The writer continues:

"The principle back of all migrations is the seeking of larger opportunities, especially for unskilled labor. It is principally unskilled labor that migrates; for professional men and skilled workers are usually kept at home by personal ties and business success. Migrations have always moved in the direction of larger opportunities for low-class labor. That these opportunities exist here now may be seen in the following:

Country	Per Capita Income	Railway Miles per 10,000 Population
United Kingdom	$233	5.13
France	203	6.37
Germany	225	5.71
Russia	45	2.46
Austria	75	4.98
Italy	82	3.09
Spain	70	4.72
Belgium	157	3.87
Holland	190	3.77
Denmark	170	8.30
Norway and Sweden	175	11.80
Switzerland	200	7.83
United States	395	26.15
Canada	309	34.45
Australia	315	41.93
Argentina	80	28.08

"These figures in a way show where the opportunities lie. The first column is the estimated per capita income of nations at the present time and the second column shows the railway mileage in 1912. The latter figure is significant, because a large railway mileage in proportion to population means great undeveloped areas and a big opening for common laborers. After looking at these figures, it seems natural, indeed, that before the war the big movement of immigration was into the United States, Canada, Argentina, other South-American countries, and Australia. There was plenty of room for common labor in all these countries, and there is still. This is true even in Argentina, for although the per capita income is low, it is made so by the large proportion of low-class native or half-breed population, while, at the same time, the average income of the white population is high.

"There is more reason than ever why common labor should leave Europe; and it is from Europe, and especially from Russia, Germany, Austria, and Italy, that the heavy emigration has been coming. War-taxes are bound to be enormously heavy and to have a depressing effect upon labor for many years to come. In Germany there will be the added burden of the indemnities—so that European workers will be tempted more than ever to seek larger opportunities. That the United States will get its full pre-war proportion of the immigration is indicated by the fact that we have become a capitalist nation.

"Before the war the common labor that migrated in such volume to Canada and to South-American countries was paid its wages with funds that came largely from European capital. Now, however, Europe has other uses for its capital and our competitors for the favor of the emigrant are sure to be relatively short of funds, and therefore to show a relatively poor demand for common labor as compared with the demand in the United States. Because of these factors we look for a heavy immigration with all that this means. For one thing, it means lower wages, especially for common labor. It also means lower operating costs and better control of operating ratios. It is bound to mean, too, some decrease in the present extraordinary power of labor-unions."

DIAMONDS AND ANTWERP.

In the year 1914 there were about 200 diamond-cutting shops in Antwerp, employing about 16,000 cutters and 3000 cementers, altogether about 20,000 highly skilled workmen, who earned over 100,000,000 francs ($20,000,000) a year. Besides, there were between 3000 and 4000 manufacturers, merchants, and brokers; what these men earned it is impossible to tell; it is certain that they dressed very flashily and spent lots of money. If it is considered further that these 23,000 diamond men had families averaging three to four members, it will be found that the living of over 100,000 people depended directly on the diamond trade. Add to this the large number of hotel and cafe owners who made huge sums on the diamond trade. The fact is these men acted as private bankers to the cutters, who lived almost exclusively in hotels and boarding-houses and paid their accounts at long intervals. Finally, there were the hosts of tradesmen and retailers who supplied the "diamond people" with provisions, clothes, and furniture. The "Diamond Club" of Antwerp, where the yearly business ran into millions of francs, had a membership of 12,000, all of them merchants, brokers, or manufacturers.

A return to individual expenditure on the scale of 1914 would spell a financial crash and social disorder. The mode of life has to be simpler and the distribution of wealth has to be wider and upon a more equitable basis. The worker will receive more wages in the future, and the idle rich will become fewer, if they are not shortly non-existent. To think otherwise is to ignore the lessons of the past and to misread the signs of the times.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Produce Cheapest Coal.

American mine workers produce the cheapest coal in the world, work longer hours and receive a smaller percentage of their product than do European miners, says Robert H. Harlin, statistician of the United Mine Workers of America.

"The individual American coal miner," he says, "produces from two to three times as much coal per working day as the coal miner of Great Britain or continental Europe. While the wages of the American miner are uniformly higher than the wages paid the miners in Europe, yet the American miner receives for his labor a smaller percentage of the value of the wealth he produces than does the miner of Great Britain and continental Europe.

"The American miner does not have an eight-hour working day, as is generally supposed by those not intimately familiar with conditions of mine labor. The so-called eight-hour day now in existence provides that the miner shall be at the working face eight and one-half hours. When we add to this the time it requires to travel from the mine mouth to the working face (in most instances this traveling represents the hardest kind of work where men burdened with tools have to traverse difficult man-ways under low roof) we find that the working day of the miner under ground is nearer ten hours than eight hours.

"The workday in the mines in Great Britain is now seven hours, and, in all probability, will be reduced to six hours in the very near future. The miners of France and Belgium now enjoy an eight-hour day."

Unions Will Contest.

The Chicago Federation of Labor has voted to stand behind the Piano and Organ Workers' Union in an appeal to the United States Supreme Court to set aside a decision by the Illinois State Supreme Court that picketing can be prohibited by an injunction.

Several months ago Superior Judge Smith of Chicago commanded striking piano and organ workers not to picket the plant of the Lyon & Healy Piano Company. The strikers were violating no criminal law and they refused to obey the order. President Dold and six other members of the union were arrested for contempt of court. They were each sentenced to 30 days in jail and Dold was fined $500. The others were each fined $300. The decision was carried to the State Supreme Court where it was upheld. One of the State judges said:

"Even though the injunction issued by Judge Smith was too drastic, that did not give the workers any right to violate any part of the injunction."

Other injunction judges in Chicago continue issuing these writs. Girls on strike against a large department store have been denied the right to picket peaceably, and Judge Denis Sullivan has sentenced 32 striking cigar makers to jail for 30 days each because they violated his injunction. The court ordered the cigar makers not to talk about the strike, so they hung placards on their arms notifying the public of the strike. The court construed this as contempt.

Seamen's Law Benefits.

Interviewed in a New York newspaper, President Furuseth of the International Seamen's Union declared that seamen's wages throughout the world are being raised because vessel owners know that the La Follette Seamen's Law permits seamen to quit their vessels on arriving at an American port when formerly, if they quit, they were arrested and thrown back on the ship.

"The wages on foreign vessels," said President Furuseth, "have followed wages on American vessels since 1916. They are paying New York wages on ships leaving Liverpool to-day. It is the same in Norway, Sweden, and Denmark. The Seamen's Act is equalizing wages everywhere. It has placed the European countries in a position where they must pay American wages to get the men. When I was in Norway two months ago the shipowners and seamen were meeting to settle wages for the coming year, and they made no secret that it was the American Seamen's Act that had made them pay the wages.

"When the eight-hour day is granted here it will only be a short time until England will do the same. On the Pacific Coast, where the eight-hour day is in effect, it costs 25 per cent. less per ton mile to move cargo, because the seamen are of a better type, more highly skilled and work together better."

Demand Mooney Trial.

A new trial for Mooney and Billings "without further delay" was demanded by the twenty-eighth convention of the Locomotive Firemen and Enginemen.

The convention established a pension department and an old-age pension department which shall be self-sustaining, shall be entirely separate from all other departments and shall in no way create a financial liability for any other department.

It was voted to publish the brotherhood's official magazine semi-monthly "until such time as we may establish a daily press, at which time, if in the judgment of the grand lodge officers it is thought best, they may revert back to the monthly edition."

In permitting the discussing of political questions in the magazine, it was voted that these articles be confined "exclusively to the advocacy and promotion of a labor party in the United States and Canada."

High Prices World Wide.

While anti-union elements are blaming organized labor for present high prices along comes the Annalist, financial paper, and prints a War Industries Board report which declares that high prices have spread throughout the commercial world. High prices prevail in Japan, where it is a crime to organize a trade union, and in India, where organization of the workers is an unknown doctrine.

"Remoteness from the chief scene of conflict," it is stated, "did not protect Japan nor Australia from a revolution in prices; difference in economic organization did not protect India; the maintenance of

World's Workers

Striking British Columbia miners have asked provincial officials to appoint a commission to investigate wage and working conditions. The miners have been on strike for over a month and they say if the probe is started they will return to work.

The Dockers' Union of Copenhagen, Denmark, has been declared bankrupt for refusing to pay a fine of 800,000 kroner ($200,000) for calling an unlawful strike. Employers consented to reduce the fine to 25,000 kroner "to mantain the principle" but the dockers refused the offer.

The Dominion government is arranging for a Canadian industrial conference which will include capitalists and workers. The conference will be the first of its kind in the history of the Dominion and will be along the same lines as a meeting called in England by Premier Lloyd George after the armistice was signed.

In Spain provisions for the creation of deferred life annuities on a contributory and State-aided basis was made by the law of February 27, 1908. This Act was, however, of a permissive nature. A Royal Decree has now been issued which makes insurance against old age compulsory for all wage earners between the ages of sixteen and sixty-five whose total annual income does not exceed £160.

The great trade union movement in Britain, with its 5,000,000 members, has decided to join forces with the Union of British Co-operative Societies, with a membership of about 4,000,000, in order to dominate production, consumption and distribution in Britain. This amalgamation will represent the greatest business combination in history. It will dwarf, in power if not in funds, the gigantic Federation of British Industries, with its capital of $20,000,000,000.

The Swiss Federation of Metal and Watch Workers had only 35,500 members on January 1, 1917—it has 80,000 to-day and is the biggest union in Switzerland. It had a 57-hour week until April 1, 1918, which was reduced for watchmakers soon after to 55. April, 1919, it went down to 54. After more agitation it was reduced to 50 on May 1st, and the employers have now agreed to go down to 48 hours October 1, raising piece work salaries proportionately.

Representatives of the principal labor organizations have taken steps for the erection in London of a building intended to be the finest headquarters of any democratic movement to be found in the world. Arthur Henderson, labor leader, explained to the meeting which launched the project. It is to be erected in Westminster district near Parliament, and will contain the headquarters of the Trade Union Congress, the British Labor Party (which is a political party with an organization distinct from the trade unions), and the co-operative trading bodies, which are powerful in the industrial centers. There are to be committee rooms, offices for the staffs, reference library, reading rooms, hotel and restaurant.

DO YOU KNOW
That War-Savings Stamps pay 4 per cent. compound interest?
That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?
That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?
That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?
That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?
That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?
That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

INFORMATION WANTED.

The following named persons, or their beneficiaries, who have claims against the German Government are requested to communicate with F. R. Wall, 324 Merchants Exchange, San Francisco, Calif. Telephone Sutter 5807: Colstad, Adolph; Cudahy, H. L.; Greene, John S.; Hill, F. A.; Hughes, William; Healey, George; Jensen, G. A.; Lee, Chester; Larsen, L. Pacific Coast Marine.

The New York Overseas Company, Inc., subsidiary corporation and American representative of the Overseas Company of Christiania, Norway, will open offices in Seattle and engage in a general export and import business.

The Matson Navigation Company has announced the completion of a new concrete pier at Hawaii, known as the Matson wharf, the liner "Manoa" having loaded the first cargo from the pier with the up-to-date appliances installed thereon.

Recommendations that Naval radio service apply to Seattle have been sent to the Foreign Communication Committee of the National Foreign Trade Council by the Seattle Chamber of Commerce at the request of the council's secretary, O. B. Davis.

The "Choyo Maru," a new freighter, which is making its maiden trip to San Francisco, sailed from Nagasaki July 17 with a cargo of 8,968 tons. The "Choyo" is due to arrive here August 7 and will sail for Oriental ports as soon as she can be loaded

San Francisco, it is said, has fifteen steamers of 10 to 12 knots, 8,800 deadweight tons each, carrying cargoes to China and Japan on ten-day sailings. Two 8,800-ton, 11-knot ships are making monthly sailings to Eastern ports and Europe, with the prospect of additions to this fleet.

Results of the June survey of the Columbia River entrance, made public by United States engineers, who made it, show that there is a minimum depth of forty-two feet in the channel. The average depth is greater than this, ranging from 45 to 67 feet, according to the report.

Captain C. L. Arec of San Francisco has been selected master of the "Ellbeck," a Seattle-built steel steamer, which will make the first Seattle to London voyage for Dimond & Company. Captain Frank White will command the "West Hepburn," and Captain Otto Holstrom the "Askawake," also of this fleet.

Additional steamers may be placed on the San Francisco-Portland freight run by the Charles Nelson Company of San Francisco, it is said, the new vessels to engage in carrying general freight north and returning south with lumber. The firm of Dant & Russell of Portland is taking the cargo space for the lumber shipments.

Gordan Glidden, who has charge of the San Francisco business of the Moore Shipbuilding Company, announced that the work of repairing and overhauling ships is increasing. For a time the vessels have been kept so busy that the operators refrained from sending them to the shipyards until it could not be avoided. Among the vessels being handled recently at the Moore plant, in addition to the new work, are the six-masted barkentine "City of Sydney," schooner "Forest Home," "Mahanna" and tug "Ripley."

Shipping from Bandon over the bar of the Coquille River is returning to the normal condition of before the war. For a time only the steamer "Elizabeth" was visiting Bandon. Now five or six boats are regularly making the port, among them the "Elizabeth," the "Phoenix," the "Acme," the "Bandon" and the "Brooklyn." The Moore Mill and Lumber Company and the Prosper Mill Company are both shipping lumber. The Fyfe-Wilson Lumber Company is handling a large amount of ties and lumber. The wharves at Bandon are crowded with matchwood, railroad ties and other freight. Dairy products make up a large part of the water shipments.

John H. Rosseter, director of operations of the United States Shipping Board, told representative San Francisco and Los Angeles shipping men, meeting during the week in the Chamber of Commerce offices, that if they will give concrete suggestions for the use of new bottoms on transpacific trade routes, the Shipping Board will do everything possible to allocate Pacific Coast built ships to the Pacific Coast trade. In inviting these suggestions, however, Rosseter asked Pacific Coast shippers to bear these three things in mind: That the available merchant marine tonnage is not as great as reports indicate at this time. That shippers must realize the necessity of boats in transpacific trade returning with imports sufficient in volume to equalize the outbound cargoes. That Pacific Coast shippers must organize to help themselves and to provide capital with which to acquire home port ships if they desire to make permanent the foreign trade possibilities looming before the people of the West Coast at this time.

Before one of the largest crowds that has attended a launching of a vessel from the Union Construction Company's plant at Oakland, the "Hawarden," 9400-ton steel cargo ship, was sent into the water on July 23. Mrs. E. G. Burr, wife of the assistant to the company's general manager, sponsored the vessel, crashing a bottle of California champagne over the bow of the ship as it was broken from the ways. Delegates from Oakland and Berkeley Chambers of Commerce, as well as from many other civic organizations, were guests of the construction company at the launching. H. G. Peake, general manager, and W. H. Christie, secretary of the company, assisted in the launching of the vessel. The "Hawarden" is the fourth vessel to be finished by the Union Construction Company. Ten contracts have been awarded to the company by the Government since the early days of the war. Three vessels are now in the fitting ways, while three new hulls are also being placed in position. The "Havilah," sister ship to the "Hawarden," construction on which has been delayed due to a defect found in its hull, will be launched this week.

Increased production of cocoanut and other vegetable oils in the Philippines and other Oriental points will make San Francisco a big terminal for the receipt of this product in the future, according to O. Vorster, general manager here for the Philippine Vegetable Oil Company. Vorster left for Manila during the week on the Pacific Mail steamship "Santa Cruz." He is going to the Far East to make a general investigation of the oil business with the view of increasing the output of his concern by the installation of additional crushing mills. This concern, which has created vast facilities here for handling vegetable oils, is one of the biggest factors on the Pacific in oil production and will be of more importance in the future. At present the production of cocoanut oils and copra in the South Pacific has been considerably reduced on account of the lack of labor in the various groups of islands. The influenza swept away a certain percentage of the population and at present there is no available labor to be secured. The result is that it is difficult to secure cargoes and some of the sailing ships have been compelled to return here in ballast after taking out cargoes of case oil

Now that the war is over and the pre-war method of ship operation again is in vogue, the United States Hydrographic Office is doing everything possible to assist the mariner in his work of sailing the seven seas. The San Francisco office announced during the week that the former method of displaying the code numbers on vessels arriving and sailing would be permitted. The practice was discontinued during the war. Secrecy is no longer necessary and it will now be easier to identify vessels sighted at sea. The local office is distributing a new and novel map of the British Isles and waters of the North Sea. This will aid navigation, because the outlines of the known and unknown mine fields are shown, and by referring to the map the navigator can avoid danger. Much has been written about the extent of these mine fields, but after a glance at the map it appears that the difficulties attending navigation through the infested area are more difficult than has been imagined. The document indicates that in order to make one of the German ports the navigator has to be on watchful guard. The vessel can proceed only through quite narrow channels for a short distance and then decided turns to port or starboard are necessary. The slightest deviation from the marked course would prove disastrous.

Unless San Francisco shipping concerns and the United States Shipping Board come to the aid of the proposed California Nautical School the entire proposition which involves the use of the scout cruiser "Annapolis" as a local training ship to create officers for the American merchant marine will have to be dispensed with. At least this is the opinion of President J. H. McCallum of the Harbor Board, chairman of the board of trustees of the school, after conferring with his fellow members of the local experts, who know a few things about operating ships of all kinds. McCallum said that the $50,000 promised by the State and National Governments to defray the expenses of the school during the next two years will prove entirely inadequate. The scheme promised well until the trustees met and began to discuss figures. Then reports from similar schools from the East were gone into and it was ascertained that New York expends $125,000 each year for a single ship and at that the number of cadets has been cut to the bone. Boston expends $105,000 a year. The trustees then consulted the men who know and it was decided that if the greatest of economy is exercised the stunt can be handled here provided $70,630 is provided each year. That is $50,630 more than the trustees have at their disposal each year and it was then decided that unless more money can be secured it is useless to place the "Annapolis" in commission.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, AUGUST 6, 1919.

AN AMBITIOUS PROGRAM.

The San Francisco Chamber of Commerce, as a civic organization, may not be all that could be wished, but no one can very well accuse it of lacking business initiative or the spirit of aggressive go-aheadishness. Nor can it be said that it is short on optimism of the kind that won't rub off. Neither the threat of a further inflation of prices, nor the black cloud of bolshevism hovering over the eastern horizon, seem to have any terrors for the gentlemen directing its destinies. When it comes to grabbing off all the business in sight, and looking for more, the Chamber is there like a million, every time.

For several weeks past a committee on shipping appointed by the Chamber's directorate, has been hard at work preparing a report on American shipping conditions, and drafting recommendations to Congress based upon the committee's findings. Last week the committee presented its findings and recommendations to the directors, who approved them. The recommendations of the committee follow:

First. Early transfer of the United States Shipping Board vessels from the Government to American private individuals, firms or corporations properly equipped and competent to successfully operate them.

Second. That the President be authorized and directed to investigate and determine as promptly as possible what steamship lines should be established and put in operation from the principal ports of the Atlantic, Gulf and Pacific coasts where adequate terminal connections with rail carriers can and will be made or already exist to such world markets as in his judgment are necessary to and will promote development, expansion and maintenance of our foreign trade and adequate postal service, and to determine the type, size, speed and other requirements of the ships to be employed upon such lines and the frequency and the regularity of their sailings, with a view to furnishing adequate, certain and permanent service, and that he be authorized to sell such of the ships of the United States as will meet these requirements to responsible individuals, firms or corporations willing to establish and maintain such lines upon such terms of payment and other conditions as he may deem just and necessary to secure and maintain the service desired under such restrictions as would insure equal and impartial treatment of all interests and all shippers.

Third. We believe the President should be authorized to require special import and export rates to and from American and foreign ports and the issuance of through bills of lading in both directions.

Fourth. We believe fuel depots, both oil and coal, should be established upon the various trade routes, such depots to be owned or controlled by American interests.

Fifth. We believe measurements for tonnage should be revised to correspond with the British practice in order to equalize charges based upon tonnage throughout the world.

Sixth. We believe there should be established by the Government a system which would insure sufficient competent and efficient officers for the vessels who would be registered as a naval reserve, and by which American boys could have an opportunity of being trained as officers at the expense of the Government.

As will be seen, the recommendations of the committee make up a rather large order. On the whole, though, there isn't a great deal in them to which the seamen of the country will object. Least of all will they have any fault to find with the demand for the "early transfer of the United States Shipping Board vessels from the Government to American private individuals," etc. After their experience with the Shipping Board during the war and armistice, the seamen of America are not nearly so keen for Government ownership and operation of merchant ships as they might otherwise have been. Also, the danger of some autocratic Burleson being appointed chairman of the Board is rather more than potential; so much more so, in fact, that seamen cannot afford to take any chances with it. As between the Government and private shipowners, American merchant seamen will hereafter undoubtedly prefer to do their collective bargaining with the latter.

There is one recommendation of the Chamber of Commerce shipping committee, though, to which seamen may properly take exception; to wit, recommendation number six. The system of training American boys to become "competent and efficient officers," etc., which the committee seems to have had in mind, is too nearly related to the system of caste obtaining in the Navy to be acceptable to men with democratic instincts. One of Napoleon's favorite sayings was that every French soldier carried a marshal's baton in his knapsack. The principle embodied in that saying should be the governing principle in any system adopted for the training of American boys to become officers of the merchant marine. Any other system would be both futile and un-American.

Another committee will soon report on the allocation of Shipping Board vessels and the necessity for more tonnage. This committee was named after the recent meeting in San Francisco of leading shipowners and merchants with John H. Rosseter, Director of Operations for the Shipping Board.

MORE LIFEBOATS.

According to press reports the United States Board of Supervising Steamboat Inspectors has issued an order to the owners and operators of cargo-carrying ships that in the future all such vessels must carry enough lifeboats on each side, port and starboard, to care for all hands on board in an emergency.

The order of the Board is in line with the enlightened sentiment of the day that safety of life must always take precedence over safety of property and profits. The only wonder is that so much-needed a measure for the safeguarding of life at sea should have been so long a-coming to the fore.

No explanation as to the reason or reasons for the issuance of the order has been offered by the Supervisors. This probably because such explanation would be more or less unintelligible to landsmen, and seamen do not need to be told. Those of us who have tried on a stormy night to lower the lifeboats on the weather side of a sinking steamer rolling heavily in the trough of the sea, only to see them smashed to splinters, will understand quite well why all ships should have a sufficient number of lifeboats on each side to take off all hands on board should the need arise.

The requirements of the law in the case up to now have been that all cargo-carrying vessels must be equipped with enough lifeboats to properly care for all hands on board in case of wreck. There is no stipulation as to their distribution. The usual practice has been to stow one-half of the boats on the starboard side, and the other half on the port side. Indeed, all things considered, no other way of stowing them could very well be devised.

But nevertheless, this arrangement of the lifeboats has been the cause of more deaths by drowning among seamen on cargo steamers than probably all other causes combined. In stormy weather the head of a sinking, unmanageable ship generally falls off before the wind, causing her to drift broadside on to leeward, and giving her more or less of a list that way. This puts it entirely out of the question to attempt to lower the boats on the weather side. Thus the hapless crew are forced to make their getaway from the vessel in the boats on the lee side only. As the carrying capacity of these boats is, as often as not, insufficient for the needs of all hands, even in a smooth sea, a berth in Davy Jones's locker will be the lot of some at least.

All hail, therefore, to the new lifeboat regulation. If they never do another thing while in office, this act alone has earned for the Supervising Steamboat Inspectors the everlasting gratitude of American seamen.

LOSSES FROM STRIKES.

Speaking of strikes—and who isn't these days?—you may have noticed that when there is one on, all the Daily Noises of the plute press lay great stress on the loss of wages incurred by the strikers. Figures are published showing that the workers, at the rate they are falling behind on the employers' payroll, are headed straight for the poorhouse, and that nothing can save them from landing there except going back to work. And figures don't lie, so there you are.

But—as you may also have noticed—nothing is ever said by these artful dodgers of the truth about the loss to the employers. Not a thing, sir.

Well, the reason for their silence on this point is not so far to seek as might be supposed. A frank disclosure of the employers' losses might lead "the innocent third party," the public, to trace a cause-and-effect-relation between labor and profits. The public might even find out that profits

are not produced by capital but by labor, and that would never do. The truth is mighty, of course, and all that sort of thing; but it doesn't mix very well with safe, sane and conservative business methods. Besides, as every one knows, the public likes to be humbugged, and it's a wise editor who gives the public what it wants.

Labor is prior to capital, and deserves much the greater consideration, said Abraham Lincoln. But you would never think so from the attitude of the average newspaper when there is a big strike in progress. To be sure, our good friends, the molders of public opinion, are not at all disposed to dispute the scriptural dictum that the laborer is worthy of his hire. That isn't what they are paid for. But they are paid to prove that the laborer is not worthy of the hire he is striking for. And they could never do that by making public the losses of the employers.

Among the many interesting features noted in a recent issue of an esteemed Antipodean labor contemporary there is a cartoon very much to the point. The central—and only—figure in the picture is a generously bay-windowed gentleman tagged "Shipowner," and drawn to a scale of corporeal avoirdupois that would qualify him for the presidency of the leading fat men's club anywhere. He is seated on what looks like one of Captain Kidd's treasure chests, with his left leg cocked over another, and is surrounded by piles and piles of bulging money bags, variously labeled "Profits," "Gains From Cheap Labor," "Super Freight Profits," "Pure Loot," "Profits From Exorbitant Fares," etc.

On the face of "Shipowner" there is a look of agonizing pain. And well there may be, for on his head there has just descended with crushing effect the butt-end of an enormous knobby club labeled "Seamen's Strike," wielded by a brawny arm projected on the screen from somewhere beyond.

The heading of the cartoon is:

HE SHOULD BE THE LAST TO SQUEAL.

The piratical shipping ring characterizes the demand of the seamen to be treated as human beings as barefaced robbery and extortion. The super-robber: "Help! Police! I'm being robbed!"

We may add, by way of comment, that "Shipowner's" type is not unknown on this continent—bless you, no.

Doesn't the following from the Brisbane (Queensland) "Telegraph" have a familiar ring?

"Unionism is now a shelter for extremism, for men who have no respect for constituted authority, for fanatics who are conspiring against the social system which has built up the strength and character of civilization, for plotters against the British future of Australia, and for persons who at heart are aliens in the community."

Hot stuff, all right; but, in the language of "Lowbrow Mike," you can't prove it by us.

News comes over the Pacific cable that Chinese sailors have formed a trade-union, the first one of the kind over there, and that they propose to stick by the white union seamen. News respectfully referred to Captain Robert Dollar et al.

OF INTEREST TO FISHERMEN.

Comrade P. B. Gill, Agent of Seattle Branch of Sailors' Union of The Pacific, Submits Interesting and Instructive Report of His Recent Investigating Trip to Alaska.

To the Deep Sea Fishermen's Union of the Pacific,

Greetings:

As I stated in a circular letter sent out some time ago, I had been requested by our northern agents to come to Alaska and British Columbia for the purpose of investigating conditions that had come up through Salmon Trawlers and Purse Seiners having made claim to join our union, and other reasons.

I left Seattle June 26th and arrived in Ketchikan two days later. There I found that some salmon fishermen had joined our union but that some one thousand were members of the Alaska Labor Union, an Industrial organization of some twelve hundred members or more. This organization has done splendid work in and about Ketchikan, has established an eight-hour day in all industries and camps and, together with the Deep Sea Fishermen's Union at Ketchikan and Petersburg, succeeded in getting a price for the Salmon Trawlers that, apparently, is satisfactory to the fishermen. When I left, the Seiners were having some trouble about prices. I spoke to several fishermen there, and they feel that the fishermen of Southeastern Alaska, in the salmon industry, should have an organization separate from the shoremen, but there is considerable difference of opinion, whether they should be with the Deep Sea Fishermen's Union, the Alaska Fishermen's Union, or have a separate union of their own.

I left July 1st for Prince Rupert, where I was held (together with comrade Charles F. Hammarin, who was sent on the same mission as myself, from the Alaska Fishermen's Union), for twenty hours by the immigration office. It appears that an order in council provides that no foreign Labor Representatives are permitted to land in Canada till they are investigated by the head office in the district. Finally, through the kind offices of Mr. Wakefield, the U. S. Consul, and Mr. McLeod, Canadian Customs Collector, we were permitted to land, but were informed that we could not speak on the sympathetic strike situation, but could discuss business affairs of our own union. On July 2nd, I attended a meeting of our branch in which considerable interest in the progress of the union was evident. Among the different matters brought out was a complaint about fishing concessions granted to certain parties, lack of attendance to sick fishermen and a request for more local autonomy. The first two were referred to committees for investigation. The demand for local autonomy apparently originated among the salmon trawlers, some seventy-five of these men having joined our union.

This union was originally formed by halibut fishermen. Some four years ago we took in the cod fishermen. Last year a request came from the salmon trawlers that part of the time fish halibut. This request was granted. Since then numerous trawlers and seiners have applied for membership. Realizing that this request, should it be granted, would lead to complications that could not be handled satisfactorily, I advised our agents to go slow in joining these men, till the matter could be properly investigated. At the Prince Rupert meeting, a motion was made and carried that headquarters and the branches elect a committee of three from each place to meet in Seattle on the first Monday in December of this year. Several special meetings were held at Prince Rupert and at one on July 2nd it was decided to join the sympathetic strike if some members of the railroad unions, who were discriminated against, were not reinstated. I am since informed that these men were reinstated and the strike called off.

I left on July (date omitted) for Ketchikan together with comrades J. H. Meagher and H. Nixon. Nixon, by the way, had come to Prince Rupert at my request. At Ketchikan we had a meeting of halibut fishermen, but no action was taken.

I left on July 6th for Petersburg, where I found that most of the salmon trawlers were in our union, and a few in the Alaska Labor Union

At Wrangel practically all salmon fishermen are members of the Alaska Labor Union.

I went from Petersburg to Juneau, where I found the Alaska Labor Union had joined a considerable number of salmon fishermen. I had a meeting with some twenty halibut fishermen, who requested that a branch of the Deep Sea Fishermen be established there.

All along the coast I found numerous fish traps, and all fishermen are unanimous that traps must be abolished or food fishes in Alaska will be exterminated.

I returned to Petersburg, where a meeting had been arranged for Saturday, the 14th, but this meeting was postponed till the following

(Continued on Page 10.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Aug. 4, 1919.
Regular weekly meeting came to order at 7 p. m., Ed. Andersen presiding. Secretary reported shipping good; lots of members ashore.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., July 28, 1919.
No meeting. Shipping slow.

J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., July 28, 1919.
Prospects improving.

W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, July 28, 1919.
Shipping fair; few members ashore.

H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, July 28, 1919.
Shipping fair.

P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, July 28, 1919.
Shipping good; men scarce.

ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, July 28, 1919.
Shipping good; prospects good.

JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, July 28, 1919.
Shipping fair; men scarce.

HARRY OHLSEN, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, July 21, 1919.
Shipping dull; prospects poor.

JACK EDWARDSON, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

San Francisco, July 31, 1919.
The regular weekly meeting was called to order at 7 p. m., Eugene Burke in the chair. Secretary reported shipping fair.

EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, July 24, 1919.
No meeting. Shipping medium.

J. LEONARD NORKGAUER, Agent.
Grand Trunk Dock. P. O. Box 214. Phone Main 2233.

San Pedro Agency, July 23, 1919.
No meeting. Shipping fair; few men ashore.

JOE MACK, Agent.
613 Beacon Street. Phone Sunset 336. P. O. Box 54.

DIED.

Henry W. Malmberg, No. 787, a native of Finland, age 53. Died at Nakasaki, Japan, June 7, 1919.

Thomas Miller, No. 2636, a native of Russia, age 34. Died at Eureka, Cal., April, 1919.

Orders have been received by the Portland office of the Emergency Fleet Corporation to reinstate two suspended contracts for steamers at the yard of the Peninsula Shipbuilding Company in St. Johns. The vessels were first ordered completed as hulls, but owing to the fact that the ships have been sold to Eastern parties, it is now necessary to install the machinery as originally intended. The two reinstated ships are the "Cartona" and "Corona." Both are 4,000-ton vessels of the Peninsula type, the special design of the Peninsula Shipbuilding Company.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Washington, July 31.—Policemen at the national Capitol have not yet followed the example of the London "bobbies" and gone on strike to improve their conditions; but they have begun to organize a clear-cut trade union under auspices which promise complete success. They demand a monthly wage of $150.00.

The Washington Policemen's Union is affiliated with the American Federation of Labor and the Central Labor Union of the District of Columbia. Organizer J. Ed. Toome, of the American Federation of Labor, is aiming at a hundred per cent. membership, a fresh group of 200 public guardians being ready for admission within a few days. A committee of business men met at a local theater on July 26 and organized for the express purpose of assisting the policemen to perfect their union. The need to improve the numbers and morale of the Washington police force has been emphasized by the recent race riots. Secretary James, of the Central Labor Union, voices a widespread opinion when he says:

"If Washington is ever to have a police department that will be effective in such emergencies, the members of the department must organize to secure a larger, better paid force and better working conditions. The labor organizations of Washington will help see to it that the claims of the organized policemen for regular working hours and better pay are presented to Congress in the proper light."

Organizer Gertrude McNally, of the Federal Employees' Union, gives similar encouragement, when she says: "The policemen should be better paid, and there should be more of them. Many sections of the city never see a policemen. Only the other night women workers in the Bureau of Engraving had to call off their regular meeting because they had no police protection against the hazards of present unsettled conditions."

From Macon, Georgia, comes word that the policemen of that city have formed a trade union to promote their welfare by collective action. Pittsburgh, Pennsylvania, is another large city where the public guardians have formed a union. American Federation of Labor organizers expect that the next decade will see the policemen of the country solidly lined up beside the rest of the country's wage earners. Passing time, the pinch of high prices and the neglect suffered at the hands of indifferent officials have made the policeman see that he is not different from the other workingmen in the need to unite for defence against exploitation.

Boston furnishes a still more unusual trade union victory. The "Hub of Culture" was scandalized when the newspaper writers there organized a union, joined with the Central Labor Union, and prepared to strike unless their grievances were satisfied. This threat to leave the town without any news struck the thoughtless leisure elements at first as either funny or preposterous. The associated newspaper owners also were first inclined to treat the threat with contempt.

There came an afternoon early in July, however, when the news writers announced that there would be no newspapers in Boston next day unless a new scale of wages was granted at once. Up to that time the Newspaper Publishers Association had refused even to receive a delegation of the men. When the threat to strike immediately was made the publishers came down off their high horses and asked for a conference. Shortly afterward a settlement was reached which means a one hundred per cent. victory for the writers' union. The terms of settlement call for $45 a week for rewrite men and copy readers; $38 for reporters and $30 for district men.

This settlement applies to the papers printed in foreign languages, as well as to the seven printed in English. Those entitled to the new scale must have been employed by a daily newspaper for at least three years. The scale is retroactive to June 1st.

Two attaches of the Department of Labor, Grace Abbott and Ethelbert Stewart, have sailed for Europe to assist in preparations for the World Conference on Labor to be celebrated in Washington next October. This is the conference provided for in the labor clauses of the Paris peace treaty. In this connection a further word can be said about the provision which restricts labor's representation to one-fourth of the convention membership, the other three-fourths being divided: one for capital and two for each of the various governments participating.

As at first drawn at Paris the agreement provided for one delegate each for labor, capital and government. It occured to Emile Vandervelde, the Belgian spokesman, and to others, that if the different presidents and prime ministers concerned were allowed to name only one delegate they would likely name a very conservative individual. The strategy was then resorted to of having each government name two delegates, in the hope that friendly but timid government heads would name one acceptable pro-labor man if they could match him with a known partisan of the employers. By this expedient it was hoped that the convention might be more evenly divided between pro-labor and pro-capital, since the other plan would almost certainly leave labor in a one-to-three minority.

Skeptics may regard the above arrangement as a pretty long gamble by the friends of labor. In any case, it illustrates the conviction of labor spokesmen at Paris that if a government cannot be neutral in the dispute between wages and dividends, then it will lean toward dividends. On the other hand, supporters of the plan finally adopted contend that governments are coming into the full control of labor so rapidly that in the near future so-called "government spokesmen" will really be spokesmen of labor, just as in the past they have usually been friends of the employers.

In the coming October convention here, for example, the British labor unions will have their one particular delegate, with almost a certainty that they will also have one of the government's delegates, since the power of their unions and of the British Labor Party are a direct menace to Premier Lloyd George and cannot be ignored in such an important matter. In that case the British delegation as a whole will be at least fifty per cent. pro-labor.

The French and Italian delegations may be no less evenly divided, with a chance to be nearly three-to-one pro-labor, should Premiers Clemenceau and Nitti fall, because of the incessant labor attacks in their respective chambers of deputies, before the delegates to Washington have been named. The five countries of Germany, Austria, Hungary, Bulgaria and Turkey will not be represented at this first labor conference provided by the peace settlement. Neither will Russia, if by that name we imply the 130,000,000 persons living within territory controlled by the Moscow Government. On the other hand, Poland and Finland—once a part of Russia—and Czeko-Slovakia and Yugo-Slavia—once parts of Austria-Hungary—are likely to send delegates. Labor is apt to be fairly well represented in all these delegations.

Offhand, it may be supposed that Mr. Gompers will be the strictly labor man named by the American unions—unless President Wilson should name him as a "government" spokesman so that labor could make sure of a second friend in the convention! In any case, the United States is likely to figure in the list of countries whose delegations to the October convention are composed in half of labor champions. And the logic of events points to Gompers as the organizing chairman of the big conference.

The 300,000 men employed in the steel industry are at present engaged in a poll to decide whether they favor a strike to break the autocratic power of the owners and management. The committee appointed by the American Federation of Labor to organize the steel workers have issued a statement, in which they say:

"The grievances of these men are real. Their lives are hard, and their conditions, prior to the beginning of the great organizing campaign, were all but hopeless. There can be no doubt that the strike vote will carry by an overwhelming majority. Indeed, so badly have these men been discriminated against in many localities that it has been a most difficult matter to prevent strikes from occuring long before this."

Judge Gary, chairman of the United States Steel Corporation, professes to be sanguine that there will be no strike. He says the workers are satisfied with present conditions. "The vast majority of the workmen are not members of labor unions," is a phrase he uses to console himself with. Judge Gary would have us ignore the well recorded fact that some of the most sensational strikes have been by men who were not organized until in desperation they rose in a united demand for freedom.

The strike vote being taken is to enforce the following general demands:

Right of collective bargaining.

Reinstatement of all men discharged for union activities, with pay for time lost.

The 8-hour day.

One day's rest in seven.

Abolition of 24-hour shift.

Increase in wages sufficient to guarantee American standard of living.

Standard scale of wages for all crafts, and classification of workers.

Double rate of pay for overtime and for Sundays and holidays.

Check-off system of collecting union dues and assessments.

Principle of seniority in maintaining, reducing and increasing the force.

Abolition of company unions.

Abolition of physical examination for workers seeking employment.

The scandal of Tom Mooney's conviction at San Francisco broke like a stink-ball on the floor of Congress this week, when Secretary of Labor Wilson responded to an official request from the lawmakers and submitted the report of an investigation conducted by John B. Densmore for the Department of Labor. Much of Densmore's evidence was obtained from a dictaphone located in the private office of District Attorney Fickert, who conducted the prosecution of Mooney. It is of interest that many of the conversations heard on the dictaphone were so indecent that the Government printing force at Washington has protested against setting it up, and it has had to be expurgated.

The report submitted to Congress declares that Mooney did not receive justice, and that there is evidence to indicate that he is the victim of corporate interests in California who desire to discredit union labor and maintain the open shop. "The plain truth is," says the report, "that there is nothing about the case to produce a feeling of confidence that the dignity and majesty of the courts have been upheld. There is nowhere anything resembling consistency, the effect being a patchwork of incongruous makeshift and often of deliberate expediency." It is pointed out that while Fickert gave his consent to a new trial after Oxman had been exposed as a perjurer for the prosecution, he later opposed a new trial, evidently at the behest of financial interests.

"Since the Oxman exposure," says the report, "the District Attorney's case has melted steadily away until there is little left but an unsavory record of manipulations and perjury, further revelations having impeached the credibility of practically all the principal witnesses for the prosecution. And, if any additional confirmation were needed of the inherent weakness of the case, the acquittal of Mrs. Mooney and of Israel Weinberg would seem to supply it."

An amusing circumstance about the situation is that the Densmore report was brought before Congress through a mistake by a notorious hater of union labor—Congressman Blanton, of Texas. Blanton had been gunning for the Labor Department, and he hit upon the idea of showing that the Department had spent public money in behalf of the "notorious" Mooney, to make unnecessary investigation. Other men in Congress at first feigned reluctance, and then voted for Blanton's resolution, calling upon Secretary Wilson to say what he had done about the Mooney investigation, and how it had cost the taxpayer. When the sensational report of the Mooney frame-up was read on the floor, Blanton fled the scene in dismay and has been in semi-hiding ever since.

Finally, it must be recorded that all the facts are not included even in this report to Congress, for Secretary Wilson explains to the lawmakers that things have been discovered about the attempt to procure a new trial for Mooney which cannot be made public at this juncture without injury to "the public interests." As it is, he states, the Federal Government did not interest itself in the case until it had become "an international labor case, endangering the friendly relations between the United States and Russia, and affecting the prosecution of the war."

"CAMPHOR LANGUAGE."

One of the strangest of all languages is the "camphor language" of Johore on the Malay Peninsula. It has been studied and reported by an American in the Far East.

This language is employed by the natives and others engaged in gathering the product of the Malayan camphor tree and is employed only at such times. It is the belief of the natives that if they used either of the languages of that region, the Malay or the aboriginal Jakun, no camphor would be obtained. A most curious reason underlies the belief.

The camphor tree grows abundantly in certain parts of the peninsula, but only occasionally contains camphor crystals. The camphor is not the same as that obtained from the camphor laurel of Formosa and Japan, which is the source of the ordinary camphor of commerce. It is of a sort highly prized by the Chinese in the embalming of their dead, in incense and in medicine, and the gum brings a price much higher than that of the common camphor.

The Malayans and other Johore natives believe that each species of tree has a spirit or divinity that presides over its affairs. The spirit of the camphor tree is known by the name of Bisan—literally, "a woman." Her resting place is near the tree, and when at night a peculiar noise is heard in the woods resembling that of a cicada, the Bisan is believed to be singing and camphor will surely be found in that neighborhood.

But the spirit of the camphor tree seems to be jealous of the precious gum and must be propitiated, and if she knows that hunters are in quest of it she will endeavor to turn their steps aside. The natives think she is acquainted with both the Malay and Jakun languages, and that if the camphor hunters spoke either of those she would know that they had come for camphor and would defeat their purpose. So it is necessary to speak in a tongue she does not understand. For this purpose has been invented the "camphor language." It consists of a mixture of Jakun and Malay words, but these are curiously altered or reversed, and the natives believe that the divinity of the camphor tree is completely confused when she hears this jargon.

THE RACE AS ONE MAN.

In accepting the essential unity of the human race, we must regard the humanity in entirety, as a great collective being, a social organism of which the different nations represent the living members. It is evident, from this point of view, that no people can live in itself, by itself, or for itself, but that the life of each one is merely an individual share in the general life of humanity.—Vladimir Solov'ev, in "The Crisis of Western Philosophy."

Sixty per cent. of the work on a ship is constructing the hull and the remaining 40 per cent. is in installing mechanical parts, deck furnishings, and other equipment that goes to make the finished vessel.

LAWYERS IN CONGRESS?

Eight of the eleven members of the Committee on Rules of the House of Representatives, now conducting the investigation of the alleged leak from Washington to Wall street relating to the President's peace note, are lawyers. Two of them have received the degree of LL. B. Nearly all of them have had college or university educations. The committee is charged with a simple inquiry as to the truth or falsity of certain rumors, and yet it appears from the record that not one of the members is competent to cross-examine witnesses. A delay in the investigation has been caused by what is said to be necessity of engaging a lawyer who will be competent to meet the persons summoned to testify. This becomes the more surprising when we note the fact that at least two of the committeemen have been district attorneys who must have had considerable experience in practice and procedure.

Why elect lawyers chiefly as Representatives in Congress if the public is never to receive the benefit of their legal training?—New York World.

A shooting-fish in the East Indies has a hollow cylindrical beak. When it sees a fly on plants that grow in shallow streams it ejects a single drop of water, which knocks the fly into the water.

Demand the union label.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

neutrality did not protect Argentina. No other development has ever demonstrated so forcibly the strength of the economic bonds that unite all the nations of the globe in a common fortune."

Nolan Wage Bill Passes.

The Nolan $3-a-day minimum wage bill has passed the House by a vote of 327 to 48, and is now before the Senate. It provides that no government employe shall be paid less than $3 a day. The bill was approved by the House at the last session of Congress by a vote of 252 to 16, but failed to receive consideration by the Senate. The bill has been urged for several years by Congressman Nolan of California, a member of the Iron Molders' Union, and a member of the Congressional labor group.

Murder by Soldier Police.

Soldier police acting as guards at the Overland automobile plant are blamed by the coroner for the unjustifiable killing of two Toledo citizens last June. The coroner recommends that the grand jury make a thorough investigation.

The company locked out several thousand employes when they refused to lengthen their workday from 45 to 48 hours a week. Federal Judge Killets issued an injunction against the company and the men, in which the company was commanded to resume operations and the men were restricted in picketing. The court placed a representative in charge of the plant, which is attempting to manufacture automobiles with high school boys and full-fledged strike-breakers.

Sickness Rate Is High.

A survey of the State of Alabama, published by the United States Bureau of Educaiton, shows that on an average approximately one-quarter of all the people in that State are sick all the time. More than one-third of the young men examined for admission to the army were found unfit for full military service.

It is stated that the warm climate of Alabama, the sluggishness of its streams in their lower courses and the marshy character of much of the land yet undrained, give rise to many diseases unknown in other climates and increase the prevalence of others.

The report declares that the economic loss as a result of this condition is too large for a State like Alabama to bear, if it can be avoided, and much of it can be avoided.

A call is sounded for good, sanitary engineering, a wide knowledge of preventive medicine on the part of all physicians, care for the health of children in school and home, diet instruction and a knowledge of the elemental principles of health.

Coal Miners to Meet.

A call has been issued for the biennial convention of the United Mine Workers of America, to be held in Cleveland, Ohio, beginning September 9.

Because of the importance of questions to be discussed, this gathering will probably be the most important in the history of the organization. A six-hour day, wage increases and the nationalization of coal mines will be among the issues before the miners.

It is possible that President Hayes will not attend this convention, as he is ill and confined in a hospital in Indianapolis. The international executive board has granted him a four-months' leave of absence. Vice-President John L. Lewis is acting president.

Packers Start Back Fire.

Meat packers have started a back fire against pending legislation in Congress that would license the packing industry. Stockholders in the network of secondary corporations are called upon to petition national lawmakers to vote against this proposal. In a letter issued by the Swift corporation it is stated that the proposed law "should be opposed by every investor in every industrial enterprise."

Congressmen and Senators are being flooded with protests that, if forwarded by trade unionists, would result in charges by editors and manufacturers' associations that organized labor is "trying to bully Congress."

Avoid Political Parties.

In his report to the annual convention of the Wisconsin State Federation of Labor Secretary-Treasurer Handley urged greater activity along non-partisan political lines. "My personal opinion is," he said, "that the Wisconsin Federation of Labor should adhere to its former position insofar as indorsing any party or faction."

The legislative committee pointed to the success of North Dakota farmers who have applied the A. F. of L. non-partisan political policy by securing pledges prior to the primary elections and then voting for these candidates. The committee recommended that trade unionists in the various localities unite with farmers "and agree upon a man who would not only vote for the principles for which both organizations are standing, but one who would put up a fight for them. After picking out a good organizer, a farmer or laborer, who is true and tried in labor's cause and who will subscribe to the legislative program of the Federation, our advice would be that the workers see that such a man is placed in nomination and not permit the interests to make the selection."

A resolution calling for a five-day Mooney strike was rejected. The convention took the position that the State Federation has no right to call a strike. Old officials were unanimously re-elected.

J. Ogden Armour, at a recent dinner, spoke in defense of the meat packers. Among other things he said: "Our enemies willfully misconstrue our statements. They misinterpret our motives and our statements of fact as bad as the little child to whom the Sunday-school teacher said: 'Ethel, tell me something about King Solomon.' To which Ethel replied, 'King Solomon was a very rich king and very fond of animals.' 'Why do you think he was fond of animals?' asked the teacher in surprise 'Well,' said Ethel, 'it says in the Bible that King Solomon had 900 wives and 1000 porcupines.'"

OF INTEREST TO FISHERMEN.

(Continued from Page 7.)

day, and as the "City of Seattle" left on the 14th, southbound, I took passage on her and did not stay for the meeting.

At Ketchikan, I took the "Princess Mary" for Vancouver. At this place, I found that our members had taken no part in the general strike or the One Big Union question, but the steamers had laid up for some time owing to the fact that no firemen were available.

I arrived back at Seattle, July 18th, 1919.

From my observations it appears that neither the Deep Sea Fishermen's Union of the Pacific, the Alaska Fishermen's Union, the Alaska Labor Union nor the Structural Iron, Bridge and Ornamental Iron Workers can handle the Salmon Fishermen in Southeastern Alaska. The headquarters of these unions are too far away. The conditions and grievances of these are many and, being of a strictly local nature, can best be handled on the ground. The Alaska Labor Union is in a splendid position to handle cannery help, loggers and other trades that are not numerous enough to have effective organizations of their own.

I am convinced that a separate organization of seiners and trawlers in the salmon industry for Southeastern Alaska is the best for all concerned, and suggest that this matter be taken up at the Seattle conference. As this is vital to many existing organizations, I recommend that our union extend invitation to the Alaska Fishermen's Union, the Alaska Labor Union, and the Trap and Web Workers' Union now affiliated with the Structural Iron, Bridge and Ornamental Iron Workers' Union, to send delegates to the Seattle conference.

As for local autonomy of the branches, this is not feasible under the system of the Deep Sea Fishermen's Union and would necessitate a complete reorganization. This matter will undoubtedly come up in the Seattle conference. Branch at Juneau I also suggest be referred to the conference, as well as any matter that may not now be worked to the satisfaction of any of the branches.

As the next convention of the International Seamen's Union of America takes place at San Francisco on the 2nd Monday in January, 1920, I recommend that the time of the Seattle conference be changed from the first Monday in December to the 2nd day of January, 1920. This will give delegates who may be elected to the International Seamen's convention an opportunity, should they also be elected to the conference at Seattle, to attend the two, without too much loss of time and expense.

I also recommend, for reasons of economy, that two instead of three delegates be sent from each to the conference.

As you know, the members of our union have, together with the Independent Boat Owners launched a Co-operative Fish Company called the Pacific Sea Products Association (Inc.). The disposal of your fish is essential, and you know from experience what you can expect when the large fish companies have a clear field. I trust that you, as individuals, will purchase stock in this concern to the extent of your ability.

I further recommend that the union purchase five thousand dollars ($5,000) worth of stock and, if in accord with our constitution and bank regulations that one thousand dollars ($1,000) worth of stock be purchased to the credit of each branch of our union.

The greatest champion the fishermen have in Alaska is Mrs. H. H. McEvoy, the editor of the "Weekly Gleam" at Juneau. I urge upon all members and friends to do all in their power to assist her to fight their battles, take subscriptions and secure ads for her able paper

In conclusion, I wish to state that the trip was a revelation to me. The vastness of Alaska is something tremendous. Opportunity for a large and progressive union is at hand, and I hope it will be properly taken care of and the course set in the right direction.

To officers of the union and their families and members, who made my trip a very pleasant one, I am deeply grateful, and my sincere wish is that all good things will come to them.

With sincere wishes to all, I am

Fraternally,

P. B. GILL, Secretary.

P. S.—Branches are requested to vote as soon as possible on the recommendations mentioned herein:

1. To extend invitations to other unions to attend conference.
2. To change date of conference to January 2nd, 1920.
3. To change number of delegates from each branch from three to two.
4. Union to invest $5,000 in stock of Pacific Sea Products Association.
5. If in accord with bank regulations, credit each northern branch with $1,000 stock in Pacific Sea Products Association.

Demand the union label.

IN JAPANESE COURTS.

A Japanese criminal court is almost as difficult to get into as a spectator as it is difficult to get out of as a prisoner, but there are enough unusual points of difference between American tribunals and their counterparts in Japan to make at least one visit instructive, if not profitable. Criminal trials in Japan are public, but not blatantly so, and idle curiosity is not encouraged. To be permitted to even enter the grounds surrounding the court buildings one must secure the formal permission of the stern police official at the gate, and that permission is only secured through the presentation of some good reason why the solicitor should be permitted to pass.

Once past the guardian of the gate, however, one may proceed into the courtroom itself without trouble, provided always that he removes his hat immediately he enters the building, removes his overcoat if he happens to be wearing one, walks quietly and holds his remarks and questions down to a faint whisper. In the main courthouse in Tokyo, which houses the supreme court and the various local courts, corresponding to the American circuit courts, the corridors are lined during the sessions by besworded gendarmes, between the rows of which the one with business before the judges warily walks. No chance is lost to impress upon every one the fact that the dignity of the law in Japan is something which must not be trifled with.

Ordinary police court cases in Japan are disposed of in the police stations themselves and the police inspectors in charge have the power to exercise a wide discretion. Ordinary drunks, of whom there are very few considering that almost every corner grocery store and every tea house and restaurant sells intoxicants, and there are saki shops every hundred yards on almost every street, are simply kept long enough to sober up and are discharged with a stern warning.

Domestic squabbles are settled by the policeman on the beats. Street brawls are rare, and offenders are usually made to perform profound apologies to each other and the police and are let go, and other minor offenders are punished by the scare the inspectors are always able to throw into them, while the more serious violators of law are passed on to the headquarters of the metropolitan police and thence into the local courts.

Once he has been sent to headquarters a prisoner's troubles commence. As a preliminary to all else he is photographed and finger-printed, a decided reversal of the American principle, which bars a man from the Rogues' Gallery until he has been convicted of felony. A suggestion that a prisoner be "mugged" in America before conviction would set every syllable of the constitution quivering, but in Japan "it is an order" and as such goes. To question a police order is neither according to etiquette nor the dictates of prudence, and the records contain no instances of any one ever doing so. From the photograph room and the ink pad the prisoner passes on for his "examination," a legalized third degree, held in an underground room where, without benefit of counsel, he is sweated, perhaps for several days in succession, although the law prohibits the holding of a man without a definite charge for more than twenty-four hours.

A similar law is evaded in America by rearresting the prisoner at the end of each day, but the process is simpler in Japan. Here they keep the fact of a suspect's arrest a secret, and there is no booking to help inquiring friends, if any are foolish enough to run their own necks in a noose by making inquiries. The examinations are legal, however, and are always held in camera, following which the prisoner is either released or committed for trial. There is nothing else corresponding in any way to the American grand jury system.

Then after waiting his turn the prisoner goes to the local court, where he faces a bench of usually four judges, one of whom is head judge and who does all the questioning of the witnesses. On the bench also sits the prosecuting lawyer, with the lawyer for the defense occupying a desk and seat immediately facing the head judge, but on a level about four feet below that of the bench. Judges and lawyers are all gowned, with stiff black crepe costumes and the collars and chests liberally decorated with embroidery, the judges and prosecuting officer in red and the members of the bar in white. All wear caps of black crepe, somewhat resembling a Scotch bonnet without the tail ribbons.

Everything is solemn, everything is decorous and, without a jury to impress, there are none of those flights of oratory with which the American lawyers call upon heaven to witness either the scandalous nature of the prisoner's crime or the halo of innocence so plain to the attorney for the defense. The prisoners sit in a prisoner's box until their case is called, when they stand one by one before the judges and are polished off in rapid succession. Witnesses are not sworn, nor are there any bewildering laws of evidence that furnish legal arguments, grounds for appeal, and keep any one from telling all that he knows and suspects. The criminal code is that of Napoleon and the procedure is practically that of the French courts.

The handling of the prisoners is purely Japanese, however. Delivered at the court house for trial, the prisoners are marched from the police wagon in single file, handcuffed and tied together by a stout rope that circles each man's waist and is twisted through his obi. Their jail kimonos are of a dull drab and on their sockless feet are grass sandals, in which they flop through the corridors.

The most unusual feature of all to a stranger is the fact that each prisoner has his head covered by a wicker basket, more like an inverted wastepaper basket than anything else, the object of which is to prevent recognition of the prisoner, to permit him to hide his shame under the disguise, and, very possibly, to prevent the whole file from making a bolt for liberty. The sight of a prisoner so arrayed is ghastly, the mask bringing up the suggestion of the hangman's cap. Once in the prisoners' box, however, the masks are removed, while the prisoners sit with deeply bowed heads in an attitude of the utmost humility.

Some of the returned soldiers recently secured a harvesting job in Southern California. "Well, boys," said the rancher, "do you like this work better than army life?" "In some ways it's better and in some it ain't," spoke up one of the doughboys. "It evidently's going to be a long time here before you'll ever say 'stand at ease.'"

Labor News

International President Mahon of the Amalgamated Association of Street and Electric Railway Employes has issued a call for the sixteenth convention, to be held in Chicago, beginning September 8.

A one-day strike of Macon Railway & Light Company platform men resulted in recognition of the Street Car Men's Union, a 10-hour day and a wage rate that ranges from 36 to 40 cents an hour. Former rates were from 23 to 28 cents.

Molders' Union No. 164 and International Association of Machinists' Lodge No. 68 have unanimously endorsed the action of the San Francisco Labor Council in protesting against the carrying out of the proposed deportation of seven Hindus.

An arbitration board has awarded an eight-hour day and wage increases to striking employes of the Boston elevated railway system. Rates are advanced up to 62 cents an hour, and will date back to May 1. Union officials declare it is the best wage scale in America for street transportation workers.

About 1,000 cigarmakers, mostly women, have suspended work in four large factories at Bethlehem, Pa. It is charged that these workers are victims of New Brunswick, N. J., "agitators" who have stirred up trouble in that low-wage community, and who now come to Bethlehem with their pernicious doctrine of living wages and better working conditions.

Earnings of $9.60 per week by women candy makers in the busy season and $5.62 in the dull season, representing an increase of 40 per cent. since 1915 for these women, with $18.35 per week for men in the busy season and $10.41 in the dull season, representing an increase of 75 per cent for the men since 1915, are some of the figures given by Miss Mary Van Kleeck, director of the Woman-in-Industry Service of the United States Department of Labor, in a report on the candy trade in Philadelphia, which is one of the large centers of the candy industry in the United States.

The Southwest Bell Telephone Company is interested in the welfare of its telephone girls, and has organized a "union" for these workers. The girls were not troubled about drawing up a constitution or preparing plans for the new organization. They were called in one at a time and told "we want to fix it all nice for you." The girls who signed were tendered a banquet by the company, which is guaranteed its dividends while under Government control and can charge its union-smashing costs to operating expenses. The regular union of telephone operators is struggling against this power.

The minimum wage scale for women under present living conditions should be $18 a week, said Mrs. Raymond Robins, president of the National Women's Trade Union League of America, in discussing the question of women's wages with a representative of the Christian Science Monitor in Chicago. Ten years ago, she said, efforts were made in Chicago to have a minimum wage fixed at $12. If that was a fair wage at that time then $18 will be the least women should receive now. Mrs. Robins would not advocate fixing a minimum wage by law, however, but thought there ought to be a minimum wage commission to pass on such matters.

Seattle, Wash , Letter List.

Under a rule adopted by the Seattle Postoffice, letters addressed in care of the Sailors' Union Agency at Seattle can not be held longer than 30 days from date of delivery. If members are unable to call or have their mail forwarded during that period, they should notify the Agent to hold mail until arrived.

INFORMATION WANTED.

Members of the crew of the "John A. Kirby," who have not already filed their claims, should communicate with the undersigned. I have made arrangements to file claims for families of seamen and officers who were lost by submarine activities during the war; also for seamen who were injured by torpedoes, etc., or who were taken into Germany as prisoners. Such persons should communicate with me at earliest convenience in order to have their claims filed with the State Department. Silas B. Axtell, One Broadway, New York. 7-23-19

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

CARRY ON!

Uncle Sam is releasing from his service the men who went "over there" to free the world from autocracy. Thousands of soldiers are daily receiving their honorable discharges; they pocket their pay, bid farewell to their comrades, and sally forth—civilians.

There is one army, however, which must not be demobilized. That is the army of War-Savings Stamp buyers. More recruits are needed to carry on the campaign of readjustment which follows the signing of the armistice.

The army of fighters has achieved its purpose.
The army of savers must remain in "action."
"Carry on" to a lasting peace under the banner of W. S. S.!

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

Home News

Postoffice officials predict that within a year air planes flying on daily schedule will carry mail from New York to San Francisco in a day and one-half. The record time now is nearly five days.

The separate bill proposing repeal of the daylight saving law, already passed by the House, was reported favorably to the Senate by Chairman Cummins of the Interstate Commerce Committee.

A total of 245,018 men, women and children secured employment through the California State Public Employment Bureaus during the year ending June 30, 1919, according to the annual report of John P. McLaughlin, State Labor Commissioner.

A resolution to co-operate with the three other railroad brotherhoods for the creation of a national labor party was adopted at the annual convention of the Brotherhood of Locomotive Firemen and Enginemen. Similar action was taken at the recent convention of the Order of Railway Conductors.

Deportation of 513 enemy aliens for violations of various war statutes is proposed in a bill unanimously reported by the House Immigration Committee. The aliens are now interned at Fort Oglethorpe, Ga., and Fort Douglas, Utah. They would be permitted hearings by the Department of Justice before deportation.

Part of the House committee investigating War Department expenditures will go to Portland, Ore., and the Northwest to look into spruce production for airplanes. This was finally determined on during the week. A partial report to be made to the House is expected to assail the War Department for not sooner making the surplus of canned meats and vegetables available for public use.

Congress has voted $14,000,000 for the rehabiliation of injured soldiers and sailors. This action follows a veto by the President on an appropriation of less than half that amount and which would result, the President declared, in disabling the entire service. The work of rehabilitation is being directed by the Federal Board for Vocational Training. Soldiers who are receiving vocational education are being paid by the Government while so engaged.

Between thirty and forty fires beyond control are still burning in North Idaho, Glen C. Smith, assistant district forester at Missoula Mont., advised Governor D. W. Davis during the week. Losses in timber he estimated at 30,000,000 board feet, and losses to private property at $300,000. The Forestry Service has already spent $275,000 in an effort to control the fires, he said. Fires burning in the Yellow Pine district of the Thunder Mountain country are raging with unabated fury. Smaller fires in national forests of South Idaho are being brought under control. Secretary Lane telegraphed from Washington he had set aside an additional $200,000 to help fight Idaho's forest fires. The Governor of Idaho refused to join Judge Cornwall, editor of the Timberman of Portland, Ore., in asking the Federal Government for troops for fire-fighting purposes. Soldiers, he said, will not be asked for in Idaho as long as it is possible to hire labor.

Domestic and Naval

Holland is vigorously protesting against the tunnel from Dover to Calais on the ground that it will hurt her passenger and freight traffic.

Japan will build two battleships, three light cruisers and eight destroyers during this fiscal year. All of the hulls are to be built by private shipyards, to help offset the slump in shipbuilding following peace. The navy will complete the vessels.

Henry Ford will build no more vessels after his contract with the Government expires this month. Many of the buildings on the River Rouge, near Detroit, where the "Eagle" submarine chasers were turned out, are now being transformed into machine shops and will be used in the manufacture of tractors. Frank E. Kirby directed work on the "Eagles." Mr. Ford at first thought of using the surplus material when the war ended in the construction of small lake freighters or canalboats, but this idea was later abandoned.

The Todd Shipyards Corporation has closesd a contract with the Sinclair Navigation Co., New York, for the construction of a self-propelled oil barge of 1,450 tons deadweight, to be delivered complete in all respects in eight months. The steel hull will be constructed at the plant of the Tebo Yacht Basin Co., the engine at the Quintard Iron Works and the burners will be supplied by the White Fuel Oil Engineering Corporation, all subsidiaries of the Todd Shipyards Corporation. The barge, which will have a speed of 7½ knots, is to be 216 feet over all, 210 feet between perps., 44 feet beam and 14 feet molded depth.

One officer and six enlisted men were killed in the destruction of the American mine-sweeper "Richard H. Buckley," by the explosion of a mine in the North Sea, July 12. Two other officers were injured. Two officers and sixteen enlisted men were rescued. The "Buckley," with other mine-sweepers, was removing the North Sea mine barrage when a mine became entangled in the sweeping cable and exploded directly under the ship's stern. The trawler sank in six minutes, before other vessels of the fleet could reach her. Commander Frank A. King remained on the bridge directing the efforts to save the crew and went down with his ship. The remainder of the dead either were killed by the explosion or trapped below decks when the vessel sank.

According to a press dispatch, a shipyard will be erected at Newport News, Va., by the Southern Shipyard Corporation, which has organized with $200,000 capital and the following officers: O. A. Blovom, president; T. A. Fowler, vice-president; C. L. Marsilliot, secretary-treasurer; J. B. Ransome, general superintendent. The plant will be in operation by the end of the year and will include a Crandall type marine railway of 3,000 tons capacity and several smaller ways. Contract has been awarded to the Sanford & Brooks Co., of Baltimore, for constructing a 3000-foot bulkhead and a 500 by 40 foot dock required and to the Truscon Steel Co., Youngstown O., for six buildings of all steel construction with concrete floors, to house the machine, pattern and woodworking shops and offices.

News from Abroad

The Ministry of Communications in Brazil will shortly begin work upon the electrification of all suburban lines and terminals of the Government-owned railways of Brazil.

Senator Luzzatti, formerly Italian Premier, in a statement to the Associated Press, predicted a tariff wall against German imports in order to prevent a sudden avalanche of German products into Italy.

Chinese Government railroads yielded a good profit for the year 1917. The report for that year shows a surplus for the entire system of $21,630,195, which is a slightly larger sum than the 1916 surplus and nearly double that of 1915.

Since the armistice 2,750,000 British soldiers have been discharged, of which number only 400,000 remain unemployed. This means that 80 per cent. of the fighting men have been absorbed into industry, and statisticians claim that this is a greater proportion than France, Italy or the United States can show.

The American Chamber of Commerce in London understands that a British naval correspondent in Japan foresees the end of Japan's dependence on imported steel from the United States and from Great Britain. The Japanese are said to be exploiting on a large scale the ores which they have discovered in Korea and to be making extensions of their industries to handle this new source of supply. Ore concessions in China will further increase the Japanese raw material.

All land values are to belong to the State in the Republic of Austria. Frau Hertzka, head of a school for agriculture and domestic science for girls near Vienna, in reporting the above to the International Congress of Women at Zurich, said also that no one at present is allowed to hold more than about three hundred acres of land. Small holdings are often worked co-operatively for economy's sake, and the great castles have been taken over by the Government to be used in many cases, and frequently with compensation, as hospitals.

Germany has been notified in a note sent by the Allies that they possess the right to punish the persons responsible for the destruction of the German ships and to collect reparation for the loss. The sinking of the fleet is denounced as a violation of the armistice and a deliberate breach, in advance, of the conditions of peace. When the investigations have been completed, the note states, the Allies will exact "the necessary reparation." Reparation also will be asked for the burning of the French battle flags, which, under the treaty, Germany was to have returned to France.

The American army of occupation technically ceased to exist when the removal of the units still in the Rhineland began during the past week. It is expected that within a comparatively short time there will remain on the Rhine only one regiment, with certain auxiliary troops, totaling approximately 5000 men. The Fourth and Fifth Divisions, now entraining for Brest, will be followed eventually by the Second, Third and First Divisions, in the order named. The exact time of departure of these latter divisions depends on the manner in which Germany carries out the military terms of the treaty.

With the Wits

"How did you feel after the car struck you?" "Very much run down, doctor."—Judge.

"A scientist declares that meat eaters are more active than vegetarians." "They've got to be to get meat to eat."—Boston Transcript.

"Thought transference? Nothing to it. I've tried it." "Got to have some thought to start with," commented the other chap.—Louisville Courier-Journal.

The Reckless Auto Driver (rounding a corner at full speed)—Do you hear those cylinders knocking?

Timid Companion—'Taint the cylinders; it's my knees.—Toledo Blade.

"Madam, why can't you serve on this jury?" "Why, Judge, I have a bridge engagement this afternoon." And she said it so positively that the judge subsided.—Kansas City Journal.

In a western court a certain man was defending himself in a suit for divorce. "She's unreasonable," he contended, adding, "why the other day she called me the laziest man in the world because I threw a kiss at her."

"But suppose," said one of the spectators on the Common, "that the parachute should fail to open after you had jumped off—what then?" "That wouldn't stop me," answered the parachutist, "I'd come right down."

"Sargent was a great artist," said the teacher of the drawing class. "With one stroke he could change a smiling face into a sorrowful one." "That ain't nothin'," piped up Johnny. "Me mother does that to me lots of times."

Mrs. Flatbush—Has your husband started on his garden work?

Mrs. Bensonhurst—Oh, yes. Why, he came home from the club to-day awful tired.

Mrs. Flatbush—How could he get tired doing anything about his garden at the club?

Mrs. Bensonhurst—Why, his jaw ached something awful.—Yonkers Statesman.

Taylor's Nautical Academy
Established 1888
Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 49. SAN FRANCISCO, WEDNESDAY, AUGUST 13, 1919. Whole No. 2551.

LABOR AND BUSINESS

An Instructive Survey of Their Post-War Relations

The following timely article by Roger W. Babson, president of Babson's Statistical Organization, is reprinted from a recent issue of The Public.

Mr. Babson needs but little introduction to the readers of the Journal. His contributions to current literature on the problems growing out of the relations between labor and capital are quite widely read. The fact that he is also a generally recognized spokesman for the saner element among American employers of labor only lends additional interest to what he says, whether we agree with his conclusions or not.

Labor and business are facing each other. There can be no business except as labor is satisfied, and little labor except as business is recognized. It is harder to satisfy labor than it ever was. Therefore the labor question looms large in every business proposition. Heretofore it has been commonly true that labor took what was left,—what business could afford to give it. It looks as though from now on labor must be reckoned as one of the first prime costs of doing business. Just as we figure raw material, overhead, and the other common items in production cost, so we must figure labor as a prime charge.

Furthermore, this charge is not a fixed or static thing. It is always changing, always mounting higher. It is this that makes the labor question so increasingly important.

The average business man does not care much what his costs are, so long as he knows what they are. We have built up the habit of accepting costs and of passing the charge on to the ultimate consumer and of going merrily on with the game. Now we are confronted with an item in costs that is alive, that moves and changes while we are looking at it. What is more, the ultimate consumer has got about all he can stand in the way of costs.

The significance of this last statement is indicated by the new "Middle Class Union" just formed in London. At a big meeting held in London during March several hundred distinguished men and women, representing the consuming population of England, formed this new union to withstand the aggressions of high costs as forced on the public by the increasing demands of labor. The program included the familiar weapons of the unionist—the boycott, the strike (on buying), and so on. The members of the new union considered that the power to curb cost greed lay in their own hands.

We may never have a Middle Class Union in America. But we shall have a virtual strike on the part of the purchasing public, which will limit the output of our mills and shops and will put a new crimp in business activity.

Now, with this kind of thing facing us, what are we going to do?

There is just one thing that will help everybody—workers, employers, purchasers, investors, and all. That thing is increased production.

This statement is a truism, and furthermore it is a very easy statement to make. The statement is none the less true because it is easy to make it. It is true to-day under our capitalist society. It will be true under any other system that can be devised. We must live out of income or go bankrupt. If we live better, the income must be greater. There is no getting away from this simple economic fact. The problem is how to get more production.

I make no charges against American workmen. On the face of the case figures show that the average value of the product of the average American workman has steadily gone up for the past twenty-five years. If this is true, it is a welcome fact. There is ground for suspicion that the increasing money value of products largely accounts for this increase in value. However, I do not press that point. Let us go to England for our illustration. Since 1886 the average value of the product of the average British worker has steadily fallen. My expert, Mr. George E. MacIlwain, says in 1912 it was thirty per cent. less than it was in 1886. When you question the British worker about this he will deny it or he will say that the worker is not going to "put his back into his job," as they say over there, for the sake of piling up profit for somebody else.

Now, England is some way farther down the road than we are. What we are finding here is that the danger of unemployment, the examples of large profits, the high cost of living, and all the other items that go into the indictment which labor brings against our industrial [illegible] are giving us a labor body which does not work with the enthusiasm which marked labor in the good old days. We have somehow failed to furnish labor with the incentive to produce which labor once had. No amount of preaching can bring that back to labor. Industry might produce enough to give everybody the scale of life which he wants. The plain fact is that industry does not at present produce this amount. If things go on as they are now going we are likely to arrive at the point where England now is, namely, at something which looks like universal sabotage on the job.

This is our great danger, and the avoidance of it is our great problem. My own feeling is that the only way we can solve it is by a more equitable division of the fruits of industry between worker and employer. This means that the employer must voluntarily take less for his share There is at present no other possibility. Progress in the immediate future can be made only by taking the worker into closer confidence, by giving him a better knowledge of the facts of the business, and by giving him an opportunity to train for a real share in the management. If labor is going to get more, it must ultimately do more. As long as labor can put forth its demands for more wages and less hours and get by with it, with no further share in responsibility, it will take that course. Why not? So would you and I.

My contenton is that we have reached the point in our most advanced industries where this process can not longer continue. We must call on labor to put its back into industry in a new way. The call will have no effect unless we can hold out some inducement to labor to do this. To bring this about labor must know more about the business and must take new responsibilities.

Labor is learning more every day. The level of intelligence of American labor is bound to rise. We are going to get fewer immigrants. The education level of the worker will therefore advance. Our Americanization activities also look in this direction. The great question is as to where the worker is going to get his instruction and what kind of instruction it is going to be. There are plenty of people ready to pour into the workers' ears education leading to the degree of the horse-leech, who had three daughters whose one cry was, "Give, give, give." It is for the employer to devise a way to get into the minds of the workers education of another sort and to make them understand that those who say "Give, give, give," must also themselves give. There is no way to get without giving!

I therefore feel that it is up to employers to open up to the workers the doors to fresh responsibilities. They must be urged to take the part of men and women in industry, instead of being merely cogs in the industrial machine. When our workers know industry from the employers' standpoint, they will cease to make demands that proceed only from their own selfish standpoint. The can gain this knowledge only by doing the things that have hitherto been regarded as the sole function of the employer. This new activity must be paid for on its own basis.

I do not mean by this that the manager should be turned out and a man in denim put in his place. I know well that men cannot go from the molding room to the general manager's office overnight. I do feel that the functions of management and the problems of management must be shared by the workers just as fast as they are able to take them up. Co-operation must mean not merely co-operation in work. It must mean co-operation in responsibility, in profits, in everything that goes into industry. I see no other solution, however much both sides to the controversy now avoid it.

GETTING AT THE TRUTH.

The letters received by a trade-union editor cover a wide range of understanding, mental attitude and viewpoint. Communications are received from some cock-sure individuals who are positive that the trade-union movement is almost all wrong, and that some particular theory which they hold is the only one which will enable the wage-earners to work out their industrial salvation. Others indicate that the writers have but few ideas of their own and but little knowledge of the problems which affect them. Then there are the letters from earnest men who desire to become well-informed, who are anxious to know the truth, and who ask for assistance in securing the knowledge which they feel they must possess in order to make the most of their opportunities.

It is an almost impossible task to tell the searcher after knowledge, what is the truth, and the whole truth, about the single tax, socialism, communism, bolshevism, syndicalism, anarchy, co-operation, and the other theories and methods by which men have endeavored to solve the worker's problems. It is possible to give a fairly accurate definition of any "ism" or theory which has been advanced . . . the dictionary and the encyclopedia help us out in these matters. It is an altogether different question when the effort is made to explain theories in connection with practice and to explain the results which have followed the efforts made to apply these theories.

One serious difficulty in endeavoring to arrive at the truth concerning these movements lies in the fact that many active and sincere minds have become wedded to some particular theory, and the method of its application, which prevents the individual from taking a broad-gauged view of what is going on in the world. Some theory or philosophy having met with their approval, they are no longer able to give a fair or full consideration to others, they can only see the good in the theory which attracts them, and only the bad, and the unsound in all others. They become so wrapped up in the belief that their theory, or system, is the only one, that their minds are unwilling to admit that there can be truth and soundness in others.

What we need, is all of the information which we can secure, and this in itself is not sufficient, unless we have had considerable experience, for even a sound theory can be applied in such a manner as to work destruction. When we are experimenting with economic and industrial theories we can wreck a labor movement as effectively as the chemist, who knows the chemicals he is dealing with, can mix or handle them in such a manner as to blow up his laboratory and destroy his own life.

In some ways the partisan advocates of many economic, industrial, and social theories or philosophies resemble the various medical schools. There is, for instance, the old-fashioned and general practitioner of the allopathic school; then came the homeopaths who were convinced that the allopaths killed more of their patients than they cured, and who could cite terrible examples of mistreatment to prove their case. The hydropaths, who believed that most of the human ills could be cured by water treatment, attacked both the homeopaths and the allopaths as vigorously as one of these groups of doctors had attacked the theories of the other. Then in more recent times the osteopaths became convinced that the allopaths, the homeopaths, and the hydropaths were largely either fakers and charlatans or men who were fundamentally ignorant relative to the functions of the human body which should be understood as the osteopaths understand them to overcome disease.

When the practitioners of any of these groups, or any of the others which exist, reach the conclusion that their own theory of medical practice contains all of the truth which it is necessary to know and apply, and that the members of the other medical schools are ignoramuses, fundamentally wrong, and many of them fakers, then their fitness to experiment in an effort to effect cures is completely nullified. No medical school contains all of the truth; and when the graduate of a medical college has acquired all of the knowledge which the college can give him, he is not permitted to immediately begin to apply his little knowledge and skill to the public, he is forced to go to some hospital and serve as an interne, so that in addition to what he has learned from books and lectures, he can have some practical experience under the watchful eye of the physician in charge of the hospital, before he is turned loose upon the community to cure the physical ills which exist.

Those who are searching for the truth, and all of the truth, should not permit themselves to become convinced that some particular philosophy, or "ism," contains the sum and substance of all of the truths, and that every other philosophy is unsound, untrustworthy, and containing nothing warranting their serious consideration.

As between theory and practice, philosophy and experience, the test is always found in the application. How has a certain method of system operated when applied to men as they are is the most essential information to secure.

The ablest battleship designer in every country—men governed by mathematical methods of applying their knowledge and ability to designing—have been forced to fundamentally change engines, construction, armament and armor as the result of one naval battle which gave a practical application to their own previous theories or those of their predecessors.

The practical school of experience which the workers have had is only found in trade-unionism. It is in the every-day experience, in the shop, and in the meeting hall. It is in the experience found in committee work, in the conferences with the employers. It is the experiences acquired during strikes and the efforts to maintain the organization in the face of hostile employers. It is in these and the experiences acquired in the effort to secure necessary legislation that the trade-unionist acquires the practical knowledge which fits him better than any one else, to see the world in which he lives and works as it really is, and to understand the problems of to-day as they must be understood if he is to make his trade-union an effective organization.

To those who frequently ask the Editor for information as to the books they should read in order to secure the truth, and all of the truth, there is but one reply, "read the standard works of all schools dealing with economics, sociology, or the industrial problems." Read as much written by the writers on the other side as time can be found to give to their position and viewpoint. But, above all, test every theory which they come into contact with by their every-day experience as workers and trade-unionists.—International Moulders' Journal.

LISBON AS AN AERIAL PORT.

The interest and delight of everybody in Lisbond in the success of the first trans-Atlantic flight looks further than the immediate achievement of a remarkable feat; it sees the city a future port for trans-atlantic aerial traffic, with all that such a situation would mean to Portugal in national prosperity and prestige. That Lisbon is logically placed to become a great aerial port, and to restore with its fleets of aircraft something of the glory that faded with the passing of the maritime pre-eminence that Portugal had gained in the fifteenth and sixteenth centuries, is a natural enough thought to anybody in Lisbon who knows the history of the city. De Macedo Piuto, Minister of Marine, voiced it when he said the other day, "Lisbon is the ideal terminus for such crossings, as the wide, sheltered and well-nigh landlocked expanse of the Tagus permits safe arrival and departure in any weather. The present flight, to say nothing of those we hope will follow soon, will teach us just what harbor disabilities we have to reckon with, and where it is necessary to build breakwaters to counteract them. The establishment of a regular air service would bring wealth and prosperity to Portugal." Harbor improvements are no small and inexpensive matter, and the ease with which the Minister of Marine speaks of them shows that Portugal is awake to the possibilities of the future and ready to go out to meet them.

THE MALEKULANS.

The sending of a small naval force to Malekula Island, in the New Hebrides, for the protection of planters against the natives, brings some incidental information about a peculiar people with the undesirable fame of being the most bellicose inhabitants of any island in the South Pacific. Malekula Island has long been under the joint control of France and England, and at intervals some display of force has been necessary to make the islanders respect the local representatives of a more advanced civilization. Despite their reputation for pugnacity, however, there is much, declares a recent writer, to be said for the Malekulans. For one thing, they are remarkably honest; the traveler who goes among them knows that however he may fare as regards personal safety, he is in no danger whatever of losing his personal property. And if he is careful not to irritate his hosts, he is likely to come away with a pleasant memory of the native village community, its discussions of community affairs in a kind of village forum, its dances, and its children's playground under the bay banyan tree. He learns also that many of the villages have a social club for men and that the islander, who is also a crack marksman with bow and arrow, takes great satisfaction in belonging to it.

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

One Kind of Free Speech.

A. F. of L. Secretary Frank Morrison has received from Wm. Z. Foster, secretary of the national committee for organizing iron and steel workers, a signed "permit" to hold a public meeting in McKeesport, Pa. The "permit" is addressed to the chief of police and is issued by Mayor Lysle. It is as follows:

"This is to certify that the McKeesport Council of Labor has permission to hold a meeting in Slovak hall on White street, Tuesday evening, July 15, 1919.

"Permission is granted subject to the following conditions, and is also subject to police regulation:

"(1st) That no speaker shall talk in any other language except the English language.

"(2nd) That a list of the speakers' names be submitted to the mayor before the meeting is held."

Secretary Foster states that trade unionists are paying no attention to so-called police regulations that are only intended to deny free speech. "We are holding our meetings," he writes, "under the auspices of the national committee, are using foreign-speaking organizers and are not submitting lists of speakers to the mayor."

Trade unionists make the point that Mayor Lysle is not issuing orders to the steel trust that only English-speaking workers shall be employed.

Start Labor Party.

Thomas Van Lear, former mayor of Minneapolis, was elected secretary-treasurer of the Working People's Non-partisan Political League of Minneapolis. This movement was launched at a conference attended by delegates to the Minnesota State Federation of Labor. It was voted to co-operate with the farmers' non-partisan leagues of North Dakota and Minnesota.

The purpose of the new league, it was declared, is "to unite members of organized and unorganized labor into movements in sympathy with those of the common people, in order that representatives may be elected to public office who will enact, interpret and enforce laws that will serve the general welfare in accordance with the platform adopted at this conference."

Weary of Non-unionism.

"We are weary of attempting to operate on a non-union basis and want to reach an agreement with the International Molders' Union," is the substance of a statement to President Valentine of that organization by a representative of the O. K. Stove and Range Company, Louisville, Ky.

The conference resulted in an understanding and the molding department is now strictly union.

The importance of this voluntary action by the company can be appreciated when it is recalled that this concern is one of the best known stove companies in the South, and since a molders' strike twelve years ago has been non-union and has been pointed to by anti-union manufacturers as justifying their opposition to organized labor.

The company's alleged success was frequently commented on at meetings of Southern foundry men and the plant has been the mecca of other employers to secure information on the company's success. But this "success" is now shown to be a sham—the company acknowledging that non-unionism does not pay.

Officers of this international union declare that the incident is of tremendous importance to the Southern stove industry.

"Hands Off Unions."

"Keep hands off trade unions" is the essence of a recent order to officers of the ordnance department of the Army by Brigadier General Pierce, acting chief of ordnance. The order is directed to officers in charge of workers and declares that "it must be clearly understood that there shall be no abridgment of the right of men to join societies, associations or unions of any kind, and no limitations upon conferences between representatives of those bodies and the proper ordnance representatives."

Back Payments Wiped Out.

Discharged service men who let their Government insurance lapse are given the privilege of reinstating their policies within 18 months without payment of all back premiums, under an order issued by Secretary of the Treasury Glass. The new regulation is regarded as the most liberal ever offered by any insurance organization and is designed to make it possible for every discharged soldier, sailor and marine to continue Government insurance after returning to civil life.

The only requirement is that the man requesting reinstatement must be in as good health as at the time of discharge and must pay the premium for the one month of grace in which his insurance was continued after he stopped payment and the premium for the month in which he requests reinstatement.

The reason for this requirement is that the insured was protected by having his policy continued in force that month and if he had died his dependents would have received the face of the policy.

War risk insurance officials say that many service men have been deterred from reinstating policies because they did not wish to pay or could not pay the accumulated premiums. The new decision permits a man to start all over and secure the insurance both as a protection to his dependents and as an investment.

Children Are Hungry.

The attention of social unrest probers is called to a statement by Miss Lydia Roberts of the Children's Bureau, Department of Labor, that from 3,000,000 to 6,000,000 American children are not getting enough to eat.

Many of these children are going hungry, says Miss Roberts, because their parents cannot afford to buy a sufficient amount of

World's Workers

The Ido Federation of Socialists (Budapest) has issued the following: The Hungarian workers turn to the workers of the world praying them not to allow the destruction of what has been gained by the Hungarian Peoples' Republic. This destruction is threatened on the pretext of occupation. Our delegates visit every part of the world; we utilize all methods and all roads with a view to the enlightenment of the European workers concerning the menaced condition of the Hungarian democracy, of Hungarian Socialism, and of the Hungarian Labor Movement, and to secure effective help.

The recent passage of the Rowlatt Act has thrown the whole of India into a ferment of rage and despair, the like of which has never been known in the history of the country. Business was suspended throughout the country, meetings of protest were held, and demonstrations against the Black Bills (the Rowlatt Acts) took place in every city. In the Punjab the feeling was most intense. Here the stupidity and high-handedness of its ruler drove the people mad. Serious disturbances occurred in Lahore and Amritsar, the leading cities of the Punjab. Following these, the government put the entire province under martial law.

The most important fact in Great Britain is the addition of $1.50 a ton to the price of coal, which, by order of the Government, has already gone into effect. What that increase means to the vital industries of Great Britain is described as "disaster and ruin." Originally announced by Bonar Law in the Commons, enforcement was postponed at the request of miners and members on the understanding that the unions would agree not to strike for three months. In the meantime the miners were to demonstrate they could greatly increase the production of coal. The proposal was promptly refused by the national convention of coal miners. Meanwhile 200,000 coal miners of Yorkshire went on strike, the cause being a dispute over hours and pay. They were joined during the week-end celebration by 50,000 pumpers and surface workers.

The Sydney, New South Wales, Stove Molders' Union has been fined on the ground that it was involved in an "illegal" strike. The government made the charge and the court of industrial arbitration, in announcing the decision blamed union officials for not "controlling" these employes. The molders were employed in a shop against which they had grievance, and a conference with the manager lasted from noon until 2:30 that afternoon. The manager then refused to furnish the molders with iron for the remainder of the day, whereupon they declared they were dismissed. They refused to work there, and the next day demanded their wages. Complaint was made by the government that this constituted an illegal strike, which was upheld by the court, which ruled that under the compulsory arbitration law the union should be fined for permitting the strike.

DO YOU KNOW
That War-Savings Stamps pay 4 per cent. compound interest?
That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?
That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?
That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?
That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?
That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?
That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

INFORMATION WANTED.

Any one knowing the whereabouts of L. C. S. Admiraal, a member of the Eastern and Gulf Sailors' Association, last heard of in Rotterdam, Holland, 1914, will please notify his brother J. J. Admiraal, 51 South Street, New York, N. Y. 8-13-19

Anyone knowing the whereabouts of Calvin Pickett, last heard of in Port Arthur, Texas, February, 1918, will please notify G. Schroeder, Agent, Eastern and Gulf Sailors' Association, Port Arthur, Texas. 7-9-19

Members of the crew of the S. S. "Fred W. Whellen" who were on board November 11, 1918, when she picked up the bark "Galica" should file their claims with this office and be joined in libel which is being filed by the undersigned on behalf of the members of the crew. Silas B. Axtell, 1 Broadway, New York City. 12-25-18

Pacific Coast Marine.

The Shipping Board steamship "Oratan," previously reported to have been towed to Colon on account of a broken cylinder, will have to remain at the Panama port for at least six weeks, according to advices received.

The "Siberia Maru," Captain Totaka, will omit Honolulu on its outward voyage, September 5, going direct to Yokohama. This will enable the ship to make better time, arriving here on its return voyage October 23 instead of November 2.

The Canadian Consolidated Whaling Company believes that aeroplanes might be used successfully in spotting whales and has decided to investigate the matter, having arranged with the aerial league of Canada to furnish two pilots to assist.

There is much passenger congestion at Australian ports owing to the number of persons wishing to come to this country. All of the Oceanic liners are booked full until the end of the year. There is little prospect of an increase in the present facilities of transportation.

The steamer "Santa Alicia," which left San Francisco four months ago with coal for Central America and then took coffee to Havre, France, sailed July 1 from Norfolk for Argentina, where she will load coffee for San Francisco, resuming her West Coast route for the Grace line.

Steel shipbuilders of Portland are still conducting negotiations for private contracts, although no definite announcement of success has been made to date other than the statement that Scandinavian interests had virtually decided to place orders for four ships with the Albina Engine and Machine Works.

The historic metal fence which has separated the Crowley and Peterson launch concerns on the bulkhead between piers 14 and 16 for some years must come down. This was announced by President J. H. McCallum of the Harbor Board. One of the concerns has frequently requested that the obstruction be removed. The other company would protest. On one occasion the apparatus was actually taken down, but after a protest again was put in place. Recently when the Navy Department applied for the necessary space and conveniences at piers 14 and 16 to be used as landing places upon arrival of the fleet, the request was made that the fence come down so as to permit restricted movement of the sailors and visitors along the bulkhead. The request of Uncle Sam could not be denied.

The ancient and jinx-ridden bark "Harvard," which has endured more than is usually coming to the average windjammer that continues to float, will be towed to San Francisco from Honolulu and will be overhauled and placed in commission by the Charles Nelson Company, which bought the craft at the United States Marshal's sale recently. The first bid was thrown out several weeks ago and, after the advertising had been displayed for the necessary time, the local firm obtained possession by a tender of $5100. The "Harvard" limped into the port of Honolulu on October 25, 1918, leaking badly and with the report of the cargo of case oil piled along various reefs of the South Pacific. The oil had been thrown overboard and scattered by the wind and seas. Then the balance of the oil caught fire and there was a lot of excitement. The present owners expect to have a good vessel when the numerous repairs have been effected.

The shortage in passenger ship facilities between San Francisco and Honolulu is to be relieved by the Government, official advices from Washington announced recently. The officials of the Matson Navigation Company were notified that the big liner "Wilhelmina," engaged in transporting troops from France, will be released upon arrival at New York August 7. The "Wilhelmina" will be back at San Francisco the latter part of August and is expected to be overhauled and ready to resume her former service on the Honolulu-San Francisco run in October. Although nothing official regarding the release of the Matson liners "Maui" and "Matsonia" has been received, it is unofficially announced that both of these ships will be returned to the owners during the coming month. This will mean that in a little more than two months the former complete service of the Matson fleet will be resumed and the tide of tourist travel between the mainland and the islands will again be a big factor. The three liners were commandeered when the United States entered the war. Several narrow escapes from the German submarines resulted.

The officials of the Gulf Mail Steamship Company announce that internal combustion engines would be installed in the big five-masted schooner "John W. Wells" as soon as a convenient time was presented to lay the vessel up. The "Wells" is now en route from Melbourne for this port with a cargo of wheat. It has been the intention of the owners to turn the craft into an auxiliary immediately upon arrival, but so urgent were the offers to charter the ship for a cargo of barley for the United Kingdom that it was decided to delay the vessel's overhauling and engine installation until more time was afforded. In the meantime the rate of something like 150 shillings for the 6000 tons of cargo will more than pay for the auxiliary power. Thereafter the craft can be depended upon to make more money for the owners, for the time of passage will be cut down. The "Wells" is the largest schooner afloat on the Pacific, and was constructed at the St. Helens yards of the McCormick Steamship Company. McCormick operated the vessel for a time and then sold out to the present owners. The success of the auxiliary "City of Portland" demonstrated that this type of craft is a comer. The "Wells," like the "Portland," has a longitudinal steel truss frame extending the entire length of the ship and is well adapted to receive engines.

James Rafferty, special agent for the Government of the Philippines, suggests that Manila be made a general clearance port at which cargo from China, Dutch East Indies, Straits Settlements and India should be collected and sent on to San Francisco. In making this suggestion, Rafferty refers to the recent meeting with John H. Rosseter, at which suggestions were made as follows: Let Manila be made the American collecting and distributing port for the Far East, where homeward bound cargoes gathered from Singapore, the Dutch Colonies, China and India can be piled up waiting to be laden on ships of large tonnage, making rapid regular and direct voyage between Manila and Pacific Coast ports, and where American goods can, in like manner, be distributed. The prevailing thirty-day service to Manila should be reduced to seventeen days. To insure the success of this route, the co-operation of the Philippine Government will be needed, and may be secured if the Chamber of Commerce, foreign trade clubs, shipowners' associations, freight forwarders and importers and exporters of the Pacific Coast will send representatives to Manila or write or cable their plans to the Governor-General, requesting the co-operation of the government and its commercial organizations. The situation of the port of Manila in regard to the geographical relation to the countries mentioned, from which trade is to be drawn, is ideal and capable of indefinite expansion so far as the accommodation of ships is concerned.

Unless the Board of State Harbor Commissioners adopt measures to keep the slip between piers 14 and 16 free of all river and other big craft during the fleet visit, the most joyous event in Pacific naval history here may be turned into a disaster, the managements of the Peterson and Crowley launch concerns announced recently. The failure of the Harbor Board to keep the large craft away from the slip and from the end of pier 16 in November, 1916, resulted in an accident, for which Attorney William B. Acton recently won a case against the owners of the river steamer "Apache." The vessel was moored at the end of the pier and a swift flooding tide dashed the sailing launch of the United States steamer "Glacier" against the revolving paddles astern, and three men were drowned. Acton went into the Navy during the war, learned about the incident, and when he was released opened the case and won out. The launch experts estimate that the daily arrivals and departures of commercial and Navy small craft at this slip will total far into the thousands each day during the fleet visit. At present something like fifty launches come and go. There are frequent jams, however, and on numerous occasions mishaps of a serious nature are avoided only by inches. When this number of craft is multiplied by twenty there will be a continual jam and even if the best of care is exercised and none of the big craft are permitted near it is doubtful if a number of accidents will not happen. In addition there will be a congestion of probably 50,000 persons in the vicinity of the bulkhead. All will desire to cruise out on the bay and visit the ships. Some will be accommodated, but many will not get the opportunity. The congestion will be added to by the thousands of sailors, officers and dignitaries. All of these facts are being laid before the Harbor Board and immediate action is expected in the hope that the visit of the fleet will not result in mishaps.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, AUGUST 13, 1919.

A STRIKE WELL SETTLED

Now, that something like definite news about the recent seamen's strike on the Atlantic and Gulf coasts has at last filtered through to this side of the continent, seems a good time to take a leisurely squint at what the comrades over there have accomplished.

To present the matter in an orderly sequence, the organized seamen on the Atlantic and Gulf coasts have secured from the American Steamship Association and the U. S. Shipping Board the following concessions:

First. A flat increase of $10 a month in wages for all hands in the deck department, except deck boys, whose wages are to remain the same as before. This is a compromise on the seamen's original demand for a $15 a month increase, the shipowners and Shipping Board, as will be seen, making the major concession.

Second. The crew will be divided into three watches at sea on all vessels carrying 6 able seamen or more. The question of what disposal to make of the crews, with respect to dividing them into watches at sea, on vessels carrying less than 6 able seamen will be taken up for consideration by a joint committee of the shipowners and the seamen.

Third. All seamen who were unable to collect the wages due them when they went out on strike will be paid such wages in full.

Fourth. All duly accredited representatives of the seamen's unions will have free access to all docks and ships controlled by the American Steamship Association and the U. S. Shipping Board.

Fifth. At least 6 able seamen are to stand watch and watch at sea on all vessels carrying that number, the remainder of the crew, if any, to work 8 hours as day men. The which, by the way, is a sure enough improvement on the old system of "Kalashee watches"; i. e., keeping all hands on deck all day, and making them stand watch and watch at night—and two-watch shifts at that.

As an off-set to all these substantial gains the strikers lost out on their demand that, when crews are signed, American citizens, regardless of union affiliations, shall be given first preference; non-citizen union seamen to come next, and non-union aliens last.

The shipowners characterized this demand as "impracticable," and their henchmen and defenders in the public press roundly denounced the seamen for "trying to enforce the un-American closed shop in our merchant marine."

The come-back to this from the seamen was that their demand for this much of a try at Americanizing our merchant marine was really a test of the sincerity of the shipowners' oft-expressed desire for "America first," etc. But this attempt to show them up as 2.75 per cent. patriots was diplomatically ignored by the shipowners, which, on the principle that he who has no defense has no case, leaves the seamen the best of the argument.

Yes, all things considered, our comrades on the Atlantic and Gulf coasts scored a big victory over the shipowners and the Shipping Board. The opposition arrayed against them was, perhaps, the most formidable ever encountered by a body of striking seamen in this country. Not the least encouraging feature of their strike was that in those ports which have hitherto been hard to unionize, all the seamen came out as one and joined the union strikers. This argues well for the future morale of the seamen on the Atlantic and Gulf coasts. Here is hoping that our comrades over there will long enjoy the fruits of their victory, and make wise use of their newly gained advantages.

THRESHING OLD STRAWS

It is usually a great deal easier to nail a lie than to make it stay nailed. There, for instance, is that husky young whopper about the Seamen's Act driving the Pacific Mail Steamship Company away from the ocean. Time and again in the last four years has it been turned inside out in public and shown to be stuffed with nothing better than a weak mixture of hot air and poison gas, only to come strutting along somewhere else the next day as cocky as ever, pointing an accusing finger at Andrew Furuseth and U. S. Senator Robert LaFollette.

The latest citizen of note to trot out this precious morsel of fiction in public is Mr. Homer L. Ferguson, president of the United States Chamber of Commerce, and also president of the Newport News Shipbuilding Company. The ceremony was staged at a recent luncheon give in honor of the directors of the U. S. Chamber of Commerce by the Commercial Club.

From press accounts of the affair we gather that Mr. Ferguson was greatly wrought up over the imminence, as he saw it, of the conversion of the Pacific ocean into a "Japanese Lake." Among other things the gentleman is quoted as saying:

"We have the steamers, a great fleet of them. The fleet is somewhat badly balanced because there are too many cargo steamers, but at present they can be operated at a profit. Our need is more the definition of a settled policy than anything else just now.

"We must never again be at the mercy of the politicians. The LaFollette bill was passed at the instance of an unofficial Pacific Coast knew about the question was from this representative.

"Unfavorable shipping laws drove the Pacific Mail from these waters. Unfavorable laws prevented the construction of two magnificent steamers in which President Wilson could have gone to Europe, instead of in the German-built 'George Washington.'"

The "unofficial Pacific Coast representative" referred to by Mr. Ferguson was, of course, none other than Andrew Furuseth. We don't know whether the reference was meant as a compliment to Furuseth or a slur on Congress. The truth, as every well-informed person knows, is that the Seamen's Bill became law only after its various provisions had for years previously been debated by both houses of Congress, and deliberated upon by the respective committees. Public hearings on the bill were held in Washington almost daily during those years. Where were Mr. Ferguson and his friends when those hearings were going on?

The gentleman's statement that "the Senator (LaFollette) said that all he knew about the question (the Seamen's Bill) was from this representative (Furuseth)," was, if true, really a tribute to Senator LaFollette's good judgment. For where in America could he have found a better authority on seamen's legislation in general that Andrew Furuseth?

"Unfavorable shipping laws drove the Pacific Mail from these waters." It beats all what a lot of nonsense well-fed, portly gentlemen can get off their chests at a public banquet. At the risk of boring our readers we will state here for the hundredth and 'steenth time that the Pacific Mail people were never driven from the ocean. When the war came along they found the pickings on the Atlantic ever so much better than on the Pacific, that they forthwith sent all their best and largest ships over to the east coast. Their smaller ships, all of them vessels of an old and obsolete type, the company sold at a profit, the size of which would, before the war, have staggered the most imaginative of the directors. In fact, the company had tried for several years before the war to sell these ships, but without success. And that's all there is to the yarn about the Seamen's Act driving the Pacific Mail from the ocean, Mr. Homer L. Ferguson to the contrary notwithstanding.

GOING, GOING! GONE!!

The time-honored shibboleth of ye raucous-voiced auctioneer heading this editorial fittingly summarizes the celerity with which our Uncle Samuel is getting rid—at a handsome profit, thank you—of the less desirable of his war-time emergency-built ships. Here are some facts to prove it.

In the last week of July, and the first week of this month, the U. S. Shipping Board initiated the sale of 220 wooden and steel ships, aggregating 820,000 deadweight tons. The consideration is announced as amounting to $140,000,000.

One hundred of the ships are of steel, of a type known as the "Lake" type, and are ready for immediate delivery. Those constructed on the Great Lakes vary in tonnage from 3,500 to 4,000 and were sold at the rate of $200 a ton. A number built by the Submarine Boat Company in New

Jersey are in the 5350 deadweight ton class. These were disposed of at $210 a ton. All of the others are wooden ships of the Ferris type, and were sold at the flat rate of $500,000 each.

The steel ships were bought by the Anderson Overseas Corporation of New York for approximately $80,000,000, and, so it is said, will eventually be turned over to the French Government. Delivery of these ships commenced on August 10th, and will proceed at the rate of six or more a week until completed. It is estimated that this is probably the largest fleet of ships ever sold at any one time.

The wooden ships went to London interests. Twenty have already been turned over to the purchasers. As yet only an option has been taken on the remaining 100, but it is certain that the sale will go through. Deliveries, in fact, will probably begin before the expiration of this month.

The Government still has on hand 174 wooden steamers, with a total tonnage of 614,166. But so anxious are the French and other interests to secure ships at almost any price that the Shipping Board does not anticipate any difficulty whatever in soon profitably disposing of its remaining fleet of wooden ships.

The Board also announces that it has no present intention to sell any of the big steel ships to foreigners. The contention of the officials is that these ships are more economical in operation per unit ton than the small vessels, and therefore better fitted to remain permanently in the service of American interests. The only rift in the lute, so far as this proposition goes, is that American interests are not likely to buy this class of ships at the Government's price of from $210 to $230 a ton, while responsible private shipbuilders stand ready to build new ships for not to exceed $190 a ton.

Indeed, a recent news dispatch stated that two fast passenger ships are to be built for the run between San Francisco and Los Angeles. They will be electrically driven, and of 15,000 tons burden each. It was further stated that these ships can be built in local shipyards for about $160 a ton, as against $230 asked by the Shipping Board for cargo ships.

"What became of the suggestion that the Government should invesigate the war profits of the organization of shipowners having unlimited license to rob Government and people during the war, that they might be able to pay sailors good union wages?" asks Arthur Brisbane, the well-known editor.

It is probably being held incommunicado somewhere until the shipowners have had time to fix up an alibi.

When reflecting upon the power of money it should be remembered that after all it can not be eaten. The producers of food, clothing and shelter constitute the power that dominates in the last event.

After all, the only difference between the labor trust and the capitalist trust is the difference between altruism and selfishness.

"SELF-DETERMINATION"

A Term to be Construed in a Pickwickian Sense Only Where Weak Nations Are Concerned.

Autocracy, whether political or industrial, succeeds only in the measure of the ignorance of its victims. The effort to democratize the world will succeed only when every artificial obstacle has been removed from the paths of individuals making up the races.

For those races which have achieved political democracy, there remains only a fight for industrial democracy. For the so-called "backward nations," the effort must be first for political freedom and afterwards for industrial freedom. Never in the history of the world has any nation achieved mental or physical freedom, as far as industry is concerned, until it has made effective the fullest and freest political independence.

American labor is primarily interested in political freedom for every nation in which a majority wish to exercise the right of self-determination because that is the first and the most necessary step toward doing away with the competition of pauper labor. That class of labor exists only among suppressed races, the politically subservient. Political freedom, with the industrial freedom which inevitably would follow, would raise the standard of wages and of living in all countries in which pauperism is bred wilfully and consciously by political masters.

The foregoing ideas form the crux of opinions recently expressed by Frank P. Walsh, former joint chairman of the National War Labor Board, in an interview with the writer.

"The working people of the world are for the first time looking behind the scenes in the theatre of diplomacy," he said. "They find this theatre the home of a cruel Punch and Judy show, with the diplomatic representatives of every dominant and rapacious interest exploiting ignorance and the consequent lack of unified action. They see vast races, the so-called backward nations, emptying their pockets into the coffers of greedy capitalists, the latter exponents of that misnamed progress of superior nations which makes dependents of individuals and races of weaker nations. These diplomatic marionettes, mimicking in thinly-disguised voices the characters of the ghastly entertainment, preach justice and progress while they ply the whip upon the helpless backs of men and women kept illiterate and politely submerged for the very purpose of making them victims to exploitation.

"They impose ignorance, filth, disease and starvation by denying political rights, knowing full well that the path to industrial freedom is a short cut after political freedom is obtained. The pages of history were opened by the war at places seldom read. The policy of self-determination which formed the soul and genius of America's entrance into the war, would, if enforced, liberate all the world politically and industrially.

"What does this denial of self-determination mean to Ireland, India, Egypt; to all the countries held in political thrall by England? What does the denial mean to all the other small countries of the world whose racial aspirations are throttled beneath the iron heels of masters? If self-determination had been made effective, as it has not yet been done in the Versailles parleys, it would ultimately result in happiness for the entire world. The war and the later surrenders of rights and principles at the peace table have brought home to the workers realization that the diplomatic procurers, agents of capitalists, still are pulling the strings and throwing their voices in the effort to upset mankind.

"Consider Egypt from among these nations denied an inherent and natural right which was re-emphasized by the Wilson peace points. For fifty years England has continued its grievous assaults upon Egypt, whose historic greatness has endured since the history of the races on this planet began. Vermin, filth, poverty, starvation, the lash, machine gun, ignorance and disease has been its portion, while its great agriculture, the most fertile in Africa, the groans and sweat of its men and women and children, has been coined into English dollars. England loads it with debt. Its people are always at the starvation line. Their racial aspirations have been checked but not killed by lack of educative facilities denied by its conquerors, by the free use of machine guns and the lash. The bodies of 800 dead men, women and children, and the wounds of 1600 maimed, victims of machine guns fired by English soldiers last April in the streets of Egyptian cities after the citizens had quietly gathered to urge England to observe President Wilson's self-determination clauses, speak eloquently of the desires of this once proud people.

"Egypt, in common with other selected small nations, was given no hearing at the peace table. It is refused one now. It, as other small races are doing, knocks at the peace door without awakening an echo. The reason is plain. No nation, submerged or not, can be given full

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Aug. 11, 1919.
Regular weekly meeting came to order at 7 p. m., Joe Faltus presiding. Secretary reported shipping good and lots of members ashore.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., August 4, 1919.
No meeting. Shipping slow.

J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., August 4, 1919.
Shipping fair; prospects uncertain.

W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, Aug. 4, 1919.
Shipping fair; few members ashore.

H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, August 4, 1919.
Shipping fair.

P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, August 4, 1919.
Shipping good; men scarce.

ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, August 4, 1919.
Shipping good; prospects good.

JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, August 4, 1919.
Shipping fair; men scarce.

HARRY OHLSEN, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, July 28, 1919.
Shipping dull; prospects poor.

JACK EDWARDSON, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Aug. 9, 1919.
Regular meeting of the Marine Cooks and Stewards' Association was called to order at 7 p. m., Ed. Andersen in the chair. Secretary reported shipping slow on account of the strike of Masters and Mates on steam-schooners.

E. F. BURKE, Sec'y pro tem.
42 Market Street. Phone Kearny 5955.

Seattle Agency, July 31, 1919.
Agent reported shipping good. No members ashore.

J. LEONARD NORKGAUER, Agent.
Grand Trunk Dock. P. O. Box 214. Phone Main 2233.

San Pedro Agency, August 4, 1919.
Agent reported shipping slow on account of the strike of Mates.

JOE MACK, Agent.
613 Beacon Street. Phone Sunset 336. P. O. Box 54.

With the repeal of the war-time act permitting foreign lines to engage in coastwise traffic, American shipping companies of San Francisco again will have full sway over this lucrative trade, according to advices received from Washington. The Toyo Kisen Kaisha, which has been enjoying the freight and passenger business between San Francisco and Honolulu by reason of the war-time measure, must relinquish the coastwise traffic July 1, 1920, if the repeal becomes effective. Steamship men hailed the repeal of the act with satisfaction. It was pointed out that this is one of the ways in which the prestige of the American flag on the Pacific may be maintained and increased. The Oceanic, Pacific Mail and Matson Companies of San Francisco are the lines which will benefit by the repeal, which returns to them the coastwise business in which they had exclusive rights prior to the war

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Remember that old saw: "The way to a man's heart is through his stomach"? Well, the women, too, are going to vote next year, and unless both the big political parties do something to bring down the price of food they will hear a loud noise when father and mother march into the voting booths.

So President Wilson has created a committee of three officials to hurry up and see what can be done. He has also directed Attorney General Palmer to see whether some individuals can't be sent to jail or some corporations dissolved for illegal poaching on our food preserves. The committee named is composed of Railroad Director Hines, Federal Trade Commissioner Colver and Assistant Secretary of the Treasury Leffingwell.

Director Hines ought to know how urgent the matter is. President Warren S. Stone of the Brotherhood of Locomotive Engineers, has just told Hines and the President that if the cost of living does not come down almost immediately the enginemen will insist on a substantial increase in wages. In fact, the railroad workers have formulated and presented their demands. Their demand is for a wage increase to cover an 65 per cent. rise in the cost of living. Six hundred and ninety thousand conductors, brakemen, trainmen and shopmen have joined in a petition to this effect, which now lies before the Railroad Wage Adjustment Board. When the engineers and other crafts present their claims, the movement is expected to have the backing of almost 1,000,000 railroad workers.

The conductors ask for a 35 per cent. increase, and the trainmen for a 45 per cent. raise. "Officials representing 450,000 shop workers demand an increase of 25 per cent," according to John Scott; while Timothy Shea, of the engineers and firemen, says: "We have called a meeting for August 12, at Cleveland, to frame our demands."

Meanwhile the railway shopmen of the whole country have walked out to enforce their long-standing demand for 85 cents an hour. The men complain that they have waited in vain for six months to have their claims passed upon. During the first few hours of the strike 150,000 machinists, blacksmiths, carpenters, carmen and helpers had joined in the walkout.

All this serves as an introduction to the measure presented in Congress on August 2 by Representative T. W. Sims—the bill of the railroad brotherhoods for government ownership and democracy in the operation of the railroads, otherwise known as the Plumb Plan. The brotherhoods claim that this plan, if adopted, will go farther to reduce and control the cost of living in the United States than any other possible measure. In presenting the bill to Congress, Representative Sims said:

"The heads of the four railroad brotherhoods and the ten affiliated railway organizations of the American Federation of Labor, numbering 2,200,000 men, have asked me to present this bill. The Executive Council of the American Federation of Labor was instructed on this matter at its last convention, at Atlantic City, on June 17 last, to 'co-operate with the organizations representing the railroad employees.'

"This it has done; and Samuel Gompers, President of the American Federation of Labor, is honorary president, and Warren S. Stone, head of the Brotherhood of Locomotive Engineers, is president of the Plumb Plan League, formed to urge this bill before the country.

"The proposed law would leave the valuation of the railroads to the courts, providing review on appeal from the finding of a properly constituted appraisement board. By the decisions of this body or of the courts, it would pay back every honest dollar put into the railroads, issuing therefor Government bonds at 4 per cent. It would work at every stage by peaceful, constitutional methods. It would establish harmony between the public interest, the interest of the wage earners and of capital. It would protect the public against exploitation for the benefit of either capital or labor, and it would assure the public of reductions in rates exactly equivalent to any increase in earning power which the empolyees might create for themselves by the efficiency of their organization or the skill of their management.

"This would be the first step in solving the problem of the high cost of living, as the cost of transportation enters into the price of every commodity which is paid by the consumer. Protection against increased rates—assurance of reduced rates—would inspire industry with confidence; would increase the purchasing power of the dollar, and would break the vicious circle which now exists, whereby every increase in wages is reflected in an increase in the cost of production. The plan itself, without committing myself to the details by which it is to be carried out, to my mind offers a solution of the railroad problem much more perfect than any other that has been presented."

News of the big International Labor Conference at Amsterdam is meagre but interesting. The opening sessions were marked by an effort, led by President Gompers of the A. F. of L., to wring from the German delegates an expression of regret over the part German Labor played during the war. Whether the statement finally drawn by the German delegate Sassenbach (Socialist), and accepted by Congress, is an apology or a mere explanation must be judged by every reader for himself, since the paraphrase of it printed in this country reads:

"The German workers recognize that the workers of other countries cannot appreciate or understand the several actions of the German workers during the war; but these actions were forced upon them by the severe struggle waged by the German nation. The German workers always were opponents of war and armaments, and never gave assent to the Government's imperialism. The trade unions always recognized that Germany had acted wrongly in Belgium and always condemned atrocities committed; German occupation of Belgium and deportation of Belgians was done without the consent of the German workers. The attitude of the German workers at the outbreak of, and during, the war was dictated by the position of Germany; it was the conviction of the workers that Germany was fighting a defensive war."

The Dutch delegate, Oudegeest, contended that "the capitalist systems of all countries was responsible for the war." This theory was denied by American delegate Tobin, who asserted that "the monarchistic and militaristic elements of Germany and Austria were entirely responsible." It developed very early that the Italian delegates had been barred from the conference by the French government, which refused to vise their passports for the journey across France.

Although the order of business has not been disclosed in America, press reports indicate that the general attitude of European workers toward the League of Nations Labor Conference scheduled to meet in Washington next October may be revealed during the Amsterdam discussion. Some delegates have declared that their unions will not tolerate the plan to have the labor spokesmen selected by government heads. "Not until," as one orator put it, "the heads of governments are all labor men."

If it were known here just what labor bodies are represented at Amsterdam, and how they were selected, it would be possible to judge with more conviction what stand the conference will take on such questions as direct action by the workers to attain political ends, to which President Gompers is opposed. For example, the British railway men, transport workers and miners (Triple Alliance) are just now engaged in balloting to decide whether they shall go on general strike to end military conscription, to compel nationalization of the mines and to terminate all British participaton in the Russian internal problem. If the referendum goes in favor of the strike while the British delegates at Amsterdam vote against strikes for political objects, which incident shall we accept as binding upon the British workers? If the British delegates to Amsterdam were selected by a rank and file vote we would have the answer. But were they so selected? Were any of the men at Amsterdam selected by the rank and file of their respective countries? Those may sound like foolish questions, but who can answer them?

The seamen's strike, which ended a week ago in a compromise that gave the men the bigger part of what they demanded, was complicated at the last hour by the refusal of the marine engineers to go aboard the ships until their demands had been met. After forty-eight hours of deadlock the engineers were granted wage increases to $92.50 a month for Class E ships and $100 a month for Class A vessels, which are of more than 20,000 tons.

With Chicago street railway men conducting a successful strike to obtain 85 cents an hour, and the New York building trades preparing for a walkout to win $1 an hour, there is enough evidence that the better organized workers do not intend to shoulder the crushing and growing cost of living without trying to better themselves during the crisis. Few labor men contend that a raise in wages is a cure for the soaring cost of living, since employers have the power to advance the price of the commodities every time they

grant higher wages. But, pending the day when the railroad brotherhoods—or some one else—discover and apply a lasting remedy for the evil, the organized workers are not going to sit still while they and their families sink lower into the bog of privation. The old-fashioned economist always demanded that the working people submit to several years of sacrifice every time the world got itself into a jam of impossible prices—that the wage earners give up their wages so that costs might fall without any loss or inconvenience to the rest of the population. The view of labor after the great war for democracy is that sacrifices which cannot be avoided should be borne in common by everybody, not by the labor "goat" alone.

Uncle Sam has at last complied with the demand of the Federation of Federal Employes that civil servants be granted the right of collective bargaining. This decision is rendered in the particular case of employes of the Ordnance Bureau of the War Department, but it will have a wider application as other classes of workers form their unions. An order issued by Brigadier General Pierce reads:

"It must be clearly understood by all officers of ordnance that there shall be no abridgment of the right of men to join societies, associations or unions of any kind, and no limitations upon conferences between representatives of those bodies and proper ordnance representatives."

Labor is not letting up in its fight on Postmaster-General Burleson, who, they are determined, must get out. The Federation of Federal Employes has even selected its own man to fill his place when it shall please President Wilson to remove the Texas man. The candidate of the Federation is James J. Forrester, of Cincinnati, who is now president of the Brotherhood of the Railway Mail Clerks. He was formerly in the postal service, has a large personal following and supported President Wilson in the last two presidential campaigns.

MEANING OF "PARAVANE."

The oddity of the word "paravane," as it now reaches the general public, shows how well an important secret was kept during the historic years 1917-18. During those years the invention, perfected at Portsmouth, England, was added to some 4000 British vessels, and no case is known in which a ship thus protected was damaged by a sunken mine. Towed under water on both sides of the bow, the paravane, shaped like a kite, met the mooring wire of the sunken mine, deflected the hidden menace to a safe distance from the ship, severed its mooring, and left it free to come to the surface where it could be exploded by gunfire. Seamen naturally enough soon came to speak of the paravanes as "otters," and they enabled many a vessel to travel safely through mine-infested waters. Several hundred American ships had been thus equipped at the signing of the armistice, and it is a pleasing thought that the cessation of hostilities saved about $10,000,000 which the United States meant to spend in providing paravanes for American shipping.

Demand the union label.

LABOR NOT A COMMODITY.

Since men first learned to live by the toil of others rather than by their own exertions, labor has been reckoned a commodity. It has been counted an expense of production along with land, machinery and raw material.

The wage system divided the worker from his work. The first was recognized as human. The latter remained a commodity.

But this commodity could not be divested of human attributes. It could be used only while connected with its owner.

The owner of a dollar cares little whether it is invested in material to be used in sewers, swamps, sweatshops or banks. He need not accompany it at work.

But the laborer must go with the labor he sells into the sewer, the mine, the factory or the office and remain while it is being used.

The community has little interest in the age, health or sex of the owners of other commodities. The health and comfort of the owner and the well-being of society are not affected, except most indirectly, by the way such commodities are used. But a young child, a mother or a tubercular patient may have their lives wrecked or shortened, and society may be greatly injured through the sale of their labor.

Labor is the most perishable of commodities. Other commodities may be stored and gain in value. They can be put aside to await a market. But labor must be sold the moment it is produced. If a market is long lacking the owner perishes.

Such great differences demand a new classification. The American Federation of Labor has long declared that labor should be taken out of the "commodity class."

This was legally done when the clause was placed in the Clayton anti-trust bill providing that for the purposes of that act "the labor of human beings shall not be considered a commodity."

The phrase was but the tardy recognition of what laborers will henceforth insist shall be a fact in all social relations. Labor must not be considered as apart from laborers. The human relation, not the property relation, must henceforth dominate in industry.

Progress has long been measured by the degrees gained toward this goal. That measure will be an even more imperative standard of progress in the future.—Ex.

YOUR "JOHN HANCOCK".

When the men who framed the Declara- "endowed by their Creator with certain inalienable rights," that among these are "Life, Liberty and the Pursuit of Happiness," they knew they might fact a firing squad as a consequence. If captured by the British, execution in the Tower of London as rebels would have the best fate they might expect.

Knowing this, John Hancock dipped his goose quill deep and splashed his signature large across the page. He declared his independence, asserted unmistakably that he believed in the right of himself and his fellow citizens to institute a Government "on such principles and organizing its powers in such form as shall seem to them most likely to effect their Safety and Happiness." Hancock was willing and anxious to face the consequences.

Hancock and his associates with their signatures signed a bond for the freedom and national independence of America. Every citizen who signs now his Declaration of Financial Independence is doing as great a service to his country as John Hancock did. Hancock and his associates declared themselves free from the dictates of a British King, but the financial freedom of American citizens, the assurance of their right to the pursuit of happiness depends on their freedom from the tyranny of far more powerful monarchs, Old Age, Disaster, Illness and Unemployment.

The Declaration of Individual Financial Independence awaits your signature. No evil consequence can follow the signing of that document, but failure to sign it is evidence of a craven bending of the knee to poverty and fear of the future. If any man fails to put his John Hancock to that covenant, if he fails to write it large and bold and unmistakable, he is surrendering unconditionally the freedom John Hancock and his mates risked their lives and fortune to make possible.

A declaration to save, is a declaration to be free, free from debt, from anxiety, from misfortune of the future. The regular purchase of Government Thrift Stamps and Savings Stamps is a Declaration of Independence. It is an assertion of the determination to maintain that equality with which all men were created.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

suitable nourishing food. Thousands of American families are living on an income that does not permit of an adequate diet. Included in the millions of hungry children are those whose mothers do not know how to spend their money to get the best return in food value.

Packers Make Sentiment.

Meat packers were denounced in the United States Senate by Mr. Kenyon because of their unfair methods in creating opposition to legislation that would regulate this industry.

Senator Kenyon declared that the packers have agents traveling through the country interviewing retail merchants, "telling them that these bills will destroy them, borrowing letter heads from certain merchants to send in letters to members of Congress, stimulating commercial bodies and banks to believe that these bills will simply destroy the nation."

Senator Kenyon presented letters from business men to support his charge.

Other Senators stated that they have received similar protests against regulation of the packing industry and which were written along lines that would indicate that the sentiment was manufactured.

Modest Real Estate Men.

Some Charleston, S. C., real estate owners are modest sort of chaps, and only ask a 10,000 per cent. profit from Uncle Sam.

This is shown in a report by the War Department's board of appraisers on marsh land seven miles from Charleston, which the Government wants for terminal purposes. The appraisers fixed a price of $100 an acre and one claimant wanted $1887 an acre. Instead of the $798,500 asked by the principal claimant, the report recommends $43,360 as a fair compensation.

The board states that the amount now asked is "about 10,000 per cent. increase" over the purchase price of six years ago.

First Air Strike Ends.

The first strike of air pilots in this country has ended by a compromise. The strike was caused by the Postoffice Department's failure to reinstate two pilots who refused to operate planes they declared were dangerous. The strike threatened to spread to other sections of the country.

These workers were handled in a different manner than is the case with other workers who complain of grievances in the Postoffice Department, and after a conference with the air pilots it was announced that one of the discharged pilots was reinstated and the other's case "presents complications which require separate action."

The strike afforded much amusement for shallow editors who attempted to be funny about "picketing non-union airplanes," etc., and who ignored the demand of these workers that danger to their lives be minimized.

Educating Soldiers.

More than 5000 disabled ex-service men are now in training under the direction of the Federal Board for Vocational Training. Of these 35 per cent. are preparing for some trade or industry, 25 per cent. are taking commercial courses, 15 per cent. are training for some profession, another 15 per cent. are studying agriculture in some form, and almost as large a percentage are taking general educational courses, needed for their vocational training to be taken later. The Federal board takes the man just where it finds him and trains him in the most direct course leading to his independence and usefulness.

Chinese in Postoffice.

Postmaster General Burleson attempted to solve the mail problem of the nation's capital by sending his Chinese cook to work during his spare time in the city postoffice, said Secretary-Treasurer Thomas F. Flaherty of the National Federation of Postal Employes to the committee of the Washington Chamber of Commerce that is investigating defects in the local mail service.

"Mr. Burleson," said the trade unionist, "evidently thinks he has done his full duty to correct postal conditions by having his cook distribute mail during the rush hours, but an efficient mail force cannot be recruited from Chinese cooks. This can only be obtained by improving postal working conditions so that American young men will enter the service and make it their vocation. At present the postal service is justly termed the national sweatshop."

"Order vs. Panic."

"It is either orderly development or a panic with the inevitable rout," declares President Perkins of the Cigar Makers' International Union in writing in the official journal of that organization on the need for trade unionists to do their duty.

"It is either construction along orderly lines," continues President Perkins, "or over the precipice of destruction by following destructive leadership. Let us all have the courage of our convictions and stand manfully by the orderly, constructive methods.

"Men and women are the victims of environment and conditions. We don't blame people who have been forced to work for low wages, long hours and under miserable living conditions, for holding resentment and bitterness in their hearts and minds. They have been browbeaten, cheated and robbed by unscrupulous manufacturers; they have been lied to by unscrupulous, hair-brained, radical, self-constituted would-be leaders, who have unhesitatingly denounced the legitimate trade union movement and the officers and members thereof.

"At this time and in this crisis we ask the unorganized and others, however, to look the facts squarely in the face; to inquire what the international union is; to ascertain from reliable sources who its leaders and its officers are, and then to consider for themselves what is best to do."

The ruby, weight for weight, is more valuable than the diamond. A pigeon's-blood ruby weighing five carats will sell for five times more than a diamond of the same weight. The greatest ruby mines in the world are at Mogok in upper Burmah, about seventy miles north of Mandalay. Burmah not only produces the finest rubies, but its output is greater than that of all other countries combined.

"SELF-DETERMINATION"

(Continued from Page 7.)

political freedom without ultimately acquiring industrial freedom.

"It remains for the intelligent masses of labor in America, no less than the workers of nations whose governmental cliques are responsible for political outrages, to speak in chorus to the end that every worker shall have a place in the sun; that there shall not be nor ever will be a shadow on his right to work, to live and to happiness. This may not be done until the utmost political freedom is obtained for the people of every country dominated against their will by the machinations of conscienceless exploiters, masquerading in any disguise or using any soft phrase."

(By William P. Harvey, former Editor of the American Railway Employes' Journal.)

EVERY MAN A CRIPPLE.

"I suppose you regard yourself as a whole man," demanded one of the vocational therapy experts at the General Hospital in Washington.

Looking myself hastily over to make sure that I had not lost anything in the surgical wards (says a writer in the Red Cross Magazine), I replied that I could count the usual number of arms, legs, and other appurtenances.

"All right," said the expert, "but you're sort of a cripple at that. Your atrophied."

"If I am, I've never discovered it," I assured him.

"Of course not. People never do until they're shown. You haven't got anything like the full use of more than four fingers and two thumbs out of a total of ten. The normal man—the man who believes himself normal I mean—never has. Can you light a safety match with one hand?"

He handed me the box and the match. After the second abortive attempt the match fell on the floor and the box fell on the match.

"That's elementary, that stunt," remarked the instructor. "Our one-arms can do that before they get out of bed. You see, your two smaller fingers are really cripples. Now we teach our fellows to do the work with those fingers that you have to use another hand for. There's the whole physical principle of our training in the simplest form—substitution."

THOSE ARCTIC STOCK FARMS.

The highly successful experiment made by the United States Government when it provided the Alaskan Eskimos with imported Siberian reindeer may have results more far-reaching than the most hopeful supporters of the scheme anticipated. It provides a potent argument which Mr. Stefansson is using to back his suggestion, now being considered by the Canadian Minister of the Interior, that the Dominion Government do the same thing on a larger scale in the Canadian north. Here, says Mr. Stefansson, are from 1,000,000 to 2,000,000 square miles of land available for raising reindeer and musk-ox, a food industry capable of becoming a great source of wealth to the producers, as well as a great benefit to the world. At first one was inclined to regard the idea of Arctic stock farms as probably no more than the dream of an explorer, but it is beginning to seem almost certain that the North may be thus usefully developed.

Tobacco seeds are so minute that a thimbleful will furnish enough plants for an acre of ground.

INDUSTRIAL AUTOCRACY.

The war against political autocracy for the extension and perpetuation of democracy has been won. Now we are facing the second phase of the situation, which is that for industrial democracy: That the great waste of labor's hosts in the winning of the war against political autocracy shall not have been in vain, we must meet the second phase with no less force but of a different character.

Let no one entertain the belief that industrial autocracy has had its forces in America in any way deadened by winning the war in Europe. It is just as virulent to-day as it ever was, and while for the time being submitting to existing conditions, the mental forces are working twenty-four hours a day devising means whereby the workers' interests may be restrained and oppressed.

Organized labor has made great gains in many ways during the war. The task confronting us now is that of holding what has been gained in the way of organization and keep adding to it. Those who delve into the situation and view it from the existing standpoint, will at once see that the future is not a path of roses, and that the reconstruction days will be freighted with conflicting ideas on the solution of our new industrial problems.

The industrial autocrats—of which we have many—will, when the wheels of commerce have been changed and directed to the task of promoting the world's commerce instead of efforts at destruction, endeavor to force labor back to the pre-war conditions. This, of course, is unthinkable, and will and must be resisted by the forces of labor. It is inconceivable to labor's concept that, having fought and bled for changes of conditions and having honorably won, it should enjoy some of the fruits of the sacrifices made. This war and human waste has taught many things, and among them is, that labor, which produces the world's commerce, shall be permitted to enjoy a larger share of the profits of that production, and the force that attempts to deprive the producers of justified rights will learn that labor has rights that must be respected.

In order that we may hold fast to the gains that have been bought at such terrible cost, we must be alive to what is going on all around us. "He who would be free must himself strike the blow that breaks the chains that bind," and he who would keep his freedom must know how to do it. He can not keep it unless he regards it as a sacred trust and prepares himself, through study and acquired knowledge, of his own situation; he must not leave it to chance or to the other fellow. Thorough organization with centralized force acting for the workers is the only means that will preserve our industrial freedom.

Our large employers know the value of organization and apply it in every department of their enterprises, as it is the only means by which success can obtain. They, being in the minority in numbers, fear the results should labor adopt and apply the same principles of defense of their most vital interests, and they fight with all the force they can gather to prevent the workers from using a means they have found so efficient. They know what the weight of the force of numbers means to them, as they have weighed it to the last pound, and have more or less successfully combated it in this great country of ours.

Not so many years ago they realized that the organized forces of labor were becoming a force to be reckoned with, and in order to break or lessen this force they leagued with the great steamship lines and presented dazzling pictures of the new world opportunities to the clogged populations of southern Europe and soon filled their factories, mills and mines with labor they could get at wages far below the American standards. Every effort was made to keep them together, unorganized and ignorant of conditions that should obtain. With these hordes of immigrants hanging as a mill-stone about the neck of organized labor, progress was necessarily slowed down. The plan panned out for the time being, but when the war broke out, with the departure of great numbers of these southern Europeans who answered the call, a change took place, and the organized workers' cause moved over to the ascendant column. This was not to the liking of the industrial captains and new means of repression and oppression are being sought in the hope that the forces of organized labor championing American standards will in some way be deprived of its powers.

From our point of view the forces of organized labor must be maintained and strengthened to meet the storms that nobody doubts will blow across the industrial seas during the coming months. So let us prepare and be ready to meet the issues. If labor meets with organization equal to the organized forces of capital, capital will not fight. It will be the first to say, "Let us sit down and talk this thing over," as they have already counted the cost, and an agreement will be reached because labor does not go round with a chip on its shoulder; it has had too many costs to count in its journey upward. It is only when capital thinks it is much the stronger, with might being right, that it will issue a challenge and attempt to defend it. This has been proven hundreds of times in all industries. When one force meets a force of equal weight on the same track, it is time to begin negotiations, and no group in our social make-up recognizes this principle quicker than the forces of capital. They are familiar with cost sheets, and cost sheets tell no lies if the proper figures are put down.

To the end that organized labor may have the force necessary to meet the forces of capital with equal strength, let us organize, educate and organize.—The Tobacco Worker.

The French method of train operation differs sharply from the American. In the United States it is customary to move the trains by means of the block signal system, under the orders of train dispatchers. In France the chef de gare, a sort of sublimated station agent, is supreme. He is in absolute charge of all trains that pass through his station and of the allotment of cars within his district. A through train having reached his station, it can not leave without his permission. This practice brings about such a condition that fewer trains are operated over a French double-track line than could be handled over an American single-track line equipped with block signals and dispatchers.

Labor News

S. J. Konenkamp has resigned as international president of the Commercial Telegraphers' Union.

Marine engineers employed on the Kanawha and Ohio Rivers, who were locked out several weeks ago, are still fighting against a wage reduction of $1 a day. The rate which the owners refuse was set by the National War Labor Board.

At a conference in Seattle the State triple alliance of trade unionists, railroad brotherhood men and farmers was launched and headquarters established. A convention will be held next January, when a declaration of principles will be made. Until that time an agitation for organizaton and unity will be conducted

Officers of the New Jersey State Federation of Labor have issued a call for the forty-first annual convention to be held in Atlantic City, N. J., beginning September 22. In urging affiliates to be represented it is stated that "almost all labor legislation during the past 40 years is the result of the earnest efforts of the State Federation."

Nearly two pages of the American Pressmen, official journal of the International Printing Pressmen and Assistants' Union, are necessary to list recent gains by locals of this organization. Every section of the country is included and every unit of the international is represented in a report of continuous wage increases, shortening of hours and improved working conditions.

Officers of the United Textile Workers have informed the National Silk Association of America that a 44-hour week in the silk industry should be established at the earliest possible time and intimate that they are ready to negotiate on that basis. Three years ago the union reduced the hours of silk workers to 50 per week and last fall reduced these figures to 48.

The system of "welfare" work in the plants of the International Harvester Company have failed and restlessness is rampant among the employes, who are now discussing trade unionism. Recently the harvester trust organized a "company" union along the lines of Rockefeller's Colorado organization. The scheme has been press agented like a three-ring circus, but the unrest continues

Three years ago union coal miners started an organizing campaign throughout the Allegheny valley. They were successful, except in the case of the McFetidge Brothers Coal Company and the Pittsburgh Plate Glass Company. The former concern, however, has agreed, after three years of fighting, to recognize the union and has signed an agreement similar to that signed by other union coal companies.

Injunction judges in Detroit, Mich., have discovered that they can't bluff striking iron molders, who are acting on the suggeston of the last American Federation of Labor convention to defy these writs, let the consequences be what they may. Recently several iron molders were sentenced to five days in jail because they violated an order not to picket a struck plant. This concern is now picketed every day by a large number of iron molders.

The Public
A Journal of Democracy

Poverty is A Crime!

It isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

CARRY ON!

Uncle Sam is releasing from his service the men who went "over there" to free the world from autocracy. Thousands of soldiers are daily receiving their honorable discharges; they pocket their pay, bid farewell to their comrades, and sally forth—civilians.

There is one army, however, which must not be demobilized. That is the army of War-Savings Stamp buyers. More recruits are needed to carry on the campaign of readjustment which follows the signing of the armistice.

The army of fighters has achieved its purpose.
The army of savers must remain in "action."
"Carry on" to a lasting peace under the banner of W. S. S.!

INFORMATION WANTED.

I am representing most of the crew of the S. S. "J. E. O'Neil," in the matter of their claim for salvage services rendered to the steamship "Oregon" on or about January 19, 1918, about 300 miles off Honolulu. The following awards were made to the vessels which assisted in the salvage operations: Steamship "Lurline," her master, officers and crew, $18,000; steamship "President," her master, officers and crew, $1750; steamship "J. E. O'Neil," her master, officers and crew, $6872. One-quarter of the $6872 was allowed to the master, officers and crew of the "J. E. O'Neil." All those members of the crew who have not yet filed their claims should do so at once in order that the claims of the entire crew will be presented at the same time. Silas B. Axtell, One Broadway, New York. 7-9-19

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

Frank J. Phillips, a member of the Marine Firemen's, Oilers' and Watertenders' Union of the Atlantic and Gulf, last heard of in San Francisco, Cal., April, 1916. Anyone knowing his whereabouts will please notify Mrs. Frank J. Phillips, P. O. Box 521, San Pedro, Cal. 2-19-19

Will Lars Hansen, who was second mate on the "William T. Lewis" last January, please call on or communicate with F. R. Wall, 324 Merchants Exchange, San Francisco? Phone Sutter 5807. 6-25-19

Home News

Thirteen thousand ounces of platinum have been sold by the ordnance department of the army. The mineral sold at $105 an ounce.

Robert Dollar declares that China will retaliate with trade boycott against American goods unless she is convinced that America is not responsible for Shantung decision.

Pending action by Congress toward a permanent policy on dyestuffs importation, the War Trade Board will not issue licenses permitting traffic in German products.

North Dakota's bone dry law passed by the Fifteenth Assembly was declared not legally passed by that session of the Legislature by the State Supreme Court in an opinion handed down in the case of the State against John Schultz.

The so-called "free port" bills, in which San Francisco and other California harbor cities are vitally interested, have been taken up by a joint Congressional Committee and the legislation is to be crowded just as hard as possible at the present session.

The United States is now the chief producer of tungsten. Burma was formerly the leader, but the stimulus of war production has caused the United States to outstrip all rivals. Although possessing the richest tungsten ore deposits in the world, Burma has been handicapped by crude methods of mining.

Federal regulation of the navigation of the air is provided in a bill introduced in the Senate by Senator Sherman of Illinois. Senator Sherman, in a brief statement, declared that navigation of the air must be regulated. He declared that the recent blimp tragedy in Chicago indicated necessity for a code of aerial navigation laws.

One urgent message, consisting of ten chargeable words, is the limit that will be accepted by the Commercial Pacific Cable Company for the Philippines, China and Japan. The same sender will be allowed but one message in twenty-four hours. Officials of the company also announced that extreme economy should be used in sending urgent messages, as the cables are overcrowded with ordinary messages.

The Mutual Home Association, commonly known as the "free love colony," on Joe's bay, Puget Sound, which has been given much notoriety during its twenty years of existence, was dissolved by a decree of the Superior Court. Fight for control between two factions brought the case into court. Determination of persons actually members of the association will be announced at a later date, the court ruled, and the property distributed among them.

Declaration that before the negroes of the country will submit to "many of the injustices which we have suffered, the white men will have to kill more of them than the combined number of soldiers that were slain in the great world war," is made in a letter written to President Wilson by Rev. J. G. Robinson, presiding elder of the African Methodist Episcopal Church at Chattanooga. The letter appeals for the President's support in behalf of legislation to prevent lynchings and to force Southern States to place negroes on juries.

Domestic and Naval

Under a resolution introduced by Senator Harding of Ohio, war risk insurance would be paid to the dependents of the 233 officers and men who were lost in the mysterious disappearance of the naval collier "Cyclops" in the West Indies, in March, 1918.

The Navy's NC-4, the first seaplane to cross the Atlantic, will not yet be retired from service for permanent exhibition at the Smithsonian Institution in Washington, but will be used by its crew, headed by Lieutenant-Commander Read, in recruiting service along the Atlantic coast, it was announced recently.

It is stated that Cramps' shipyard and other concerns are to be merged into a gigantic ship building and ocean navigation corporation, the stock of which is to be sold for $69,000,000. Firms in New York, Cleveland, Gloucester, N. J., and Wilmington, Del., may be included in the big combine.

The United States submarine K-5 with a complete flotilla of every kind of vessel that the Navy operated in the war against German submarines is going from St. Louis to New Orleans on a recruiting and educational trip. It was the first submarine ever visiting the upper Mississippi. The flotilla has two bands, a baseball team, a glee club and a complete moving picture outfit.

After interruption due to the war, once more seekers of Spanish gold are prepared to resume the delving for doubloons in the hold of a buried treasure ship of the Spanish armada in the Bay of Tobermory, North Ireland. Colonel A. Foss, director of the salving operations, is reported to have placed his diving and dredging plant on a steam lighter and pontoon anchored over the sunken galleon and to be only awaiting the arrival of crack divers recently released from the admiralty work in clearing the harbors of Ostend and Zeebrugge.

Navy officers on shore duty in jobs that keep them in a swivel chair all day long must not allow their muscles to grow flabby and the waist line must be kept down, according to recent orders from Secretary Daniels. When on sea duty they have plenty of opportunity to keep fit, but in an office the temptation to remain inactive physically has been found too strong for most men, with a consequent reduction in general efficiency. So, henceforth, every officer of the United States Navy on shore duty must put in two hours each week in some physical exercise.

Demobilization of the Navy is progressing satisfactorily, according to a Navy Department announcement. A total of 316,554 enlisted men have been discharged since the armistice was signed, of which 94,306 were enlisted men in the regular service and 222,248 were members of the reserve force who were released to inactive duty, subject to call. More than 22,500 reserve officers have been returned to civil life and 7124 still are on duty. There still are 70,000 enlisted men on the reserve force on duty, most of them aboard transports. It is expected all of the reserve officers and men remaining in the service will be released within two months.

San Francisco Letter List

Letters at the San Francisco Sailors' Union Office are advertised for three months only and will be returned to the Post Office at the expiration of four months from the date of delivery.

Members whose mail is advertised in these columns should at once notify S. A. Silver, Business Manager, The Seamen's Journal, 59 Clay Street, San Francisco, Cal., to forward same to the port of their destination.

INFORMATION WANTED.

Members of the crew of the "John A. Kirby," who have not already filed their claims, should communicate with the undersigned. I have made arrangements to file claims for families of seamen and officers who were lost by submarine activities during the war; also for seamen who were injured by torpedoes, etc., or who were taken into Germany as prisoners. Such persons should communicate with me at earliest convenience in order to have their claims filed with the State Department. Silas B. Axtell, One Broadway, New York. 7-23-19

Ingwald Johnson and Charles Moller, members of the crew of the S. S. "Chehalis," on January 29, 1919, when Otto Peterson was injured, kindly report to the Secretary, Sailors' Union of the Pacific, San Francisco, Cal. 8-13-19

News from Abroad

The allied supreme council appointed H. Deuf, a French engineer, provisional director of the Port of Kehl, Baden.

The Baltic Commission of the Peace Conference presented a report recommending that the Aland Islands, between Sweden and Finland at the mouth of the Gulf of Bothnia, be neutralized under the guarantee of the League of Nations.

All reserves of the French army, including the class of 1917, will be demobilized by the middle of October, according to plans completed by the Government. There would remain in service members of the classes of 1918, 1919 and 1920.

Australia is preparing to increase the duty on merchandise now imported from the United States, with a differential in favor of Great Britain, which when put into effect practically will eliminate the exportation of American commodities to Australasia.

A revolutionary movement headed by General Lopez Gutierrez, presidential candidate, is reported by the press to have broken out in Honduras. Various encounters between rebel and Government troops were said to have occurred on the Nicaraguan frontier.

Japanese newspapers announce that three brothers-in-law of Emperor Yoshihito will soon visit the United States, Great Britain and France for military inspection. They will stay abroad for about three years. The imperial travelers are Princes Kitashirakawa, Asaka and Higashi Kuni.

The Italian War Trade Board has abolished many restrictions on importations. The list of commodities allowed to enter Italy, to be published soon, will undoubtedly be most liberal as regards American products. It is anticipated that leather will be near the top of the new list, as the public is clamoring for American shoes.

It is reported that Dr. Auguste Durand, a prominent land owner and proprietor of the Lima, Peru, newspaper "La Prensa," has sold approximately 800,000 acres of land near Huanco, on the Amazon watershed, to a Japanese syndicate. Three hundred thousand additional acres are in negotiation. This land purchase is considered the forerunner of a big Japanese colonization scheme in Peru.

A new political party was formed in Cuba recently with "non-interference of other nations in Cuba's affairs" as its principal platform. The sponsors for the party are prominent men of the Liberal and Conservative parties who have endeavored unsuccessfully to persuade their respective parties that they should not permit Americans to interfere in any way with Cuba's internal affairs.

Workers in a mine at Matehuala near San Luis Potosi, Mexico, have discovered a cave which is said to be one of the largest in the republic. It is more than 300 feet below the level of the mine and is 15 feet in width. Its length has never been estimated but exploring parties expect to survey it carefully in the near future. One of the most fantastic of its many grotesque adornments is a sulphurous fountain, which pours out continually a stream of blue water.

With the Wits

"He's a modern reformer." "That so?" "Yes, he's out to reform the reformers." "In what way?" "He's trying to educate them to discover that not everything the other fellow gets some fun out of is wholly wrong."—Detroit Free Press.

Mrs. Flatbush—What's the matter with you and Bensonhurst?

Mr. Flatbush—Oh, he insulted me.

Mrs. Flatbush—What did he say?

Mr. Flatbush—Called me an old grouch.

Mrs. Flatbush—Don't mind him. You're not so old, dear.—Yonkers Statesman.

Speaking on the prohibition situation recently a prominent liquor dealer said: "Our opponents keep quoting scripture to us, but that leaves me cold. Not very long ago I went through the Bible from Genesis to Revelation and I found only one instance of a man asking for water—and he was in hell."

A discouraged counsellor remarked to the court, "My poor client is little likely to get justice done her until the judgment day." "Well, counsellor," said the judge, "if I have an opportunity I'll plead for the poor woman myself on that day." "Your honor," replied the other, "will have troubles of your own upon that day."

An attorney was defending a man charged by his wife with desertion. For a time it looked as though it were a cinch for the prosecution, but at the psychological moment the attorney called the defendant to the stand. "Take off that bandage," he cried, and the man did it, exposing a black eye. "Your honor," said the attorney, "our defense is that this man is not a deserter. He's a refugee."

Blank had a day off, and when he returned to the office the following morning his pals wanted to know why he looked so disgruntled. "Everything went wrong," grumbled Blank. "How was that?" one asked. "Ever go fishing with a girl?" "Once." "Did she protest against hurting the fish?" "No. She said she was sure they were perfectly happy, because they were all wagging their tails."

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE SEAMEN'S JOURNAL

FOR THE SEAFARING PEOPLE OF THE WORLD.
Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 50. SAN FRANCISCO. WEDNESDAY, AUGUST 20, 1919. Whole No. 2552.

MEANING OF THE "PLUMB PLAN"

Labor's Proposal for the Nationalization of the Railroads

The "Plumb Plan" is the proposal by the organized workers of America that the railroads be nationalized under "tripartite control."

In brief, the "Plumb Plan," is a workable substitute for the autocratic control of financial dictators under private ownership.

The organized seamen of America are deeply concerned in the proposed nationalization of the railroads. For if the railroads are nationalized the merchant marine will most likely be next on the program. The Journal herewith submits explanatory statements of the "Plumb Plan" by two recognized spokesmen for organized labor.

The following is a summary of the statement recently made by Mr. Frank Morrison, Secretary of the American Federation of Labor, before the Joint Committee on Interstate Commerce:

For the sake of the record, I am Frank Morrison, Secretary of the American Federation of Labor. I am here representing the American Federation of Labor to testify that it stands behind labor's plan for the reorganization of the railways.

At the convention of the American Federation of Labor at Atlantic City on June 17, 1919, the following resolution was considered:

"Resolution No. 180. By Delegates A. O. Wharton, International Associaton of Machinists; John J. Hynes, Amalgamated Sheet Metal Workers' International Alliance; J. W. Kline, Internatonal Blacksmiths' and Helpers'; Louis Weyand, Internatonal Brotherhood of Boilermakers; S. E. Heberling, Switchmen's Union; Martin F. Ryan, A. E. Barker, United Brotherhood Maintenance of Way and Railroad Shop Laborers; J J. Forrester, Brotherhood of Railway Clerks; E. J. Manion.

"Whereas, There is now pending before the American people and their representatives in Congress the political solution of the railway problem; and

"Whereas, Every human and industrial activity, the life of every community, and the happiness and the prosperity of every citizen are dependent upon the solution of this problem; and

"Whereas, It is demanded by the private owners of these properties as the condition on which they will resume the control and operation thereof, that the people of America guarantee them privileges which they have not heretofore enjoyed, to wit, the right to earn a guaranteed return of the property investment account of the railway companies; and

"Whereas, Such a guarantee would make valid as a direct obligation of the people of the United States all fictitious securities, stock dividends, and discounted bonds issued by the railroads without consideration and representing no service to the American people; and

"Whereas, In order to make good such guarantee, rates must be raised far in excess of the level now fixed, or, in default of such increase in rates, wages must be reduced far below the level now fixed, or both; and

"Whereas, There has been presented to the Senate Committee on Interstate Commerce, and will shortly be introduced in Congress the plan for a reorganization of this industry originating with the railway employes; and

"Whereas, Labor's plan so presented provides for immediate public ownership of these properties, the protection of every honest dollar actually invested, and the assurance of an adequate return on such investment without any increase in rates; and

"Whereas, Labor's plan provides for joint control of the industry through a Board of Directors representing equally the wage earner, management, and the public; and

"Whereas, Said plan guarantees to the public the protection of its interest in procuring ultimately service at cost, and at the same time secure to the wage earner a fair share of the profits produced by his skill, efficiency and economy; and

"Whereas, Labor's plan provides for the full protection of all the rights and privileges of the wage earners as a class without invading the rights of any other classes of society, and at the same time throws wide the golden gate of opportunity for the full development of the powers of initiative, inherent to every individual; now, thereore, be it

"Resolved, By this Thirty-ninth Convention of the American Federation of Labor that we hereby approve, endorse and adopt the plan for the reorganization of the railway industry, presented to the Senate Committee on Interstate Commerce on behalf of the Railroad Employes represented by the following organizations: International Association of Machinists; Brotherhood of Locomotive Engineers; Brotherhood of Railway Carmen of America; International Brotherhood of Blacksmiths and Helpers; International Brotherhood of Electrical Workers; Brotherhood of Railroad Trainmen; Switchmen's Union of North America; Brotherhood of Railway Clerks; Brotherhood of Locomotive Engineers and Enginemen; Sheet Metal Workers' International Alliance; Order Railroad Conductors; Order Railroad Telegraphers; United Brotherhood Maintenance Way and Railroad Shop Laborers; International Brotherhood Boilermakers; Iron Shipbuilders and Helpers of America; by A. B. Garretson, Grand Chief of the Order Railroad Conductors and Glenn E. Plumb, their counsel; and, be it further

"Resolved, That we hereby pledge ourselves to use every legitimate endeavor to promote the enactment of this plan into law."

The Resolution Committee sbmitted the following report on the above, which was unanimously adopted:

"With reference to the subject matter contained in the Executive Council's report and in the above resolution, your committee, in submitting a declaration in favor of ownership or control of railroads by the United States government, recommends that inasmuch as the details connected wth the same are at present in a formative stage, the subject matter be referred to the Executive Council with instruction to co-operate with the organizations representing the railroad employes."

President Samuel Gompers of the American Federation of Labor, accepted the Honorary Presidency of the Plumb Plan League organized among the rank and file of the fourteen railway national and international organizations and generally among the organizations affiliated with the American Federation of Labor, to carry to the public and to Congress the principles of the plan now embodied in the Sims bill, which has been endorsed by the Chief Executives of the fourteen railway organizations.

In all discussions of this question it would be well to bear in mind that quasi-public corporations are created for service and not for profit. A long line of decisions, from the Supreme Court of the United States down have invariably held that the fundamental purpose of these corporations is to serve the public and that they are only entitled to a fair remuneration.

Hardly any one will deny that under private management the railroads have been financial footballs and that they have been directed by interests whose wreckage of numerous railroad systems is common knowledge. This wreckage has been accompanied by a debauching of legislatures and other political activity that tested democratic institutions.

The times call for new arrangements in the management of properties that are only made possible by the public's consent.

The passage of the Sims bill will re-establish the theory that railroads should be operated for public service rather than for private profit.

Aside from the application of democracy in these properties, and their handling by practical railroad men, the Sims bill will squeeze all fictitious value out of these properties. This will affect living costs and reduce charges the public must now meet, for then it will no longer be necessary to compel the railroads to earn dividends on millions of dollars of watered stock.

Summary of Railroadmen's Attitude.

Declaring that American democracy is controlled by an autocracy in industry and that America must become the home of industrial freedom, Warren S. Stone, Grand Chief of the Brotherhood of Locomotive Engineers and President of the Plumb Plan League, gave the key statement of labor in the hearing before the House and Senate Committees.

He argued that there could be no solution

of the industrial problem and no lowering of the cost of living as long as consumers had to pay extortionate profits on their own earnings in purchasing the necessaries of life. Labor's belief in the Sims bill, he said, was profound. "In this plan," he concluded, "we raise the banner of democracy in control of industry, we advance to a new crusade with the faith of the Pilgrims, with the convictions of the framers of the Constitution and with the hope of America for economic independence." His statement was as follows:

"At the request of these organizations the Sims bill is now before you. I speak as the voice of these two million men, delegated by them to announce to this committee and to the people of this country that they are supporting this measure with all the strength and all the unity of purpose that can move so large a body of citizens.

"Joined with us and represented by Mr. Morrison is the American Federation of Labor adding three million and a half men to that body of railway employes who instituted this movement.

"In the industrial development of this country great organizations of capital first appeared as employers. Individual workers, following the example set by capital, organized as employes. Their purpose was to secure better working conditions and a larger measure of return for their labors. The full force of capitalistic organizations has been set against labor to hold and to keep all the profits of industry. The strength of the labor unions has been exerted to wrest from capital some share of the profits for the wage earners.

"This has been a perpetual struggle by the workers to maintain a tolerable standard of existence; on the part of capital to amass greater profits. At times, both sides could ignore the needs of the public. But now the very growth of the labor organizations has brought into their ranks a great mass of the consumers. The large number of the wage earners now constitute a large percentage of the people. The extension of industry has changed the nature of the previous struggle.

"For whatever the worker receives in wages he must spend for the necessaries of life. In addition, he is always compelled to pay to the emloyer an excessive profit on his own wages. The cost of his living is determined by the sum he earns plus the profit he is charged on his own labor. And as a group, labor is forever prevented from bettering its lot because of the profits exacted by the employer. The hope of a finer life is never realized. So long as consumers are forced to pay extortionate profits on their own earnings to a third interest there is no solution of the industral problem.

"We find that this third interest absolutely controls and dominates the management of industry. It fixes wages and controls working conditions. It fixes the prices of commodities without regard to the needs of society, or the necessities of producers and consumers. We have a democratic form of government but an autocratic control of industry.

"We exist under government, but by industry we live. Under such a system the majority of a democracy can through their government enjoy only such rights and privileges as an autocracy in industry permits them to receive. This country was peopled by a race who sought within its boundaries religious freedom. It was established by their descendants through revolution as a land of political freedom. We now demand that it become the home of industrial freedom.

"This can be accomplished by extending to industry the same right of individual freedom recognized by the founders of our government in establishing this democracy. The need of mankind for the products of industry must be accepted as the basic interest in all industry. The right of the worker who supplies that need demands like acceptance. This can only be achieved by permitting producers and consumers to share in control of the management of their means of existence. The machinery for attaining this result we believe is embodied in the plan outlined in the Sims bill.

"Our belief in the efficacy of this plan is profound. We embrace this plan with all the ardor of those who sought political freedom. In this plan we raise the banner of democracy in control of industry, we advance to a new crusade with the faith of the Pilgrims, with the convictions of the framers of the Constitution and with the hope of America for economic independence."

The yate, one of Australia's numerous hard woods, seems to be the strongest known timber, with an average tensile strength of 24,000 pounds to the square inch and a maximum as high as 35,000—about equal to cast and wrought iron.

Demand the union label.

RESOURCES.

(By Henry A. McAnarney.)

The old order passes. Old in these days of a new birth means 1914 and the years beyond it. Four years of time have engulfed all of the past. The first shot of the great war was a salute to the new ruler of the world.

That ruler is the People.

Shall that ruler be swayed by impulse or controlled by judgment? Shall it throb with passion or follow the course of calm reflection?

We of to-day are the builders of the future. We have the tools, and the materials, and the skill to erect the structure. Shall we lay its foundation in rotten rock or in solid ground?

The site is ours to choose.

Ignorance is the rotten rock; enlightment the solid ground. The structure that rests upon rotten rock will crumble before the storms that are bound to form in the clash between the old and the new; that which is builded upon solid ground will long endure.

Education brings enlightenment. It enlarges the vision. It trains the mind to calm reflection; shapes its course of thought into channels of order.

The fullest development of the resources of a nation, of mankind, is achieved through the broadest system of education. That system of education wherein every person has access to learning, has the chance to develop his latent thought into positive material things, is the best for all the people. The welfare of the child toddling to school clinging to its mother's gown has been provided for. Now the welfare of the grimy man of maturity toiling in the factory, the mine, and the mill is being provided for. It is of no lesser importance to society than the welfare of the child. Neither should be neglected and both should be provided for.

Who can fix the limits of a nation's economic or political progress?

Who can analyze the vast material possibilities of the human mind? Who knows of what all men are capable?

Does a man's economic place in the nation's life control his capacity for thought? Has this laborer of brawn wielding the sledge at the forge reached the limit of his human powers?

The nation needs this man, needs all of his powers. The nation, therefore, owes to him the opportunity of developing his resources by placing education within his reach.

Congress has made the initial move in extending general education.

By its act authorizing the Bureau of Naturalization to issue the Federal textbook for training candidates for citizenship through the public schools Congress has invited all those who want an education to the schoolroom doors.

The people hold the keys.

Shall they not exercise their trust everywhere for their own benefit by throwing open those doors and bidding to enter all who wish to learn?

The full resources of the nation can never be put to use until all the people have been given the opportunity to apply their minds as well as their muscles to the work of the world.

Education of all its peoples is the prime need of America to-day!

Forget the causes of illiteracy of the present. They belong to the past! That has been forever buried!

NORWAY'S MERCANTILE SHIPPING.

Shipping is one of Norway's chief sources of income, and carrying for other nations has offset the foreign trade balance which is always against that country. Prior to the war there were but three nations whose merchant fleets were larger than Norway's, namely, Great Britain, Germany, and the United States. At the end of 1913, Norway had a merchant fleet of 2,626,708 gross registered tons. During the war this has been engaged for the most part in carrying for the allies, and the losses in tonnage have been enormous. A total of 829 ships, equal to 1,240,055 gross registered tons, have been sunk, or, in other words, the gross loss has been more than 47 per cent of the entire fleet. However, every effort has been made to acquire new ships to replace those lost, and the tonnage at the end of 1918 was something over 2,000,000 gross registered tons, the net loss during the war therefore being reduced to between 20 and 25 per cent. Furthermore, an agreement has been made with Great Britain whereby the British Government sanctions delivery from the British shipyards to Norway or 780,000 tons during the three years following the close of the war. Owing to lack of material and inadequacy of the Norwegian yards for building ships of the size desired, Norwegian yards have confined themselves during the war to building small wooden vessels.

Norwegian shipping is not only engaged in carrying for other nations, but lately lines have been established running from this country to all parts of the world. Formerly England and Germany controlled the greater part of the shipping trade to Norway, but, like the other Scandinavian countries, Norway is preparing to take her shipping trade into her own hands through her direct shipping connections with other countries overseas.

TO THE FREE FORUM.

What folly then it is, especially for the leisure class, to attempt to suppress free speech. It puts the burden of proof on them, to justify their continued possession of alleged advantages or privileges. To suppress their critics instead of meeting them in free discussion in an open forum is interpreted as a confession of guilt, an indication of weakness, a sign of fear that the truth will triumph when the wrong is exposed to the light of day.—F. F. Ingram, in Forum Folks (Detroit).

They were discussing the raising of children at the Chamber of Commerce show in Los Angeles recently and Dr. Maude Wiley, in charge of the Welfare League, told an amusing story. Seems the little girl had been spanked by her father for disobeying. With tears running down her cheeks, she ran to her mother crying, "I think papa's perfectly horrid. Was he the only man you could get?"

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Press May Criticize.

Newspapers have the right to criticize public officials for their acts and to deny them that right would "seriously impair the value and force of a democratic government," according to a decision by New York Supreme Court Justice Greenbaum. The decision was made in the suit for $25,000 for alleged libel begun by former Congressman Bennett against a New York newspaper. The newspaper attacked the methods of feeding immigrants who are detained for investigation on leaving the ship. Bennett was general counsel for the contractors. While in Congress he was one of the leaders against any restrictions of immigration.

In dismissing the case, the Court said:

"Accusations against the public official, whether they be specific or general, are not libelous, per se, when they are solely based upon official acts which he may lawfully do.

"The value and force of a representative democratic government would be seriously impaired if its officials, who are merely servants of the people, may not be freely criticized in their official acts by those who indirectly employ them. The comments may at times be unwarranted, extreme and unjust, but if they be limited to acts which do not involve illegal action or criminality they are permissible comments."

"High" Wages Not High.

"It is quite interesting to hear some persons talk about the 'high' wages of the coal miners of the country," says the United Mine Workers' Journal, official magazine of the United Mine Workers of America.

"Did you ever hear of the man who wrote a letter home from the hot lands of Arizona to tell the folks about the terribly high temperature of that region? He said: 'It is 120 in the shade and no shade.'

"And now about the miner's wages. He gets $5 a day, when he works. But what does that amount to when he has no work?

"It is easy enough to talk about 'high wages' for the miner and thus mislead the public into believing that miners are making money hand over fist. But when these people talk about 'high wages' for the miners they should be fair enough to tell the public, also, that the miners have been working only from one to three days a week and that in many places the mines have been closed down entirely for weeks or months.

"It is merely another case of 120 in the shade and no shade."

Hysterical Wave Recedes.

Edmonton, Alberta, Canada, Aug. 9.—The hysterical wave of one-big-unionism is receding in Canada, declares the Edmonton Free Press which states that the central body of this city refused to be stampeded into the o. b. u. movement and by the exercise of foresight performed a task which other central bodies find it necessary to do now.

"The net result of the whole affair in Canada," says this labor publication, "merely proves that the o. b. u. idea of general strike, of complete cessation of all industrial activity, is economically unsound, and is not a practical scheme for attaining the desired ends of labor. The general strike is impossible because the other fellow controls the food store houses and can eat three square meals a day while labor starves. It is impracticable because all society—including women and children—suffer while the fight is on. And last but not least it is impossible because the rest of society will not permit it. Neither will the state permit it. If union men persist in refusing to turn a wheel industrially, the remainder of society will do the job for them. Self preservation is the first law of nature. Because of these irrefutable facts the o. b. u. was doomed to failure at the onset, and already it is recognized generally not as the one big union but as the one big failure."

H. C. L. Causes Unrest.

The high cost of living is responsible for industrial unrest and domestic suffering, reports a commission appointed by Mayor Thompson to investigate conditions in Chicago. An appeal for relief has been forwarded to the Illinois delegation in Congress.

It is significant that the causes for high costs do not include "high" wages. In the judgment of the commission, the causes are: Exportation of food to Europe in excess of domestic surplus; profiteering by speculators; hoarders who withdraw food from consumption during the producing season in excess of normal requirements and later throw it on the market at exorbitant prices; resales within the same trade during interstate commerce; fictitious sales to enhance prices; wasteful practices by common carriers during transportation; illegal monopolistic combinations.

Another investigation is being conducted by the Anti-Profiteering League, whose chairman, Mrs. William C. Keogh, said:

"I know the working people. I know the conditions under which they struggle. I am satisfied from our investigation there would have been no strikes in Chicago had the cost of living kept within the bounds of reason. The working people have been forced to demand more wages and the pitiful part about it is that a few weeks after their wages have been increased the cost of living is boosted and they are no better off than they were before."

Capitalists Hide Their Vast Holdings.

While investigating the meat packing industry the Federal Trade Commission uncovered a remarkable financial device which can completely hide the ownership of stocks and bonds. If this system comes into general use, the commission says, it can be used to evade the payment by corporations

World's Workers

A court of referees at Manchester, England, has ruled that cotton workers who have been thrown out of work because of a refusal of spinners to accept an agreement offered by employers are entitled to government out-of-work benefits.

Allan Studholme, the sole labor representative in the legislature of Ontario, is dead. He was born in England in 1846, and was first elected to the Ontario legislature ten years ago. He was never known to be recreant to the trust reposed in him by the workers. He was a member of the Stove Mounters' union.

The current issue of the Labor Gazette, issued by the government, prints a summary of the more important industrial agreements recently made, and also makes this comment: "While the conclusion of every industrial agreement implies the acceptance, to a greater or less degree, of the principle of collective bargaining, it should not be overlooked that in a number of cases the agreement was reached only after the employes had been on strike."

Striking employes at the Canadian Vickers shipbuilding plant at Montreal, Canada, have won a big victory over this concern, which has been vigorous in its opposition to organized labor. Wages of the basic trades are advanced 7 cents an hour, making a 75-cent minimum. Laborers are advanced from 35 cents an hour to a 45-cent minimum and the 47-hour work week has been established. The company spent large sums of money to defeat the strikers, and when the latter won the local press made sparse mention of the incident.

The British government has again recognized postal unions by agreeing that these organizations shall appoint one-half of the fifty-four members of a national council that will make effective in the civil service the recommendations of the Whitley commission. The government will appoint the other members of the national council. The national council's functions include those general functions adopted by the Whitley commission for the adjustment of disputes between employer and employed. As applied to the civil service it provides for a national council, departmental councils and district and office committees.

During the evidence before the Waterside Commission in Melbourne, Constable M. Macpherson said that meetings had been held on the wharves by returned soldiers in conjunction with the waterside workers. At one meeting a speaker said they were there to see that, firstly, returned soldiers received preference of employment; secondly, that soldiers' fathers got preference; and thirdly, that waterside workers obtained it. The speaker added that they would have to force "scabs" off the wharves, and if they could not do it constitutionally bombing parties would be formed. Another speaker said "scabs" had to be chased from the wharves and killed if necessary. This speaker referred to the British flag as a "dishcloth." The war evidently did not leave this digger as patriotic as it should have.

DO YOU KNOW

That War-Savings Stamps pay 4 per cent. compound interest?

That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?

That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?

That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?

That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?

That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?

That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

INFORMATION WANTED.

Any one knowing the whereabouts of L. C. S. Admiraal, a member of the Eastern and Gulf Sailors' Association, last heard of in Rotterdam, Holland, 1914, will please notify his brother J. J. Admiraal, 51 South Street, New York, N. Y. 8-13-19

Information wanted regarding John Johnsen, native of Bergen, age 44, last heard from in New Orleans, 1917, was then on schooner "Lizzie M. Parson," going to France. Any information will be appreciated by his brother, Andrew Johnsen, Sailors' Union, Seattle, Wash. 8-20-19

Will Ingwald Johnson, Charles Moller, and any other member of the crew of the S. S. "Chehalis," on January 29, 1919, when Otto Peterson was injured, kindly report to the Secretary, Sailors' Union of the Pacific, San Francisco, Cal. 8-13-19

Pacific Coast Marine.

July was an exceptionally good month both for cereal and lumber shipments from the Columbia. The total flour shipments were 228,509 barrels, valued at $2,177,729; and the total wheat shipments 401,192 bushels, valued at $1,002,830.

The five-masted windjammer "John W. Wells," which has been chartered by Balfour, Guthrie & Co., to load barley at San Francisco for the United Kingdom, was built at St. Helena, Oregon, for the McCormick interests, but was sold recently to the Gulf Mail line.

Amid cheers from nearly 20,000 persons, including editors from forty States, the Skinner & Eddy Corporation's world champion shipbuilding plant at Seattle launched the 9600-ton steel steamship "Editor" at 9 o'clock a. m., on August 16 in honor of the National Editorial Association's annual convention in Seattle.

Relief in the traffic jam between San Francisco and Honolulu is at hand with the release of the big liner "Wilhelmina" by the War Department. The ship has been engaged in transporting troops from France to this country. It is one of the vessels of the Matson Navigation Company, in whose hands it will be the latter part of August. It will not enter into active passenger carrying service until October, owing to necessary overhauling.

The Pacific Steamship Company, according to a list filed with Congress, operates sixty-three vessels, making this company the largest ship operator in America, Vice-President A. F. Haines announced during the week. These figures show that thirty-two ships are managed and operated for the Shipping Board; three operated for the Shipping Board; nine managed for the Shipping Board and twenty-three ships owned and operated by the company.

The six wooden ships now lying in Lake Union, Wash., which were reported as sold to the Universal Shipping and Trading Co., Seattle, are the "Vincennes" and "Oelwein," barges, built at the Seaborn plant in Tacoma; "Imufka," hull, built by Barbare Bros., Tacoma; "Cineas," hull, built by Nilson & Kelez, Seattle; "Anthon" and "Addison," hulls, built by Sanderson & Porter, at Raymond. All of the vessels are of the Ferris type, and it is probable that most of them will be completed for sea as sailing craft.

Establishment of a thirteen-day transpacific service between San Francisco and Yokohama, effective with the sailing of the liner "Siberia Maru," was announced recently by officials of the Toyo Kisen Kaisha. This will be made possible by eliminating the call at Honolulu and the utilization of the great circle route. The existing time via Honolulu is twenty-one days. The "Siberia" will inaugurate the new service September 5. Later, if the demands require, another vessel will be placed in the same service. The other units of the fleet will continue to operate as at present, via the Hawaiian port. The saving of four days is expected to make the short run popular.

The American troops in Siberia, including officers, are so thoroughly disgruntled that they give vent to their feelings by singing a new song entitled, "What Are We Here For?" according to Major R. W. Fuller, U. S. A., retired, who arrived at San Francisco during the week. He is quoted by a local daily, as follows: "Every officer and every man in the American army in Siberia really wants to know what they are there for. One of the generals said he did not know why he was there; that we really had no policy at all and therefore had not the slightest reason for being there. If the country really knew the real situation in Siberia, they would rise and demand the troops come home, for they have no business there."

At the conclusion of a conference with local representatives of the United States Shipping Board, John H. Rosseter announced that the following recommendation for additional vessels for San Francisco and the Pacific Coast would be made to the United States Shipping Board at Washington: Two between San Francisco, Manchuria, China and Japan; four between San Francisco and India; two between Tahiti, India and Honolulu; ten beween San Francisco and Coast ports and European countries; four between Puget Sound, San Francico, Australia and New Zealand; three between San Francisco, Seattle and Central and South American ports; three between San Francisco, Seattle, India and New Zealand. Forty-eight vessels, now being constructed in Pacific Coast shipyards, to operate on Pacific Coast as tramp steamers, twenty of which will be assigned to San Francisco.

The foreign trade committee of the San Francisco Chamber of Commerce has appointed a subcommittee to consider the matter of the radio telegraph service with the Far East in view of the approaching discontinuance of the Government service when the war demobilization is complete. The cable and radio stations were taken over by the Naval Department last December. During the first month only 27,000 words were transmitted from San Francisco. In June the traffic had increased to 130,000 and in July to 300,000. Only 25 per cent. of the messages were on Government business. G. Marshall Dill, chairman of the foreign trade committee, has appointed a subcommittee which will secure information and acts from all parties interested in the wireless service, with a view to ascertain what conditions will inure when the Government control passes into private hands on the ratification of peace.

The Pacific Steamship Company's "Senator," now on her last voyage in the Nome service, may be converted into a full freighter this coming winter. Plans of such alterations already drawn and now being considered by the company indicate that she can be turned into a cargo carrier of 3000 tons measurement capacity. As a passenger and freight carrier the "Senator" has always rendered splendid service and been a good money-earner; but for present day demands she is wanting in speed. Hence the likelihood of her being changed to a freight carrier exclusively. However, with her return from Nome she will take the run of the company's steamship "Governor," which is soon to undergo her annual overhauling; and after the "Governor" is again ready for commission she will replace the steamship "Queen" while the latter also overhauls. Then it is likely that the removal of her passenger accommodations will be undertaken.

The King Coal Company of San Francisco has recently added two large automatic discharging barges to the service and there will be two others in the immediate future. Each is capable of delivering, weighing and placing into the ship bunkers a total of more than 1000 tons in an eight-hour day. The advantage of the new system is saving much time to the operators of ships. This is being taken advantage of by numerous concerns, notably the Dodwell Company, which is handling a large fleet of Japanese freighters. These vessels come from New York or the Orient and it is seldom that they remain more than a day. Under the former conditions it would have taken from two to three days to bunker each and that time would have been lost to the ship. As it is reckoned that each of the big freighters is worth more than $1000 a day in charter money, the advantage of the rapid bunkering system is revealed as one of the big assets of the port.

The steel steamers "Point Adams," "Point Bonita," "Point Judith" and "Point Lobos," owned by the United States Shipping Board, are reported sold to the Pacific Mail Steamship Company, at an average price of $200 per ton deadweight. These vessels were built by the Albina Machinery and Engineering Works, Portland, Ore., in 1918, and carry each 3760 tons deadweight, 2675 tons gross and 1664 net, fitted with triple expansion engines of 1400 i. h. p., two oiled-fired Scotch boilers, speed ten knots, consumption 18 tons oil per day, dimensions 289 x 44 x 21.6 feet, draft loaded 19⅝ feet, bale space 165,173 cubic feet, grain space 174,134 cubic feet. They are classed to Lloyd's Register. It is understood that the vessels were sold on the terms of 25 per cent. cash, 12½ per cent. the first six months, 12½ per cent. the first twelve months, totaling 50 per cent. of the cost in the first year, and semi-annual instalments of 6¼ per cent. thereafter, full payment being made in four years.

Plans for the building of a 10,000-ton floating drydock and acquiring an additional 60,000 square feet of State property were revealed when J. J. Tynan, manager of the Bethlehem Shipbuilding Company, applied to the State Board of Harbor Commissioners for approval of the plans. According to Engineer White of the commission, the plans have been taken under advisement pending further conferences between the commissioners and officials of the Bethlehem Company. The 60,000 feet of land, officials pointed out, are needed for the building of additional outfitting docks. The land in question is on the east and north side of the Potrero plant, where the drydock will also be built. San Francisco's natural port of call, where ships may be repaired, and the growing feature of the city as a shipbuilding center, with the expansion of the Bethlehem Company's business, necessitates the move. Work on the drydock will be started at once, together with the proposed new outfitting docks. it was intimated by Tynan. With the completion of the floating dock the Bethlehem plan will have two 10,000-ton drydocks.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.
Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, AUGUST 20, 1919.

PROGRESS ON THE PACIFIC.

After a series of negotiations with owners and managers of vessels sailing from Pacific Coast ports the following new schedule of wages and overtime has been agreed to and is now in full force and effect:

Sailors, quartermasters, stationmen and watchmen, $90.00 per month; boatswains, $95.00 per month; carpenters, $105 per month. These wages are applicable to all classes of vessels, in all trades, except towboats, where sailors' wages are fixed at $105.00 per month.

Overtime pay for all hands in the deck department is 75 cents per hour for ordinary shipwork. When working cargo the overtime rate is $1.00 per hour, except only as provided in the following: (a) In oil vessels all overtime work is to be compensated for at the rate of 75 cents per hour. (b) In steamers of the Pacific Steamship Company and the Alaska Steamship Company, when in Southeastern or Southwestern Alaska ports, all overtime pay shall be at the rate of 75 cents per hour.

Wages for firemen, oilers, watertenders, wipers and coal passers are to be $90.00 per month in all trades. Overtime pay has been fixed at the rate of 75 cents per hour.

In the stewards' department the wages of cooks, butchers, bakers, waiters, and in fact all hands, have been advanced $15 per month. The rate for overtime, in this department, under the new rules is 60 cents per hour for all work performed outside of the regular working hours.

The old working rules in all three departments remain substantially as before, with these exceptions: When the crew are required to eat ashore 50 cents is to be allowed for breakfast, and 75 cents each for dinner and supper. When the crew are required to sleep ashore 75 cents, per person, is to be allowed for room rent.

A notable improvement in the working rules was made for the crews of all sailing vessels by introducing a regular Saturday half-holiday, both at sea and in port.

Revised pamphlets containing the new wage schedules and working rules are now in print and will be available shortly for distribution to members at the respective headquarters and branches of the three marine unions.

It is, of course, wholly unnecessary to state that the net result of the negotiations with the Pacific Coast shipowners is most gratifying to the organized seamen. In a large measure, the shipowners' willingness to concede wage increases and make other liberal concessions was due to the fact that the three unions involved have faithfully observed the terms of previous agreements. The organized seafarers on the Pacific Coast have been frank in recognizing that collective bargaining with employers creates obligations and responsibilities no less than advantages.

But aside from this recognition of mutual responsibility the present standard wages and improved conditions of American seamen could not have been established were it not for their ability to "pull together." In other words, the constant and steady improvement in the conditions of seamen is but the reward of earnest and patient endeavor to apply intelligent organized self-help in the complex industrial relations of men.

In the darkest days of the International Seamen's Union of America, when less than 4000 men comprised the entire membership, unbounded hope and unshaken faith—mingled with a grim determination to carry on—were often the sole assets of the Union.

Well, hope, faith and fortitude to endure for a righteous cause has brought its reward. To be sure the goal has not been reached, but there is almost unlimited satisfaction in knowing that our craft is on a safe course—always headed for a brighter and better day!

BACK TO THE LAND.

Notwithstanding many earlier discouragements the process of going "back to the land" is now possible in California to the man of moderate means.

Charles F. Shaw, Professor of Soil Technology in the University of California, has just been named examiner of all lands offered for sale to the Land Settlement Board of the State of California.

October 1 has been named as the closing date for receiving offers of land tracts from 4000 to 12,000 acres in area, and November 1 has been announced as the day by which Professor Shaw hopes to complete his investigations.

Already 1500 applications for farms or farm workers' allotments have been filed with the Land Settlement Board, of which one-third are from returned soldiers. Under the amended State act, other things being equal, soldiers will be given the preference in the new land settlements.

Under the terms of the original California State Land Settlement Act, passed by the Legislature of 1917, there has already been a successful demonstration of State planned rural development. Six thousand two hundred and nineteen acres, located in Butte County were bought by the State, improved, subdivided, etc., and sold at cost to actual settlers, on easy terms. When this property was purchased by the State, no landowner had lived on it for twenty years. It was farmed by tenants and hired labor. To-day 120 families live in their own homes and till their own fields, and in these homes there are over 200 children. The selling price of land has been increased, not only within the boundaries of the settlement, but around it. It has increased the revenue from taxes, increased the business of the surrounding towns, added to the political and social strength of the State, has added to the aspirations, the comfort and happiness of every family. This has been done without any cost to the taxpayers of the State. It encourages those who believe in an enlarged use of the State as an instrument of direct service in those things that affect the general welfare.

Although less than two years old, the settlement has become widely known. Officials from ten American States, from Canada and Australia have visited the colony and made reports on the scheme and its results. Agricultural and engineering papers, magazines and reviews have described and discussed its plans and the State policy of which it is a concrete illustration. This challenge to public attention is not due to the size of the settlement, or the amount of money appropriated to finance it. It grows out of the fact that it is an attempt to solve in a definite way some problems of rural life in the United States that for the last twenty-five years have caused growing anxiety and unrest.

As a natural sequence to the splendid demonstration in Butte County this year's Legislature appropriated $1,000,000 for continuing the settlement policy with a preference for veterans of the army and navy. The same Legislature authorized a bond issue of $10,000,000. The latter, however, will have to be ratified by vote of the people. If approved, it will enable the board to proceed with land settlement work in a more systematic and economical way than would otherwise be possible.

Thus it seems that California is the first State to take definite action in providing homes for discharged soldiers. And from present indications it looks as though California would have the first soldier settlement in this country. Other States have made appropriations but none have acted.

For further detailed information upon the foregoing address Secretary, State Land Settlement Board, Berkeley, California.

During the month of July, 108 vessels aggregating 400,039 gross tons (600,058 deadweight tons) were launched from yards under the control of the United States Shipping Board. A world's record in launching was established in July, 1918, when 124 vessels of 423,167 gross tons 634,750 deadweight tons) were sent overboard from Shipping Board yards. The launchings of July, 1919, were therefore only sixteen less than the number launched during the record month of last year. The gross tonnage delivered to the Shipping Board to date is 4,542,278 (6,813,417 deadweight tons).

AGAINST CONSCRIPTION.

The National Capitol has not yet recovered from the shock of the terrific, and wholly unexpected, attack upon the Chamberlain-Kahn Conscription bill made by the National Guard Association of the United States which is holding its annual conference in the Seventy-first Regiment Armory in New York City. Every member of the House and Senate Military Affairs Committees received last week a telegram, stating definitely and explicitly that the men who carried the day at Chateau Thierry and the Argonne, are in no mood to trifle with permanent peace-time training and conscription in America. That telegram, which was only partially carried by the press associations, deserves rehearsal in full:

Four million veterans of the great war are a sufficient nucleus for the organization of any army which may be required for some time to come.

The Chamberlain-Kahn bill abolishes the citizen soldiery of the United States which public sentiment demands shall be the backbone of its military strength; and, at a time when the people are struggling under the burden of excessive taxation, creates, at enormous expense, the machinery for the establishment in America of that detestable Prussian system which is abhorrent to the American people.

The League of Nations and the Chamberlain-Kahn bill can never go hand in hand.

Either the League of Nations is a snare and a delusion or there is no necessity for the passage of the Chamberlain-Kahn bill.

The Chamberlain-Kahn bill is the swan song of the General Staff. Failing utterly in its efforts to secure necessary recruits for the regular army it now attempts in time of peace under the guise of a universal service bill to resort to conscripion, and to seize from their homes the youth of America for service in the regular army in the Philippines, in Hawaii, in Porto Rico, in the Canal Zone and even in Russia should the military dictator created by the provisions of this vicious bill determine that the emergency demanded it.

The Chamberlain-Kahn bill destroys and places a stigma upon the citizen soldiery which bore the brunt of fighting as shock troops, and creates a centralized military oligarchy with dangerous potentialities for political abuse, and the destruction of the freedom which is vital to the existence of the country.

Therefore the National Guard Association of the United States, through its officers, executive and legislative commitees in conference assembled, representing that great body of citizen soldiers whose record of efficiency entitles it to the fullest measure of support, opposes the passage of the Chamberlain-Kahn bill.

Their nominations having been confirmed by the Senate, Judge John Barton Payne, Henry M. Robinson, and Commander Thomas A. Scott, whom the President had nominated as Commissioners of the United States Shipping Board, assumed office during the past week and attended the regular meeting of the Board. The Shipping Board now has a full membership, consisting of Judge Payne, Vice Chairman Raymond B. Stevens, and Commissioners John A. Donald, Henry M. Robinson, and Thomas A. Scott. Judge Payne has been elected Chairman of the Board.

A recent meeting of the New York Branch of the Eastern and Gulf Sailors' Association was addressed by Nicoline Edouardo, a representative of the Italian Seamen's Union. Comrade Edouardo congratulated the union upon its victory in the recent strike; he also gave interesting details of the progress made by the organized Italian seamen and predicted closer affiliation with the International Seamen's Union of America.

Demand the union label.

MUZZLING UNION SPEAKERS.

Pennsylvania Workers Not Permitted to Hold Meeting—Not Even on Ground Owned by Union Member.

The struggle to secure the rights of free speech and free assembly in Western Pennsylvania has been an unending, discouraging one. Yet the National Committee for Organizing Iron and Steel Workers has made some progress. For, in spite of numerous arrests and the other harassing tactics resorted to by the Steel Trust hirelings occupying official positions, it is now possible to hold meetings unmolested in McKeesport, Rankin, Braddock and Homestead. In all of these places the greatest labor meetings ever seen in this section are being held, and men are swarming into the unions by the thousands.

But, surrounding Pittsburgh are boroughs and boroughs. Nearly all are important steel centers and all are bad. Some are worse than others. The worst one so far discovered is North Clairton.

North Clairton is a typical one-man steel town. It is a place where the Steel Trust has always had its own sweet, unhampered autocratic way. The casual visitor to the Pittsburgh section would not likely ever hear of North Clairton. Yet, within its tyrannical borders, some four thousand steel workers live out their miserable existence working in ten and fourteen-hour shifts with its crushing, killing twenty-four hour shifts at the weekly changes. The Natonal Committee could not ignore the plea for organization on the part of these enslaved human beings.

Several weeks earlier an application to the Burgess of North Clairton for a permit to hold a meeting was made. It was instantly and insultingly refused. Repeated but unsuccessful attempts were made to rent a hall. Hall owners in some cases were sympathetic, but the terible reprisals against those who ignore the edicts of the Steel Trust have left a fearful memory behind, and they did not dare.

P. H. Brogan owns a lot in North Clairton. He is local secretary for the National Committee in that place. He is a fighting man who fights. "Hold your meeting on my lot," he suggested. So it was arranged for Sunday afternoon, August 3. Secretary Brogan had a sign which he had fastened over his little office torn down and destroyed. He suffered many other indignities. But he fights and all this made him mad. He was arrested for handing out bills advertising the meeting that he had arranged for on his lot. But the arrangements were completed, and just before the first speaker was ready to tell the story to the workers, Constable White and Burgess Williams came on the lot, came on the private property of Secretary Brogan, and forbade the meeting. "It is against the State law," said the Burgess. "Hold the meeting at your peril," warned the constable.

The meeting was opened by Organizer J. G. Brown, but at the end of a couple of minutes the constable, accompanied by a half dozen Carnegie Steel Co. police blustered up through the enormous crowd and arrested the speaker. Then, the constable completely lost his head. But there was another head there, Captain Bowen, chief of the Carnegie Steel Co. police, was on hand. He was one of the scabs of the great Homestead strike of 1892. His brutal tendencies, his hatred for unions has been developing in each of the twenty-seven years since that time. He took charge of the situation. He pointed out six other organizers as by instinct. Organizer Joe Manly of the Structural Iron Workers was arrested for coming from Pittsburgh; Secretary Foster as "a suspicious character"; A. F. of L. Organizer J. L. Beaghen "for being along"; A. A. Lassich, organizer of the Mine, Mill and Smelter Workers, was asked if he was "a member of the American Federation of Labor." He admitted it and was immediately arrested. R. L. Hall, organizer of the International Association of Machinists, was accused and convicted by Capt. Bowen of "doing nothing," and taken in. Secretary Brogan was yanked to jail without explanation.

All the men were marched by the heavily armed company gunmen up the big hill, through the streets of the town, across lots to the city jail in Clairton a mile away. Upon arrival, a demand was made to know the amount of bail required. The demand was ignored and all the men thrown summarily into the filthy cells of the suffocating jail. This jail has cells so ingeniously constructed that a fair-sized man can neither stand up nor lie down straight. One can only sit in a humped-up position. Each was furnished with cell, a toilet that had apparently seen much use and little attention. The stench on a hot day like August 2 was sickening.

A friend, seeing the door from the office open for a moment came in and asked the prisoners if he could be of service. One of

Honolulu Agency, August 4, 1919.
Shipping dull; prospects poor.

JACK EDWARDSON, Agent.

P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Aug. 14, 1919.
The regular weekly meeting was called to order at 7 p. m., Eugene Burke in the chair. Secretary reported shipping fair.

EUGENE STEIDLE, Secretary.

42 Market Street. Phone Kearny 5955.

Seattle Agency, August 7, 1919.
Shipping good.

J. LEONARD NORKGAUER, Agent.

Grand Trunk Dock. P. O. Box 214. Phone Main 2233.

San Pedro Agency, August 7, 1919.
No meeting. Shipping at standstill on account of mates' strike on steam schooners.

JOE MACK, Agent.

613 Beacon Street. Phone Sunset 336. P. O. Box 54.

DIED.

Albert Alsin, No. 160, a native of Sweden, age 64. Died at Kenia, Alaska, August 4, 1919.

The Army transport "Sheridan," on the way from Honolulu to San Francisco with a propeller missing and a coal supply dangerously low, has appealed for aid to Admiral Hugh Rodman of the Pacific fleet. Admiral Rodman immediately ordered the destroyer repair ship "Vestal" to leave as soon as possible to meet the transport. It was stated the "Vestal" would reach the "Sheridan" some time Monday. If necessary the "Vestal" will tow the "Sheridan" into San Francisco. If not, she will merely convoy the transport into port. At last accounts the "Sheridan" was 1140 miles out from San Francisco. She had a coal supply of 450 tons and was burning 60 tons a day. Her speed was seven knots an hour. The "Sheridan's" appeal for help was based upon her decreasing coal supply and the possibility of decreased speed. She was in no immediate danger.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Politicians drowsed until labor threw ice water in their faces. And, oh, what sputtering and cursing has ensued among the rudely wakened sleepers!

But it did wake them up. The heaviest heads in the whole Van Winkle corps flew back with a jerk, and dull eyes were opened for the first time to the senational fact that if the present leadership in America can do no better than let things drift from bad to worse, then labor will take the helm before everybody is left pounding on the rocks.

Congress was about to adjourn, if you please! Of course the Senate would stay behind to discuss Shantung, and certain committees of the House would stay in Washington to listen at leisure to testimony on divers subjects. But the others would go home, or to the mountains or seashore. Wages were being devoured by the ravenous cost of living, but that misfortune had become for politicians what we used to call "an act of God." Nobody could help it; then why worry? So Congress got up and started to leave, when a heavy hand fell on its shoulder—and a shadow passed over the White House.

Labor had entered the Executive Mansion. The heads of the railroad brotherhood called on the President. The cost of living must come down, they told him. If a great disaster is to be averted a more just balance must be struck between the day's wage and the daily expense of the average American. The labor leaders appeared at the White House as patriots, as the friends of their fellow men, as Americans anxious first of all to preserve order and promote the prosperity of their country.

These labor men told the President that a great bitterness was creeping into the hearts of the wage earners; that excessive bills for food and clothing were crowding faith out of the workman's home. A great strike on the railroads in revolt against the intolerable pinch was being agitated by impatient men, they explained to Mr. Wilson. To prevent such a walkout the leaders were doing their best. Would the President of the United States please help by allying the Government on the side of the people in the fight against oppressive prices?

The President was deeply impressed. In the middle of the conference there came a message which deepened the impression. The railway shopmen had struck. Three hundred had quit in Washington, 700 in Alexandria, 1500 at Norfolk. The figures rose as reports came in from the north and west. Fifty thousand were out by nightfall, and twice as many by noon the next day.

Mr. Wilson sent in haste for Attorney-General Palmer, Director-General Hines, of the Railroads, and other experts on food, wages and justice. He ordered them to begin immediately a probe into profiteering. He sent a private word to the Capitol, which stopped the decamping lawmakers in their tracks. Even in August the legislators must stay in Washington—or the railroaders might leave their engine cabs and brake handles. Mr. Wilson canceled his tour of the Nation in behalf of the treaty and league.

Thus the Big Friday at Washington came to an end. But Saturday proved still bigger. The Plumb Plan for disposing of the railroads was offered in Congress by Representative Sims. Had the dome dropped in the reactionaries would not have been more scared. No need to describe this plan to readers of a labor paper. "Without a word of warning!" exclaimed the big dailies—which means nothing, except that the editors of those big dailies had refused for weeks past to print the details of the plan which the railroad men have been sending out from their headquarters here. They imagined they could kill the truth by ignoring it and keeping it from their readers.

A week has passed at the time this is written, yet not one prominent man in Congress has come out in opposition to Labor's plan, and told why he opposes it. The head of one of the big news agencies told me yesterday that his entire Washington staff had spent the day trying to get some big man in either party to stand up in public and tell why he is against the Sims bill. No one should be deceived by this blushing evasion of the limelight. Unless a miracle has happened over night, a good majority in Congress is opposed to the Plumb Plan. But that majority will swing partners quickly enough if it suspects that the Plumb Plan will appear to the general public as the best one in sight. If they could have kept the Plumb Plan out of the big newspapers the public would never have had a chance to judge for itself, and Congressmen might have scratched the backs of their big constituents by enacting a Treasury guaranty of dividends to the private security holders.

And right there we come to the crux of the whole crisis. The private security holders have their own bill written. It provides that the roads shall be restored to complete private ownership and management, after which the Interstate Commerce Commission shall be obliged to grant freight and passenger rates sufficient at all times to insure 6 per cent. profit to stockholders. This is the bill that is backed by the United States Chamber of Commerce, whose membership has just voted in a referendum against Governmnet ownership of the lines.

Many foolish opponents of the Plumb Plan have been preparing to fight it with the argument that labor wanted a scheme whereby its own wages would be guaranteed and the Treasury would have to pay all deficits resulting from inefficient management by the workers. The education of these foolish opponents will be improved when they find that the private owners of the lines will not take the roads back unless they also have a guaranteed profit, no matter how much they may neglect the management.

As between the plan of labor and the plan of private capital, the taxpayer has every reason to side with labor, when he learns the facts. Under private management the public will have no say nor direct information about methods of operation. Like the Merchant of Venice, the stockholders will demand their 6 per cent., flaunt the law in the face of the public and the Interstate Commerce Commission and cry: "It is written in the bond; we stand on the bond."

Under labor's plan the big fixed charge against the lines will be only 4 per cent., since the roads will be bought with Government bonds floated at that rate. Then the public will have five of the fifteen general directors of the lines. Through them it will know of, and can protest in time against, bad management, even if we assume that the five technical directors and the five labor directors were disposed to conspire against the Nation, which is ridiculous. To these things must be added the benefit of reduced rates as often as the earnings warrant a reduction.

Your correspondent knows that the chief lobbyist for the railroads reported to his clients that Glenn E. Plumb made a fine impression on the Congressional Committee last week. But that is for private knowledge. In public Plumb will still be held up as a theorist and demagogue. But Plumb is not through with the Committee yet. Let us wait until he submits his detailed proof that the roads are hopelessly bankrupt under private ownership, and that Wall Street is planning an enormous further robbery of the Nation if the lines are returned to private hands.

Fear is widely expressed that if the workers have their way with the railroads then we will move rapidly toward the nationalization of all the so-called public utilities. That contention is in the nature of a red herring at this juncture. The Plumb Plan will not be adopted unless the complete and final failure of private operation is proved twice over to Congress, as Plumb thinks he can prove during the next six months. And when Congress believes this unpleasant thing it will be after a majority of the people see it. Further nationalization will come or be rejected on the same test; it will not be an unnecessary experiment, but a last alternative. If there is no need for more nationalization it won't come.

Meanwhile it is thought the striking shop repairmen will obey their leaders and return to work pending a decision by Director Hines on their wage demand. It must be remembered, however, that the repairmen have already waited six months for that decision, and are not in a mood to stand for much further delay. Also, their strike was having a deadly effect on the opposition, which always increases the disposition to stay out.

Washington is much interested in the Chicago stock yard workers, 35,000 of whom have struck to enforce a demand that state militia and deputy sheriffs be removed from the environs of the plant. The charge that prejudice between white and negro workers is responsible for the trouble there is explained by officers of the stock yards labor council, who contend that no feeling prevails against any negroes save those who refuse to join the union. In evidence of this they state there are about 12,000 negroes working for the packers, 2,000 of whom have joined the general strike against the other 9,000 and the presence of militiamen and sheriffs.

At this writing the Brooklyn transit strike is still 100 per cent. successful, hardly a car moving there. While Mayor Hylan has ordered the receiver for the road to deal with the union, there is some

chance that a settlement may be postponed until the walkout spreads to Manhattan and becomes general in the metropolis.

The Amsterdam Conference of the International Federation of Trade Unions is now over, with only incomplete reports of its work having reached America. As reported in the New York Tribune, however, "the Convention demonstrated clearly the difference between the European and the American viewpoints. Where nearly all the Europeans are Socialists and Internationalists, the Americans are opposed to Socialism, and came in constant conflict with the others. Except during the election of officers, the Americans were in the minority on every division."

Appleton, an Englishman, was elected President of the International Federation, being supported by the American delegates. The principal discussion appears to have centered about the relative merits of the program adopted by the Berne Conference and that adopted by the Labor Commission of the Paris Peace Conference. The Amsterdam Conference seems to have approved the Berne program in full, and the Paris program only in part. The question then arose as to whether the one or the other should guide the delegates to the October conference in Washington. Again the Berne program seems to have been endorsed, although President Gompers declared that the Americans would not be bound by that decision.

A still more important resolution is one which would bind all the labor groups represented not to go to Washington in October unless all bars against delegates from the former Central Empires and Russia shall be removed. Here again Mr. Gompers protested, and the bulk of the European labor unions may not attend the Washington conference unless the program is largely modified. The Americans are believed to have concurred in the demand that the blockade against Soviet Russia be lifted.

LOSSES WOULD FEED ARMY.

The meat ration for an American army of 3,000,000 men could be furnished from the animals lost through exposure in a single year, exposure meaning starvation in most cases.

These figures are taken from the government reports of the last recorded year, 1917-18. Most of this wastage is preventable and the American Red Star Animal Relief branch of the Women's Pennsylvania Society for the Prevention of Cruelty to Animals, which has just celebrated its fiftieth anniversary, will, during the coming year, stress its efforts in this direction.

In such states as Maine, where almost all stock is farm fed, only two in 1000 of the cattle are lost through exposure, though it is as cold as Colorado, where the loss is twenty-seven in each thousand, because so many cattle are on the open range throughout the year. In Montana the loss runs as high as thirty-four, while for sheep the figures reach fifty-eight in Wyoming.—Philadelphia Ledger.

The community which leases its lawbreakers has no logical claim to respect for its laws, and in fact receives very little of that.

PEACEFUL REVOLUTION.

The city workers are not the only pioneers of social progress. The farmers are not only falling into line but in some states are blazing the way. The program of the organized farmers of North Dakota—the Non-partizan League—has severely shocked the banking and other corporation interests that had relied upon the supposedly conservative farmer to defer indefinitely—if not to absolutely defeat—the progressive legislation proposed by trade unions, socialists and other radical reformers.

The much-mortgaged farmers of North Dakota did not rest when they had adopted a program; they took the action necessary to put it into effect. A year ago the Non-partizan League obtained control of the lower branch of the legislature and elected the governor; at the last election it gained control of the upper house and of the State supreme court. The farmer legislature enacted laws providing for the establishment and operation of a State bank through which funds will be provided to build and operate terminal grain elevators and flour mills and to engage in other industries. These enterprises will be under the control of an industrial commission. The State will also establish an association through which its people will be enabled to build and own their own homes. Under another law any city or county may engage in any industry or business except the manufacture of intoxicants. The legislature also enacted laws prescribing a minimum wage for women, restricting the weekly hours of labor for women to 44, laws to govern taxation and the granting of franchises, a mining law and an up-to-date workman's compensation law with state insurance of employers' risks and liberal compensation.

This peaceful revolution in industry, banking and politics is bitterly resented by the press of the big cities and other reactionary forces. The fact that the measures enacted are approved by two-thirds of the people has not deterred the moneyed interests from attempting to prevent their being put into operation. The Supreme Court of the United States has been asked to pass upon their constitutional validity. It would seem to be a foregone conclusion that the court will respect the wishes of the people of North Dakota and sustain the action of their representatives in the legislature. Should some technical flaw be found and the laws be declared unconstitutional a wave of radical sentiment will be created that may result in changes compared with which those proposed by the farmers of the Northwest will seem conservative.—The Painter & Decorator.

"Mother," said George, as he presented his office chum, who had come to spend Saturday afternoon with him, "this is my friend Mr. Specknoodle." Now it happened that the lady who is the heroine of this veracious history was rather deaf. "I'm sorry," she said, with her hand to her ear, "but I didn't quite catch the name." "My friend Mr. Specknoodle!" shouted George. "I'm sorry," said his mother, "but I can't hear it distinctly." "Specknoodle!" George fairly bellowed. "I'm afraid it's no use," said the old lady, as she sadly shook her head. "It sounds just like 'Specknoodle' to me." Then George said something else, and her hardness of hearing came in useful.

FREE SAFE DEPOSIT SERVICE.

A great many banks, trust companies, and safe deposit concerns throughout America have joined in a movement to offer the public free safekeeping for the Liberty Bonds and War Savings Stamps of small holders, and some of them are actually advertising this offer extensively for the protection of people who have no safe deposit facilities of their own.

For years safe deposit facilities have usually been greater than the demand, and bankers with vaults and small boxes to rent have wondered how they could interest the public. Before the Liberty Loan flotations hardly one person in ten had ever heard of safe deposit facilities or knew that for from $3 to $5 a year it was possible to rent a box large enough to keep valuable papers and jewelry in a vault not only fireproof but secure against every emergency.

Since 20,000,000 Americans have become Government bond holders and purchased fully a billion and a quarter dollars' worth of War Savings Stamps and Certificates, public interest in the safe-keeping of securities has grown. Bankers now uniformly report that demand outruns the supply of safe deposit boxes, especially the small ones suited to modest investors. It is by way of providing safe-keeping for these investors that the banking institutions have come together, and agreed to render this free service with a view of popularizing safe deposit facilities.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

of income and other taxes to the Government.

The device is known as a "bearer warrant," and is a receipt for a stock certificate. The certificate itself runs to the treasurer of the corporation and he issues a receipt, or warrant, for it. The warrant runs to "bearer" and the dividends can be collected and the stock actually voted without even the officers of the corporation knowing who the stockholder is.

The system was discovered by the commission in its search for the true ownership of certain Chicago stock yards interests and it prevented the commission from fully determining the identity of the real stockholders.

The Chicago yards, yard railways and adjacent real estate development are operated by companies whose stock is owned by the Chicago Junction Railways and the Union Stock Yards Company of New Jersey, which in turn is controlled by the Chicago Stock Yards Company of Maine. "Bearer warrants" for 19.4 per cent. of the Maine company stock have been identified as belonging to J. Ogden Armour, president of Armour & Co., one of the "big five" meat packers.

The commission found that Armour exchanged $194,000 in cash for $1,552,000 of stock in the Maine company. Up to the year 1917 he has drawn in dividends $152,950 more than his investment.

America's First Need Is Well Fed Families

America's first need is well-fed families, is a summary of the North American's editorial on malnutrition in this country.

"The truth is," says this paper, "that this nation to-day faces, in malnutrition, a more dangerous foe than any armed force the world could muster. This truth showed its ugly head when one-third of the men called in the drafts were rejected for physical defects due chiefly to nutritional lacks in childhood. Now its equally ugly body is being bared to public gaze by a Government which is waking up to the menace of malnutrition.

"The draft revelations led to further investigation. It seemed strange that so large a percentage of our young men should be physically unfit at a time of life when they ought to be fittest. In the early twenties one is less than ten years beyond childhood. And childhood—in theory, at least—is the health-building time of life. Yet American childhood is not that in anything like the measure it should be.

"In fact, 5,000,000 of our boys and girls to-day are suffering from malnourishment.

"We have some 25,000,000 children, so this means that one in every five is being handicapped at the source of strength and usefulness by wrong nourishment—too little food, too much food, or lack of right food.

"How did we come to find this out? Well, last year was children's year—planned and carried out by the children's bureau of the Federal Department of Labor—and in every part of the country the health and surroundings of children were given careful attention by a host of volunteer investigators, who reported to Washington.

"When these reports were gone over it was seen that malnutrition was working more harm among young Americans than anything else.

"Years ago a notorious Hun said that what you want to put into a nation you first must put into its schools. That may do for ideals. But for power of mind to appreciate ideals and power of body to apply them practically it is better to say that what you would put into a nation you first must put into the stomachs of the children."

Nationalized Roads Is Before Congress.

Congressman Sims of Tennessee, former chairman of the House Interstate and Foreign Commerce Committee, has introduced a bill which embodies the railroad employes' plan to nationalize the railroads.

The bill provides for operation of the roads by a commission of fifteen, to be chosen as follows: Five appointed by the President, five by operating officials and five by the employes. Wages will be set by a subordinate board. The Interstate Commerce Commission will retain its present rate-making powers.

One of the fixed charges of the roads under this system will be a sinking fund, the money to be eventually used to retire bonds now privately held, the roads thereby becoming the property of the people.

After all charges are met, profits will be divided on a 50-50 per cent. basis between the Government and the operators. The Government's 50 per cent. will be used in extensions, improvements or other developments and the operators' 50 per cent. will be divided pro rata among them on the basis of wages or salaries received.

The plan provides that the only basis of valuating the railroads is to ascertain the amount of money each corporation put into the actual service of the public. The amount will represent the property interest which the corporation has been granted in the public highways to which it holds title. This feature of the plan will be attacked most vigorously by private interests as its success would squeeze untold millions of dollars of watered stock from these properties, and on which the public is forced to pay interest.

Millionaires Pitied.

The New York Times pities the millionaire because of increased taxes, which the editor infers is not passed on to the public.

"Profiteers," says the Times, "should be called to account, but if the workers use the increases they have received in unaccustomed and unnecessary indulgences their case is weakened. Everybody is feeling the pinch and sharing the blame for it, who is not reducing the cost of living as far as possible by individual action.

"The millionaires are doing so more than the workers. In every industry, in every land, there is clear proof that the wage earners are living more lavishly and the rich more frugally. The taxes have compelled the rich to do this.

"In addition to the enacted taxes the lavish spending of those overpaid beyond their experience lays a supertax upon the cost of living of everybody."

MUZZLING UNION SPEAKERS.

(Continued from Page 7.)

them asked for a drink. At the same moment, an officer of the Clairton police force stuck his head in the door. "Come out of there," he thundered. The friend explained that he was only giving one of the men a drink. "They are always wanting something. Let them alone," he commanded.

All the organizers were kept in the unspeakable jail till night, unable to communicate with either friends or their attorney, bail refused, and would undoubtedly have had to spend the night there had it not been for the activities of some labor men from Pittsburgh who happened along just as the so-called arrests were being made. They raced around town, located the Burgess and forced him to fix the bail, furnished it, and just before dark the men were released.

Thus, these men were in jail for hours without a charge being placed against them. Their money refused for bail, they were made sport of by the small boys of the town, humiliated and sneered at by the hired gunmen of the Carnegie Steel Co.

All this happened in a State where men took their lives in their hands when they signed a declaration setting forth the fundamental principles for the establishment of a free government, and just following the world's greatest war, during which millions of lives were sacrificed in the cause of liberty and democracy.

But the same spirit that impelled men to fight for freedom in other times is not dead now. Mother Jones, gray-haired, stooped and bent under the load of her eighty-nine years of fighting for labor, but with a soul on fire and the flash of her eyes undimmed, hearing of the outrages in North Clairton, sent a wire demanding that she be billed for a speech in that place on Sunday, August 10. Her offer has been accepted. Thousands of mine workers, in grateful remembrance of the many sacrifices Mother Jones has made for them, insist that they too are going to be in North Clairton and if she is going to be dragged to jail by the brutal Carnegie Steel Co. police with the sanction of the municipal authorities they want to be eye-witnesses to the depths to which corporate hirelings can sink.

The spirit of liberty still lives! The American Federation of Labor proposes to plant its banner in every steel center in Western Pennsylvania. Other national figures in the labor movement will follow Mother Jones. Wires are pouring into the office of the National Committee for Organizing Iron and Steel Workers announcing the names of the men who wish to enlist "for the duration of the war."

North Clairton and other autocratic boroughs will have to back up. Democracy is on the ascendency. Justice for labor is the cry that is encircling the world and wise men will heed this cry.

CIRCULATION OF GOLD.

Gold never again will be seen in circulation, according to John E. Gardin, chairman of the board of the International Banking Corporation of New York and at one time vice-president of the National City Bank, in charge of that institution's foreign department. Hoarding has been the principal evil that the world has had to contend with, and this has not been confined to Oriental races exclusively, Mr. Gardin said. The chief offenders, though, are India and Egypt. It is claimed that in the last eighty years more than $1,500,000,000 worth of gold has disappeared in India alone. This gold will never again see the light of day and can be considered a total loss to the world as far as its economic value is concerned. A further and serious loss is to be found in the use of gold in the arts and industries. Prior to the outbreak of the world war the estimated value of gold consumed in this way was $100,000,000 to $125,000,000, and with the plethora of money caused by the war these figures must have been largely increased. In the United States alone in 1916 $51,000,000 was used. This perverted use of the yellow metal will have to be greatly restricted, if not altogether prohibited for a period at least, if the efforts to re-establish the equilibrium of gold holdings to note issues is expected to be successful.

INQUISITION IN INDIA.

This is the twentieth century. Yet the Spanish Inquisition is being repeated in India. In 1917, a Commission, known as the Rowlatt Commission, was appointed to investigate the revolutionary movement in India. It was headed by Judge Rowlatt, from London; working with him were a number of Englishmen and one British-appointed Indian. The findings of this body of men disclosed the existence of a well-organized revolutionary movement which threatened the existence of British rule in India and held the possibility of the establishment of an Independent India. These findings culminated in the presentation and enactment into law of two Bills, known as the Rowlatt Bills. These measures, nailed upon India at the present time, should be made known to the American people. According to their provisions,

1. Any Indian is subject to sudden arrest without warrant, upon suspicion, and detention without trial for an unlimited duration of time.

2. The burden of proof rests upon the accused.

3. The accused is kept ignorant of the names of his accusers and of witnesses against him. The accused is not confronted with his accusers or with witnesses against him, and is entitled only to a written account of the offenses attributed to him.

4. The accused is deprived of the help of a lawyer, and no witnesses are allowed in his defense.

5. The accused is given a secret trial, before a Commission of three High Court Judges, who may sit any place they deem fit,—in a cellar if they choose. The method of their procedure or their findings may not be made public.

6. Trial by jury is denied. The right of appeal is denied. "No order under this Act shall be called into question in any court, and no suit or prosecution or other legal proceeding shall be against any person for anything which is in good faith done or intended to be done under this Act."

7. The accused may be convicted of an offense with which he is not charged.

8. The prosecution "shall not be bound to observe the rules of the law of evidence." Prosecution may accept evidence of absent witnesses. (The witnesses may be dead or may never have existed.)

9. The authorities are given power to use "any and every means" in carrying out the law and in obtaining confessions. In other words, torture.

10. Any person *possessing* "seditious" documents, pictures or words, intending that the same shall be published or circulated, is liable to arrest and imprisonment. "Sedition" has been legally held to mean disaffection, the absence of affection for the British Government.

11. Men who have served prison terms for political offenses may be restricted to certain specific areas, must report regularly to the police, cannot change address without notification of authorities, and must give securities for good behavior. They can never thereafter attend public meetings or write on or discuss publicly any subject of public interest, either educational, religious or political.

12. Any person (even the family) voluntarily associating with an ex-political prisoner may be arrested and imprisoned.

13. Search without warrant of any suspected place or home.

This is a brief and incomplete summary, taken from the Modern Review, of Calcutta, of the provisions which have been enacted into law by the British Indian Government, even over the protest of the most orthodox and conservative Indians. Aside from these Bills, there are the infamous Secret Acts, the Newspaper (incitement to offenses) Acts, the Criminal Law Amendment Act, the Seditious Meetings Act, the Indian Press Acts, the Conspiracy and Deportation Regulations of 1818, 1819 and 1827, and the all-sweeping martial law measure, the Defense of Indian Act, under which unnumbered Indian patriots have been hanged or shot to death during the past five years.

SHIPWRECKS.

The medieval theory concerning the treatment of shipwrecked refugees seems a curious one to the modern viewpoint. Formerly everything in a wreck belonged to the lord of the manor on which the wreck occurred or to the crown, as the case might be. Shipwrecked individuals of importance were often held for ransom, as happened, it will be remembered, to Harold in his famous visit to William of Normandy. The ransom William paid to rescue Harold from the penalty of shipwreck later gave the grim Norman his excuse for extorting an oath of fealty from Harold. And thus William obtained his claim to the English throne, a claim which he made good at the Battle of Hastings.

It was not until the time of Richard I, in the second year of his reign (1190), that this barbarous idea that a shipwrecked person was an outlaw of heaven was abandoned. In the first volume of Brequigny's "Lettres de Rois" will be found a Latin decree of Richard's which Halliwell has translated as follows: "Richard, by the grace of God, King of England, Duke of Normandy, of Guienne, and Anjou, to his archbishops, bishops, abbots, counts, barons, justiciaries, sheriffs, and all bailiffs, and faithful subjects, to whom this present letter may come: greeting. Know ye, that we have proclaimed that the wreck of shattered ships be quiet and unmolested through all our land, both on this side of the sea and beyond it, henceforth for ever, for the love of God, and the health of our own soul, and of the soul of our father and of our predecessors, as follows: Willing and positively commanding that, if any vessel shall have been wrecked in any part of our territory, and anyone, whoever he be, have escaped from thence, he have all his goods and property freely and quietly which shall come to land, and which he shall be able to show to be his in right and reason. . . . Moreover, that this grant of ours may continue sure, firm, and valid forever, we confirm the same by the sanction of our seal."

The dogmas of the quiet past are inadequate to the story present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new, so must we think anew and act anew.—Abraham Lincoln.

Labor News

William Short, president of the Washington State Federation of Labor, has issued a statement urging all union men to cast their ballots in the negative in a referendum vote to be taken soon on a proposal that "One Big Union" be formed in Washington.

The Granite Cutters' Journal prints this conversation on the muchly-discussed efficiency question: "Boss—Better consider my course in efficiency training. I can show you how to earn more money than you are getting." "Hired Man—I do that now."

A one-big-union resolution was rejected by the annual convention of the Minnesota State Federation of Labor. It was presented by the Minneapolis Milk Wagon Drivers' Union and declared that "there is no possibility of further improvement in craft unionism." In view of the gains that are continually made by milk wagon drivers, the delegates couldn't see the joke.

The Reading Iron Company has signed its first wage agreement with the Amalgamated Association of Iron, Steel and Tin Workers, and this strike is at an end. Heretofore agreements with this concern have been oral. The new rate is $10.75 a ton for puddlers. About 10,000 puddlers are affected as all mills east of the Allegheny mountains based their wage scales on rates paid by the Reading company. Thousands of eastern puddlers have been idle because of this dispute.

Half a million metal trades workers will join in a demand to the President and Congress this month for a reduction in the cost of living, according to Jas. O'Connell, chairman of the metal trades department of the American Federation of Labor. The demand will be formulated August 15, when the executive committee of the department meets in Washington. "We have been granted wage increases but they have gained us nothing. We are going to put it up to the Government to find the way out," said O'Connell.

The Superior Court of Quebec, Canada, has awarded compensation benefits to an injured employe of the Canadian Pacific Railway Company, although the court held that the employe was imprudent in attempting to cross a railroad track in front of an engine. The company claimed that the accident was due entirely to the employe's fault and would not have occurred had he exercised ordinary reasonable care. To this the court agreed, but it ruled that the fact of his employment gave him the right to make a claim under the Workmen's Compensation Act.

Iron Molders employed by the Bass Foundry and Machine Company have been forced on the street because the company refused to apply a wage award made last May by the National War Labor Board. The company says the war is over and production must be increased. This concern is one of Fort Wayne's leading low wage plants and it is charged with being most open in its appeal to racial prejudices of its employees, by this means keeping them apart. The Fort Wayne Worker declares the company is "a typical slave driving concern of the worst type," with the work day ranging from 12 to 14 hours.

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

CARRY ON!

Uncle Sam is releasing from his service the men who went "over there" to free the world from autocracy. Thousands of soldiers are daily receiving their honorable discharges; they pocket their pay, bid farewell to their comrades, and sally forth—civilians.

There is one army, however, which must not be demobilized. That is the army of War-Savings Stamp buyers. More recruits are needed to carry on the campaign of readjustment which follows the signing of the armistice.

The army of fighters has achieved its purpose.
The army of savers must remain in "action."
"Carry on" to a lasting peace under the banner of W. S. S.!

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted

La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

I am representing the Union men who are entitled to salvage and members of the crew of the following vessels. In most cases action has commenced. In some cases the funds have been recovered. In others they are readily recoverable upon filing power of attorney form with me. Apply to Union delegate or address this office by letter. "Princeton" vs. "Ardmore," $7500 received. "Gulf of Mexico" vs. Bark "Portugal," $5000. "Gulf Coast" vs. "Boxleaf," settled. "Argonaut" vs. "Jason," funds received. "Iroquois" vs. "Skinner," settled, crews share $12,250. "Brasos" vs. "Iroquois," settled. "Maine" vs. "Theresa Accomme." "Oskawa" vs. "Westgrove." "Buda 2" vs. "Western Star." "St. Charles" vs. "Monte Cenis." "Florence Olsen" vs. "Marina." Florence Olsen" vs. "Claremont." "Alliance" vs. "Belvernon." "Donnelly" vs. "Irish." "Anacortes" vs. "S. O. Barge No. 95." "Fred W. Wellor" vs. "Overbrook." "Neptunas" vs. "Panama." "Quincy" vs. "Transportation." "Herman Frash" vs. "Brilliant." "O'Neil" vs. "Oregon." Bark "Superior." "Pan American" vs. "Santa Rita." "St. Charles" vs. "Tea." Tug "Navigator" vs. "Edgar H. Vance." "Tunica" vs. "Nepponier." "Lake Charles" vs. "Cantiwo."

SILAS BLAKE AXTELL,
1 Broadway, New York City.
8-20-18

Home News

The Georgia Senate, by a vote of 39 to 10, refused to ratify the suffrage amendment to the Federal Constitution.

A rechecking by the War Department of the figures up to June 3, shows the total number of Americans captured by the enemy in France was 4480 of whom 316 were officers.

A bill permitting national banks to lend 25 per cent. of their unimpaired capital and surplus, instead of 10 per cent., as fixed by existing laws, was passed by the House and sent to the Senate.

The minimum age for public land homestead entrants would be reduced from 21 to 18 years, under a bill by Senator Smoot, Republican, Utah, passed by the Senate. The measure is designed principally to aid discharged soldiers and sailors.

Enlistment of negroes for the infantry will be discontinued temporarily under an order issued by the War Department. It was explained that this action was taken only because the authorized enlistment of negroes already has been exceeded.

The Annalist, financial paper, says the Standard Oil Company of New Jersey is preparing for a fight for world oil markets, and hints that Uncle Sam's assistance would be most welcome. It is stated that Dutch interests are strongly entrenched in California, Oklahoma and Mexican oil fields, and are developing South America. Standard Oil and Dutch both had large interests in Rumania but these were destroyed by the English armies to prevent their use by the then successful Germans who were conquering that country.

Evidence that food profiteers have entered into a conspiracy to hoard sugar preparatory to raising prices at least 3 cents a pound was obtained by Deputy Commissioner of New York Markets O'Malley, who said that he has discovered that brokers controlling the sugar market have entered into a hoarding combine while he was investigating dealings in army supplies. The official declared that although the Government recently released 37,000,000 pounds of sugar for public purchase in an effort to relieve the sugar shortage, it is impossible to buy sugar in large quantities at almost any price. He said it was intimated that some of the Government's sugar has fallen into the hands of the profiteers.

The United States bureau of standards warns the public against manufacturers who sell clinical thermometers with a certificate that these thermometers have been tested by the Government. The clinical thermometer is the fundamental measuring instrument of the physician and is used in the sick room. The Government submits the thermometers it buys to rigid tests, but manufacturers themselves test those sold to physicians and the public with a misleading certificate so worded as to give the impression that the instrument has been tested by the bureau of standards. "As such instruments are nearly always of the cheapest and least reliable kind, a great deal of harm is done," says the bureau. Legislation will be sought to curb the manufacturers.

Domestic and Naval

The coming into operation of the British Merchant Shipping (Convention) Act, 1914, giving effect to the International Convention of 1913 for the safety of life at sea, has again been postponed; this time until January 1, 1920.

The Maryland Shipbuilding Company, Baltimore, has been sold to the United States Shipping Board. The yard, which has four berths and is equipped for the construction of wooden ships, will be used as a storage and repair station.

From December 1 to July 7, the War Department redelivered to the United States Shipping Board 2,774,000 tons of shipping. This left in the army service 1,121,000 deadweight tons of troop ships, 71,000 tons of converted cargo ships, and 13,000 tons of refrigerator ships.

The number of keels laid in American shipyards on account of the Emergency Fleet Corporation has reached 2081, of 11,421,111 deadweight tonnage, including 1424 steel ships, of 9,439,061 tons, and 657 wooden ships, of 1,982,050 tons. The deadweight tonnage of all vessels delivered is of 6,068,739 as of July 14, standing for 1096 ships.

Secretary Daniels announced just before leaving for the Pacific Coast that a contract for the construction of battleship No. 54, to be named the "Massachusetts," has been awarded to the Fore River Shipbuilding Corporation, Quincy, Mass. The ship, which was the last of the authorized battleships to be contracted for, will be of 43,200 tons displacement.

The Railroad Administration has decided to continue the present barge service on the Mississippi River, with regular sailings and at freight rates from 4½ to 22½ cents per hundred pounds less than rail rates, according to official announcement by Theodore Brent, traffic manager of the Mississippi-Warrior River section of the administration, in a letter to shippers at New Orleans and other ports of call for the barge service on both streams.

On July 8 at New York, the steamship "St. Paul," 2029 tons gross, 1222 net, built at Chicago in 1897, was sold in damaged condition after fire to the Hudson Navigation Company, New York, for $10,000. The sale having been protested by the interested parties, another auction was to have been held on August 7, but was stopped by an injuncton issued by the United States Circuit Court of Appeals. It is understood that the vessel will again be offered for sale by the United States marshal on September 5.

The Cunard Line has greatly increased its scope since the signing of armistice. The company now controls a vast fleet of ships made possible because control of additional concerns has been taken over. In addition to the Dominion, Donaldson-Anchor lines, the concern now controls the Finch, Edge & Co., the Brocklebank Line, the American Levant Line and several others. A working agreement has been made with the Toyo Kisen Kaisha for passenger business and new branches and agencies have been opened in various parts of the world. The officials now announce the company is represented in every part of the world.

INFORMATION WANTED.

Members of the crew of the "John A. Kirby," who have not already filed their claims, should communicate with the undersigned. I have made arrangements to file claims for families of seamen and officers who were lost by submarine activities during the war; also for seamen who were injured by torpedoes, etc., or who were taken into Germany as prisoners. Such persons should communicate with me at earliest convenience in order to have their claims filed with the State Department. Silas B. Axtell, One Broadway, New York. 7-23-19

News from Abroad

All American soldiers excepting about 8000 who will remain on the Rhine indefinitely will be out of Germany by August 20, according to latest instructions from general headquarters.

The British Foreign Office has completed negotiations with the United States, according to the Evening News, for a new commercial treaty between the United States and the United Kingdom. The text will be laid before Parliament soon, it is said.

The former Prince Henry of Prussia in a letter to King George, published recently by the Hamburger Nachrichten, says the truth about the war may be had from the allied statesmen and he suggests that if the former German emperor is placed on trial the statesmen also appear.

The interallied conference of co-operative societies at Paris has declared for the abolition of all import and export duties on the necessaries of life and on products required for the reconstruction of industry. The conference favored a pool of the food supplies of the world, same to be distributed according to the needs of the various peoples.

So many refugees are arriving at every German city and village from territories taken from the former empire, that communities in increasing numbers are forbidding their residence because of lack of buildings. The Government, therefore, has ordered that all communities must accept such refugees and returning prisoners of war.

Censorship by the French ministry of public instruction of all motion picture films, except those representing facts or actual happenings, is provided for by a decree printed in the Journal Officiel. The approval of the ministry must be obtained before the pictures may be shown in public. A committee of thirty was appointed by the ministry.

The New South Wales Farmers' and Graziers' Co-operative Grain Insurance Agency has purchased the business of a large operator in wool and live stock. Last year the co-operative company handled 55 per cent. of the New South Wales harvest. Its latest purchase is for the purpose of dispensing with the middlemen's tolls in the sale of wool and live stock.

It has been learned that the Japanese Government, after mature deliberation both by the Cabinet and the Diplomatic Advisory Council, has informed the Government of Admiral Kolchak that Japan is unable to accede to its request to send several divisions of troops to assist Kolchak in the war against the Bolsheviki. American troops are still being sent from Pacific Coast ports.

Last year the five principal co-operative societies in Finland sold $57,000,000 worth of products and made $1.500,000 profits. The largest of these movements, the Finnish Co-operative Wholesale Society, operates a number of manufacturing establishments, including coffee roasting plants and fruit canneries. It imports direct from the manufacturer. These societies have a chain of banks subsidized by the government to assist in the development of the co-operative theory.

With the Wits

"A man of letters, isn't he?" "Sure! Runs a thriving mail order business."—Buffalo Express.

"There seems to be some trouble about the entente cordiale," remarked the man who was reading a newspaper. "Of course," answered the lady with large glittering jewels, "you can't expect to get anything like that here. This is a prohibition town."—Washington Star.

Mr. Styles—So you have changed your mind?

Mrs. Styles—Yes, I have.

Mr. Styles—When did you change it?

Mrs. Styles—While I was changing my dress.

Mr. Styles—But it doesn't usually take as long as that, dear.—Yonkers Star.

There was a change of curates in the parish, and shortly afterwards one of the prominent men of the congregation asked his chauffeur: "How do you like the new curate, Barney?" "Middlin'," replied Barney; "but he can't come up to the old one. 'Twas himself could tell ye all about hell. Sure, to hear him describin' it, you'd think he was bred, born, and reared there."

The colonel, strolling through camp, chanced to notice a noncom returning, contrary to all regulations, the salute of a raw recruit. Immediately he summoned the offender to him and demanded: "What do you mean by returning a salute to which you are not entitled?" "Sir, I always return that to which I am not entitled," protested the noncom, and the reply was so apt that the colonel could not do otherwise than dismiss him with a laugh.

Representative Julius Kahn said at a dinner: "What we call a 'dessert' the English call a 'sweet'. Offer an Englishman a dessert, and he would not understand you. I remember a dinner here last year at which we entertained a number of English Tommies. At the end of the eleventh course the waiter approached one of the men with a huge dish of apple pudding. 'Dessert, sir?' he asked. 'Dessert? Not me! Not when I get a feed like this for nothing!"

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

Official Paper of the International Seamen's Union of America.

A Journal of Seamen, by Seamen, for Seamen. Our Aim: The Brotherhood of the Sea. Our Motto: Justice by Organization.

VOL. XXXII, No. 51. SAN FRANCISCO, WEDNESDAY, AUGUST 27, 1919. Whole No. 2553.

THE PROBLEM OF THE PACIFIC

An Instructive Discussion of Asiatic-American Relations

"Problems of Population of the North Pacific Area" was the title of a paper read by Wm. E. Ritter at a recent gathering of scientists at Pasadena, Cal.

The seamen of the Pacific Coast are vitally concerned in the problem analyzed by Mr. Ritter because an intensive economic contest for the control of transportation across the Pacific has been in full swing for some years past.

The Journal therefore earnestly commends a careful perusal of the sane and instructive article printed herewith for there can scarcely ever be a genuine solution of the Asiatic problem except through rational knowledge and conduct.

For long ages before written records began, human migrations seem to have taken place over the vast Pacific Region. These apparently affected the islands of the south, of the north, and of the middle portion, as likewise the continental littorals of Asia and North America. Later came the era, very recent as all human history goes, of the drifting of Chinese and Japanese fishing junks upon the northern American coast, and of castaway Japanese traders upon the Mexican coast. Following this came the truly modern era ushered in, one may fairly say, by President Fillmore's appeal to the Emperor of Japan, through the Perry embassy, for the opening up of the hermit kingdom in the interest of American industrial and commercial development as represented by the whale fishery, and closely identical with gold mining in California. Shortly thereafter, followed the bringing of Chinese coolies for labor in building the Pacific end of the first transcontinental railroad.

Through all these, and many other events of similar import, down to this very summer of 1919, when hardly a day passes in which the newspapers do not contain items of some sort involving the activities of Japanese or Chinese in the industrial and commercial life of Pacific North America, can be seen a contact of Asiatics and Americans—a kind of community and interests—made not only possible, but seemingly inevitable, by their common possession of the Great Ocean, and of the human propensities for adventure, travel and gain.

To the eyes of science, the situation as touching the peoples of the north Pacific area is this: Some 500,000,000 Asiatics are being brought into ever closer contact with some 6,000,000 Americans, the Asiatics being so placed geographically that scores of millions of them have about the lowest per capita allotment of any peoples on the earth of some of the primary material necessities of human life, while the Americans are so placed as to give them about the highest of such allotment.

That economic equilibrium will tend to establish itself between these two peoples is as certain as that two bodies of salt water of different density will tend to come to an equilibrium if in contact with each other.

There are two ways in which this equilibrating tendency may work itself out. (1) It may proceed in accordance with the brute instincts of self-preservation and self-realization. This is the way of material force working as modern commercialism and modern militarism. Frequently as the resemblance between these two gigantic forces has been noticed, yet it seems not to have been sufficiently brought home to many of us. (2) The other way in which the equilibrating tendency may realize itself is in accordance with the human reason for self-preservation and self-realization. This is the way of modern science.

Perhaps some one will question the warrantableness of including all the Chinese, Japanese and Koreans, as I did a moment ago, when speaking of Asiatic populations, while only the small portion of all North Americans are included which live on the Pacific Slope. If question of this sort be raised, my reply is that being naturalists, we are bound to think in terms of nature—of geography—whenever we speak comprehensively of people; and hence must look at population in relation to the continental slopes, drainage areas, oceanic and fluviatile water ways, etc., which constitute their major physical environments. The "North Pacific area" is clear enough of definition geographically viewed: It includes not merely the Great North Ocean itself, with its islands, but also those parts of the adjacent continents, Asia, and North America, whose rivers flow into the ocean. In an important sense this is a unit area of populational distribution, as it is of physical geography.

Pacific North America as thus defined, seems to be as natural a depositing ground for immigrants from eastern Asia as Atlantic North America is for immigrants from Europe. While manifestly it would be easy to push such a criterion of unit area of peoples too far, yet full recognition of it to the extent of its validity is of great practical importance.

The fundamental nature of the issue between Asiatics and Americans is clearly reflected in the character of the American legislative measures which have been proposed, and in some instances made into law, against the immigration of Asiatics.

That the issue is not primarily one of race, is shown by the fact that the exclusion proposals are never aimed at Asiatics indiscriminately. Without exception, I think, the measures apply only to Asiatics upon whom the economic conditions of their native lands rest most heavily; those, namely, who live by the toil of their hands. The classes—public officials, persons of large affairs, professional men, and students—who enjoy considerable economic independence, are welcome in America, travel widely over the continent, and mingle freely and pleasantly with the citizens everywhere. Because of their approximate economic and cultural equality with those among whom they are, and because of the smallness of their number, these classes of Asiatics give rise to no perplexities, economic, racial or of any other kind.

The race element undoubtedly comes into the labor immigration problem with great force finally, but only as a consequence of economic conditions, and at the locus of greatest pressure of these conditions. Except for the economic element almost certainly there would be no problem of Asiatic immigration for the simple reason there would be no such immigration.

The sole, or at least the chief motive of Asiatic laborers in coming to America is to improve their hard economic lot. And because of the restraint upon their travel which this hard lot imposes, they are bound to take advantage of the first chance which presents itself for accomplishing their aim.

No Chinaman who has barely money enough to pay the cheapest steamer passage across the Pacific, is going to the additional expense of a railroad journey to Kansas City for work if he can get as good wages in Seattle or San Francisco. And no Japanese farmer who crosses the Pacific under like conditions is going to the Mississippi valley to raise corn or wheat if he can do better raising potatoes or berries or celery on the bottom lands of the Sacramento and Colorado rivers. Nor is any Chinaman or Japanese going to Lake Michigan or Cape Cod to fish if he can do as well fishing at Monterey or San Pedro. Nor are these basal considerations the sole, or even the most important ones bearing on the case.

Not only is Pacific North America the natural depository for the semi-destitute peoples of eastern Asia who migrate to America, but as long as there exists an immense Asiatic population in such economic condition, and as long as there exist such alluring chances in Pacific America for relieving that condition, it is hardly possible that any device of politics or law or any gentlemanly arrangements will be able to permanently stay the movement for such betterment. The problems concern some of the most elemental and mighty forces of human nature—the forces which antedate and condition politics and law and gentlemanly conduct, as the tree with its roots antedates and conditions the tree with its blossoms and fruit.

During these very last weeks comes the report that 5000 Asiatics came into the Pacific States of Mexico during March, 1919, and that the total immigration to that country last year was 100,000. And entrance into Pacific Mexico means entrance into Pacific United States sooner or later. So subtle and pervasive and powerful are the forces which are impelling Asiatic immigration into America, that exclusion treaties and laws and other mere contractual arrangements will be incapable of controlling them.

Am I not right in supposing it is the complexity and subtlety of these forces—economic in the sense of physical poverty affecting the great masses of Asiatics; racial as affecting these same portions of both Asiatics and Ameri-

cans; and instinctive of self-preservation and self-realization of all the people of both continents—that makes the growing breach in the traditional friendship between the United States and Japan incomprehensible to the acutest observers of both these countries? "I do not know how to account for it," frankly and almost despairingly declares Baron Shibusawa, one of the oldest and most intelligent of Japan's business students of America.

And the replies which he records having received from distinguished Americans to whom he appealed for light, shows that they were really as much in the dark as he was. One of these Americans, he tells us, assured him that "the little cloud overhanging the sky will soon pass away."

Terrible, I warn both America and Asia, will prove the illusion if it goes uncorrected, that the ill-wind growing up between these two old-time friends is only a little cloud that will soon pass away!

But is the gigantic tornado which impends, to be regarded as a Fate—as a thing in the hands of a Purpose and a Power wholly unapproachable, unmodifiable by man? No! and ten times No! is my answer. We can convert the devastating tornado into a benign and fructifying wind-and-rain if we so resolve and act according to our resolution.

To point a way, and I am quite sure the only way, toward such resolution and such action is the central aim of my part in this symposium.

My first move in this shall be to remind ourselves that, as a few observers of anti-Asiatic "agitation," often so-called, of the Pacific States have remarked, this agitation is at bottom an expression of the instinct of self-preservation. This remark I wish to supplement by affirming that not only is the instinct of self-preservation on the part of the American agitators involved, but likewise there is involved not merely the same instinct of the Asiatics, but also the instinct of self-realization of both Asiatics and Americans. And I call attention to the fact that he errs grievously whose observations on human instinct has not recognized the difference between the instinct of self-preservation and that of self-realization.

But the point which I wish particularly to fix attention upon in the remarks just made is that the problem as it is actually presenting itself to us, lies chiefly in the domain of human instinct and passion; and that this is only another way of saying that it does not lie chiefly in the domain of human reason.

The quintessence of the proposal I am going to make is that our problem shall be so shifted in its locus that instead of lying primarily in the domain of instinct and only secondarily in that of reason, it shall lie primarily in the domain of reason, of intelligent life and action, and only secondarily in the domain of instinct, of instinctive life and action. And may I not believe that at least in the group of men and women here assembled, scientific as we all are, this proposal shall not be received with listless toleration, as a mere academic pronouncement?

In the interest of grounding my proposal a little more securely on fundamental principle, I remind you of the familiar characterization of all instinct as "blind." And note the unerring truthfulness of our common modes of expression: The "instinct of" self-preservation and of self-realization, we say: The instinct of existence is in the very essence of existence itself. Not so with reason. The "reason for" we automatically say, self-preservation and self-realization. Existence must justify itself, according to reason. Furthermore, reason must concern itself with the modes and means of existence.

My proposal that the problem of the peoples of the Pacific area shall be carried up so that its larger moiety may lie in the domain of reason instead of in the domain of instinct, means that the Chinese and Japanese and Koreans and Siberians and British Columbians and United Statesans and Mexicans shall take much thought about their self-preservation and self-realization—about why they should be preserved and why they should realize their desires and ambitions; and about the manner in which they should exist and the means by which this may be and ought to be accomplished.

It means, in other words, that the problem should be one of science at its fullest and best; science as the great body of observational and reflective truth concerning external or material nature, and science as the great body of observational and reflective truth concerning the internal or spiritual nature of man. And this means economic and cultural justice and morality, international as well as national.

A cardinal aim of all effort in accordance with the principles here indicated, would be to remove the one great inducement to Asiatic migration to America, namely, the grinding poverty under which the great masses of hand laborers of Asia live at home. Surely it would be disastrous to both Western America and eastern Asia as wholes, for the former to become Asiaticized to the extent that the Hawaiian Islands have become so. But the only rational way and, as I believe, the most effective and practical way to prevent this is to make the economic conditions of Asiatic laborers in Asia at least approximately as favorable to them as are the conditions which they find in America.

If statesmanship pronounces this an utterly unrealizable ideal, it thereby merely declares its own incompetency to bring it about, this incompetency being due to the fact that statesmanship of the traditional sort is not primarily a thing of comprehensive, accurate knowledge and reason, but rather only of partial knowledge dominated by instinct and impulse. And this raises the question, very pertinently at this time: What has been in general the fundamental nature of political motive and action, especially as between nations, down to this time? Has it been mainly rational and intelligent, or has it been mainly instinctive and passionate? Let history answer. In the cataclysmal condition of the world today, three occurrences in particular are recognizable which should encourage the attempt to deal with the Asiatic-American problem on the principles I am setting forth. (1) The revised covenant for the League of Nations (which will surely soon be adopted if reason is indeed now to be enthroned in the government of the world) making the League the central body for coordinating and promoting international activities generally. (2) The provisions of the covenant relating to labor problems which are international in scope. (3) The determination by the American Federation of Labor at the Atlantic City convention to co-operate with Japanese workmen for bringing about a better understanding between workingmen of Japan and the United States.

I venture to predict that were the agencies and movements here indicated to become really active in behalf of the Asiatic-American problem, they would inevitably move in the direction of some such solution of the problem as I am indicating.

A thing that science can say which ought to contribute much as an initial step in this direction, is that the civilized world may assure itself that given adequate scientific investigation and utilization of the resources of nature; and given a due measure of scientific knowledge and of the spirit of justice and morality in politics and law in national and international affairs; and given, further, a due sway of reason in the growth of population, and no people of the world need live in danger of starvation or even of serious want. The proposition is surely susceptible of something approaching demonstration that the dogma of the inevitability of material poverty for great sections of the world's population is a mark of primitiveness, of immaturity of human societies.

And I wish here to affirm the unhumanness of national policies which encourage large families in the interest of large armies and cheap labor.

Probably the foremost significance of reason in the human animal is that it is the device or agency developed by nature to relieve the species from the uncertainty and precariousness of material sustenance as instinct alone is able to secure it.

To develop the latent natural resources of the whole Pacific area, of land and water alike, and then to distribute and use the fruits obtained in such fashion that all portions of all the populations shall be beneficiaries in just ratio, would be exactly one of the most characteristic things which these peoples could do as rational, i. e., truly human animals.

This paper and those to follow in this symposium, are so many indices of what would be involved in carrying out such a proposal so far as the Great Ocean itself is concerned.

Many decades of common experience with, and scientific research upon the oceans of the earth, the atmosphere which overspreads them, and the life which teems in their waters, have yielded large knowledge. Much of this knowledge is revelatory of great riches in living beings useful to man. And revelatory, too, is the knowledge of how intimately the life and health and happiness of men are dependent upon the oceans themselves because of certain of their physical and chemical attributes; and upon the atmosphere which is a sort of vital nexus between sea and land.

But the knowledge thus far obtained as to these beneficences is hardly more than an outline the details of which are yet to be filled in.

The papers which are to follow will present portions of the sketch more clearly, and will indicate in some particularity what filling in of details would probably show, and the means by which the task would have to be done.

Far more knowledge is essential as to what useful organic resources the waters contain; as to how these may be utilized; and as to how they may be made permanent as well as useful.

Greater knowledge of the ocean itself and the atmosphere must be had in order that the harvesting and the conserving of its resources may be more certain and safer; in order that all travel upon the sea may be facilitated; and in order that those aspects of the land's productiveness which are largely influenced by the conditions of the sea, may be brought more under the control of man.

Knowledge, and even more knowledge, is the watch-word in this aspect of the great problem; and of such nature and so broad is the requirement that it is well nigh indispensable that all the peoples whose interests are involved should participate in securing it. Common needs of world-population demand common world scientific research and world effort in affairs, to meet the needs.

And now, taking this very meager statement as a foundation to build on, I venture to summarize, in the name of world science and the spirit of it, what the problem of peoples of the Pacific Area is, and by what methods it could be resolved. It is a problem in which the two elements of economics and race are so enormously potent that little wonder need attach to the fact that many students anxiously observing the animosity growing up between Japan and the United States particularly, conceive that the problem is wholly either the one or the other, or at most both of these elements. But not so. It is a problem of the whole gamut of human nature as this manifests itself in two great groups of highly and equally, though diversely civilized peoples of different though equal races, coming into economic conflict with each other.

And just because the two groups stand high and essentially equal in civilization; and just because each is within itself, predominantly guided by rational knowledge and conduct, the only possible real solution of the conflict between them must be likewise through rational knowledge and conduct. It is then heavily incumbent upon those men and women in both groups who are professed and acknowledged leaders in the life of the intellect, not only to bring home to our fellows what is involved in this way of solving the problem, but also to bring home to them what would almost certainly result from leaving the problem where it now is, namely predominantly in the realm of instinct and passion. This last means that our duty is to proclaim the indubitable fact that the counterpart of the instinct of self-preservation throughout the whole animal creation is the fighting instinct; and that consequently fighting—war—will be almost certain consequence of leaving the problem where it is, this implying an almost certain irrational, unjust, and destructive treatment of the problem.

And upon those of our fellows, the numbers of whom are, unfortunately, neither few nor powerless, who oppose the rule of reason in such matters, and favor the rule of instinct, let us not fail to impress the lesson of Germany at this hour, as an example of the doom that awaits any modern nation whose international conduct is based more on instinct and brute force than on reason and moral force.

"All that take the sword shall perish by the sword." The profound natural truth which comes to expression in this familiar phrase, has never been more terribly exemplified than by Germany, yesterday wielding her vast might of intellect and muscle to dominate the world; to-day cast down into the very dust of the earth and utterly impotent.

A LABOR DAY MESSAGE.

(By J. B. Dale, Organizer for American Federation of Labor.)

Labor Day nineteen hundred and nineteen comes to us freighted with splendid achievements from the past year.

The Organized Labor Movement recognized as the American Federation of Labor has contributed, is contributing, and will contribute, if the future can be judged by the past, one of the most potent factors for the promotion of economic justice there is in Christendom.

If this bleeding, staggering, struggling old world is to be redeemed and the Ship of Humanity again placed on an even keel, the plan offered and the blue prints submitted by the American Federation of Labor, if not adopted in toto, cannot and will not be ignored in the reconstruction period that confronts civilization.

Men of Labor, I mean all Organized Labor, have just cause to be proud of the splendid achievements of their organization, when one considers the obstacles that it has overcome, and its high ideals, and that it never has wavered, hesitated or halted in its march and in its fight—when it was necessary to fight—to continue its progress to reach these ideals.

There are millions of overworked and underpaid toilers in this and other lands who are looking to our movement as the

LABOR DAY, 1919.

(By Frank Morrison, Secretary, American Federation of Labor.)

Labor Day, 1919, the organized workers possess greater intelligence and confidence in themselves than at any other period.

The trade union movement was true to its historic mission in the great war that defeated a military autocracy and it has not forgotten the plea, "Make the World Safe for Democracy" that so successfully united the people of our country in one purpose.

The organized workers will continue their efforts to make our country safe for democracy, though certain other elements of our citizenship have abandoned this plea in their desire for material gain, regardless of effects on the nation's life.

The workers' determination is indicated in their demand that the purchasing power of their wages permit them to meet present living costs. The workers have not forgotten praises showered on them during the war and they now insist that living standards shall not be lowered. They point to Government statistics which show that over $1.80 is now necessary to purchase goods that were priced at $1 before the war.

The railroad solution offered by organized railroad shopmen and the railroad brotherhoods, and supported by the American Federation of Labor as a whole, and the declaration of the Policy Committee of the United Mine Workers of America for the nationalization of coal mines under democratic management are also indicative of the workers' determination to make our country safe for democracy.

Government reports show that there are 8,500,000 persons over 10 years of age in this country who can not read nor write the English language. It seems unnecessary to urge that our educational system be revised that this illiteracy menace to a government "of, by and for the people" be removed.

Another policy that would make this country safe for democracy is organized labor's demand that immigration be stopped until such time as those aliens who are now in this country can be assimilated. Sentiment must give way to the dictates of self-preservation when national needs and social aspirations are threatened by waves of immigration that are stimulated by cheap labor employers.

The proposed plan to "Americanize the alien" will not be successful while industry is conducted along autocratic lines.

The attempt to solve this question by company "unions," welfare work and beneficial features will not suffice. None of these contain the element of fundamental democracy.

The alien must be Americanized, but industries like the steel trust, that make the alien possible, must first be Americanized. These business men must be Americanized. The American spirit of freedom and equality can not be aroused in a worker who is denied the right of free speech or who has been discharged because he does a lawful thing—joins a trade union.

On this fundamental the trade union movement stands. It is idle to talk of Americanizing the alien or of establishing democracy in industry while an industrial oligarchy ignores guaranties in the Declaration of Independence and the Federal Constitution.

The trade union movement stands for the highest order of Americanism and it believes that the first step in Americanizing the alien is to Americanize the job.

Sharp Child Labor Rule.

A saw mill must pay a tax on its profits, under the Federal Child Labor amendment to the revenue law, if it employs children under 14 years of age to work in the woods, but mine owners may employ children under 16 years of age to work in these same woods without paying a tax.

The above summarizes a ruling by United States Internal Revenue Commissioner Roper, in response to a request for a decision by a Cresson, Pennsylvania, mining company. The officials stated that they wanted to employ boys in the woods to stack mine ties, bark, "and other light work," and inquired if the company was liable for the tax.

The Federal official held that the boys are not "employed in the mines," although their names are on the company's pay rolls.

Mr. Roper shows, however, that if the boys were employed by a saw mill company, the tax would be levied, as the law applies to all departments connected with the mill.

Under the law a tax is levied on the employment of children in mines under 16, and in other industries the age limit is 14.

"Stand Pat" Theory No Part of A. F. of L.

Writing in the American Federationist, Matthew Woll, acting editor in the absence of President Gompers, laughs at the claim that the A. F. of L. is a "stand-pat" organization. He says "the American Federation of Labor lays no claim to being a conservative organization."

Eastern newspapers express sorrow at the action of the last American Federation of Labor convention in denouncing injunction judges, and one editor declares that "the American Federation of Labor failed to display its usual good sense and conservatism." This statement Mr. Woll says:

"It is for the defenders of the profiteers and plunderers and for those who are in need of all the machinery of reaction in their struggle against progress to build for themselves records of consistent conservatism. Labor has no use for any institution or arrangement which does not serve the best interests of all the people. It regards all institutions as having value only in so far as they serve the actual needs of the people.

"When it comes to ridding the country of institutions that no longer serve this

World's Workers

Virtually all the newspapers of Tokio have suspended publication, owing to the demands of the printers for higher wages.

Charging that the French government is not using its power to protect workers against living costs, which are continually soaring, organized employes in the postal, telegraph and telephone service demand a high-cost-of-living bonus of $25 a month.

Forty-three per cent. of the total population of Finland is landless and lives mainly as day laborers on the farms or forests. The figures which are furnished by the Department of Commerce indicate that 23 per cent. of householders work their own holdings and 34 per cent. are tenants.

The labor government of Queensland is urging increased taxes on large blocks of government land held under lease by wealthy stockmen, who occupy 407,140 square miles, and who pay $4 a square mile as against an average of $14.26 a square mile paid by the small leaseholder. Former attempts to tax these monopolists has been blocked by the Legislative Council, still under the control of big business.

The vigilance and strength of organized workers in France is necessary to check employers from juggling the workers out of benefits intended under the eight-hour law, recently passed by the French parliament. The employers' favorite scheme is to cut piece rates below the point which prevailed under the long work day. This is prohibited by the new law and the unionists are compelled to rely on their economic power to enforce a statutory act. These strikes are forcing the government to act and new regulations have been issued.

An award for two years from May 12 is made by agreement between the New Zealand Clothing Manufacturers' Industrial Association of Employers and the New Zealand Federated Tailoresses' and other Clothing Trade Employes' Industrial Association of Employes. The award embodies a complete agreement. An award covering members of the New Zealand Federated Woolen Mill Employes has been filed in the four industrial districts where there are woolen mills—Otago and Southland, Canterbury, Wellington, and Northern. The award, which embodies a complete settlement arrived at by the parties, is in effect a Dominion award. It has a term of two years from May 1 last.

Writing in the Australian Worker, a correspondent makes this reference to compulsory arbitration, in force in New South Wales: "Ten years ago every employers' organization in the land bitterly denounced compulsory arbitration. They demanded the right to settle all disputes with their wage earners by a trial of strength. The workers, with splendid foresight, while favoring arbitration, reserved the right to cease work if the courts proved biased or incompetent. Can anyone say that the men who have been appointed to preside over the arbitration courts have acted as free and impartial adjudicators? When have any of them attempted to enlist the confidence and good will of the employees?"

DO YOU KNOW

That War-Savings Stamps pay 4 per cent. compound interest?

That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?

That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?

That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?

That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?

That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?

That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

INFORMATION WANTED.

Any one knowing the whereabouts of L. C. S. Admiraal, a member of the Eastern and Gulf Sailors' Association, last heard of in Rotterdam, Holland, 1914, will please notify his brother J. J. Admiraal, 51 South Street, New York, N. Y. 8-13-19

Information wanted regarding John Johnsen, native of Bergen, age 44, last heard from in New Orleans, 1917, was then on schooner "Lizzie M. Parson," going to France. Any information will be appreciated by his brother, Andrew Johnsen, Sailors' Union, Seattle, Wash. 8-20-19

Will Ingwald Johnson, Charles Moller, and any other member of the crew of the S. S. "Chehalis," on January 29, 1919, when Otto Peterson was injured, kindly report to the Secretary, Sailors' Union of the Pacific, San Francisco, Cal. 8-13-19

Pacific Coast Marine.

The U. S. Coast Guard Service has advertised for bids for building a new set of launching ways for the lifeboats at the coast guard station on Humboldt bar. It is estimated that the work will cost between $7000 and $8000.

Recent sale of the new Portland built steamer "Butte" to Eastern parties will result in the ship taking a cargo of lumber to the Panama Canal for the Government, instead of proceeding overseas with ties, according to C. D. Kenworthy of the operating department of the Shipping Board.

Figures showing the status of the eleven wooden shipbuilding yards of the Oregon district are being prepared by Statistician M. Reed of the Emergency Fleet Corporation. Reed succeeded Captain Hiram E. Mitchell as statistician when the latter was recently transferred to the Department of Sales and Supplies.

The Chilberg Ship Company has secured a contract from the Universal Shipping and Trading Company of Seattle to convert three wooden steamer hulls into sailing vessels. The vessels are part of a large fleet of wooden ships built in yards across the border to the order of the United States Shipping Board. Six of the craft were purchased by the Universal Shipping and Trading Company.

The salmon pack on Puget Sound will fall short compared with previous years, according to reports from the various packing houses. Few fish are being taken by purse seiners at Neah Bay. Few of the fleet of over 300 boats at Neah Bay are securing enough salmon to pay expenses, while the traps up to the present are barely breaking even. Indications are that the late run will be light, which will cut the Puget Sound to a limited amount.

A new high level on cargo rates has been set on shipments by the "West Harts" and the "West Chatala," which are carrying lumber to China at the rate of $35 a thousand feet. The price marks a rise of $10 over rates prevailing after the heavy launching period of last June, when two Japanese boats loaded with lumber at the rate of $25. Shipping men say the present rate is probably higher than the rate which will prevail in the future because of competition and shipping conditions.

Launching of the thirty-fourth hull under Government contract took place at the Northwest Steel Company plant at Portland, on August 18, when the 8800-ton steel steamer "West Cocasset" was put into the water. The sponsor was Rosemary Mahoney, fifteen-year-old daughter of Mr. and Mrs. W. E. Mahoney. Only two more launchings remain to complete the Government program at the Northwest Steel Company. The plant has already reduced its force of employes in anticipation of the end of building activities.

It was announced during the week that the Government had disposed of the wreck of the cruiser "Milwaukee." The stranded and broken craft, lying about four miles north of the north jetty of Humboldt bay, was sold to Rosenthal & Snyder of San Francisco, the consideration being $30,000. The consensus of opinion along the waterfront is that the local firm is entitled to a fair profit in daring to gamble with nature and the elements. It will be difficult to salve the machinery and old metals of the fighting ship, owing to the exposed position in which the work will have to be done.

The three shipbuilding plants in the Northwest owned and operated by the Foundation Shipbuilding Company, a French concern, are to be dismantled. The plants are located at Tacoma, Portland and Victoria and devote their attention to the construction of wooden vessels for the French government. Captain A. Rice of the French high commission is on the Fuget Sound and will superintend the dismantling of the plants. The main part of the machinery of the plants will be shipped to France to be used in the reconstruction of the industrial sections, while the remainder will be sold.

That lower freight rates on steel are essential to the future success of Pacific Coast shipbuilders, in order that this section will be able to compete with the East and the Orient, is the firm conviction of J. C. Bowles of the Columbia River Shipbuilding Corporation. The campaign for a reduction of rates on steel to the Pacific Coast is now fairly launched and behind it are eighteen of the big steel shipbuilding plants of the Coast, including the yards in Portland. This fight will be carried to the Federal Railroad Administration, the aid of representatives in Congress and Chambers of Commerce vitally concerned being solicited.

The "Lavada," Fourth Liberty Loan honor boat, was christened at the yard of the Pacific Coast Shipbuilding Company on August 23 by Mrs. Emmet D. Boyle, wife of the Governor of Nevada. Mrs. Boyle, now visiting in Berkeley, accepted the invitation to be sponsor, extended by the war loan headquarters in San Francisco. The "Lavada" bears the combined names of Nevada and of Las Vegas, honor loan town of that State. She is the sixth of ten big steamers being built by the Pacific Coast Shipbuilding Company. The Governor of Nevada, who is a classmate of Colonel D. C. Seagrave, general manager of the yard, was represented by Colonel Lowe A. McClure, brother of the sponsor.

All of the ship surgeons employed on the transpacific passenger steamships will secure certificates as licensed embalmers if the bill introduced by Senator Howard Sutherland of West Virginia recently, becomes a law. The bill which has been read twice provides that common carriers by water engaged in foreign and interstate commerce shall provide for the proper embalming of bodies of all passengers and employes who die at sea, provided a United States port cannot be reached within twenty-four hours after death. The bill also provides that no owner be permitted to bury at sea, and that a duly licensed embalmer, with necessary equipment, be supplied all vessels coming within the intent of the act. At present the ship's surgeon acts as embalmer.

With Mrs. Josephus Daniels, wife of the Secretary of the Navy, pressing the button that flooded the structure, the great Pearl Harbor drydock was dedicated by Secretary Daniels on August 21. Hundreds of army and naval officials and other spectators were present. While the water was pouring into the dock Secretary Daniels addressed the gathering, emphasizing the future importance of Pacific commerce in relation to the nation's naval power. When the speech ended the pumps started emptying the basin. During the ceremony seaplanes circled about and the sailors and marines units stood at attention. The destroyer "Waters" took the official party from Honolulu to Pearl Harbor. Hundreds of others went by automobile or train. A series of banquets, receptions, dances and sight-seeing trips for the Pacific fleet units there occupied the remainder of the day. The Pearl Harbor naval drydock dedication marked the completion of an important unit in a navy and army construction program designed to make the island of Cahu the Gibraltar of the Pacific.

Plans of a Honolulu syndicate to make San Francisco a base from which refrigerator vessels will steam to Mexican and Central American waters, to return with huge quantities of oysters, were announced in private advices from the islands. Captain W. R. Nye, a Honolulu navigator who formerly lived in this city, is returning to San Francisco to direct the venture, it was announced. In his search for oysters Captain Nye expects to find many pearls. Twenty years ago Nye was master of a whaling vessel that operated out of this port and cruised the tropical waters. His whales always were captured in shoal water, and in the course of a few years Captain Nye charted hundreds of those shallow places, sometimes hundreds of miles from land. Oysters are thick in those shoals, according to Nye. The plan is to purchase a refrigerator steamer equipped with machinery to rake the sea bottom and hoist the catch aboard the vessel. The oysters will be prepared for the market and the shells will be searched for pearls and then placed in the holds to be used for manufacturing purposes.

An ambitious plan involving the organization of a steamship concern, with a capital stock of $100,000,000 and fifty freight and passenger steamships to be operated out of San Francisco, has been submitted to the Chamber of Commerce and the shipping and business interests of San Francisco. The proposal was made by A. C. Worthington, vice-president of the Maritime Navigation Company, and officially submitted to Secretary L. M. King and General Manager Robert Newton Lynch. Immediate consideration and action have been agreed upon. It is proposed to include the citizens not only of San Francisco, but also of all other sections of the State, to become interested financially in the ownership of a fleet of ships that will care for this port's future overseas trade, and it was announced that the officials of the United States Shipping Board had indorsed the proposal, which provides that every person in California shall be presented with the opportunity to do his bit toward perpetuating the American Merchant Marine at the port of San Francisco. The enterprise is based on the Rosseter view that the future of America's merchant marine can never be assured unless the people of the country are educated on ship matters, and that this can not be brought about unless the ownership of the operating concerns is vested in a large number of the people.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

The Seamen's Journal

Published weekly at San Francisco
BY THE
SAILORS' UNION OF THE PACIFIC

Established in 1887

PAUL SCHARRENBERG.....Editor
S. A. SILVER.....Business Manager

TERMS IN ADVANCE.
One year, by mail - $2.00 | Six months - - - $1.00
Advertising Rates on Application.

Business and Editorial Office, Maritime Hall Building, 59 Clay Street, San Francisco. Telephone Kearny 2228.

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.

Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, AUGUST 27, 1919.

"OH, HORRORS!"

The continued success of the Atlantic Coast marine unions in raising wages and otherwise improving conditions has had a curious depressing effect on the stand-pat editors of New York shipping papers.

Listen to this awful tale of woe from the Nauticus:

> What the unions want now is very clear. They want the Government to continue running the ships and man them with union men, the chief function of the ships being to supply jobs for union members at high rates of pay and next to nothing to do.
>
> By and by we shall have a Soviet on board every ship, which shall replace the master. The workers—meaning thereby the sailors, firemen and stewards—will naturally compose the majority in the Soviet and they will appoint a commissary in true Bolshevik style, who in turn will delegate the navigation to what are now the mates, and the running of engines to what are now the engineers. The Soviet of every ship will decide when to sail, time to be spent in port, etc. The ship's agent on shore will furnish the crew with the best of food and all the booze they can drink and a communist Government back in the home country will meet the deficit arising out of the voyage. This picture is not exaggerated. If the truth were to be told, it is the ideal state in the minds of those who are now agitating for the supposed rights of sea labor. Amendments to the LaFollette Act will not do. The whole merchant marine must be purged of undesirables and a new code adopted which will guarantee the safety of life and property at sea, define the authority of the master and officers, safeguard the civil rights of subordinate employes and at the same time visit exemplary punishment upon those impairing the discipline of ships.

Truly, brethren, this picture is appalling. We must be a bad lot, indeed.

But are we really as bad as painted? Or does this New York scribe longingly pray for a return of the days when discipline aboard ship meant plenty of physical abuse, long working hours, very little to eat and still less pay? The JOURNAL, at any rate, is firmly of the opinion that the mournful cry for discipline is actuated by a strong desire for the return of the "good, old days" when it was perfectly safe to beat up a sailor for any reason or no reason whatsoever.

But his hopes in this respect will never be realized.

The new spirit of the American merchant seamen is the voice of young America. That's why it is so distasteful to hidebound old fossils.

More native Americans are taking to the sea for a livelihood, of late, than for many years past. These young men are neither Bolsheviks nor drunkards. They are clean, right-thinking, high-minded and independent in thought and action. But that is the very reason why the Nauticus editor shrieks "undesirables." What he probably prefers is meek and docile Chinamen who eat little and work for less pay than any other race or nationality on earth.

That, and that only, accounts for all his silly vaporings anent the Soviets and the undesirables.

FAIRY TALES.

The waterfront reporter of the San Francisco Examiner is a versatile and enterprising sort of fellow. When there is no real shipping news available for publication he induces someone to spin a yarn and no matter how grotesque, the story told is then faithfully recorded in the news columns of that daily.

For instance, the skipper of a Swedish motorship now at San Francisco, is quoted as follows:

> Our sailors are paid 370 kroner a month. That is about $100. They look to the Pacific Coast to provide them with gear at a reasonable price. In Sweden they have to pay more than $100 for an ordinary suit.
>
> San Francisco to-day is the cheapest port in the world so far as sailors are concerned. Stevedoring is rather high, but not much higher than other Pacific Coast ports, and very much below European ports.
>
> In Stockholm the ordinary artisans were getting 65 kroner a day for seven hours' work. That means about $18 a day, and groceries are being charged for at the same rate.

It will be startling news (?) to many that San Francisco is to-day the cheapest port in the world, as regards sailors.

But let no one be deluded by illusionary tales of fancy wages abroad. Here is the latest official data regarding wages of sailors (A. B.'s) from ports in Europe. This information was compiled in April of this year by the executives of the International Seafarers' Federation, at London, England:

	Total Monthly Wage	U. S. rate of exchange per unit
GT. BRITAIN	15 pounds	$4.23
SPAIN—		
Barcelona...	180 pesetas	.20
NORWAY....	200 Kroner	.23½
DENMARK..	208.75 Kroner	.22
SWEDEN....	200 Kroner	.24
HOLLAND..	115 florins	.37
ITALY—		
Naples.....	275 lire	.11 normal
FRANCE.....	220 francs	.19 .12

The wages, as given above, have remained practically unchanged, except in Norway, Sweden and Denmark, where increases have been made (see report of Richard McGhee elsewhere in this issue) making the present scale equivalent to the minimum of £15, demanded by the recent conference of International Seafarers' Federation. All of which seems to indicate that San Francisco is far from being "the cheapest port in the world, so far as sailors are concerned."

San Francisco waterfront reporters will please take notice.

THE AUSTRALIAN STRIKE.

According to private advices from Australia the Seamen's strike over there has been compromised with a substantial increase in pay and several worth while improvements in working conditions, etc., for all hands.

The original demands of the Australian seamen were for a modest increase in wages, with insurance of seamen against the risk of infection with pneumonic influenza, and all wages to be paid until such time as the men were convalescent and returned to their homes.

The influenza epidemic slowly abated while the strike was on and the issue then became a question of higher wages.

Early in the contest the Union refused to go before the compulsory arbitration court. This incensed Justice Higgins of the federal arbitration court who became furious at the attitude of striking seamen toward his court, which is supposed to set wages. He said these workers were mocking him. The seamen admitted the charge, and said they would have to depend upon themselves to secure improved conditions.

The same judge intimated that the higher wage strike of seamen and their refusal to go before his compulsory arbitration court was due to the superior conditions established by American and British seamen.

"What has really stirred the union to make such a claim is an abnormal rise in rates for seamen in America as well as in Great Britain," said the court. "On the Pacific Coast, as well as on the Atlantic Coast, the rate for able-bodied seamen is £15 ($75) per month, as contrasted with the Australian rate of £11 ($55), and when the men meet in ports the contrast is disturbing." When the learned judge hears about the recent boost in American seamen's wages he will have to use a word other than "abnormal."

Justice Higgins also opposed some of the working conditions demands of the seamen, who asked for such luxuries (?) as electric lights and decent sleeping quarters.

Well, the strike is ended. All the details of the settlement are not yet at hand, but this much is certain: the Australasian Seamen's Union is very much alive and able to meet and take care of all issues.

PERTINENT COMMENT.

As usual, the Australian labor press acquitted itself nobly during the recent Seamen's strike. The following excerpts are from leading articles in the two foremost organs of labor:

> If the seamen could have secured their reasonable demands by arbitration it certainly would have saved both them and the community a heap of trouble.
>
> But the right to knock off work when the conditions are intolerable, and the means of redress provided by the law are not deemed satisfactory, is of THE VERY ESSENCE OF LIBERTY, and to rebuke men in the name of society for exercising it is to set up the ethical standards of the Servile State.—The Australian Worker, Sydney, N. S. W.
>
> One would have thought that even the most calloused shipping profiteer would have hesitated before deciding to deal harshly with the seamen, but apparently it is thought that the capitalist Press will be able to remould public opinion to the extent that the men who were regarded as "heroes" for the past four and a half years, now that they ask for justice, will be recognisable easily as "Bolsheviks" or "extremists."—The Queensland Worker, Brisbane, Queensland.

The JOURNAL is pleased to announce that the clubhouses operated by the Panama Canal primarily for its employes generously offer their facilities to the crews of merchant vessels passing through the Canal or calling at the terminal ports. The clubhouses have free reading and writing rooms, libraries of fiction and reference works and current periodicals. Moving pictures or other entertainments are given in the evenings. Clubhouses are operated at Cristobal, Gatun, Pedro Miguel, Ancon, and Balboa. Clubhouses for colored men are at Cristobal and La Boca, adjoining Balboa. In addition, there is the house of the Salvation Army at Cristobal especially conducted for seamen. A Salvation Army seamen's home is being built at Balboa, near the land end of Pier 18. The Salvation Army provides meals and lodgings, and facilities for table games, reading, and writing. It is hoped that conditions will make it possible, in the near future, for the International Seamen's Union of America to establish a permanent agency at a convenient location in the Canal Zone.

Labor Day of 1919 finds the various District organizations of the International Seamen's Union of America in better shape numerically, financially, and otherwise, than ever before in history. Of course, the strength and influence of the organizations has its reflex in higher wages and improved working conditions for members. "Recognition of the Union" and the right to collective bargaining are scarcely disputed these days. But we are apt to forget that it has not always been thus. A quarter of a century ago Seamen's Unions were few and far between. "Recognition of the Union" was sneered at. Crimps and other waterfront leeches were yet in their glory. And it is well to remember that every change for the better made during the last 25 years has come solely and wholly through the Seamen's organized effort. That single thought would furnish the text for a first-class Labor Day sermon—but it is intended only as a reminder.

The so-called Densmore report has been published by the United States Government and the story of the frame-up on Tom Mooney and his associates can be had in full as written by an agent of the United States Department of Labor. Write to your representative in Congress, or to the Government Printing Office, Washington, D. C., and ask for a copy of House of Representatives Document No. 157, 66th Congress, 1st session.

Late reports from Boston and Gloucester indicate that the Fishermen's Union of the Atlantic has won, or is about to win, practically all points contended for in the strike which has been in progress for some time past. More power to the Atlantic Fishermen! They have made a winning fight from the very beginning.

The U. S. Army Transport "Dix" sailed from San Francisco for Manila, on August 24, after a delay of forty-eight hours which time was consumed in unwinding red tape and securing permission from Washington to pay the crew the going wages of the port.

SEAMEN'S WAGES IN EUROPE

British Seamen's Union Sends Representative to Assist in Wage Negotiations by Seamen in Scandinavian Countries.

The Journal is indebted to "The Seamen," official organ of the National Sailors' and Firemen's Union of Great Britain and Ireland, for a report upon the recent journey of Mr. Richard McGhee (as the official representative of that Union) to ports in Denmark, Sweden and Norway for the purpose of assisting the seafarers in those countries to secure the minimum wage, as fixed by the International Seafarers' Conference.

Comrade McGhee was one of the two fraternal delegates from the British Seamen's Union at the recent New York convention of the International Seamen's Union of America. He is a forceful speaker and is well grounded in the fundamentals of the trade-union movement.

The report follows, in full:

I embarked at Hull, on the steamer "Bernstorff," for Copenhagen, on the evening of May 27, arriving in Copenhagen on Friday, May 30, accompanied by Mr. Damm, Secretary to the International Federation. We were met on the arrival of the steamer by a deputation of the Seamen's Unions, and, after we had secured rooms at the Hotel Cosmopolite, we took counsel with some of the local unions' delegates, who had been in conference with the Danish shipowners, discussing the questions of wages, hours of employment, and rates for overtime on shore work. We learned that just at the time of our arrival the shipowners were showing a firmness to resist the demand for a standard rate as in operation in the United Kingdom. After our conversation the delegates returned to the Conference, and our arrival was announced to the Conference, together with the objects of our mission. The shipowners were informed that no settlement could be sanctioned by us unless the British standard of wages was adopted in Denmark. They were told the substance of the conversation which had taken place between the Union delegates and ourselves, and which was to the effect that if the standard wages were refused, and the men forced to resort to a strike, we would support them generously with funds, would guarantee that no ship in a British port belonging to Denmark would be either loaded or discharged, and that no British seamen would take service on any Danish ship while the strike lasted. At a subsequent meeting with the whole of the Union delegates to the Conference, which was held later in the afternoon, we were told that our decision was effective in bringing the shipowners to an immediate acceptance of the Union claims, and that afterwards the minor questions were easily adjusted. Some of the "minor" questions were of vital importance, and in pressing the Union demands for some of them we pledged our support. One of the questions was the "three shift" work in stokehold, and on deck. In the stokehold the "three shift" was conceded without much debate, but the "three shift" on deck was a more difficult matter to adjust. The Conference opened on Saturday, May 31st, and adjourned without being able to settle definitely the "three shift" question on deck; and meetings of the men were held the same night at 7 o'clock to consider the point in dispute. We saw that firmness would secure all that was asked for, and we encouraged the men, quietly to hold firm, which they did, and at 10 p. m. the Conference reassembled and sat till 4 on Sunday morning, at which hour the shipowners finally agreed to the "three shift" on deck as well as in the stokehold, with some little time allowed for bringing it into operation. Thus, every point in the claims made by the Unions had been won, and it filled the men with enthusiasm. On the day following, June 2nd, a joint meeting was held to either ratify or reject the terms, and this meeting I addressed. I pointed out that the men were profoundly indebted to their capable delegates who, with wisdom, skill, and moderation, had conducted their side of the negotiations, and had won for the seafaring men of Denmark a splendid victory. I emphasized the points won, in wages, in hours of work, both on ship, and on shore, the big increase in the overtime rates, and in the establishment of an 8 hour day, both on ship and on shore; and I congratulated the shipowners upon the wise discretion they had shown in the negotiations, which I said would pay them in the end better than if they had had to make the concessions after a trade-destroying strike. At this meeting of men there appeared a few who urged that a strike should still be made unless the Government would set free some political prisoners who had been found guilty of starting a riot, which they called a revolution. I was strongly appealed to for a declaration of British support of a strike to be continued until the prisoners were set free.

(Continued on Page 11.)

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Aug. 25, 1919.
Regular weekly meeting came to order at 7 p. m., Ed. Andersen presiding. Secretary reported shipping good; members ashore increasing. Nominations were made for delegates to the annual convention of the California State Federation of Labor, to be held at Bakersfield, Cal. The election will take place the third Monday in September at the regular meetings held in San Francisco and San Pedro.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg. 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., August 18, 1919.
No meeting. Shipping slow.

J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., August 18, 1919.
Shipping fair; prospects uncertain.

W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, August 18, 1919.
Shipping medium.

H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, August 18, 1919.
Shipping quiet.

P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, August 18, 1919.
Shipping good; men scarce.

DIED.

Fred Lotus, No. 138, a native of Russia, age 59. Died at sea, August 5, 1919.

Axel Pettersen, No. 1442, a native of Norway, age 39. Died at Tahiti, Society Islands, June 9, 1919.

Jan Smith, No. 1750, a native of Holland, age 44. Died at Port San Luis, Cal., May, 1918.

W. E. Mahoney, Portland marine writer, has assumed his new position as assistant publicity director for the department of sales and supplies of the Emergency Fleet Corporation. The new department, which was created to take care of the disposition of materials and supplies left over after cancellations of contracts and completed building program, has a vast amount of work ahead of it.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

Surface excitement over union labor's plan to dispose of the railroads has subsided somewhat. While increasing strikes in every part of the country prove that the brotherhood chiefs did not exaggerate when they told President Wilson that high prices were breeding revolt, the hostile newspapers are inviting the public to stick its head in the sand and pretend that all danger is past.

But the cost of living and labor's plan for operating the railroads are so closely bound together that they cannot be separated. This central fact is fully appreciated by the President of the American Federation of Labor, no less than by the Railroad Brotherhoods. Standpat editors all over the country had begun to say that Mr. Gompers should hurry home from Europe and teach the American wage-earners that they must not tamper with the vested rights of the railway owners. But Gompers did not tarry in making known his complete support of the Plumb Plan. In a copyrighted dispatch from Paris on August 13, the United Press quotes the labor chief as saying:

"American railway workers intend not only to compel the Government to take over the railways, but will demand, as the logical next step, that labor be granted a permanent, equal voice in railway administration. The railways must be brought under suitable control, made up of Government, laborers and technical experts. At present none of these elements has a real voice in any matter of importance concerning the railways.

"The first step in changing the situation would be for the Government to take over the lines. The next step would be admitting representatives of labor and representatives of the Government into the administrative council. The Government's failure during the war was due to its methods as well as to abnormal conditions. It can't be expected that a man like McAdoo, who had not the slightest knowledge of railroading, would be able to handle the situation, even in peace time. . . . We will insist that rail experts, not merely politicians, be placed in charge of technical questions.

"Solution of the whole problem rests with the co-operation of three heretofore conflicting interests—labor, Government and the owners. Labor is fully justified in its present steps, as it has not received the slightest consideration in the past. . . . Present conditions are extremely unfair. Previous methods have failed to achieve legitimate results. Hence we will be forced to use other means."

The Senate Committee on Interstate Commerce will report during the present week its bill to dispose of the railroads. This measure will be known as the Cummins Bill, Senator Cummins being Chairman of the Committee. Under this bill it is proposed that the railroads be returned entirely to their private owners, with the power to fix rates preserved in the Interstate Commerce Commission. The only novelty contained in the measure is a plan to divide the country into sixteen different regions wherein the conditions and problems of transportation are relatively similar, and thereafter to have the Interstate Commerce Commission fix traffic rates applying equally to all the roads within each of such regions. Cummins insists that his bill would preserve and stimulate competition between the different lines, however.

The Iowa Senator discussed this subject at some length with your correspondent, and seemed anxious to preserve his reputation as a friend of labor.

"I have stood with union labor for many years and helped it to procure recognition and a greater measure of justice," he said. "I believe the average manual workman is still underpaid and must be given a greater share of the wealth he helps to produce. But I must part company with labor on the Plumb Plan, as I was compelled to do when it advanced the Adamson Eight-Hour Law to enactment. If our civilization is to survive we must preserve the two classes of employers and employees. Under the Plumb Plan private owners and employers would be eliminated from the railroads, which would pass under the complete control of those whom we now term wage earners. The Soviet system is one in which the workers in an industry or a community are the dominant class there. I am opposed to the Soviet system, therefore I must oppose the Plumb Plan."

I quote these remarks of Senator Cummins because he and his bill typify the most respectable and constructive opposition to the purpose of organized labor. He views with a sense of alarm, which millions of Americans share, any weakening of private ownership of the great public necessities, or of the means for their preparation and distribution. But millions of other Americans, who once shared the Cummins fear, have for nearly a generation past watched in patience while the Iowa statesman and his prototype applied their theories of public control to the railroads and other monopolies. The Plumb Plan is based squarely on the contention that these applications have failed—that we must divorce private capital from the railroads, simply and only because it has failed and now threatens the people with redoubled hardships if continued. It will be the duty of all Americans, especially of the organized workers, to compare the Cummins Bill, detail for detail, with the Plumb Plan and see wherein it offers an answer to the workers' indictment of private ownership.

Meanwhile the strikes continue. The Brooklyn transit workers have won complete recognition of their union, after tying up the lines for almost a week. Workmen on the underground and elevated lines in Manhattan and the Bronx are encouraged to believe that they too can find relief from high prices by wringing higher wages from the Interborough Rapid Transit Company. They are preparing to demand $1.00 an hour for motormen and 75 cents an hour for all others—a general increase of fifty per cent. A 10 per cent. increase is scheduled to go into effect on September 1, but the workers declare that is not enough to meet the soaring price of necessities.

Ten thousand painters are on strike in New York City, demanding $1.00 an hour, and some 30,000 railway shopmen are reported still out at present, in spite of President Wilson's advice that they return to work pending further consideration of their six-months-old request for more wages. In Washington 640 policemen have joined the new Policemen's Union, while only fourteen men attended a simultaneous meeting of the older Policemen's Association, which is now said to consider asking to be merged with the progressive younger body. The cost of living is almost the sole stimulus to this movement, the public guardians finding that they cannot procure justice except by the force of united protests.

In the New York district 120,000 cigar makers are on strike, in addition to an undetermined number of plasterers, machinists, brassworkers, shirtmakers, furriers, dressmakers, and others, while 27 international unions are threatening a general strike in the building trades that would involve 1,500,000 men in all parts of the country. Pittsburgh and East St. Louis have trolley strikes, and Allied Iron and Steel Workers of Chicago have voted overwhelmingly in favor of a general strike if necessary to obtain higher wages. Brooklyn milk drivers are demanding $50 a week and a 2 per cent. commission on all bottled deliveries.

Thirteen theatres along Broadway are still closed by the sensational strike of actors which began early last week. The striking body is known as the Actors' Equity Association, and it contains some of the most widely known entertainers on the American stage. Their strike is at bottom a protest against the rank commercialism that prevails in the amusement world, and which has given the sensitive stars of the theatrical world a taste of the inconsiderate treatment which ordinary wage-earners have always had to contend against. The actors have now been joined by a rebellion of the lesser stage lights, the Chorus Equity Association, which has more than 1,000 members after a few days of existence. Hugh Frayne, organizer of the A. F. of L., and P. J. Shea, president of the Stage Hands' and Picture Operators' Union, are assisting the men and women of the chorus to attain their ends.

The grievance of the girls has been stated by one of them:

"We are workers, and we are ladies, and we want a chance to make an honest living. We demand managers who are gentlemen, and if they can't be gentlemen they can't deal with us. We are tired of being sworn at and of having the public take it for granted that we haven't any morals. Well, it's hard to keep your morals when you don't get enough wages to live on, and when the managers, the public, everyone, is ready to pull you down. We are human beings, and we want a decent chance like the rest." And a chorus man adds: "We are not jokes. We are men and we want to be treated as men and gentlemen."

The chorus strikers submit this list of demands: A minimum wage of $40 a week while playing in New York, and $50 while playing on the road; railroad and Pullman fare while traveling; half pay during rehearsals after four weeks, and full pay for all extra performances; collective bargaining. Stockings and shoes purchased for use at performances to be paid for by the management.

Reporters who attended the chorus strikers' meetings have been so impressed by the seriousness of the men and women, and the justness of their cause, that they have quit writing alleged funny stories about them, and now inform the public

that the strikers are for the most part hard working young people whose average salary is $25 a week. And they quote with sympathy the assertion of one girl: "On $25 a week a girl can't dress the way she must if she wants to please the manager and keep her job, and there is always a Johnny at the stage door to tempt the girl whose rent is not paid and who doesn't know where the next meal is coming from. A girl may be another Elsie Ferguson in looks and everything, but if she hasn't got her complexion on and good looking clothes, she's got a fat chance to show her talent. You've got to keep your nails manicured and your shoes looking nice—well, you've got to be a good looker from your head to your feet."

Another symptom. The newspapers report that a group of physicians employed by insurance companies and other corporations in and about New York have applied for admission to the A. F. of L. as a regular labor union. These doctors find they are like the chorus girls and coal miners in the fundamental fact that they crave respectful treatment and enough money to support themselves and their families. This era of painful prices is very hard on everyone, but it will be worth the experience if it teaches a majority of Americans the big truth that men form labor unions because they have positive grievances and know of no other way to correct them.

Incidentally, but importantly, political officials find themselves in the ludicrous position of having to berate the profiteers to stand in with the growing host of restless labor, and at the same time having to shout "Bolsheviki!" at the strikers to curry favor with those who stand pat and have no remedy for any problem. It is this futile attitude of shilly-shally which makes organized labor believe the time has come when it must lay its own constructive proposals before the American public. If that be revolution, the standpatters will have to make the most of it.

A COMPLAINT FROM THE SICK.

Editor, SEAMEN'S JOURNAL:

As a member of the Marine Cooks and Stewards' Association of the Atlantic, I take great pleasure in writing to you. We have a great many members down here suffering with tuberculosis, some of them have been pronounced cured, but are compelled to stay because they have not the necessary funds to pay their transportation home.

Soldiers and naval sailors here who recover from their disease receive transportation and compensation to the amount of thirty dollars per month while they are disabled. These men deserve it because during the great world war they risked their lives for the great cause of liberty. The Red Cross and K. of C. are supplying them with candy, cigarettes, tobacco, shoes and clothing, but no one thinks of poor Jack the Merchant Mariner who risked his life to carry food, ammunition and supplies to those men. The Merchant Mariner was the man behind the man behind the gun. Many of my dear comrades are asleep in the deep as the result of submarine warfare and those that are here are suffering from the great white plague caused by colds and chills while they were exposed to the weather in open boats caused by the torpedoing of their ships. These men were game, they tried again and again, and in my estimation they deserve just as much credit as the Service Man.

It is a certainty that they deserve better recognition than they have been getting. Picture a sailor aboard ship every day and night, keeping a look-out for "Subs." You are relieved at eight bells and go below for rest as sleep is impossible when you are in the War Zone. The incessant ringing of the bell tells you to get to your boat as you have been attacked. If you are lucky you get saved to serve the rest of your life in a T. B. sanatorium where the world forgets you and you become an outcast. Do you think this is a square deal for the Merchant Mariner?

We Merchantmen have had none of the praise that is going around, we did not even rate the uniform as the Navy denied we were sailors and yet Admiral Sims says in an article for The Baltimore American that if it had not been for the Merchantmen there would have been another tale to tell.

I hope some of our boys may read this article and know how their shipmates have been treated and try to get the boys that are cured transportation from here. Hoping you will publish this in the JOURNAL, I remain,

Respectfully yours,
JOSEPH O'CONNOR,
Member of the Marine Cooks and Stewards' Association of the Atlantic.

U. S. P. H. S. Hospital, Greenville, S. C., August 10, 1919.

"VOTES FOR SEAMEN."

"Votes for sailors" is the slogan of the National Seamen's Franchise Association, now being organized at New York to work for legislation giving seamen the right to register their votes at National, State and local elections.

Sailors usually lose their votes because absent from their election districts on registration and election days. Legislation to permit them to vote by mail, such as has been sought by traveling salesmen, railway men and others whose work keeps them away from home much of the time, is advocated by the Seamen's Franchise Association. The association was formed at a meeting of delegates of the Masters, Mates and Pilots' Association, the Marine Engineers' Association, the Seamen's Unions of the Atlantic, Gulf and Coast, the Firemen's Union and Marine Cooks and Stewards of the United States.

S. B. Axtell, who is organizing the franchise association, said:

"Men in the United States without a vote are not represented. The mere existence of a right to vote is nothing without the creation of the machinery by which the votes may be registered, and only with the creation of this machinery will seamen be represented in Congress and the State legislatures.

"Then the seamen will be considered, and no political party will omit his interests when drafting its national platform. No President, or member of Congress, or United States Senator, or member of any of the State legislatures, will overlook the interests and welfare of the human beings aboard American vessels.

"The people of the United States to-day are in a receptive mood to this step. Woman's suffrage has just been granted. The crews of railroad trains desire absentee voting privileges. Traveling salesmen are clamoring, and have been for years, for it, and for sensible legislation that will permit them to register their votes.

"If democracy is to function for the seamen as well as these other classes; if representative government is to be representative in fact as well as in name, then the election machinery must be altered so as to provide for the proper and efficient registration of their votes."

An American officer lying wounded on the battlefield was amazed by the sight of a German officer walking toward him with stately precision. Every once in a while, however, his impressiveness would start and twitch as though something were jabbing him from behind. And such proved to be the case, for as the bemedaled officer drew close, up from behind him loomed a gigantic darky doughboy, grinning from ear to ear. "Look at him, look at him, boss," he gloated. "Ah' doan know what-all Ah's got, but Ah shuah am bringin' it along."

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

purpose, there is no conservatism to be found in the American Federation of Labor. The American labor movement is a sternly radical movement and is the more radical by reason of constructive character of its radicalism.

"Organized labor knows the injunction as an instrument in the hands of reactionaries and bourbons to crush the hope and ambition and struggle of the wage earners for a brighter day and a better life. The injunction loses all character as a proceeding in equity when it is used as an instrument for the suppression of constitutional rights.

"Labor firmly believes that the courts usurp certain powers which come into direct conflict with certain rights definitely and specifically guaranteed by the constitution of the United States and it admits to no institution and no set of men the right to abrogate any section or provision contained in that document.

"Labor regrets that certain newspapers have found it impossible to uphold the Constitution in this respect. Labor would like to see the voice of the American people raised in unanimous demand that abrogation of the Constitution and denial of the rights guaranteed by the Constitution be ended forthwith and forever."

Poor Mothers Defended.

Miss Julia C. Lathrop of the Federal Children's Bureau defends poor mothers who are charged with ignorance in the care of their children. In justifying her position Miss Lathrop quotes Sir Arthnr Newsholme, medical officer of the English local government board:

"Maternal ignorance is sometimes regarded as a chief factor in the causation of excessive child mortality. It is a comfortable doctrine for the well-to-do person to adopt, and it goes far to relieve his conscience in the contemplation of excessive suffering and mortality among the poor.

"There is little reason to believe that the average ignorance in matters of health of the working class mother is much greater than that of mothers in other classes of society. But the ignorance of the working class mother is dangerous, because it is related with relative social helplessness. To remedy this, what is needed is that the environment of the infant of the poor should be leveled up toward that of the infant of the well-to-do, and that medical advice and nursing should be made available for the poor as promptly as it is for persons of higher social status."

The official report of the Georgetown University seismological station, Washington, D. C., shows that during the year 1918 there were recorded on the seismographs ninety-eight earthquakes. From dispatches received the location of thirty-seven quakes of importance was ascertained. Of these three were disastrous, the first occurring in Guatemala, the second in China, and the third in Porto Rico. No disturbance of any consequence is tabulated as having taken place in the United States.

A LABOR DAY MESSAGE.

(Continued from Page 2.)

"Star of the East" for their redemption from the economic slavery that is now smothering them.

Civilization owes to the Labor Movement a debt of everlasting gratitude for its stanch Americanism. It has fixed its face like a flint against the I. W. W., who preach the philosophy of hate and destruction. The Organized Labor Movement is the bulwark against the inroads and machinations of that un-American organization. The I. W. W. seeks to destroy the growth and success of the American Labor Movement, claiming that the Federation is too slow, that it is dominated by capitalistic influences. These men remind one of the Chinaman who jumped overboard to keep the ship from sinking. If they were really in earnest, or if their cause were logical, there would be no necessity for them to preach and practice the philosophy of hate that they do whenever and wherever opportunity presents itself for them to preach and spread the poisonous vapor. The bona fide Labor Movement has learned the truthfulness of the adage, "Thrice armed is he who hath his quarrel just." Organized Labor has nothing to fear from this hydra-headed monster that pretends to be what it is not, and what it is it pretends not to be. Listen! These same preachers of the philosophy of hate when confronted by their own short-sightedness and their own sins, and are in the meshes of the law, turn for assistance to the Organized Labor Movement to which they have given time and spent money to try to destroy, claiming that they are no worse than capital, which is trying to hinder and destroy the bona fide Labor Movement. In this confession, however, there is much merit, as the capitalists have their I. W. W. who are at cross purposes with everything that squares with humanity and which aims to give the workingman an opportunity to better his condition and broaden and sweeten his life.

The American Federation of Labor has taken up the cross of the overburdened workers of the land, and is going about its task in a common-sense, practical manner. It is not asking the impossible, neither does it expect to revolutionize society in a day. It realizes the impracticability of putting a pair of No. 10 boots on a 4-year-old boy, and appreciates the fact that it will not only retard the growth of the boy, but completely destroy the utility of the boots. Its program is to keep the boy healthy, minister to his mind and morals, and when he reaches man's estate he will then don the No. 10 boots, which he will wear in his every-day, common-sense efforts, and gradually remove the obstacles that he finds in the pathway of the progress of his class. By his class I mean the men and the women who do the world's work and furnish the lubrication for the machinery of life.

I have said (and the thought is worthy of repetition) that the Labor Movement has the sanest and most workable program for preparedness against the invasion of a foreign foe of any that has been submitted to the American people for their consideration—namely, it stands for a living wage, for an eight-hour day, for a sanitary workshop and for the elimination of child labor, for equal wages for equal work of men and women. When this program is put into operation it reflects itself in the lives of the race by producing a healthy childhood, a virtuous womanhood, and contented, vigorous and manly manhood, which, again let me say, is the only preparedness that prepares the citizens of any country to live and to die for their country.

No country is safe that encourages—let me change that—that compels men and women to go through life single. Nature intended and the Good Book says, "Man should not live alone." The Labor Movement program is to bring about a condition whereby a man who has reached his majority can earn a sufficient wage to justify him undertaking family responsibilities, when he meets the maiden of his choice, that he is neither afraid nor ashamed to ask her hand in marriage, realizing that when the little ones come along he will be able to provide for their needs and equip them mentally and morally for Life's battle. That, then, is the preparedness program of the American Labor Movement.

I pause for a suggestion from some of the "uplifters" who are willing to do everything for Labor with the exception of permitting Labor to attend to its own business, thinking that the man whose hand is hard and whose form is bent from bearing more than his portion of the world's work is incompetent to work out his own economic salvation. I pause and listen for a suggestion from our "pink-tea friends" for a program that will surpass in soundness and in true Americanism the one herein submitted, and one that will better serve and promote the interest and the comfort of the toiling millions.

This plan has stood the test of the most virulent opposition, and, like the Hebrew children of old, has come forth without the smell of fire upon its garments. No movement has been more maligned, vilified and misrepresented than the Labor Movement. Injunctions have been served and laws have been passed with the one thought and one hope in mind—to stifle the progress of the movement.

Let me say to the trade unionists who may read this article to take heart. The Organized Labor Movement was born in necessity and suckled at the breast of humanity. The Labor-haters might as well attempt to sweep back the waves of the ocean with a hatpin as to attempt to destroy this great movement, the principles of which are as high as heaven, deep as earth, broad as space, and as long as eternity—principles that appeal to every atom of sincerity in our composition, every fiber of love in our hearts, and every grain of gratitude in our souls; principles that will last as long as "the earth produces a plant or the ocean a wave."

As to the Labor-haters who attempt to force their conclusions upon the common people through paid advertisements in the subsidized press, their ravings are the vaporings of a diseased mind. In the language of Shakespeare, "It is a story told by an idiot, full of sound, full of fury and full of nothing."

The man who in these days will seriously debate the affirmative of the question, "Resolved, That trade unions are a menace to the prosperity of the country," belongs to that order of persons who, when the case goes against them, find their only relief in cursing the court.

SEAMEN'S WAGES IN EUROPE.

(Continued from Page 7.)

I was asked whether I knew that the men in prison were fellow-workers of the seamen, who had been sent to prison for doing no more than delivering speeches. I at once replied to the challenge, and in a few direct sentences, told the meeting that we would not in any shape, or form, be parties to a strike for such objects. We were here in connection with the demands set out in the program of the International Seafarers' Federation, all of which had been secured at the Conference, and there our mission ended. But, having in mind that the shipowners and the Government were both likely to hear of the purport of my speech, I added, that in case a strike was made for the political purpose indicated, we would not only refuse it support, but we, in all likelihood, would give our support to the other side, for we were profoundly convinced that such a strike could lead to nothing but ruin for trades unionism. This declaration was warmly applauded by the meeting. I went on to say that there were other, and far more effective, means of working for the release of the prisoners, and the settlement that had been now effected between the shipowners and the seamen's unions would satisfy the Danish Government that there was nothing revolutionary in the trades unions, nor even in the working men of the country, and most probably, that fact alone would secure the release of the prisoners much quicker than a strike. This also was cheered by the meeting, and on the day following five of the prisoners—four men and one woman—were set free. To the executives of the Unions and to meetings of the men I addressed four speeches altogether in Copenhagen. My speeches were translated to the meetings by Mr. Damm, and I have reason to know were translated faithfully. But, besides, a great many of the men understood English, as was plain by the general applause at points which were intended to be effective. This finished our work in Denmark, and its success made our work in Sweden and Norway easy and simple. It was a great success, and the officials of the several unions expressed their warm appreciation of the service rendered to them by the National Sailors' and Firemen's Union of Great Britain and Ireland for sending us at a time so opportune. They frankly informed us, that, if we had been only a few days later in arriving the chances were that the Conference would have broken up without a settlement, and a strike would have followed.

We wired the result of the Conference to the unions in Sweden and Norway, and informed them when we would arrive with them. Three days were spent in getting our passports set right for entering Sweden and Norway, and on Thursday, June 5th, we left Copenhagen for Gothenburg, where we arrived early on the 6th of June. On that night we had a magnificent meeting of all three unions, the firemen's union, the seamen's union, and the union of cooks and stewards. At it, we urged the triumph of Denmark, and again pledged the support of the National Sailors' and Firemen's Union of Great Britain to the extent of large financial support, and in all other ways, as we did, when we arrived in Copenhagen, to the Danish unions. The enthusiasm was intense in the meeting, and for the first time we raised the question of the three unions linking up in unity, for any trouble that might be imposed upon them by the shipowners refusing the Danish terms of settlement. A strike had taken place some months ago among the seamen for better wages, but the firemen, being under a contract, could not join in it, and it not only proved an utter failure, but the most tyrannical terms were forced upon the defeated men. Next day we learned from the officials of the unions that the shipowners had made offers to them of wages, somewhat approaching the wages in Denmark, but the delegates had declined to accept the offer. They told us they would now insist on the Danish terms, and as soon as the contract with the firemen's union ended, which it does on July 7th this year, they would unanimously tell the shipowners that they must pay the wages of Denmark or face a strike. They welcomed us in Gothenburg, for our presence, they were convinced, would secure their men the standard wages, and the other concessions secured in Denmark.

I am satisfied that the shipowners will accept the position, and will settle on satisfactory terms rather than at this moment face a strike, which would be supported by the British Union and the International Federation. On Sunday, June 8th, we traveled from Gothenburg to Christiania, and on Monday, the 9th, we had our first interview with Mr. Gulbrandsen, President of the Norwegian Union, and we discussed with him the situation there. He was not sanguine at that moment that the Union would be so successful as the unions in Copenhagen had been, and when I heard the comparative number of seamen in the Unions, and the numbers not in any unions, I was not surprised that the shipowners were a bit stiff when discussing demands that were being made on behalf of the unions. We urged Gulbrandsen to utilize the fact of our presence, and mission, strongly upon the shipowners, and next day he did so, with the result that almost without a word of objection the entire terms of the Danish unions were accepted, and agreed to, by both sides. The Wednesday and Thursday were occupied in working out details, and on Thursday evening we had a dinner to celebrate the victory. On Friday the contract was duly signed by the several members of the Conference on both sides, and the work was finished.

At the request of the Finance Committee, I undertook the mission to Scandinavia, but with some misgiving as to the prospect of success. Having spent over three weeks in the work of advising and taking counsel with the officials of the several unions, I am now satisfied that the suggestion of the mission was an inspiration of the President, J. Havelock Wilson, M. P. But for it, the shipowners of Copenhagen and the shipowners of Norway would not have accepted the standard wages; nor would they have consented to the "three shift" on deck, and in the stokehold, nor to the increased rates of pay for overtime, nor to the eight-hour day, and a strike would have been the instant consequence, which would in all probability have ended in disaster for the men and the union. In any case, it would have involved our union in a large expenditure, and might have brought us into a strike also. All these possible disasters have been now avoided by the bold step the Finance Committee took in sending a representative to the spot, with considerable powers to assure support in the event of it being necessary. In this report I have not so far said much about my colleague, Mr. Damm who accompanied me during the trip. He was present at all interviews, meetings and conferences, and, in fact, arranged most of them. He, besides interpreting my speeches, delivered an equal number of his own. I have sound assurances that he gave a true and faithful rendering into Danish of what I said in my speeches. He did not spare himself from the moment we landed on the quay at Copenhagen until we sailed from the quay at Christiania, and it is but simple justice to him to say that the success of the mission was mainly due to his energy and good sense throughout, and finally I desire to place on record my warm thanks to him for his attention and services in marshaling together the details of the mission.

June 21st, 1919.

(Signed) RICHARD McGHEE.

KAISER IS OF FRENCH DESCENT.

Truly declared Buddha, "The hand that strikes you is your own," or, as another prophet expressed the same idea, "A man's foes are they of his own household."

Strange, therefore, as it may truly seem, the German Kaiser, who five years ago plotted the devastation and overthrow of France, and launched against that devoted land the most monstrous war of history, is himself of French blood and French descent, descended, indeed, from one of the most famous and noble figures in the annals of France, that of Admiral Gaspard de Coligny.

A daughter of Admiral Coligny, so the annals run, in 1583 married William of Nassau-Dillenburg. From this union was born Frederick Henry, Stadtholder of the Netherlands; and his little daughter, Louise Henriette, married Frederick William I of Brandenburg, the Great Elector. The son of the Great Elector, Frederick I, King of Prussia, married the Princess Sophia Charlotte, who bore him eleven children, among whom was a Princess Wilhemina, who was the great-great-grandmother of the present Queen Wilhemina of the Netherlands.

Snch is the descent of the queen from Admiral Coligny, in the ninth generation.

Frederick I of Prussia was succeeded by his own son, Frederick II, called the Great, who in turn was succeeded by his nephew, Frederick William II, who again was succeeded by Frederick William III. Two sons of the latter reigned in turn, Frederick William IV and William I. The last-named became German Emperor in 1871; was succeeded by his son, Frederick, and he, finally, by William II.

The late Kaiser is therefore descended directly from the great French admiral, in the tenth generation.

Labor News

The Savage Arms Company of Utica, N. Y., has increased wages of its union metal polishers from 45 cents to 60 cents an hour for day work. Piece work rates are proportionately advanced.

The recent order that no woman shall be paid less than 22 cents an hour in Wisconsin is protested by some manufacturers, who claim they are facing ruin and starvation. The State Industrial Commission will listen to the tales of woe, but in the meantime the 22-cent rate must be observed.

For fifteen years four large cabinet making concerns in St. Louis, Mo., have operated on a non-union basis, but have finally signed union shop agreements with the carpenters' district council. One manager said his experience during the war convinced him that union shop methods and union mechanics were the best.

To enforce a 25 per cent. wage increase nearly 7000 cigar makers at Tampa, Florida, have suspended work. Several thousand other employes are idle because of the strike. A few manufacturers have granted the demand, but a majority of the employers insist that a ten per cent. advance is all that they can afford.

The new minimum wage for women workers, minors and apprentices in Minnesota is now in effect. In cities of 5000 population or over the rate will be $11 for a week of 48 hours and 23 cents an hour for additional hours for women workers, with a graduated scale for apprentices during the first nine months. In municipalities of less than 5000 population the rate will be $10.25 a week and 21½ cents for additional hours.

The Milk Wagon Drivers' Union of St. Louis has signed a contract with the Pevely Dairy Company, after a three-years' fight. In 1916 this and other concerns attempted to smash the union and the venture started one of the bitterest contests in the labor history of the city. Union men were shot down by imported strike-breakers. The company concluded to make peace when a second strike started recently among its "unorganized" drivers.

The Department of Labor has appointed Miss Grace Abbott to assist the organization committee of the International Labor Conference which meets in London to arrange for the first conference at Washington, next October. The labor conference was created by the peace treaty. America's representative on the organization committee is Professor Shotwell of Columbia University, who is also assisted in London by Ethelbert Stewart of the Department of Labor.

Employes of the Buda Company at Harvey, Ill., manufacturers of railroad supplies, are discussing trade unionism, and the manager "takes his pen in hand." Result: Long letters to said employes that the plant will be operated on the "open shop" basis, that any and every employe with a grievance will be listened to and therefore it is not necessary for them to be fussing around trade unionists, which at best is an expense in these days of H. C. L. The manager cannot understand why his "hands" attended a meeting and listened to a discussion of conditions at the Buda plant by men who are not on the pay roll of the company.

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

CARRY ON!

Uncle Sam is releasing from his service the men who went "over there" to free the world from autocracy. Thousands of soldiers are daily receiving their honorable discharges; they pocket their pay, bid farewell to their comrades, and sally forth—civilians.

There is one army, however, which must not be demobilized. That is the army of War-Savings Stamp buyers. More recruits are needed to carry on the campaign of readjustment which follows the signing of the armistice.

The army of fighters has achieved its purpose.
The army of savers must remain in "action."
"Carry on" to a lasting peace under the banner of W. S. S.!

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life

Send in your order today.

$1.00 Per Year—Agents Wanted

La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

I am representing the Union men who are entitled to salvage and members of the crew of the following vessels. In most cases action has commenced. In some cases the funds have been recovered. In others they are readily recoverable upon filing power of attorney form with me. Apply to Union delegate or address this office by letter. "Princeton" vs. "Ardmore," $7500 received. "Gulf of Mexico" vs. Bark "Portugal," $5000. "Gulf Coast" vs. "Boxleaf," settled. "Argonaut" vs. "Jason," funds received. "Iroquois" vs. "Skinner," settled, crews share $12,250. "Brasos" vs. "Iroquois," settled. "Maine" vs. "Theresa Accomme." "Oskawa" vs. "Westgrove." "Buda 2" vs. "Western Star." "St. Charles" vs. "Monte Cenis." "Florence Olsen" vs. "Marina." Florence Olsen" vs. "Claremont." "Alliance" vs. "Belvernon." "Donnelly" vs. "Irish." "Anacortes" vs. "S. O. Barge No. 95." "Fred W. Wellor" vs. "Overbrook." "Neptunas" vs. "Panama." "Quincy" vs. "Transportation." "Herman Frash" vs. "Brilliant." "O'Neil" vs. "Oregon." Bark "Superior." "Pan American" vs. "Santa Rita." "St. Charles" vs. "Tea." Tug "Navigator" vs. "Edgar H. Vance." "Tunica" vs. "Neppon-ier." "Lake Charles" vs. "Cantiwo." Silas B. Axtell, 1 Broadway, New York City. 8-20-18

Home News

Nebraska joined the list of States that have ratified the Federal woman suffrage amendment when the House of the State Legislature, by a vote of 94 to 0, passed a joint resolution providing ratification. The Senate voted previously for ratification, 27 to 0. Nebraska, whose Legislature was recently called into special session by the Governor to act on the amendment, is the fourteenth State to ratify.

The land bill favored by Secretary of the Interior Lane, and introduced in the House by Congressman Mondell, has been favorably reported by the public lands committee. In favoring the bill the committee said it would open the way to work and homes on the land for the nation's war veterans; provide for the development of large tracts of land now held by private owners and would provide temporary employment for large numbers of discharged soldiers and sailors while the land projects are being developed.

The United Cigar Stores company, which operates a chain of cigar stores throughout the country, has adopted a Sunday closing policy for all stores except those located at summer resorts. In large advertisements in the daily press the company announces that "Sunday should be a day of rest." The company made this discovery simultaneous with the growing unrest of its clerks and their discussion of trade union methods. Recently several hundred clerks employed by this concern in Chicago struck, and this "bad example" is liable to be copied by others.

At a recent Senate Committee hearing on the high cost of living, E. A. Calvin, cotton authority, showed by illustrations that the farmer is not to blame for present prices. Mr. Calvin said the farmer received about $9 for the wheat that goes into a barrel of flour, which the baker turns into $32 and $34 worth of bread. He showed six yards of gingham cloth for which he paid $4.50, adding that the weight was 15 ounces and that some cotton growers received 25½ cents for the cotton therein contained. He exhibited other cotton products, and pointed out that although the prices charged in the stores for these articles were exorbitant, the farmers' share is infinitesimal.

An air mail service between San Francisco and New York will be established soon if a bill introduced by Representative Julius Kahn is approved by Congress. Kahn's bill directs the Postmaster-General to take up the matter as soon as the necessary appropriation is made. Air mail service is already an established fact between New York and Chicago and has been successful since the first of this month. Letters leave New York at 5 o'clock in the morning and reach Chicago about 1 o'clock in the afternoon. Delivery of such letters directed to San Francisco is advanced about 24 hours. It has been estimated that aerial mail delivery from New York to San Francisco can be made in 48 hours under favorable conditions, and it is believed that a service of less than three days can be maintained.

Domestic and Naval

Final arrangements have been completed for a regular passenger and freight service between Jacksonville, Florida, and Nassau, Bahama Islands. Two small converted yachts have been secured on this line.

Engineers of the Chester Shipbuilding Co. are busy making tests of the water front at the shipyard on the Delaware river, with the view of constructing a large drydock and, it is understood, that if conditions are found suitable, a dock will be built at an approximate cost of $2,000,000.

The United States submarine G-2, which is listed as an obsolete craft and used for experimental work, sank with open hatches in Long Island sound and three of its crew of eight were drowned. Others were rescued by men from the United States coast guard cutter "Acushnet," which was accompanying the submarine.

The Charleston Dry Dock & Ship Repair Co. will lay a plant at Charleston, S. C. It is capitalized at $2,000,000 and intends to build all classes of wood and steel vessels. Engineers and architects are preparing plans and specifications for a site at Remleys Point. Robert N. Reid, Winthrop H. Kellogg and Harold J. Gallegher, all of New York, are the incorporators.

Efforts are being made to utilize more fully than was possible during the last twelve months the flotilla on the Amur River. At the present time fifty-six steamers, seventy-three barges, and a variety of other craft are stationed at Blagovyestchensk. Conferences are being held at Omsk with a view to re-establishing private management of river steamers and barges throughout Siberia and as far west as the Volga River.

The Commissioner of Navigation and the Supervising Inspector-General of the Steamboat Inspection Service have recommended to the Secretary of Commerce a further extension of two years from September 1, 1919, for foreign-built vessels admitted to American Registry under the Act of August 18, 1914, of the requirements to comply with American regulations. The Secretary of Commerce has approved this recommendation and a formal order will be prepared to this end for approval by the President, who is charged by the law with the exercise of the discretion. From present indications there is no doubt that the extension will be approved.

The Department of Communications of Japan announces that the Japanese merchant marine now consists of 2578 steamers and 12,236 sailing vessels. The majority of the steamers are, however, coasting vessels, not exceeding 1000 tons. Ocean-going steamers above 1000 tons number 599, their gross tonnage being 1,830,006 and their registered tonnage 1,154,377. Of this number six are above 10,000 tons and eight between 9000 and 10,000 tons. There is only one ship between 8000 and 9000 tons. There are 123 vessels between 4000 and 8000 tons. The smaller steamers between 1000 and 4000 tons are most numerous, numbering 366. The majority of sailing vessels are between 20 and 500 tons. There are only five ships between 500 and 1000 tons, while the vessels between 1000 and 2000 tons number only two.

News from Abroad

Government owned telephones paid a profit of $1,777,340 during the year 1917-1918, according to the official British figures.

During the coming recess of the French Parliament, it is said, Premier Clemenceau and Marshal Foch will draft a bill for curtailment of military service.

Field Marshal Von Hindenburg, after a brief rest, will rejoin the German national people's party, and assume a leading role in its deliberations and activities.

The report of the New South Wales Minister of Agriculture indicates that extensive loans are being made to farmers for the purpose of constructing grain elevators and storage silos for grain.

The London National News says a suggestion that the British West Indies be ceded to the United States in part payment of Great Britain's war debt is being considered seriously on both sides of the Atlantic.

Pending a decision by the United States Congress as to whether the bodies of American soldiers killed in the war should be removed to the United States, the bodies of about 1000 men who fell in Belgium are to be concentrated in the cemeteries of Wareghem and Poperinghe.

The Lord Mayor of Sydney, Australia, is very warm in his praise of the Sydney plan of cutting all taxes on land values, stating that the city has not only more and better homes, but that many buildings have been erected that are an adornment to the city, while the "land hogs" have been penalized.

Twenty-one hundred and twenty kilometers of railway are now operated by the Government owned Siamese State Railways. The past year has seen an enormous increase in the amount of traffic. Three and one-quarter millions of passengers were carried during the past year. Operating expenses upon the various sections varied from 18 to 23 per cent. more than the previous year, and although a great deal of new construction has been undertaken the roads have shown a slightly increased profit.

Recently the New Zealand Government appointed a Board of Trade to inquire into the coal industry. The report has now been issued, and recommends the establishment of a Coal Board to take over existing coal mines at the valuation, pay 4 per cent. interest, and bonuses to shareholders and workers. It also suggests that the New Zealand Government should run its own coal vessels, control the carriage of coal on the railways, improve coal ports, prospect likely fields, and give proper attention to the housing, health, and social conditions of workers.

After twenty days of strenuous debate the Italian Chamber has approved the principle of electoral reforms with proportional representation. The proposal was carried by a surprising majority of 277 votes, with only 38 opposed. An attempt was made to introduce compulsory voting because less than half the electorate went to the polls at the last general election, but this was defeated. The Nitti Cabinet declares itself favorable to votes for women and to their right to sit in Parliament, but stipulates this measure shall be discussed apart.

With the Wits

An old offender was brought up before a well-known London magistrate. The constable, as a preliminary, informed his worship that he had in custody John Anderson, alias Brown, alias Smith. "Very well," said the magistrate, with an air of dignity. "I'll try the women first. Bring in Alice Brown. What has she been doing?"

It was washing-day, and John had been kept from school to look after the baby. Mother sent them into the garden to play, but it was not long before cries disturbed her. "John, what is the matter with baby now?" she inquired from the washtub. "I don't know what to do with him, mother," replied John. "He's dug a hole and wants to bring it into the house."

Four-year-old Hilda had been to stay with her cousins, two romping, boisterous boys, who teased her sadly the whole time. When she came back, and was telling her father all about her visit, she said: "Daddy, every night when Jack and Roger say their prayers, they ask God to make them good boys." "That's quite right," said her father. "But," she added significantly, "He hasn't done it yet."

"That picturesque old gentleman sitting there under the tree must be at least an octogenarian," commented the motorist who had stopped for a drink of water. "Say, looky yur!" truculently returned Gabe Yaw of the Sandy Mush, Arkansas, region. "You're talking about my Uncle Rip. He's eighty-two years old and can't take up for himself, but I want you to understand, by thunder, that he hain't no part nigger."

"The dignity and decisions of the court must be upheld," said the judge, in addressing a class of law students, "but some mighty queer things have to be done to live up to this creed. Like a case I heard of in Chino. The prisoner had been arrested as a pickpocket and been fined $5. 'But he's only got a dollar on him, your honor,' said the officer who had made the arrest. 'Oh, well,' said the judge, 'turn him loose in the crowd until he can raise the other four.'"

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.
The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.
There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.

THE U. S. STANDARD OF LIVING

An Inquiry Into Living Conditions of Americans

A distinct public service has been performed by Mr. Royal Meeker, United States Commissioner of Labor Statistics, in preparing a critical trial analysis of the "American standard of living."

During the present daily discussions on the high cost of living, practically every man in public life has acquired the habit of referring to our superior American standard of living. Yet, it is a painful fact that not one man in a hundred has any definite knowledge of the subject. For this reason Mr. Meeker's valuable contribution, which follows, is exceptionally timely. Being entirely minus the usual dry statistical tables the paper is as entertaining as it is instructive.

Reference is constantly made, in the press and in public utterances, to the American standard of living, as though it were a standard as definite and well known as the foot, the pound, or the peck measure. The writers and speakers take it for granted that everybody knows what the much-quoted American standard of living is, although they do not specify what is included in it, and when asked for particulars they become vague and oratorical. It gets us no farther toward an answer to be told that the American workingman is the best fed, best clothed, best housed, and most contented workman in the world. We may accept without argument the statement that, occupation for occupation, the American workman receives higher money compensation than do European workers, and that his higher money wages actually enable him to purchase more of the necessaries of life than are obtainable by the European workers for their wages.

We must have more exact information in order to determine what the American standard of living means. The investigations into cost of living made prior to 1915 do not help us much. The classic cost of living study made by the United States Bureau of Labor in 1901 and published in 1903 as the Eighteenth Annual Report of the Commissioner of Labor, helps us but little toward the desired goal. Except in the case of food, all that this study brings out is the cost of living, not the standard of living. Even for food this 1901 study does not give us exact enough information as to the quantities and kinds of food to enable us to determine whether the families studied were sufficiently nourished. The study made by Dr. Chapin is too limited in scope to give us the American standard of living. It is also questionable if the families studied were truly representative American families.

The generalizations made in this paper are based on the results, so far as they have been analyzed, of the country-wide cost of living study which the Bureau of Labor Statistics conducted during 1918 and 1919. The figures given are merely first estimates and are subject to revision. The study was planned for the purpose (1) of determining the quantities and cost of all important items of family consumption in all the more important industrial centers in the United States, (2) of applying the accepted dietary standards for determining whether the families studied were obtaining a sufficient number of calories and sufficient variety in their diets to maintain their members in health, (3) of working out, if possible, standards—similar to the recognized dietary standards—for clothing, housing, fuel, house furnishings, education, amusement, medical care, insurance and perhaps some other items which have been heretofore blanketed and lost under the term "miscellaneous," (4) of formulating eventually tentative standard budgets to be used by wage adjustment boards in determining minimum and fair wage awards, (5) of enabling the Bureau of Labor Statistics to compute a cost of living index number that will show variations in total family expenses in the same way as the retail food price index shows variations in the cost of the family food budget.

It is evident at once that the study as outlined by me, with the assistance of domestic science and cost of living experts, presents enormous difficulties. One should not, however, refrain from attempting an undertaking merely because it is difficult. Everything that is worth doing is difficult. The first great task was to find out what workingmen's families buy, how much they expend, and how much of each article bought they get for the money paid out. It is in many respects unfortunate that the study had to be made during 1918-19 when prices were abnormal, resulting in abnormalities in expenditure, and when such stress had to be laid upon the necessity of investing in Liberty bonds. The distribution of expenditures over the items of the family budget were greatly disturbed by the rapid changes in prices and wages. The loan campaigns resulted in inducing workmen to curtail expenses for clothing, house furnishings, amusements, and perhaps even fuel, housing and food itself, in order to invest in bonds. The result was unusually large savings reported and abnormally low expenditures for other items where curtailment was possible. Many families not only economized on clothes and house furnishings but actually skimped themselves on food, both because of the high prices and because of the intense Liberty loan drives.

More than 300 agents were employed by the Bureau of Labor Statistics to secure from housewives statements of their expenditure for an entire year. The information thus secured for the entire year by personal interview was checked in many instances by daily expense accounts, which many housewives were prevailed upon to keep over a period of not less than five weeks. These daily expense accounts are especially useful in checking up expenditures for food and other articles bought daily or weekly and easily forgotten.

Nearly 13,000 family schedules were obtained in 71 large cities and 26 small cities and towns in the different geographical sections of the country for incomes ranging from less than $900 to more than $2500 per family. Not only do we have the cost but we have the quantity, in most instances, of all important items of the family budget. The quantity bought is absolutely essential for working out standard budgets. Expenditures stated merely in sums of money are useless for the determination of the standard of living or of the quantitative change in the cost of this standard of living.

Food.

Quantitative standards to measure the sufficiency of the family food budget have been worked out tentatively in dietary studies. We do not eat or wear or burn dollars and cents. If the price of beef goes up we can eat less beef and more of some other protein-rich food, and perhaps keep our money expense for food constant, but if the price of all food increases 100 per cent. we can not cut down our consumption of all food one-half so as to keep our food budget expense unchanged. To speak with scientific accuracy man does not live by loaves of bread, pounds of meat, pecks of potatoes, quarts of milk, etc. He lives by the energy stored in food, which energy is measured in heat units called calories. Even this does not tell the whole story of food because it makes a difference from what source we derive our calories. There must be a proper balance between proteins, fats, starches, sugars, cellulose, fruit acids, and mineral salts. The last three classes of foods furnish us no calories at all, but they are just as essential to a healthful diet as are the fats, sugars, and starches which furnish a large quantity of calories. By far the best single measure of the sufficiency of a diet is, however, the calorie. Unless the average active worker consumes and assimilates from 3000 to 3500 calories per day he will inevitably either lose weight or efficiency as a worker or both, and this regardless of the number of dollars he spends for food, or even the number of pounds of bread, beans, and beef he eats. Unfortunately bread, beef, pork, and even eggs and potatoes, vary considerably in the calorie content per pound. It would be a great step forward if while we are reforming weights and measures we should require by law that the prices of all foodstuffs must be expressed in terms of calories, just as in Great Britain and to some extent in this country coal is sold, not by the ton, but by the British thermal unit. If it is possible to calculate the calorie content of the food for our furnaces it is surely possible to do so for the food for our stomachs. It is, of course, highly desirable to eliminate from the diet of our steam boilers and engines as much slate, ash, and bowlders as possible; it would seem even more desirable to eliminate from the diet of human beings the things that are sold as bread but are not bread, the bone that is sold for beef, and the gristle that is called pork chops by the butcher. There are no insuperable obstacles in the way of selling bread, beef, pork, eggs, milk,

cabbage, onions, corn, sugar, etc., by the 100 or 1000 calories. It should be done and it can be done.

By the time people become educated to the point where they recognize that the important thing in regard to food is not its price per pound or quart, that often the cheapest food per pound is the most expensive per unit of nourishment, they will no doubt have learned also that man can not live by bread alone or even by calories alone. Fruits and vegetables must be used largely in a proper diet, even though their calorie content is low. A proper balance between proteins, fats, starches, sugars, cellulose tissue, minerals, and acids is necessary for the maintenance of health.

Some considerable change in diet is shown since the 1901 study was made. This, of course, was to be expected in view of the greatly increased prices. The present study reveals, however, that the American family does not suffer from overfeeding, as has been so frequently alleged. On the contrary, in most of the communities studied the food purchased represents less than 3500 calories per equivalent adult male. It is necessary to buy about 3500 calories in order to secure 3000 calories per adult male, which is considered to be the amount required by moderately active workers.

Granted that to maintain the average adult worker in health and efficiency it requires approximately 3000 calories of food energy consumed, which amount can be obtained from about 3500 calories of food energy purchased at the stores, how are we to use this knowledge to determine the adequacy of the food budget of a family consisting of husband, wife, and five children of 16, 13, 10, 5, and 2 years? In order to measure the food requirements of a family we must have a consumption yardstick to measure the number of calories needed by each member of the family. Experiments have demonstrated that food consumption of adults varies approximately with the weight of the consumer. Women, on the average, are about 90 per cent. as heavy as men, and therefore a woman is rated in food consumption as equal to 90 per cent. of a man. Children of different ages are rated in food consumption as follows in terms of an adult man:

	Per Cent.
Ages above 14 years	100
11 to 14 years	90
7 to 10 years	75
4 to 6 years	40
3 years and under	15

These equivalents are quite rough but enable us to express the food consumption of families of varying composition in terms of a common unit of measure, namely, the equivalent adult man.

The food requirements of the family above mentioned would be, according to this scale, equal to that of 5.1 adult men. Allowing 3500 calories of food purchased per man, this family should use food furnishing not less than 17,850 calories each day of the year. These standards of measurement are but approximate, it is true, and we are dealing with averages. There are very considerable individual deviations from the average. The average man does not exist, but the world is full of living, breathing men who look, act, and eat so much like the hypothetical average man that it requires an expert with microscope, measuring tape, and scales to tell the difference.

The family food budgets are now being analyzed. We can say with confidence that it requires to-day an expenditure of from 50 to 60 cents per man per day for food to secure a well-balanced diet sufficient in the number of calories and in variety. This means that American families consisting of husband, wife, and three children below the age of 15 years, living in large and medium-sized cities must spend about $610 per annum for food to keep themselves properly nourished for health and efficiency. This expenditure for food goes with incomes of from $1800 to $1850, so we may say that American families on the average are not fully nourished until their yearly income reaches $1800. These figures do not indicate that our people are to-day suffering from eating too much meat, or even too much of other foods not so expensive. The average income and the modal income both fall well below $1600. The mode is about $1350 and the average not greatly higher. Conclusions must not be too hastily drawn from these figures. They do not mean that our working population is dying of slow starvation; nothing of the sort. But they do indicate that the workers of America are obliged to live on a diet too restricted and monotonous for the maintenance of as high a degree of efficiency and health as ought to be maintained as a reasonable minimum. I am of the opinion that the most efficacious remedy is not higher wages, but rather improved systems for distributing and marketing foodstuffs and the education of housekeepers in the art of keeping house, with emphasis on diets. Housekeeping is not exactly a lost art. It is one of the arts that has not yet been completely found.

Clothing.

No standard has yet been devised for measuring the adequacy of expenditure for articles other than food. The adequacy of clothing, for instance, can not be measured in pounds, calories, or square yards. It is interesting to note that actual expenditure for clothing, in all income groups combined, for wives and children of different ages conforms quite closely to the scale for food consumption. Unfortunately we have no unit of measure with which to determine whether the clothing bought is adequate or not. The charge so frequently made that the American workingman is extravagant in expenditures for clothing for himself and his family seems hardly borne out by the facts reported. Expenditures for clothing per adult male during the high-price year 1918 ranged from a minimum of $30 in the lowest income group to about $180 in the highest income group. The average clothing expenditure per adult male in the modal income group of $1350 is probably not more than $90. This does not seem to give much room for extravagance in clothing at the existing prices. Probably this sum is sufficient to enable the prudent and economical housewife to keep her family clothed warmly enough, but it does not leave much margin for style. Clothes were first invented, not for protection against heat, cold and wet, but for adornment, and it is for the purpose of ornamentation largely that clothes are worn to-day. The bizarre notions of beauty possessed by the designers of clothing are incomprehensible to ordinary mortals, but as long as society accepts these ridiculous and often health-impairing standards of dress, society must stand ready to provide the worker with a wage sufficient to enable him to conform to the accepted fashion. It is repugnant to our sense of right that the working classes should dress in a way to set them apart from the more well-to-do. Few men and women among the workers in this country are willing to appear in public unless they can dress near enough to the mode or the standard of fashion so as not to attract critical attention. It is very clear then that the clothing of the worker's family should not consist merely of material to protect them from the icy blasts of winter, the blazing rays of the sun, and the dews and deluge of heaven, but should possess something of that subtle something called "style." Style is expensive. Also, there is no standard of style. There are not even standards of dress fabrics. However, we do not need exact standards to know that $90 per adult male per annum is not too much for clothes in the varied climate of the United States.

It is interesting to note that wives spend less for clothes than husbands until we reach the higher incomes, about $1800 per year. It is also of interest that when economies are necessary they are made largely at the expense of the wife's wardrobe. The first baby makes a cut in the mother's clothes money and every addition to the family cuts deeper into this item. It is scarcely fair to say that American wives prefer clothes and upholstered parlor furniture to children. It costs money, pain, and sacrifice to bear and rear children, however, and the Bureau of Labor Statistics' study shows with startling vividness the extent to which the mother is obliged to sacrifice her house and her personal adornment to her children.

Housing.

According to the British official census overcrowding begins when there are two or more persons per room. Even if we accept a socially higher standard of more than one person per room then there is little overcrowding in American workingmen's families. However, while the average number of rooms per family are usually quite sufficient, the average room is not so satisfactory. Unfortunately it was not feasible to make an intensive study of the size and suitability of the rooms occupied by the families studied. For the typical family of husband, wife and three children under 15 years, there are in the cities for which tabulations are completed, invariably more than one room per adult male. The rooms per person decline as the size of the family increases. Families having an income of $1300 also have well over one room per person. The number of rooms per person does not tell us whether housing is satisfactory. For example, the rooms per person are higher among colored families than among white families in Baltimore. No one would maintain, however, that housing conditions are better among the colored people than among the whites.

The amount spent for rent varied from $105 per annum for the lowest income group in Fall River, Mass., to $355 per annum for the highest income group in New York City. For the modal income, $1350, the average rent paid in large cities is probably not far from $200 per annum for the typical family.

The study does not give a complete or typical picture of housing conditions among workers' families. In order to get comparable figures of family income and family expenditures for food, clothing, housing, and other items, no families were scheduled who kept boarders and no families with more than two lodgers were taken. These rulings were absolutely necessary so as to confine the study to normal natural families, but by so limiting the study no information was obtained as to the extent to which families took boarders and the amount of overcrowding resulting from the almost universal practice of taking in lodgers during the housing shortage of the war period. It is a necessary function of the community to provide suitable houses for the people at reasonable rents. As long as the provision of houses is left to speculators and contractors the workers can not be properly housed.

It is possible to determine from the information on the schedules whether the families studied used enough fuel to keep their houses comfortable, but the information has not yet been tabulated. It is reasonably certain, however, that the American family does consume abundant fuel so that the living room can be lived in during the winter. Light is probably sufficient also.

As for house furnishings, all that the schedules give is the yearly expenditure. We know nothing about the stock of household goods possessed by the average American working family. It should not be an impossible task for the domestic science experts to determine the minimum requirements in the way of standard house furnishings for the typical family. A special intensive study could then be made to determine how near our American families come to the minima.

Care of Health.

Among the expenditures lumped as miscellaneous are some highly important and significant items. Expenditures for sickness and death are the most significant in this group. The amount and kind of medical, surgical, dental, and other kinds of treatment in sickness required by the average American family can not be obtained from the family schedules. The amount paid out by each family on account of sickness is given on the schedules, and the average amounts can be computed for different income groups and for all groups combined. The average expenditures vary greatly from family to family and from group to group. In Philadelphia those having incomes less than $900 spent on the average during the year $24.15 for health care, while those with incomes of $2500 and more expended $126.12. In Boston the expenditures for these two income groups were $23.18 and $67.42, respectively. The average for all incomes in all cities would probably be from $45 to $55.

Despite the great irregularities in the distribution of these expenditures for sickness there is a remarkable increase with the increase in amount of income. This indicates that those in the lower income groups are not able to pay for adequate medical and hospital service, for no one would contend that those in the higher income groups are squandering money recklessly on physicians, surgeons, dentists, and the like.

The value of these figures is greatly lessened by reason of the fact that so much wholly unregulated, uncontrolled, haphazard, unplanned, unintelligent, more or less voluntary, and wholly unrecognized sickness subsidy prevails throughout the country. I mean that the worker is not able to pay full price for the medical, surgical, hospital, and dental services needed by himself and his family, so the community or the subsidized hospital gives him these indispensable services free or below cost. The result is indifferent medical and hospital service at a cost impossible to estimate accurately because there is no uniformity of practice and no adequate, public control. In Massachusetts it is estimated that the workmen's compensation cases sent to hospitals for treatment pay only about 50 per cent. of the actual cost of the treatment. This is handing out sickness subsidies to employers and insurance companies, not to injured workmen. This is the worst form of protective subsidy to industry. The workers who are driven by dire necessity to make use of the free wards in hospitals either learn to hate and distrust all hospitals and medical men because they are not given proper treatment, or they become partially or wholly hospitalized because they survive the treatment meted out to them and rapidly learn to like the carbolated atmosphere of our hospital almshouses. This systemless system of medical sick benefits, bestowed not as the just and recognized due of the worker but as charity handed out by a benevolent community or by private philanthropists, constitutes the worst possible form of sickness pensions that could possibly be devised. Voluntary benevolent sickness subsidies and pensions achieve the minimum of results at high cost. They reach but a minority of those who need medical and hospital care. I do not point out the obvious defects of the existing system of sickness subsidies in order to condemn the system and recommend its abolishment. On the contrary these subsidies are absolutely indispensable, and can not be abolished without very serious consequences, unless something better is devised to replace them. It is useless to talk of paying the workers a wage sufficient to meet all needed sickness expenses. This would make the misfortunes of the sick redound to the profit of the well. The health of the workers never will be adequately cared for until a system of universal sickness or health insurance is substituted for the present system of sickness subsidies. No valid objection can be raised to the public's paying a part of the expenses of such

(Continued on Page 11.)

WEEKLY NEWS LETTER

Contributed by American Federation of Labor

Every 19-Year-Old Boy to Bear Arms.

A three-months' compulsory military training for every 19-year-old boy is provided in a bill prepared by the War Department and introduced in the Senate by Mr. Wadsworth, chairman of the Senate Military Affairs Committee. Every youth will be compelled to register and the machinery used will be similar to that used to enforce the draft during the war.

Another bill has been introduced jointly by Senator Chamberlain and Congressman Kahn which provides for compulsory six-months' military training for all 18-yeor-old youths.

The War Department bill provides for an army with a war strength of 1,250,000 men. The active force of this army would be 520,000 regulars, while the remainder would be young men who had taken the compulsory training.

Exemption from training would be given only to members of the regular army and navy, honorably discharged soldiers and sailors and members of the coast guard, marines actually engaged in the service, and "persons permanently physically, mentally or morally unfit for any military service whatever." While in training the young men would receive no pay but their expenses would be borne by the Government. In the case of youths having dependents authority would be given to pay the dependents an amount equal to the average monthly amount received by them for support during the preceding six months, provided this does not exceed $50 a month.

When a youth completes his three months' training he "shall be classified for service in war in accordance with the regulations prescribed by the President."

Oil Producers Urging Mexican War.

The board of foreign missions of the Presbyterian church has made public a report which charges that oil interests are manufacturing propaganda to embroil this nation in a war with Mexico. The report was prepared by Samuel G. Inman, executive secretary of a Latin-American committee of this church.

Mr. Inman declares that the American people are being deceived by inspired propaganda and that "intervention in Mexico is coming as fast as certain interests can possibly force it." These interests, it is stated, "are playing not simply for oil wells in Tampico and Vera Cruz, but for a much larger stake; they have found out that Mexico is full of oil. What they want is for the United States to get hold of Mexico so that they can easily obtain these billions of dollars of oil property which are certain to be developed in the future."

In this connection it is pertinent to note that the Mexican Review publishes an official statement of the area of oil lands held by various companies operating in that country. The English interests, known as the Lord Cowdray group, hold 1,410,237 acres. The Standard Oil company is not included in the list, but three groups which are declared to be in "complete accord with the Standard Oil Company" hold 906,922 acres. There are 291 smaller concerns listed as controlling 1,259,207 acres, and the combined holdings of these smaller concerns and nine large companies total 5,436,271 acres.

The Mexican secretary of industry and commerce reports that during the year 1918 the value of oil exported from Mexico was $140,557,553.20, and the government collected over $11,000,000 in export taxes.

Shrieks at Union Shop.

Organized coal miners in the New River field, West Virginia, who have just secured a union-shop contract, are laughing at the shrieks of the West Virginia Mining News, which demands "the abolition of the closed shop."

"Did we not send 2,000,000 fighting Americans to Europe last year 'to make the world safe for democracy?'" this editor howls. "Does not our constitution guarantee every man security in his person and property? Aye, aye, but yonder in our national capital, sworn to uphold the constitution and execute the laws, is a group of men seeking, with the administrative machinery placed in their hands by the people of the country, to fasten unionism upon the country."

The editor bristles with feathers and war paint and calls on business men to unite against trade unionism.

Army Costs Stagger.

Members of the Senate Military Affairs Committee were staggered when General March, the War Department's chief of staff, told them that the estimated cost of maintaining a standing army of 510,000 men, with the compulsory training system as an adjunct, would be $900,000,000 a year. He said the army would cost $798,600,000 and the remainder would be used for compulsory training expenses, which would total $1,597 per man.

The witness stated that a special board of officers had recommended that military training for nine months be made compulsory, but the general staff had reduced this to seven months. Later this was cut to three months over his objection.

The testimony of the witness would indicate that the three-months' compulsory military training, which is now called for in the War Department's bill, is not satisfactory to army officials, who will endeavor to increase the training period if the principle of compulsion in peace times is accepted by the people.

Possible Epidemics Fatten on H. C. of L.

The loss of resisting power through the high cost of living will cause "serious apprehension" in the event of a recurrence of epidemics, says Dr. Louis I. Harris, of the New York City Department of Health, in a letter to American Federation of Labor Secretary Frank Morrison.

The medical man called the unionist's attention to a study of the effects of the

World's Workers

The labor party of Belgium has published a manifesto inviting the people to join in a general movement against the high cost of living.

At Ravenna, Italy, the regional congress of agricultural laborers recently voted that all land not cultivated directly by the owner or his family be expropriated and that such expropriated land be declared the property of the nation.

The plan recently adopted by the French Food Ministry to reduce food prices is working successfully in some of the French cities. At Havre, eggs have been reduced from $1.20 a dozen to 60 cents; onions, from 10 to 5 cents a pound, and potatoes from 4 to 2 cents a pound.

A wave of eight-hour strikes is spreading over Belgium. The legal eight-hour day for miners becomes effective next December, and in mechanical construction, next March. In other industries it has been fought for, shop by shop, with the employers mobilizing every power to resist the workers.

In Japan, where apparently they have neither rights nor protection, women constitute the mainstay of industry. According to the Japan Year Book, 1918, "Female labor constitutes a main part in the factory economy of Japan. In 19,299 factories, employing not less than ten operatives each, male labor amounts to 42 per cent. and female labor 58 per cent. Of the total number of child workers under 15 years of age 18 per cent. are boys and 82 per cent. are girls."

The City of Paris and the Department of the Seine being impressed by the overwhelming sentiment for full civic rights for women shown by the members of the Chamber of Deputies, has widened the opportunities for employment of women in the Departments of the City Hall and Prefecture. Heretofore women have occupied inferior clerical positions only. Competitive examinations for all the higher offices, including heads of bureaus, are now open to women.

"What is sauce for the goose is sauce for the gander," declare Queensland organized workers, who insist that the Government extend its policy of fixing wages. In a memorial presented to the Prime Minister, the unionists declare that "the present arbitration act is useless, as any increases in wages gained in the industrial court are entirely swallowed up by the profits put on by the mercantile fraternity. We ask the Government to appoint a commission to fix reasonable prices for food and clothing so that these necessities are within the reach of all."

The Canadian government has accepted a recommendation made by the royal commission on industrial relations and will convene public officials, business men and workers in a national conference on September 11. Invitations will be extended to the several provincial governments to be represented by their prime ministers and employers and employees will be asked to select approximately 60 representatives to appear for them, the selections to be made through representative organizations of both sides. The program provides for the widest latitude in the discussion of every question bearing on the relations of employers and employed.

DO YOU KNOW
That War-Savings Stamps pay 4 per cent. compound interest?
That W. S. S. cost $4.12 in January and one cent more each succeeding month of the year, reaching their highest price, $4.23, in December?
That the 1919 W. S. S., known as the Franklin Issue, will be redeemed by the Government on January 1, 1924, for five dollars?
That the 1918 W. S. S. will be redeemed by the Government on January 1, 1923, for five dollars?
That W. S. S. of either issue, if necessary, may be redeemed for value to date, as indicated on the W. S. S. Certificate, at any post office upon ten days' notice?
That one thousand dollars' worth of W. S. S. is the maximum amount allowed to any one purchaser?
That Thrift Stamps cost twenty-five cents? And that sixteen Thrift Stamps are exchangeable for an interest-bearing War-Savings Stamp?

INFORMATION WANTED.

Any one knowing the whereabouts of L. C. S. Admiraal, a member of the Eastern and Gulf Sailors' Association, last heard of in Rotterdam, Holland, 1914, will please notify his brother J. J. Admiraal, 51 South Street, New York, N. Y. 8-13-19

Information wanted regarding John Johnsen, native of Bergen, age 44, last heard from in New Orleans, 1917, was then on schooner "Lizzie M. Parson," going to France. Any information will be appreciated by his brother, Andrew Johnsen, Sailors' Union, Seattle, Wash. 8-20-19

Will Ingwald Johnson, Charles Moller, and any other member of the crew of the S. S. "Chehalis," on January 29, 1919, when Otto Peterson was injured, kindly report to the Secretary, Sailors' Union of the Pacific, San Francisco, Cal. 8-13-19

Pacific Coast Marine.

The 8800-ton steel steamer "West Hartley" was launched at the Columbia River Shipbuilding Corporation plant on August 30. The steamer is the twenty-eighth hull completed at the yard under Government contract.

Government orders have been received at Portland for the Shipping Board steamer "West Chatala" to load flour for the Atlantic, instead of lumber for China. It is said that one of the steel ships built by the G. M. Standifer Construction Company will be substituted for the lumber cargo, which will be supplied by Dant Russell.

On a bid of $25,177 the contract for repairing the new 8,800-ton steamship "West Harlan," which recently went aground in the Columbia River, was awarded to the Skinner & Eddy Corporation by the Seattle headquarters of the construction and repair department of the Division of Operations of the United States Shipping Board.

George Kubo, cook on the barkentine "Planter," filed a libel in the United States District Court at San Francisco for $5000 as damages for injuries incurred while the vessel was on a voyage from this port to Dunedin, New Zealand. He says his right hand was fractured in an accident. According to the complaint, he was not given proper treatment by the master of the schooner.

Transfer of the site of the concrete shipyard at the lower end of San Diego bay to the Navy Department for the establishment of a navy yard dry dock has been requested by the Government. It is understood that with the launching of the 7500-ton concrete tankers "Cuyamaca" and "San Pasqual" at the local yards next month, no more concrete vessels will be built on this coast.

Seeking to recover the value of the U. S. Coast guard cutter "McCullough," Federal authorities libeled the steamship "Governor" as she was about to sail from San Francisco for Los Angeles, carrying passengers and, for the first time, United States mails. Deposit of a bond prevented the steamship being detained. The issue will be settled in the Federal courts. The complaint filed by U. S. District Attorney Annette A. Adams recites the circumstances of the sinking of the "McCullough" the night of January 10, 1910, after a collision with the "Governor." Claim is made for $244,125.27.

Captain A. H. Rhodes, U. S. N., in charge of this lighthouse district, is making an inspection of conditions at the fog signal station at the Humboldt Bay bar. The structures of the station are in danger of being washed into the sea by the cutting away of the north spit at the stump of the original jetty. It was the representations made by Captain Rhodes and the officials of the coast guard service as to the damage to the station at the bar, that in a large measure contributed toward the Government taking steps to resume work on the jetties. It is believed here that the first work to be done will be protection work at the bay end of the north jetty to stop the encroachment of the sea on the lighthouse and coast guard reservations there.

For the first time in the history of the American Merchant Marine, or at least in the past sixty years, an off-shore carrier went into commission manned by a 100-per cent. native born crew of her home port and this ship was the new steel steamship "Seattle Spirit," built for the United States Shipping Board by J. F. Duthie & Company and named in honor of Seattle's contribution to the Fourth Liberty Loan. In command of the "Seattle Spirit" is Captain A. Z. Spaulding, Jr., while Howell Parker is first officer and H. H. Norgren and Virgil L. Ferguson as second and third mates respectively. Frank Brownfield, brother of Captain J. C. Brownfield, is chief engineer, and his assistants are John C. McMullen, first; Herman Coffin, second, and Alva Grandy, third, all native sons of Seattle. The deck and engine room crews are also said to be native sons.

Portland shipbuilding plants will not build vessels for the French Government, according to announcement by Lieutenant Leo Framery of the French Commission, which is here to complete details in the dismantling of the foundation yards. Although plans for dismantling the foundation plant were definitely decided on some time ago, Portland builders had hoped that arrangements could be made under which the Albina Engine and Machine Works would undertake the work under contract. Lieutenant Framery says that plans for this, or similar work, have been given up, and that the commission now is concerned only in taking down the foundation plant, sorting the equipment which is to be sent to France, and arranging for the sale in the American market of such things as will be unsuitable for shipment to Europe. Under present plans the foundation plant will be completely dismantled within the next three or four months.

The old four-masted ship "County of Linlithgow," now the six-masted auxiliary schooner "Katherine," is believed to be the first large tanker arranged especially to carry vegetable oils. The sudden growth of the copra and cocoanut oil business caused by new uses discovered since the war made the introduction of a regular carrier essential. The "County of Linlithgow" was purchased nearly a year ago by the Philippine Vegetable Oil Company and will be operated by that concern. The vessel was built in Glasgow by Barclay, Curle, in 1887, and is of Norwegian iron. She has been entirely remodeled and is entirely up to date as a modern auxiliary motorship. Twelve cargo tanks have been installed. These are capable of carrying 2,700 tons of vegetable oil. In addition there is a general cargo space amidship, with a capacity of about 500 tons. The tanks are fitted with hatchings so that after being cleaned out they can be used for carrying general cargo hence to copra ports.

Richard H. Mathewson, resident engineer of the Liberty shipyards of the United States Emergency Fleet at Alameda; E. C. Smith, forpurchasing agent of the yard, and Henry Stein, Emergency Fleet at Alameda; E. C. Smith, former wholesale metal dealer of San Francisco, were arrested during the past week by United States Deputy Marshal T. C. Butler on warrants charging them with conspiracy to defraud the United States Government in the sale of surplus materials from the yard. The men were released in $500 bonds each to appear before United States Commissioner Thomas E. Hayden. Investigation which led to the arrests was instigated by A. J. Frey, district manager of the United States Shipping Board, and was largely due to the discovery that wares from the yard were being marketed at prices way under current rates. United States Attorney Annette Adams said that reports to her office indicated that evidence existed showing that a number of transactions similar to those charged in the formal complaint which Frey has sworn ot were conducted by Mathewson and Smith.

The passage of 33 vessels of the Pacific Fleet of the United States Navy through the Canal, 30 of them on the two days, July 24 and 25, and the supply of large orders of coal, fuel oil and foodstuffs to the squadron, constituted the largest operations which has been effected through the Canal to date. The ships were on their way from Atlantic waters, many of them recently from the war zone, to station in the Pacific Ocean. The destroyers were handled in groups, with a Canal pilot in charge of three destroyers, and in the passage through the locks six of these 310-foot vessels were placed in one chamber together, in two ranks of three each, lashed together. The other ships were handled individually, with a Canal pilot on each. Two of these, the sister dreadnaughts "Mississippi" and "New Mexico," are the largest ships which have ever passed through the Canal or visited this part of the world; they are 624 feet long and 97 feet 4½ inches in the beam, with a displacement of 32,000 tons. The "Mississippi" had a draft at time of transit of 32 feet, 8 inches. The total length of ships in the fleet was 13,409 feet. Placed stem to stern, they would reach over two and a half miles. Their aggregate displacement was approximately 265,000 tons.

A ship that is its own cargo, a cargo of lumber that propels itself—such is the nature of one of the queerest craft ever known to the world which will leave a Vancouver mill shortly on its way to England. This odd ship, the dream of John Arbuthnot, former mayor of Winnipeg and now a resident of Victoria, is being translated into fact by the Furber Lumber Company, backed by the great Vickers interests of England. The ship—for it will be a ship, though mill built—will contain or be composed of 5,000,000 feet of Douglas fir and have an engine installed capable of giving the craft a six-knot speed. Two months after the vessel leaves its "builders," it is expected, it will have been dismantled in England, the lumber placed on sale or delivered to buyers, and the $200,000 worth of machinery, compasses and other equipment on its way back to British Columbia to be installed in another vessel of the same type. Each vessel will be 250 feet long, of 60 feet beam, 36 feet deep, and will draw 27 feet. The vessels may be constructed by unskilled workers with the aid of a few shipwrights. Similar craft for Australia, using sails, are planned. The vessels, although roughly constructed, will have pointed bows and will resemble ordinary ships. Regulation quarters are to be provided. Back of the novel ship construction, of course, is a new and supposedly economical method of transporting lumber. After much puzzling, officers of Lloyds Insurance Company issued a new kind of insurance on the first vessel of this type at approximately the same rate as sailing ship insurance.

F. R. WALL, who was for many years an officer in the United States Navy, is now practicing marine law in San Francisco. He gives claims of all seafarers careful attention. 324 Merchants Exchange Bldg., 3rd Floor, California St., nr. Montgomery. Phone, Sutter 5807 (Adv.)

Changes in advertisements must be in by Saturday noon of each week.

To insure a prompt reply, correspondents should address all communications of a business nature to the Business Manager.

Entered at the San Francisco Postoffice as second-class matter. Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized September 7, 1918.

NOTICE TO CORRESPONDENTS.
Communications from seafaring readers will be published in the JOURNAL, provided they are of general interest, brief, legible, written on one side only of the paper, and accompanied by the writer's name and address. The JOURNAL is not responsible for the expressions of correspondents, nor for the return of manuscript.

WEDNESDAY, SEPTEMBER 3, 1919.

WHAT IS SEAMEN'S WORK?

The deck crew of the steamship "Governor" has forwarded a protest to the Sailors' Union of the Pacific against the continued encroachment by various shore trades and callings upon work aboard ship which rightfully and legitimately belong to the regular crew of the ship.

Jurisdiction disputes over work aboard ship are as old as the organizations of workers along the waterfront. Whenever a group of workers, either directly or remotely connected with docks and ships, form a new Union one of their first efforts has usually been an attempt to claim some part of the regular work aboard ship; therefore (and in fact, ever since Noah's Ark was built), performed without question by the ship's crew.

Years ago the International Longshoremen's Association sought to benevolently (?) assimilate the entire Seamen's organization by laying claim not only to the work of seamen but also by claiming jurisdiction over seamen as such. With this end in view the name of the International Longshoremen's Association was changed to read International Longshore, Marine and Transport Workers' Association. Three successive American Federation of Labor conventions, however, refused to sanction the adoption of the new title and finally on June 25, 1907, Samuel Gompers as chairman of an arbitration committee, denied the International Longshoremen's Association the right to use the new name and, incidentally, upheld the Seamen's contention as regards the loading and unloading of cargo.

Since that memorable decision there has been a much better understanding and a mutual recognition between the organized Seamen and Longshoremen. A number of other trades, however, have from time to time made attempts by force or intimidation to separate the Seamen from their jobs when the latter were in port performing their duty aboard the vessel on which they had signed to serve as the regular crew. For example, at Seattle less than a year ago the local Painters' Union, backed by the Metal Trades Council, threatened to declare the steamers of Pacific Steamship Company as "unfair" if seamen were permitted to use a paint brush aboard ship while in port. Other trades have on various occasions presented similar unreasonable claims and demands. The Riggers have claimed all the work in the rigging; Machinists, Pipe Fitters and others, have claimed all the work in the engine room, etc., etc. But there is no need to go into details because a recital of these would only open up old sores and direct attention to the deplorable fact that Labor's battles for justice and progress are not all directed against the employer.

The point which many of the organized workers ashore seem to be unable to grasp is that the very nature of the seaman's calling demands that he must, when called upon as a member of the regular crew, do all work required "relating to the vessel, and the stores and cargo thereof, whether on board, in boats, or on shore." This has been the law, custom and ruling in all maritime nations ever since there have been ships.

But there is another equally important, and perhaps more serious, angle to the case at issue.

Through years of heart-rending struggle the Seamen of America have virtually single-handed elevated themselves and their calling to a position of honor and respect, but above all to a place where their labor brings in a fair return. This, together with reasonable working hours and fairly steady employment has actually brought the seamen's calling to a degree comparative with the average trade ashore. In a word, the seamen have just about established for themselves a decent place in the world of labor.

Now, what would happen if the seamen conceded to all the claims of their organized fellow workers ashore?

Well, to begin with, all hands, except perhaps the officers, would be required to walk ashore whenever their vessel arrived in port. Skeleton crews only would be carried to take the ships from port to port. There would be an end to steady employment and naturally the best men would seek employment ashore with the inevitable result that wages would go down and working hours the other way. In the long run this would furnish a little more work to certain shore unions but the Seamen's organization would be so weakened in membership, strength and influence that it is exceedingly doubtful if they could survive at all.

This is not a particularly optimistic picture but it is surely based upon sound logic. No shipowner on earth will keep seamen by the ship while in port if they are not permitted to do anything except eat and sleep.

It should be distinctly understood, of course, that the organized Seamen never have claimed any extensive repair work aboard ship. They have always frankly conceded that shipbuilding is the shipbuilder's work and any disputes over cases of this character have been promptly adjusted in favor of the particular shore union concerned.

This, however, must not be construed as meaning that the Seamen will relinquish any and all work in port which may be claimed by others. To do so would spell suicide for the craft and the International Seamen's Union of America is entirely too healthy and vigorous a youngster to be thinking about anything except a greater future, always upward and onward until internecine quarrels and fraticidal strife have been abolished and the Brotherhood of Man has truly encircled this little earth of ours.

LABOR'S IMMIGRATION POLICY.

It is scarcely an overstatement to say that, from the point of view of the United States, immigration is the greatest public problem confronting the nation. It determines to a greater or less extent every other public problem. Investigators who get at the heart of the various national questions of the day find, almost without exception, that immigration is one of the chief factors to be considered. It is inevitable that this should be so. For it is obviously impossible that over 32,000,000 aliens, from every European nation and many others, should be introduced into a new country like the United States in less than a century, without influencing every thread of the social fabric from one extremity to the other. Hence, a knowledge of immigration is almost a prerequisite for the intelligent handling of any other public question.

The "summary of facts" in the report of the Federal Immigration Commission (published December 10, 1910) contains the following significant data:

From 1820 to June 30, 1910, 27,918,992 immigrants were admitted to the United States. Of this number 92.3 per cent. came from European countries, which countries are the source of about 93.7 per cent. of the present immigration movement. From 1820 to 1883 more than 95 per cent. of the total immigration from Europe originated in the United Kingdom, Germany, Scandinavia, the Netherlands, Belgium, France, and Switzerland. Following 1883 there was a rapid change in the ethnical character of European immigration, and in recent years more than 70 per cent. of the movement has originated in southern and eastern Europe. In a single generation Austria-Hungary, Italy, and Russia have succeeded the United Kingdom and Germany as the chief sources of immigration. In fact, each of the three countries first named furnished more immigrants to the United States in 1907 than came in the same year from the United Kingdom, Germany, Scandinavia, France, the Netherlands, Belgium, and Switzerland combined.

As a class the new immigrants are largely unskilled laborers coming from countries where their highest wage is small compared with the lowest wage in the United States. Nearly 75 per cent of them are males. About 83 per cent are between the ages of 14 and 45 years, and consequently are producers rather than dependents. They bring little money into the country and send or take a considerable part of their earnings out. More than 35 per cent. are illiterate, as compared with less than 3 per cent. of the old immigrant class.

For these reasons and others too numerous to mention the reconstruction program of the American Federation of Labor has been made particularly clear and emphatic as regards future immigration.

The American Federation of Labor deems it essential that additional legislation regulating immigration should be enacted based upon two fundamental propositions, namely, "that the flow of immigration must not at any time exceed the nation's ability to assimilate and Americanize the foreigners coming to our shores, and that at no time shall immigration be permitted when there exists an abnormal degree of unemployment."

By reason of existing conditions the American Federation of Labor urges "that immigration into the United States should

be prohibited for a period of at least two years after peace has been declared." Surely, Labor's sane and logical policy on immigration should be "the" policy for all who are Americans in spirit as well as in name.

A great deal of interest has been aroused by the building of the vessel that will set sail from British Columbia practically solid with timber and will be sold entire when it reaches its destination; a ship, in short, that is part of its own cargo. One is reminded of the story of "The Ark of Elm Island," written some forty years ago by Elijah Kellogg, in which the author imagined a similar ship, built for the same purpose, successfully adventuring from Maine to the West Indies. Captain Ben Rhines, the fictional builder and navigator, left space to carry some horses, sheep, and poultry to sell at his port of destination, and their presence aboard his unusual vessel gave it the name of "Ark." One wonders whether Mr. John Arbuthnot of Victoria, British Columbia, who devised and patented the plan for building the nearly solid timber ship of to-day, had sometime in his youth read Mr. Kellogg's story. The coincidence at any rate gives point to the suggestion that he name his vessel The Ark even if it carries no animals.

The "left wing" of the Socialist Party has split into two sections. One group, calling itself the Communist Party of America, has definitely withdrawn from the Socialist Party and is forming an organization of its own.—Press Item.

It was ever thus. No group of ultra radicals ever hangs together for any length of time. The cause of it all is the comparative ease with which any one can pose as a "radical leader." The real worth-while leaders, however, are the fellows willing to fight on, year after year, and slowly but surely secure more of the world's goods and a greater degree of happiness for all who earn their bread in the sweat of their brow.

The flagship "New Mexico," leading more than forty ships, the main body of the new Pacific fleet, passed abeam of the reviewing ship, the famous "Oregon," into San Francisco bay at 11 o'clock on Labor Day. Admiral Hugh Rodman is in command of the fleet. Combining with the fleet on the last leg of its ocean-to-ocean cruise, an airplane squadron and a procession of thousands of automobiles made the run from Santa Cruz north and the entrance into San Francisco harbor one of the most spectacular and remarkable sea, air and land pageants ever witnessed.

In an interview Beverly D. Harris, vice-president of the National City Bank of New York, made a significant remark which indicates that Bolsheviks are not the only ones who are looking for the possible repudiation of war debts by many European nations. Speaking of a number of things that might interfere with "prosperity" after the war, Harris mentioned as one of them "the possible inability of Europe to pay its debts."

A man without an ideal is dead; so is the man who can only dream of an ideal and never dares work and fight for it. Therefore work and fight for economic justice and human brotherhood.

WAR WITH MEXICO; WHY?

The Other Side of "Intervention," by Manuel Carpio, U. S. Correspondent for Mexican Newspapers.

Those who at present advocate armed intervention by the United States in Mexico for the sake of avenging the grievances of private individuals must take into consideration the kind of task they would attempt.

No one is endeavoring either here or in Mexico to discuss whether or not the United States is capable of "beating" Mexico. The United States will surely "beat" Mexico if she wants to, and all the idle talk that has been going on at different places to the effect that Mexicans are defiant and confident that they can "lick" the United States can only be construed as a provocation of resentment.

Apart from this barren arguing as to "licking" and "beating" abilities, there is something that those who love to be fair cannot overlook Either this proposed intervention is desired by gentlemen whose ambition it is to own the natural resources that Mexico possesses, or by other gentlemen who may think that Mexico is not civilized enough with its Spanish type of culture and needs an Anglo-Saxon revamping.

Those who wish to own Mexico's natural resources may well invoke the principle, "The flag follows the investor," and for this type of conqueror all forms of logic are unavailing. For how could you convince them of the fact that there is no more justification for the use of arms against a country where foreign investors are experiencing difficulties (by no means greater than those of the natives) than there would be in using machine guns against so many speculators who right here, in the centers of stock trading, have robbed and continue to rob many innocent people? Is there more ungodliness in the bandit who holds up a man with a pay-roll around the Tampico swamps than in the "broker" who sets up his trap in the Wall Street district in quest of credulous victims?

The "intervention" fiends would not hesitate to have armies and navies sweep into Mexico, sacrificing many thousands of human lives in order to avenge the misdeeds of criminals; but they perhaps do not reflect what the world might think of them if, on account of the conspiracies of the stock market pirates, they suggested to take by fire and sword the Wall Street district—and so many other districts, for that matter—and make a "clean-up job."

It has been variously intimated, but not proved, that the present Mexican Government has failed to punish wrongdoers against foreigners; but it is a fact that many of the marauders that have been making trouble around the oil fields and elsewhere have paid for their crimes with their lives. I have seen many of those men hanging from telegraph posts and have witnessed the execution of bandits whose assaults against life and property have been proved beyond doubt.

It is unfair to assume that the Mexican Government is indifferent to crimes, whatever their nature, and knowing, as it does, that whenever a foreigner is hurt, especially an American, an enormous clamor is raised in the press, blaming the whole Mexican people and demanding indignantly the use of force against that nation.

The impression has been created that there is a peculiar form of apathy, if not of satisfaction, on the part of the Mexican Government every time a grievance is inflicted on Americans, or any act is committed which can be interpreted as an international insult.

I am speaking now of things which belong to my personal knowledge. I have been in Mexico City when reports have been given by the press of bandit aggression against foreigners, and I have noted the feeling of apprehension that both people and Government experience, not because they are conscious of personal guilt or because of national cowardice, but because of the uproar for intervention that the press habitually raises on this side of the border.

We know that for the purposes of human equity no foreign Government could impress upon our minds a better concept of right and justice than the institutions that we ourselves can set up, no matter how great their shortcomings. Surely, the shortcomings in administration and in efficiency for the protection of life and property that are to be found in the Governments that are considered most advanced and democratic are by all means comparable with the shortcomings that our dictatorial and revolutionary Governments exhibit to the eye of the impartial observer.

We know, as we visit your great cities and your splendid offices of administration, that your country and ours are not, in point of fact so far apart in some respects. We see that we have not got rid of intrigue and dishonesty in politics; that much needs to be done before can be said that both investments and lives are absolutely safe from aggressions of speculating bandits, crooks and murderers.

Are you indeed safer wearing diamonds and carrying sums of money with you on the streets of New York or Chicago than in Tampico?

If we were more powerful than you, we might,

OFFICIAL.

SAILORS' UNION OF THE PACIFIC.

Headquarters, San Francisco, Cal., Sept. 2, 1919.
Regular weekly meeting came to order at 7 p. m. Secretary reported shipping good; members ashore increasing.

JOHN H. TENNISON,
Secretary pro tem.

Maritime Hall Bldg., 59 Clay Street. Tel. Kearny 2228.

Victoria, B. C., August 25, 1919.
No meeting. Shipping slow.

J. ETCHELLS, Agent.
Room 11, de Cosmos Block, 1424 Government Street.

Vancouver, B. C., August 25, 1919.
Shipping fair; prospects uncertain.

W. G. MILLARD, Agent.
58 Powell Street E. P. O. Box 1365. Tel. Seymour 8703.

Tacoma Agency, August 25, 1919.
Shipping medium.

H. L. PETTERSON, Agent.
2016 North 30th St. Tel. Main 808.

Seattle Agency, August 25, 1919.
Shipping quiet.

P. B. GILL, Agent.
84 Seneca St. P. O. Box 65. Tel. Main 4403.

Aberdeen Agency, August 25, 1919.
Shipping good; men scarce.

ED. ROSENBERG, Agent.
P. O. Box 280. Tel. Main 557.

Portland Agency, August 25, 1919.
Shipping good; prospects good.

JACK ROSEN, Agent.
88½ Third Street. Tel. Main 6013.

San Pedro Agency, August 25, 1919.
Shipping fair; men scarce.

HARRY OHLSEN, Agent.
128½ Sepulveda Bldg., Sixth St. P. O. Box 67. Tel. 137 R.

Honolulu Agency, August 18, 1919.
Shipping dull; prospects poor.

JACK EDWARDSON, Agent.
P. O. Box 314. Tel. 2526.

MARINE COOKS' AND STEWARDS' ASSOCIATION OF THE PACIFIC COAST.

Headquarters, San Francisco, Cal., Aug. 29, 1919.
Regular weekly meeting was called to order at 7 p. m., Ed. Andersen in the chair. Secretary reported shipping fair.

EUGENE STEIDLE, Secretary.
42 Market Street. Phone Kearny 5955.

Seattle Agency, Aug. 21, 1919.
No meeting. Shipping good.

J. LEONARD NORKGAUER, Agent.
Grand Trunk Dock Room 203. P. O. Box 214. Phone Main 2233.

San Pedro Agency, Aug. 21, 1919.
No meeting. Shipping fair; very few men ashore.

L. BOTSFORD, Agent pro tem.
613 Beacon Street. Phone Sunset 336. P. O Box 54.

DIED.

Joseph Morron. No. 2730, a native of Ireland, age 30. Died at Victoria, B. C., August 23, 1919.
Frank Yerna, No. 24, a native of Belgium, age 30. Died at sea, May, 1918.

For the purpose of carrying troops from British Columbia to the Orient and the Antipodes, two passenger liners, the steamships "Tahiti" of the Union Steamship Company of New Zealand and the "Prinzessin," a former German liner, which was seized by the allies during the war, are on their way to the North Pacific. Both vessels are due at Vancouver, B. C., about September 7. The "Tahiti" will carry Australian troops now on their way to British Columbia from war service in France. The vessel is operated in regular service between San Francisco and Auckland and has been diverted to British Columbia for one voyage. The "Prinzessin" will carry relief troops for the Hongkong garrison from Vancouver. She will probably take a total of 800 men.

OUR WASHINGTON LETTER.

(By Laurence Todd.)

It all depends on who says it. When labor spokesmen told President Wilson and Congress that high prices were driving many poor people toward the verge of an explosion hostile newspapers and politicians shouted that labor was threatening a revolution in order to drive through the Plumb Plan for operating the railroads.

A few days later Washington newspapers appeared with headlines announcing that a United States Senator "Fears Revolution if Treasonable Prices Continue." The Senator in question was Kenyon, of Iowa, who had been urging the House Committee on Agriculture to approve his bill to license the big packers so that they could be controlled in favor of the public and the small competitors. In the course of his testimony Kenyon said:

"We despise anarchy and violence, riots and brute force, but we know of revolutions that have been justifiable. It would seem that those who are in possession of great wealth and who control and manage great and powerful corporations should carefully view the present situation and help us to solve the knotty problem. They should hasten to do so before it is too late. Already it has been suggested by conservative men that another 'Boston Tea Party' is needed, with the trusts playing the part of King George."

Millions of American wage earners and housewives will testify that Kenyon voiced their opinion, and that the railroad workers were right when they said constructive measures must supplant the policy of national drift if we are to avoid trouble. Listen to Senator Walsh, of Massachusetts:

"In my opinion the high prices are due primarily to the worst condition of criminal profiteering that any country has ever seen. I think when the evidence is made public as to the terrific amount—millions and millions of dollars—of profits that have been made by manufacturers and producers of foodstuffs in this country, we will have all we can do to satisfy our people that they are living under a government which can protect them and will protect them."

Senator King, of Utah, revived the dead excuse of twenty years ago when he interrupted Walsh to ask: "Does the Senator think that the profiteering has gone to the extent of violating the criminal statutes of the various States and of the United States?" King's idea appeared to be that if the people were starved legally they would have no right or excuse to complain. The American Colonists did not say King George was a law-breaker. They said his laws were unjust, and they insisted on getting rid of both the king and his legal excuses, when justice was stubbornly denied them.

Commissioner Colver, of the Federal Trade Commission, throws a bright light on those full page advertisements of the meat trust, wherein it is shown that the packers net only one-quarter of a cent per pound on all the meat they sell. Colver shows us that the big profits are taken out before the cattle are killed, for the very purpose of concealing the profit on the finished product. The same men own the stockyards who own the slaughter houses. And the stockyards soak the slaughter houses such high rentals, etc., that the books of the latter look like the books of almost bankrupt concerns. That vast jump in the price of meat which occurs between the pasture and the packer is sucked up the stockyard flue. The Kenyon bill aims to prevent packers from owning stockyards, and that goes far to explain the howl of the treed cats. It discloses the hidden pea in the packer's shell game.

So strikes and the wage issue will not down until the cost of living begins to down. New York walked for two days this past week while the subway and elevated lines were tied up 100 per cent. tight by the protesting workers. The company had offered them a 10 per cent. raise on September 1. The men demanded 50 per cent. After two days of paralysis, the strike was settled with a 25 per cent. increase.

Milwaukee, Hammond, Ind., and Butler, Pa., have been the scenes of violence in labor disputes during the week. The Milwaukee riot occurred when scabs employed by the Cudahy packing plant clashed with the indignant wives of striking employes. One man was killed and eight others wounded. Deputies employed by the Cudahy company led in the shooting. In Butler the strike is at the Standard Steel Car plant, where 3000 men are out. State constabulary are on the scene and more than 20 persons have been injured. At Hammond the strike is against the same corporation. Ten companies of Indiana militia have been ordered to the spot.

Anthracite coal miners have served preliminary notice on the operators that they will demand more wages and shorter hours next spring. Addressing the tri-district convention at Wilkes-Barre, William Green, secretary-treasurer of the mine workers, explained that the principal demand of the miners would be for a closed shop, a six-hour work day and a wage increase of about 60 per cent. Green said experience had persuaded the miners that they could produce as much coal in six hours as in eight.

Although the situation in England is farther advanced, the trend in the coal industry in that country and here seems to be along similar lines. The Sankey Commission, appointed by the British Government, conducted extensive inquiries into the ownership of the mines and the conditions of labor, and then made its recommendation that the Government nationalize the fuel industry. Lloyd George had promised to abide by the recommendation which Sankey should make. He has now broken that promise and offered a bill in Parliament which would give the Government title to the coal deposits but permit the present owners to continue in possession of them under lease. Labor's retort to this broken promise is that "the Lloyd George bill constitutes a glorified combine between the mine owners and the cabinet."

Nationalization of coal mines is perhaps a long way off in America still, but private investors and organized labor are both waiting to see how the railroads are disposed of in the belief that if the Plumb Plan is adopted the great monopolized public utilities will all become subject to similar disposal. There is already a rumor in labor circles at Washington that American seamen are planning to go before Congress with a "Plumb Plan" of their own for the ownership and operation of the new merchant marine.

The argument of the seamen is that Uncle Sam already owns most of the merchant vessels, having built them with the people's money. He must now decide to keep and operate them himself or sell them to private corporations. Private shipping corporations are notorious exploiters of the sailor, and have at this moment a determined campaign on foot to repeal the law which lifted the sailor a little higher than a slave since it was enacted half a dozen years ago. The organized sailors may propose that the Government keep the ships and permit them to be operated by their present officers and crews, after the manner of the railroad plan. The officer class is said to be very weary of its present status and may join in with the truly democratic purpose of the sailors.

The coming big show-down in the steel industry moved a step nearer on August 21 when final count of the referendum showed that 98 per cent. of the workers queried were in favor of a general strike if necessary to unionize the trade.

The strike vote count was conducted at Youngstown, Ohio, where the officers of twenty-four unions affiliated with the steel industry were gathered. Before proceeding with plans for the strike, a committee of six leaders will make a final effort to wring from the steel barons some statement of their attitude toward the demands of the men. Samuel Gompers is one of the men named to approach the steel corporations in this last effort to avoid a walkout.

As the matter now stands the corporation officials are given ten days in which to receive the union officers in conference, or finally refuse to treat with them. Should the corporations refuse to confer, the committee of six are authorized to call the general strike. The twelve basic demands of the steel workers were set forth in this correspondence a fortnight ago. They begin with the right to collective bargaining and include the eight-hour day, one day's rest in seven, standard scale of wages for classified workers, the check-off system of collecting dues and the abolition of company unions.

The arrogant attitude of the steel barons is believed to be based on their view that many of the steel workers are not organized and will not strike. In this attitude they overlook the high cost of living, which affects both union and non-union men and drives all wage-earners to desperate efforts to procure relief, and the steady organizing work of the American Federation of Labor, which neither constabulary nor kept politicians have been able to prevent.

The Director-General of Railroads, Mr. Hines, promises to make an early decision on the petition of the repair shopmen, who acceded to President Wilson's request that they resume work for the time being. The men who abandoned their highly successful strike out of respect for the Chief Executive contend that the high cost of living is only one of their motives in asking more money. They assert that they wish on general principles to birng their pay up to the level paid for similar service in private industry. The minimum wage scale for the shopmen at present is given as 68 cents an hour. The men are asking for 85 cents.

An increase of 35 to 65 per cent. in

wages is demanded by the leaders of 117,000 railway firemen and hostlers (Brotherhood of Locomotive Firemen and Enginemen) who met in Cleveland on August 17. The principal demands of the men are that firemen and helpers in the passenger service shall be paid $6.50 per day of 100 miles or less, except when Mallet engines are used, when $7.20 a day is asked; in the freight service on engines of less than 200,000 pounds the fireman's pay shall be $6.50, and on engines of more than 200,000 pounds it shall be $6.80 per day of 100 miles or less, computed on a speed basis of 12 miles an hour. Director-General Hines intimates that this demand of the firemen and hostlers will force an early consideration of the wage claims of all the 2,000,000 railway workers.

The farmer is being educated in the hard school of the trade union man. On August 9th seven Ohio farmers were arrested for the heinous crime of having come into Cleveland as representatives of the Farmers' Co-operative Milk Company, which competed with the city milk dealers and sold milk cheaper than it can be had in most cities the size of Cleveland. The farmers were guilty of collective bargaining, for their own benefit and that of the city dwellers. The indicted men are among the most prominent and respected farmers of the State.

"In order to make their humiliation or intimidation more pronounced," says the National Board of Farm Organizations, "these men were arrested at their farm homes in the night, taken to the city of Cleveland and there thrown into jail without opportunity to secure bail until the next day. The jail itself was full of vermin, and the treatment accorded these men was barbarous and extreme."

This sounds rough, but very educational. A little more of this and the farmer will know that the wage-earner is his natural ally in the fight for a better world.

The British air staff has for some time been mapping out the stages of aerial routes to Australia from Cairo via Damascus, Karachi, Delphi, Calcutta, Singapore, Sumatra and Australia. Pioneer flights have been made along this route as far as Karachi, Delphi and Calcutta, and a good deal of valuable information obtained. In Australia the first aerodrome base will probably be Normanton, on the Gulf of Carpentaria, the route leading thence to Sydney, Wyndham and Melbourne, and at Melbourne branching into two routes, one west to Perth and the other south to Tasmania and east to New Zealand. The significant fact is that for practically the whole proposed overland route from Cairo to New Zealand the air bases will be on British territory and the air routes over British territory or the sea.

Four-year-old Hilda had been to stay with her cousins, two romping, boisterous boys, who had teased her sadly the whole time. When she came back, and was telling her father about her visit, she said: "Daddy, every night when Jack and Roger say their prayers, they ask God to make them good boys." "That's quite right," said her father. "But," she added, significantly, "He hasn't done it yet."

Demand the union label.

LASCAR CREWS.

A highly significant statement has just been given to a representative of the JOURNAL, in an Atlantic Coast port, by a licensed deck officer serving on a British steamship.

For obvious reasons the name of this officer and the name of his vessel are not published.

The statement, however, is absolutely authentic. It reads as follows:

"I am at present second officer on the S. S. . . . of the . . . line of Glasgow. This company operates about eighty vessels in the Eastern trade between India, Australia and England. Our vessel is nine thousand tons deadweight. It burns oil and coal. We carry five engineers, including chief and about forty firemen, oilers and coal-passers. We carry on deck about forty lascars, also four deck officers and two cadets, a European carpenter and European chief steward and eight lascars in the steward's department; also two European wireless operators. From India to England during the war we got ten pounds a ton. Now I think we get about seven pounds a ton.

"They pay the lascars an average of a pound a month. They are hired at Calcutta through the government shipping office. They sign on for twelve months. No line not having a large number of vessels could afford to carry lascars because of the necessity of returning them to their home port when the articles expire. A pound a month is high wages for Indians. They live on rice mostly, some meat and curry stuff. Their main food is a pound and three quarters rice per day. I should think that $.30 per day would cover their food. During the war I was on the S. S. . . . when she was torpedoed in the Eastern Mediterranean. She sank in six minutes. The captain, chief steward, second assistant, fourth officer, five engineers, one cadet wireless operator, and about forty lascars were lost. There were about ninety lascars on that ship. We managed to launch two boats out of six. The boat of which I had charge I launched alone without any assistance. The lascars were absolutely helpless. They are extreme fatalists in a case like that and make no effort to save themselves or to launch a boat to save anybody else. It is very difficult to get them to do anything. They don't get excited but become very melancholy, wring their hands and cry to Allah to save them, but make no efforts to save themselves.

"I was on the S. S. . . . of the same line when she was torpedoed in December, 1917, in the English Channel. She was carrying tea. She sank in about two hours. The lascars could not be induced to help lower the life-boats, but immediately after the European officers had gotten two boats lowered they were filled until sinking condition with lascars who rowed away leaving the Europeans on board. These were the only two boats on the ship, two having been destroyed by the explosion of the mine. We officers and engineers who were left on board managed to attract the attention of a rescue boat which finally came and took us off before the vessel sank. As stated, we officers lowered the boats after having found it impossible to get the Indians to assist. They swarmed into the boats like sheep and it was impossible to stem the tide of their flight.

"I am receiving 24 pounds a month as second officer. The first officer gets 25 pounds, third officer 20 pounds, chief engineer about 30 pounds, second engineer about 26 pounds.

"I have been ashore in Belfast, Liverpool and Glasgow lately, and find that the cost of food, clothing and rent, also other necessities of life, are very little lower than the cost in New York, if any lower at all. There is a very fast migration of British officers and engineers to America, where better wages and conditions prevail, and I look to see that migration increase further unless wages and conditions come up on British vessels. I am also expecting to join my brothers who are already in America."

WEALTH AND FREEDOM.

There cannot be freedom to exchange wealth until freedom to produce wealth is established, and there cannot be freedom to produce wealth until the land, the source of wealth, is made free for use. Land monopoly and protection must be confronted by land taxation and free trade.—R. L. Outhwaite, in "Land and Revolution."

Battle deaths among American enlisted men averaged 8 per 1000, among emergency officers 11 per 1000, and among regular army officers 14. Of every 1000 officers landing in France 330 were killed or wounded.

Labor's Economic Platform

Following is the Economic Platform adopted by the American Federation of Labor:

1. The abolition of all forms of involuntary servitude, except as a punishment for crime.

2. Free schools, free text books and compulsory education.

3. Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

4. A work day of not more than eight hours in the twenty-four hour day.

5. A strict recognition of not over eight hours per day on all Federal, State or municipal work, and not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

6. Release from employment one day in seven.

7. The abolition of the contract system on public work.

8. The municipal ownership of public utilities.

9. The abolition of the sweat-shop system.

10. Sanitary inspection of factory, workshop, mine and home.

11. Liability of employers for injury to body or loss of life.

12. The nationalization of telegraph and telephone.

13. The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

14. Woman suffrage co-equal with man-suffrage.

15. Suitable and plentiful playgrounds for children in all cities.

16. The Initiative and Referendum and the Imperative Mandate and Right of Recall.

17. Continued agitation for the public bath system in all cities.

18. Qualification in permits to build of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

19. We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

WEEKLY NEWS LETTER.

(Continued from Page 3.)

high cost of living upon the health of citizens of New York, and stated that he believed the conditions set forth to be typical of the majority of American families.

"This study undertaken officially and in a dispassionate spirit," writes Dr. Harris, "has revealed the existence of a considerable amount of deprivation and want. I have reason to know that since this study was completed conditions have, if anything, become worse. In view of the fact that according to various studies which have been made, there are probably more than 4,000,000 persons sick in this country at any given time, it is of great moment, from an economic viewpoint, to consider how gravely the sick are handicapped in their recovery and convalescence because of the high cost of living.

"Properly interpreted, the facts presented in this report would seem to indicate that many who are suffering from the effects of the high cost of living will have their power of resistance to various diseases greatly weakened and this would be a cause of serious apprehension in the event of a recurrence of the epidemic of influenza and pneumonia."

Gets What Workers Get.

Edward T. Leech, editor of the Memphis (Tenn.) Press, was escorted to jail—where he will serve ten days for contempt of court—by a brass band, an automobile and a delegation of prominent citizens, who lustily demanded free press. The editor was charged with criticising public officials when he discussed politics in a general way. The editor's friends point to the process by which the editor was jailed—without jury trial and by the court that combines itself into judge, law maker and executioner.

This evil has been combated for years by organized workers who have been jailed by the same methods used in Editor Leech's case.

Trade unionists are hopeful that the latest exhibition of injunction power will be remembered by prominent citizens who have heretofore turned a deaf ear when the workers urged that American rights be maintained.

Service Vs. Profits Is Railroad Issue.

"The people must decide between service and profits in the settlement of the rail road question," said Frank Morrison, secretary of the American Federation of Labor, in urging the House Committee on Interstate and Foreign Commerce to favor the Sims bill, which embodies the railroad employes' solution of the railroad problem.

"In all discussions of this question," said the trade unionist, "it would be well to bear in mind that quasi-public corporations are created for service and not for profit. A long line of decisions, from the Supreme Court of the United States down, have invariably held that the fundamental purpose of these corporatons is to serve the public and that they are only entitled to a fair remuneration.

"Hardly any one will deny that under private management the railroads have been financial footballs and that they have been directed by interests whose wreckage of numerous railroad systems is common knowledge. This wreckage has been accompanied by a debauching of legislatures and other political activity that tested democratic institutions.

"The times call for new arrangements in the management of properties that are only made possible by the public's consent.

"The passage of the Sims bill will reestablish the theory that railroads should be operated for public service rather than for private profit.

"Aside from the application of democracy in these properties, and their handling by practical railroad men, the Sims bill will squeeze all fictitious values out of these properties. This will affect living costs and reduce charges the public now meet, for then it will no longer be necessary to compel the railroads to earn dividends on millions of dollars of watered stock."

Frey Has Tough Job.

Editor Frey of the International Molders' Journal has tackled a tough job by insisting that proper terms be used in the discussion of economic questions.

"It is sometimes easy," he says, "to get terms mixed. Recently we listened to an employer who did not seem to recognize any difference between a minimum wage, a living wage and a fair wage.

"For his benefit, and that of a few others, let us say that a minimum wage is a wage below which no one is to be paid.

"A living wage is a wage which, so far as the theory is concerned, is intended to enable the workmen receiving it to purchase the necessities of life. It is based somewhat upon the price of necessities, the cost of living.

"A fair wage is a wage which is intended to give the worker a fair share of the wealth which he assists in producing. It is but seldom that a minimum wage, or a living wage, is a 'fair' wage."

Old Anti-Union Trick.

The Cotton Factory Times of Manchester, England, prints this document, signed 62 years ago, and which indicates that one anti-union trick is not new:

"Form of Declaration to be signed by every Operative Spinner as an indispensable condition of Hiring.

"I, Richard Waterhead, do hereby solemnly declare that I will not now, nor so long as I continue in the service of Thomas and William Eccles, will I become a member of, or directly or indirectly a subscriber to, or a supporter of any Trade Union, or other Association whatever (the regular and legal Sick Clubs alone excepted).

"As witness my hand this Sixth day of January, 1857. Richard Waterhead. His X mark."

A GOOD IDEA.

A physician is measured by his ability to cure the sick, an engineer by the soundness of his bridge and ship. Why not measure a railroad president by his ability to supply coal in winter, to run trains on time, and decrease freight, rather than by his private accumulations? Why not measure a merchant or a banker by similar tests? -James H. Tufts, in "The Ethics of Co-operation."

WAR WITH MEXICO; WHY?

(Continued from Page 7.)

perhaps, be inclined to show with some kind of haughtiness the records of such cities as Guadalajara, Puebla, Queretaro, Monterey and Mexico, as proportionally better than many of the big American cities in respect of the number of assaults, murders and conspiracies against property.

We know that you have progressed along the lines of using the natural resources of the land to a very high degree, and we admire your achievements in public education; but we have an unimpeachable answer for the gentlemen who propose a revamping of Mexico according to the Anglo-Saxon type. Our answer is this: We possess a native art superior in all its inner aspects to any other native art on the American continent. We have the Castilian type of homes second to none in the world. Our women are taught the purest and the highest conceptions of virtue, which consists in controlling all reflex impulses that are always less tolerable in women than in men. It is not ignorance that keeps our women from using to their utmost their liberties; it is a sense of the highest virtue.

We have not the same kind of industries as the Anglo-Saxons, because we lack the same kind of natural elements and the necessary financial advancement. It must be remembered that the natural resources of Mexico are of a kind that need enormous investments.

Europe, no doubt, would have long ago accomplished in Mexico most of the things that constitute the material advancement of the United States, if in Mexico we had had the same endowments of nature, such as rivers, coal, and great extensions of cultivable land which do not need costly irrigation systems.

Spain discovered our mines and exploited them the best she could. Despite her unquestionable backwardness in public administration, she left us splendid tokens of superior culture which we have preserved despite banditry, filibusterism, and political turmoils.

We have had great scientists who have at all times been honored in Europe. Our literary record is among the highest in the Spanish speaking world. Such men as Ruiz de Alarcon, Rive Palacio, Altamirano, Ramirez, Vigil, Sierra, Nervo would be the pride of any country. Mexico produced all these men without any influences from Anglo-Saxon sources.

We owe a great deal to France, and we admire her type of culture. The French have given us a considerable part, if not the largest, of our training in modern thought. Philosophy, literature, science, methods of commerce, and even the art of conversation we have learned from France. Musical ability, gentleness of manners, humor that is not offensive—we have evolved all those things from our Spanish-French type of culture. What other spiritual and social improvements could we derive from an armed American intervention?

Have there been any race riots in Mexico City? Do we indulge in lynching? Or is there a possibility that this sort of thing might not be instilled in our habits through armed American intervention? Machine guns are not used to-day in Mexico to end strikes and other disturbances.

Our record shows an ignoble "Decena Tragica," but that was the result of a political coup d'ètat peculiar to Latin-American life. We are now confident that such acts of pretorianism will occur no more in our midst.

Who can, really, show a good reason for armed intervention in Mexico? We want only one kind of intervention from you—your books, your highest thoughts, your ideals of liberty, your aspirations for a better world, a friendship that is not founded merely on profits. Material conquest fades away, but the spirit lasts forever.

MIND OVER MATTER.

(From Tit-Bits, London.)

If you think you are beaten, you are;
  If you think you dare not, you don't.
If you like to win, but you think you can't,
  It's almost certain you won't.
If you think you'll lose, you've lost;
  For out of the world we find
Success begins with a fellow's will;
  It's all in the state of the mind.

If you think you're outclassed, you are;
  You've got to think high to rise;
You've got to be sure of yourself before
  You can ever win a prize.
Life's battles don't always go
  To the strongest or fastest man;
But soon or late the man who wins
  Is the man who thinks he can.

The interests of labor and capital are one, declare some persons. But the very frequency and insistency with which the statement is made would seem to argue a doubt as to its correctness.

Demand the union label.

THE U. S. STANDARD OF LIVING.

(Continued from Page 2.)

a system, as the public is responsible, in a large measure, for the unhealth which exists to-day. But the worker should pay a share, for he is responsible in some degree for sickness in his family. Above all he should feel, when he receives medical, surgical, or hospital treatment, that he is receiving services which belong to him of right and are not alms from either the state or private persons.

The sickness and physical deficiencies revealed by the selective draft has happily demolished forever the carefully fostered fallacy that the American workman is so well paid, so well nourished, housed and clothed, and so intelligent that he needs nothing in addition to the existing agencies to look after his exuberant good health. The quantitative consumption of health-giving and health-maintaining services in the average American family is certainly very much below what is necessary to attain and maintain reasonably good health. It is very clear that the medical profession and the hospitals must be more completely and effectively organized and directed for the purpose of improving the health of the community. Until this is done it is scarcely possible for the average American family to buy the required amount of health service to keep health and efficiency up to a reasonable standard.

Insurance.

Consideration of the adequacy of health expenses brings us directly to the subject of insurance against the hazards of death, sickness, accident, old age and invalidity, and unemployment. In modern life provision against these hazards is just as necessary as medical service, or, for that matter, food. The amounts spent by American families for life insurance in 1918 ranged from about $10 in the lower income groups to about $65 in the higher income groups. The average is probably not far from $40. This amount paid each year in premiums for ordinary life and term life policies would give the average family sufficient protection against the hazard of death. Unfortunately the agents in the field found it impossible to distinguish between so-called "industrial" insurance and bona fide life insurance. It seems at first blush as if it should be easy to differentiate between them on the basis of cost alone, but the amount of the policies was frequently not obtainable from the housewife, so the cost per $100 could not be ascertained. Very often, it was discovered, payments were accepted by the agents of the burial insurance companies semi-annually, or even annually, so it was not possible to make the distinction on the basis of the terms of payment of the premiums. About all it is possible to deduce from the schedules as to life insurance is that the workers pay enough on the average to secure sufficient protection against disastrous poverty resulting immediately from the death of the principal breadwinner of the family. Whether they get this sufficient protection is another matter. As explained above, it was impossible to get the quantity of and kind of life insurance bought at the prevailing market prices. Furthermore, only a part of the workers are insured at all, and those who most need life insurance are least able to buy it.

While payments for life and burial insurance by the average American family are as large as can be afforded and should buy enough insurance to protect the family adequately, the case is entirely different in case of casualty insurance and so-called "health insurance." The average expenditures, in Philadelphia, for these two kinds of insurance ranged from nothing in the income groups below $900 to $5.44 in the income groups $1800 to $2100. The amount of premiums paid by different families is very irregular. The average amount paid by different income groups and even by all income groups in different cities obeys no statistical law. The average for all families in Boston is 95 cents per annum, while for Philadelphia it is $2.74. It is very evident that no appreciable insurance protection against the hazards of accidental injury or sickness is included in the budget of the American workingman's family. Yet these injuries occur many times more frequently than death, and their hazards are just as readily calculable as is the hazard of death. It is not possible for the worker to buy adequate protection against the hazards of injury from accident and sickness even at the exorbitant prices charged by the private companies, because the companies do not sell the protection needed. The case is even worse with old age, invalidity, and unemployment. Some trade unions and a few establishments pay small old-age and invalidity benefits. Out-of-work benefits have been paid by a few trade unions in times of great stress. Unemployment is the one hazard that is purely industrial, and it causes more distress and social demoralization than any other hazard affecting the life and health of the workers. Yet nothing has been done about it by industry and next to nothing by society. Except for the feeble, sporadic help given by a few trade unions, the whole burden falls upon the individual worker. Industry should be made to pay the costs of production. A part of the costs of production under the present organization of industry is unemployment tempered by underemployment and overemployment. It would be a very simple matter to put the money costs of unemployment upon each industry in which employment is regularly irregular. This should be done. As it is now, the worker does not and cannot include in his budget protection against unemployment and the onset of old age and invalidity. Some unascertainable part of his trade union dues, if he pays any, goes for the purchase of an indefinitely inadequate amount of protection against these ills.

The percentage spent for insurance in all forms is not large, but its importance is much greater than this percentage indicates. Insurance makes for stability of family life, by distributing throughout the community shocks that would crush individuals and families. The present cost of insurance is so high that the workers are debarred from purchasing enough of it. The protection offered by private profit-seeking insurance companies is not secure and many inevitable contingencies are not included in their policies at all. Insurance is a relatively simple matter. It could be conducted as a community enterprise reaching all the people at half the expense now involved. The moral is obvious.

Amusements.

The matter of amusements is one of the most serious things in life. Wholesome laughter is as necessary to health and efficiency as good food and suitable raiment. Unlike the other wants considered, amusement is subjective, not objective, and therefore no objective unit of measure is conceivable. It is wholly impossible to guess how much amusement is obtained from a 17-cent moving-picture show. We know that large numbers of people must be amused by the movies, else the picture houses would not be packed. We can not say, however, that the families which patronize the movies get any more fun out of life than those which stay at home or go to the church festival. You can't keep people from being amused. They will get fun out of the hardest condition of life. Tom Sawyer, by using the most approved methods of the trust promoter and the professional advertiser, elevated fence whitewashing from the lowest form of menial drudgery to the rank of the most popular outdoor sport in his home town, so that for the time swimming and fishing were forgotten. The variety and weirdness of the different forms of amusement are astonishing. Some people derive much genuine enjoyment from funerals. Others seem to get quite as much fun out of grand opera. I once knew a physician of sound mind who got his recreation and amusement from directing a volunteer church choir. Truly, in the realm of amusement "One man's meat is another man's poison." One man will listen to a lecture on the Russian drama and will be upbuilded and refreshed amazingly; his neighbor will be put to sleep, and another man will be driven toward homicide, by the same lecture. The number of movies, dances, concerts, and the like attended by a worker and his family has no recognizable relation to the quantity of amusements they have imbibed. While all admit that "All work and no play makes Jack a dull boy," it may well be questioned whether the play furnished by the movies will make Jack brighter or duller.

Expenditures for movies increase consistently with increasing income. In Philadelphia only 38 cents per annum was spent for movies by families having incomes under $900, while the families having $2500 or over spent $37.22. In Boston the range was from 87 cents to $34.39. The average, for all incomes, was $10.18 for Philadelphia and $6.49 for Boston. Other cities show much the same averages and range of expenditures. The total average expenditure for all amusements amounted to $12.40 in Philadelphia and $9.23 in Boston. We do not know whether this means that Philadelphia working people found existence more amusing than Boston workers, or whether their lives being more sad they were driven to the movies and the pool parlors for cheer. We may assume, I think, that the sums spent for amusement in the income groups above $1300 are sufficient for recreational and health needs.

Conclusion.

From this very brief analysis of the data thus far worked up from the cost of living schedules it is apparent that there is no such thing as the American standard of living in the sense of a very superior standard giving all the necessaries, many of the comforts, and a goodly supply of the luxuries of life. On the contrary, we find that there are as many different standards as there are different incomes and families of different sizes. In the lower income groups the living conditions are hard indeed. The incomes of the lower paid workers must be increased and the cost of food, clothing, and housing must be lowered to enable these families to meet the higher costs of existence. Social legislation is needed to give them better and cheaper food, clothing, houses, medical treatment, and insurance. Even in the higher income groups conditions are not so easy as they are frequently pictured to us. Let us not be fooled by the cry that the American standard of living is the highest in the world. Let us make the minimum living standard in America one that will support life in decency and health.

Labor News

Officers of the International Molders' Union report that 5,012 new members were admitted during the first six months of the present year.

Twenty-five hundred men of the New York District Brotherhood of Painters, Decorators and Paper Hangers have won their demand for a one dollar an hour and a forty-hour week.

In response to urgent cables to come home, Samuel Gompers, President of the American Federation of Labor, has cut short his visit to Europe, to take a hand in quieting present industrial unrest in America.

The New York State Reconstruction Committee has recommended to Governor Smith that the State Employment Service acquire a monopoly in that field. The Commission is convinced that the problem of this phase of unemployment will never be solved while private employment agencies are entrusted with the task. The report excepts trade unions and agencies supplying service of a personal and professional character.

Under an order by the President the Federal civil service regulations have been amended so that the Federal Board for Vocational Training will test, train and certify to the United States Civil Service Commission disabled ex-service men who desire to enter civil service employment. The amended regulations permit the fullest co-operation of government agencies with the Federal board in the vocational rehabilitation of disabled soldiers, sailors and marines.

Most of the inspectors in the municipal service in New York are receiving less than $1,800 a year, and they are demanding this minimum of the Board of Estimate. Wm. B. Scheer, president of the Municipal Inspectors' Union, in a statement in the Civil Service Record, says lack of money in the city treasury is no excuse for refusal, and points to the increasing community-earned land values, which should be taxed into the community's funds, from which all civil servants should be paid a living wage.

Thomas Davies Mutch, Labor member of Parliament in New South Wales, Australia, addressed Chicago newspapermen recently on the achievements of the Journalists' Association in Australia, a newspapermen's union. He declared a minimum wage of $40 had been established and the 48-hour week was insisted upon, while overtime work was subject to extra pay. Altogether, the conditions of Australian newspapermen have been improved to such a degree that young men who previously entered the so-called professions are becoming newspaper writers, he said.

The price of food has advanced 91 per cent. from May 15, 1913, to May 15, 1919, and continues to advance, reports the United States Bureau of Labor Statistics. During this period lard increased 146 per cent.; flour, 127 per cent.; bacon, 110 per cent.; corn meal, 107 per cent.; pork chops and potatoes, 106 per cent each.; ham and lamb, 104 per cent. each; eggs, 102 per cent.; sugar and hens, 96 per cent. each; butter, 89 per cent.; round steak, 87 per cent.; plate beef, 86 per cent; chuck roast, 84 per cent.; rib roast, 77 per cent.; bread, 75 per cent.; sirloin, 73 per cent. and milk, 69 per cent.

The Public
A Journal of Democracy

Poverty is A Crime!

IT isn't a crime to be poor, any more than it is to be murdered. The poverty-stricken man is not a criminal. He is a victim of a crime for which others as well as himself are responsible. Henry George 33 years ago gave a lecture before the Knights of Labor the title of which was

"The Crime of Poverty"

It has since become a classic and has touched the spark of ambition in the hearts of thousands of men and inspired them to better things.
You can get a copy of this gripping lecture, well printed in a neat, cloth-bound book, and THE PUBLIC, A Journal of Democracy, for 13 weeks for only 65 cents. Let THE PUBLIC be your interpreter, as it is for many of the great liberal thinkers of the day: Brand Whitlock, U. S. Minister to Belgium; Wm. C. Colver, Federal Trade Commissioner; Ray Standard Baker, and hundreds of others.

Frank P. Walsh, Joint-Chairman of the National War Labor Board says:
Every worker in America should be a subscriber to THE PUBLIC. All lovers of justice are striving toward the same end. THE PUBLIC points the way.

Write your name and address clearly on the margin, attach 65 cents, stamps or money order, and with the first number of THE PUBLIC we will send you a cloth-bound and handsomely printed copy of "The Crime of Poverty."

CARRY ON!

Uncle Sam is releasing from his service the men who went "over there" to free the world from autocracy. Thousands of soldiers are daily receiving their honorable discharges; they pocket their pay, bid farewell to their comrades, and sally forth—civilians.

There is one army, however, which must not be demobilized. That is the army of War-Savings Stamp buyers. More recruits are needed to carry on the campaign of readjustment which follows the signing of the armistice.

The army of fighters has achieved its purpose.
The army of savers must remain in "action."
"Carry on" to a lasting peace under the banner of W. S. S.!

You Want the Truth

This year there will be stirring times in the Nation. Under government censorship it is increasingly difficult for the average man to get the real meaning of the social and political movements of the day.

LA FOLLETTE'S MAGAZINE

will be specially represented at Washington and will analyze and present the news from the capital truthfully and fairly. Senator La Follette is making a real fight to lift some of the tax burdens from the common people and place them where they belong — on excess profits, war profits and surplus fortunes and incomes. Because of this he is being attacked more bitterly than any other man in public life.

Send in your order today.

$1.00 Per Year—Agents Wanted
La Follette's Magazine, Madison, Wis.

INFORMATION WANTED.

I am representing the Union men who are entitled to salvage and members of the crew of the following vessels. In most cases action has commenced. In some cases the funds have been recovered. In others they are readily recoverable upon filing power of attorney form with me. Apply to Union delegate or address this office by letter. "Princeton" vs. "Ardmore," $7500 received. "Gulf of Mexico" vs. Bark "Portugal," $5000. "Gulf Coast" vs. "Boxleaf," settled. "Argonaut" vs. "Jason," funds received. "Iroquois" vs. "Skinner," settled, crews share $12,250. "Brasos" vs. "Iroquois," settled. "Maine" vs. "Theresa Accomme." "Oskawa" vs. "Westgrove." "Buda 2" vs. "Western Star." "St. Charles" vs. "Monte Cenis." "Florence Olsen" vs. "Marina." Florence Olsen" vs. "Claremont." "Alliance" vs. "Belvernon." "Donnelly" vs. "Irish." "Anacortes" vs. "S. O. Barge No. 95." "Fred W. Wellor" vs. "Overbrook." "Neptunas" vs. "Panama." "Quincy" vs. "Transportation." "Herman Frash" vs. "Brilliant." "O'Neil" vs. "Oregon." Bark "Superior." "Pan American" vs. "Santa Rita." "St. Charles" vs. "Tea." Tug "Navigator" vs. "Edgar H. Vance." "Tunica" vs. "Neppon-ier." "Lake Charles" vs. "Cantiwo." Silas B. Axtell, 1 Broadway, New York City. 8-20-18

Home News

William Kent has resigned from the United States Tariff Commission to become a candidate for the Republican nomination for United States Senator from California.

An investigation of the high cost of living and why California products cost more in California than in other States, is to be made by the civic department of the California Federation of Women's Clubs.

A national campaign for Governor Lynn J. Frazier of North Dakota as Republican candidate for President of the United States to represent the farmers and laborers has been formally launched at Danube, Renville county, Minn.

Net earnings of the Federal Reserve Banks for the first six months of 1919 have been at the rate of 92 per cent. on an average paid in capital of $81,788,000, compared with 55.9 per cent. for the same period last year and 9.8 per cent. in 1917.

A number of New England men have organized a movement to be known as the New England Farm and Food Foundation, the aim of which will be to encourage farming in this section and to promote co-operation between the farmer and the consumer.

Revocation of railroad rights-of-way through Indian reservations or lands where the grantees, over a period of five years, have failed to construct roads or utilize other land granted them has been recommended by Secretary of the Interior Lane in a report to Congress. He asked for power to decide questions arising under the proposed law.

The United States bureau of standards is experimenting with a device for testing the heating value of coal and other fuels. The Government and large commercial concerns now pay for coal, not according to its weight, but according to its heating capacity. The benefits of the new device have not as yet been passed to the individual consumer, who pays for the rocks, slate and all.

Byron Holt (of Goodbody & Co., brokers), in his August Market Letter quotes the National Bank Review of Minneapolis as saying: "Lands have increased since last winter from $25 to $75 in southern Minnesota, $20 to $25 in extreme southeastern North Dakota, from $25 to $100 in Iowa, about 50 per cent. in eastern South Dakota, from 10 to 75 per cent. in Missouri, and in eastern Nebraska all the way from 25 to 100 per cent. While the boom originated through the desire of numerous farmers to increase their holdings, prices have been made largely by speculators.

In a press notice issued by the National Popular Government League it is stated that "it is an open secret here in Washington that the real owners of the railroads don't want them back unless the Government will guarantee them at present an actual profit of $1,200,000,000, to come out of advanced rates, or else a straight subsidy, with no Federal control worth a whisper in the wind. It is an open secret here in Washington that the instant the speculative value is taken out of railroad stocks, that moment the awful fear of 'Socialism' will disappear and the big boys will be ready to sell to Uncle Sam. The test will then come as to how much shall be paid."

Domestic and Naval

Twelve members of the crew of the four-masted auxiliary schooner "Elmir Roberts" arrived at Yarmouth (N. S.), on August 27 and reported that their ship, loaded with ammunition, caught fire and blew up at sea.

The concrete steamship "Atlantus," the first of her type to have been delivered from an Atlantic shipyard, and the second concrete ship to be operated in Atlantic waters, has been turned over by the Shipping Board to the Raporel Steamship Line of New York for operation in the West Indian service of that company. The "Atlantus" was built in Wilmington, N. C. She is of 3,000 tons.

The British steamer "Clan Gordon," which capsized off Cape Hatteras while bound from New York to the Far East with general cargo shipped by the Barber Steamship Lines, was a boat of the turret-deck type, built in 1900 by Doxfords of Sunderland, who were the originators of this design. This is not the first disaster of this kind on record, and it will be recalled that about a dozen years ago a boat of the same type and ownership turned over while leaving an Australian port for the Cape, laden with a cargo of grain. The facts which came out at the inquiry anent the dangers of the turret design put an end to the construction of similar vessels, and so little were they thought of for ordinary purposes that at the beginning of the war the British Government did not requisition turret-deck boats.

The House of Representatives has passed the Bill (H. R. 7500) repealing the Act of October 6, 1917, which permitted vessels of foreign registry, and foreign-built vessels naturalized under the Act of August 18, 1914, to engage in coastwise trade during the war and for a period of 120 days thereafter. Section 2 of the Act as passed permits foreign vessels and foreign-built vessels admitted under the Act of August 18, 1914, to engage in the trade between the Hawaiian Islands and ports in the United States, upon special permits issued by the collector of customs, until July 1, 1920. After that date permits shall be issued only upon the payment of a fee of $40 for each passenger carried. This section is to become ineffective whenever the President by Proclamation declares sufficient American vessels are engaged in the trade.

The House Committee on Merchant Marine and Fisheries is taking considerable interest in the provisions of the Esch Bill (H. R. 4378) now before the Committee on Interstate and Foreign Commerce, which, as it now reads, would place a good deal of the control of water transportation under the Interstate Commerce Commission, thus stripping the Shipping Board of a good deal of its power in that direction. It is likely that some representations will be made to the Commerce Committee by the Merchant Marine and Fisheries Committee, as well as by the Shipping Board. Mr. Edmonds has introduced a Bill (H. R. 8070) seeking to repeal the Act of July 18, 1918, entitled "An Act to confer on the President power to prescribe charter rates and freight rates and to requisition vessels, and for other purposes."

News from Abroad

New South Wales' general elections early next year will be held in accordance with the principle of proportional representation.

It is reported by the Consul General at Buenos Aires that an airplane service will be established within a few months connecting that city with Bahia, Brazil.

Some of the great Italian estates are now under cultivation for the first time in a thousand years, according to the Bureau of Foreign and Domestic Commerce.

The War Work Council received report of a strike of French waitresses because they were called upon to serve German brides at the Y. W. C. A. Hostess House in Paris.

The largest airplane engine in the world has just undergone its first test at Wolverhampton, England. It weighs less than a ton and is reported to be of approximately 1,000 horsepower.

British newspaper reports indicate that the daily air service between Folkestone, England, and Cologne, Germany, is proving very successful. Mail leaving Cologne is delivered in England and Wales within twenty-four hours.

The Ministry of Food and Supply at Omsk has entered into a contract with the Union of Siberian Creamery Associations for the delivery of 72,000,000 pounds of butter during the current year. This amount represents two-thirds of the total yearly output of Siberia.

The Peace Conference is said to have reached a solution of the Thracian problem by dividing Thrace into a number of parts, some going to Greece and others being designated to form the future free State of Constantinople and a new free State under the League of Nations.

Viscount Uchida, the Japanese Foreign Minister, in a statement issued in Tokio, declares that Japan does not intend to claim any rights affecting the territorial sovereignty of China in Shantung. The Japanese troops will be withdrawn immediately an agreement is concluded with China. Japan is considering the establishment at Tsingtao of a general foreign settlement instead of a purely Japanese settlement.

The English League for the Taxation of Land Values, in its report for the year ended June 30, 1919, says that in spite of the very large reactionary majority in Parliament, the land question stands in the forefront of domestic politics. "Meanwhile," the report adds, "the landlords, reading the signs of the times, are selling out at prices inflated by the iniquitous 'Rent' Production Act, and 'England' is, as the Times almost daily reminds us, 'changing hands.'"

A bill prescribing proportional representation for the election of municipal councils generally throughout Ireland was passed by the British Parliament and became law in June. Some four hundred municipalities are affected. This measure was introduced by the Government. Its introduction was the direct result of the trial of the proportional system in one Irish city, Sligo, in January last. In spite of the intensity of political feeling in Sligo, all parties and factions were satisfied with the results of that election.

With the Wits

You can't surprise a Chinaman. An aeroplane was flying over Peking for the first time and a proud European pointed it out to a native. "Don't you think it is wonderful?" "Well," said the Chinaman, calmly, after a passing glance at the machine, "the thing is meant to do that, isn't it?"

The maiden of six was sitting in a crowded bus between her mother and a very portly uncle. "Now, dear, don't you think you had better sit on uncle's knee, and let that lady sit down?" whispered mother. "I can't, mother. Uncle breathes too far down and would push me off," replied little Lucy.

"Has Crimson Gulch gotten used to prohibition?" "Yes," said Cactus Joe. "The boys didn't know what to do with their money for a while. But Bill the barkeep has opened an ice-cream-soda fountain with a price list that makes a man feel more liberal than ever when he buys a drink."—Washington Star.

She was a young widow who had just remarried, and hubby number two was causing her much anxiety. "I cannot understand why my husband is so fastidious," she confessed to a friend. "He scarcely eats anything. Now, my first husband, who died, used to eat everything that I cooked for him." "Did you tell your present husband that?" queried the friend. "Oh, yes, of course. Why?" "Well, perhaps that's the reason."

A temperance orator was in the habit of holding forth in a workman's hall and was constantly being interrupted. The next time he lectured in that hall he engaged a prize-fighter to sit in the gallery and keep order. He was contrasting the clean content of home life with the squalor of drunkenness. "What do we want when we return home from our daily toil?" he asked. "What do we desire to ease our burdens, to gladden our hearts, to bring smiles to our lips and joy to our eyes?" As the orator paused for breath the prize-fighter shook his fist at the unruly members of the gallery and whispered in a loud undertone: "Mind, the first bloke what says 'beer' I'll throw outside."

Taylor's Nautical Academy

Established 1888

Consular Building, Corner Washington and Battery Streets, Opposite New Custom House, San Francisco, Cal.

THIS OLD AND NOTEWORTHY SCHOOL is under the direct and personal supervision of CAPTAIN HENRY TAYLOR and equipped with all modern appliances to illustrate and teach any branch of Navigation.

The class of teachers of Navigation in the past have been those having simply a knowledge of Navigation, and Navigation only. Conditions have changed, and the American seamen demand a man as a teacher with higher attainments than one who has only the limited ability of a seaman. The Principal of this School, keeping this always in view, studied several years the Maritime Law, and is now, in addition to being a thorough teacher of Navigation and its kindred subjects, a regularly admitted Member of the Bar.

There is no standard of education required of a pupil entering the School, for no matter how ignorant the seaman may be, even in the rudiments of common education, Captain Henry Taylor will teach and raise him from the depths of ignorance to the height of the average well-informed man, and in a comparatively short interval of time.
